is a fundamentals course in writing for the stage. The course will cover playwriting for monologues, 10 Minute Plays, and One Act Plays. Completion of Script Analysis is strongly suggested but not required. May be repeated for credit.

THEA 3387  Dramaturgy
3 Semester Credit Hours (3 Lecture Hours)
This class will provide a brief overview of many of the skills and tools that dramaturgs possess. We will study the history of the field and learn about currently working dramaturgs, while also covering the foundational skills of historical research, structural analysis, and theoretical application. Completion of Script Analysis is strongly suggested but not required. May be repeated for credit.

THEA 4100  Senior Seminar
1 Semester Credit Hour (1 Lecture Hour)
A seminar class for the graduating senior. The student will be given the opportunity to address individual weaknesses and strengths in preparation for graduate school or entering the job market.

THEA 4200  Senior Capstone
2 Semester Credit Hours (2 Lab Hours)
The course is designed to provide the graduating senior an opportunity to complete a final project in the acting/directing or design/tech focus areas. The student's project will be juried by the entire faculty and include a research and production component.

THEA 4312  Stage Combat II
3 Semester Credit Hours (1 Lecture Hour, 2 Lab Hours)
Stage combat is a continuation of the skills of acting and movement; integral to the training of the professional actor and an extremely marketable skill. This course is an advanced weaponry course in the stage fight discipline. It is important as actors that we develop a keen sense of duality in performance; a seemingly impromptu, theatrically engaging moment of violence built upon a foundation of safe, consistent physical dialogue. In this way, we can enhance the physical lives of all the characters we play, especially those engaged in acts of violence. May be repeated for credit.
Prerequisite: THEA 3312.

THEA 4313  Theatre Technologies
3 Semester Credit Hours (3 Lecture Hours)
Designed to provide a forum for intensive study of a particular aspect of modern theatrical technologies. Various topics may be selected based on current industry trends, student needs and available resources.
Prerequisite: THEA 1330, 3381 and 3382.

THEA 4314  Collaborative Approaches to Design
3 Semester Credit Hours (3 Lecture Hours)
An advanced design course where the student will examine the process of design from the standpoint of the relationship created within the design team. Through class projects, the student will participate in a design process which fosters communication of ideas, written analysis and collaboration in pursuit of a unified design in all aspects of production.
Prerequisite: THEA 3373.
Co-requisite: SMTE 0098.

THEA 4323  Oral Interpretation of Children's Literature
3 Semester Credit Hours (3 Lecture Hours)
A study, primarily through the medium of performance, of various types and forms of literature for children. Strongly oriented toward teaching literature in the elementary school classroom. (Credit may not be given for both this course and COMM 4323 or ENGL 4370.)

THEA 4333  Technical Direction
3 Semester Credit Hours (3 Lecture Hours)
An advanced technical class geared for the student who wishes to receive training and employment as a technical director.

THEA 4360  Stage Direction I
3 Semester Credit Hours (3 Lecture Hours)
The study and practical application of directing principals for the beginning director. Elements of script analysis, blocking, movement, character development, tempo, and design will be investigated as part of the directing process. The student will direct a ten-minute play for public performance.
Prerequisite: THEA 1352 and 2355.

THEA 4361  Stage Direction II
3 Semester Credit Hours (3 Lecture Hours)
An advanced study in directing with actual experience in organization, interpretation, casting, and producing the one-act play. The student will direct a one-act play for public performance.
Prerequisite: THEA 4360.
THEA 4364 Costume Crafts
3 Semester Credit Hours (4 Lecture Hours)
Students will learn to identify, comprehend, and demonstrate practical knowledge of tools, machines, and techniques practiced in a costume crafts studio. They will learn to recognize the different materials, chemicals, and tools used in costume crafts. They will know what the above items are best suited for and what type of project they should be applied to. The student will gain basic crafting skills. These skills are gained by extensive hands-on experience by working on projects in the costume studio. They will gain the ability to purchase, layout, cut, and construct any specialty project in the costuming area.

Prerequisite: THEA 1371 and 2370.

THEA 4365 Costume Design
3 Semester Credit Hours (3 Lecture Hours)
A study of the theory and practice of costume design utilizing the human form as a design element for the stage. Encompasses theatre form, style, and drafting and drawing techniques. Students are required to work on University Theatre productions as part of this course.

THEA 4366 Scene Painting
3 Semester Credit Hours
The examination and practice of the various materials and techniques of professional scenic painting, including material mixing, faux techniques, and textural applications.

THEA 4370 Set Design
3 Semester Credit Hours (3 Lecture Hours)
A study of the theory and practice of set design. Students will learn the fundamentals of theatre design and will apply this knowledge to projects. Projects will encompass theatre form, style, and concept utilization. Students are required to work on University Theatre productions as part of this course.

Co-requisite: SMTE 0098.

THEA 4371 Acting for the Camera
3 Semester Credit Hours (3 Lecture Hours)
Emphasizes the practice of various acting styles for television, video, and film. The student will receive practical experience in commercial styles, public service announcements, television and video style acting, and film scene study. (Credit may not be given for both this course and COMM 4371.)

THEA 4372 Theatre Practicum
3 Semester Credit Hours (3 Lecture Hours)
Advanced practice and participation in set construction, lighting implementation, and stagecraft. Students will build upon skills in the areas of theatre production and design for production in the University Theatre. Class meets twice weekly with additional crew/lab work requirements as well. Students are required to work on University Theatre productions as a part of this course. May be repeated twice for credit.

THEA 4373 Improvisation Skills Level I
3 Semester Credit Hours (3 Lecture Hours)
is a fundamentals of improvisation course that teaches the guidelines for successful improvisation skills. The course emphasizes the basics of successful improvisation as it pertains to Theatre, Communication, and the student who wants to improve their communication skills. May be repeated for credit.

THEA 4374 Improvisation Skills Level II
3 Semester Credit Hours (3 Lecture Hours)
is a continuation of Improvisation course level I that instructs the student in the guidelines for advanced improvisation skills. The course teaches the skills necessary for advanced individual and group improvisation. Emphasis is on ensemble performance. May be repeated for credit.

Prerequisite: THEA 4373.

THEA 4375 Lighting Design
3 Semester Credit Hours (3 Lecture Hours)
A study of the theory and practice of lighting design. Practical experiences in University Theatre are included to provide exposure to the total design and implementation of lighting design. Students will become familiar with the techniques and aesthetics of lighting theatrical performances and will apply skills to create designs for projects and actual plays. Students are required to work on University Theatre productions as a part of this course.

THEA 4380 Advanced Stage Makeup
3 Semester Credit Hours (3 Lecture Hours)
A study of the theory and practice of designing makeup for the stage. Students will learn about aesthetics, application, and techniques of stage makeup. Students will do makeup designs as projects in the class. Students are required to work on University Theatre productions as part of this course.

THEA 4384 Theatre Production
1-3 Semester Credit Hours (1-3 Lecture Hours)
An applied production experience in which students perform in a play, work backstage or on a stage crew, or learn to design a play or musical from conception to final production. Students enrolling in the course but not cast in the shows will work backstage (technical production) or in another production capacity. Enrollment is by application only, and must be approved by the instructor in advance of registration. As part of the application process the number of credit hours will be determined by the instructor. May be repeated for credit.

THEA 4390 Topics in Theatre
1-3 Semester Credit Hours (1-3 Lecture Hours)
Study of specialized topics and themes in the areas of acting, directing, and theatre history. May be repeated when topics vary.

THEA 4396 Directed Individual Study
1-3 Semester Credit Hours (1-3 Lecture Hours)
See College description. By application.

THEA 4398 Applied Experience
3 Semester Credit Hours
See College description. By application.

Certificate Programs

- Advanced TESOL, Certificate (p. 376)
- Spanish/English Translation, Certificate (p. 382)
- TESOL, Certificate (p. 385)
- Writing for Non-Profits, Certificate (p. 391)

Advanced TESOL, Certificate
Program Description
The Advanced TESOL (Teachers of English to Speakers of Other Languages) Certificate provides a pathway for students to acquire and further develop skills needed for teaching English internationally or teaching English to adult second language learners in the U.S. The
certificate consists of 16 semester hours of five core courses plus one credit of guided independent tutoring work.

**General Requirements**

Students must have at least an overall GPA of 2.75 in the six courses. All courses must be passed with a C or better. Students must have completed ENGL 1302 Writing and Rhetoric II (3 sch) and Core Curriculum Language, Philosophy, and Culture requirements (ENGL 2316, ENGL 2332, ENGL 2333, PHIL 1301, PHIL 2306, or SPAN 3307, SPAN 3308, SPAN 3309, or SPAN 3310) with a C or better. Students must pursue the certificate in conjunction with their bachelor's degree; the certificate will be awarded upon completion of their degree. Students already holding a Bachelor's degree may also pursue a TESOL certificate. This certificate will appear on transcripts. Non-degree seeking students pursuing this certificate will be eligible for financial aid.

**Course Sequencing**

Certificate Coordinator: Dr. Stephen Doolan

Students should take the courses in the following sequence to complete in the most timely manner:

**First Year**

**Fall**

ENGL 3339 Introduction to Linguistics (offered Fall & Spring) 3

**Hours** 3

**Spring**

ENGL 3340 Grammar (offered Fall & Spring) 3

**Hours** 3

**Second Year**

**Fall**

ENGL 3365 Second Language Acquisition (only offered in the Fall) 3

**Hours** 3

**Spring**

ENGL 3367 TESOL Seminar (offered Fall & Spring) 3

ENGL 3167 English as a Second/Foreign Language Tutoring (offered Fall & Spring) 1

**Hours** 4

**Third Year**

**Fall**

One additional Applied Linguistics course: 3

**Total Hours** 16

**NOTE:** While three courses (ENGL 3339, ENGL 3340, ENGL 3365) can be taken with multiple courses in the same semester, we recommend that ENGL 3365 is taken prior to ENGL 3367 & ENGL 3167. Taking ENGL 3365, ENGL 3367, & ENGL 3167 in the same semester requires instructor approval.

**Courses**

ENGL 0001 Grammar I

0 Semester Credit Hours (3 Lecture Hours)

Grammatical structures that enable students to better comprehend and use academic English are the focus of the course. Students will learn to appreciate the relevance of acquiring and applying grammatical knowledge to express themselves confidently and appropriately in different academic situations, as well as social situations relevant to the American college context.

ENGL 0002 Listening and Speaking I

0 Semester Credit Hours (3 Lecture Hours)

This course provides short and focused activities to help students improve their English listening and speaking skills. It includes practice in both mastering the larger message and key words, phrases and specific sounds to assist students in developing better speaking and comprehension skills. Students will practice giving academic presentations as well as practice speaking in small groups and individually.

ENGL 0003 Reading I

0 Semester Credit Hours (3 Lecture Hours)

In this course, students will develop the reading skills essential for academic learning and inquiry in the context of authentic academic reading tasks. Students will work to build fluency, comprehension, and vocabulary skills through extensive and intensive reading tasks of increasing complexity. Contemporary academic and literary texts will be used to develop students’ critical reading and vocabulary, writing, listening, and speaking skills.

ENGL 0004 Writing I

0 Semester Credit Hours (3 Lecture Hours)

In this course, students will learn and apply the writing skills essential for academic success including sentence, paragraph, and basic essay writing. This course is aimed at students planning to study, or are already studying, at university level in English.
ENGL 0005 Recitation I
0 Semester Credit Hours (3 Lecture Hours)
This course provides students with a structured, scheduled academic environment providing the opportunity to complete assignments and work closely with their language instructor. Instructors utilize materials from student courses to facilitate activities and discussions that will increase comprehension of academic material and further students’ abilities to work independently in academic settings. Each week, the course will focus on the language skills and vocabulary needed for the students’ courses. Additionally, there will be a focus on study skills and time management needed for success in academic settings. Students will leave the course better equipped for university level academic course work and a thorough understanding of time management and appropriate study habits for the university.

ENGL 0011 Grammar II
0 Semester Credit Hours (3 Lecture Hours)
This course will focus on high-intermediate grammatical structures that enable students to better comprehend and use academic English. Students will learn to appreciate the relevance of acquiring and applying grammatical knowledge to express themselves confidently and appropriately in different academic situations, as well as social situation relevant to the American college context.

ENGL 0012 Listening and Speaking II
0 Semester Credit Hours (3 Lecture Hours)
In this course, students will learn and apply the listening, note-taking, and presentation skills essential for academic learning, inquiry, and communication in the context of authentic academic listening and speaking tasks. Students will work to build fluency, comprehension, and vocabulary skills through extensive and intensive listening tasks of increasing complexity. Contemporary academic lectures and seminars will be used to develop students’ critical thinking skills.

ENGL 0013 Reading II
0 Semester Credit Hours (3 Lecture Hours)
In this course, students will study texts across several different academic disciplines in order to deepen their understanding of the rhetorical styles and conventions used and applied within the English language. Students will practice identifying audience, purpose, theme, main ideas, and details within several different genres of writing. Students will also develop a variety of strategies to improve their reading comprehension and efficiency, including annotation, vocabulary-building, and discussions regarding written materials.

ENGL 0014 Writing II
0 Semester Credit Hours
In this course, students will develop a foundation in the writing skills critical to academic success. Students will apply knowledge of audience, purpose, voice, arrangement, and style in varied writing tasks by writing across several different genres. Genres practiced in this course may include, but are not limited to: emails, newsletters, personal narratives, fiction, academic essays, and magazine/news articles. Students will learn grammar and vocabulary conventions as they apply to different genres and apply these skills in writing tasks of increasing complexity throughout the semester.

ENGL 0022 Listening and Speaking III
0 Semester Credit Hours (3 Lecture Hours)
In this course students will learn and apply listening, note-taking, and presentation skills essential for academic learning, inquiry, and discourse in the context of authentic academic listening and speaking tasks. Students will work to build fluency, comprehension, and vocabulary skills through extensive and intensive listening tasks of increasing complexity. Contemporary academic lectures and seminar will be used to develop students’ critical thinking skills.

ENGL 0023 Reading and Writing III
0 Semester Credit Hours (3 Lecture Hours)
In this course students will improve upon and apply the reading skills essential for academic learning, inquiry, and discourse in the context of authentic academic reading tasks. Students will build vocabulary through extensive and intensive reading tasks of increasing complexity. Contemporary academic tests about writing will be used to develop students’ critical reading, academic vocabulary, and complex writing skills. There will be a number of in-class written tasks and prompts that will stimulate free writing practice and introduce students to various styles of writing. Students will also use these written tasks to develop editing skills through the writing process. The final project will be a collection of these written tasks in the form of a portfolio.

ENGL 0036 US Culture
0 Semester Credit Hours (3 Lecture Hours)
This course will offer English Language Learners a means for analyzing and evaluating the complex social and moral issues that are specific to the social and moral landscape of the United States. As students examine their own cultures and compare them with others, culture shock and cultural conflict may be lessened and appreciation for cultural differences may be strengthened. Students will engage in interactive tasks, including researching and case analysis of topics and social, academic and professional issues, especially those suggested by the extensive reading component of this course. Through the process of reading, discussion, analysis and writing students in this class will enrich their understanding of today's global society while at the same time they are sharpening their academic English skills.

ENGL 0037 Critical Thinking
0 Semester Credit Hours (3 Lecture Hours)
The purpose of this course is to develop the critical thinking skills needed to interpret and assess arguments and information. This course will highlight the language skills essential for critically analyzing and discussing the quality of the information and opinions presented in authentic texts and listening selections. The course will concentrate on detecting errors of reasoning in short and long passages, evaluating evidence in written and verbal arguments, detecting logical inconsistencies, removing vagueness and ambiguity through word choice and phrasing, and identifying the point or purpose of someone’s remarks. Through examining these topics, students will be able to thoughtfully respond to others’ opinions in a clear, logical, and informed way. Students will leave the course better prepared to collect, synthesize, and evaluate information and feel more confident in presenting their perspectives in an academic setting.

ENGL 0099 Integrated Reading and Writing Non-Course Based Development
0 Semester Credit Hours
ENGL 0099 is designed to develop students’ critical reading and academic writing skills on an individualized basis through tutoring. The course fulfills TSI requirements for reading and writing. TSI compliance staff will approve each student for this course. Approval is based on test score and/or by academic standing.
ENGL 0399 Integrated Reading and Writing
3 Semester Credit Hours (3 Lecture Hours)
A portfolio-based course with required tutoring (lab) time focused on the writing and reading processes, including strategies for invention, revision, and editing, and techniques of active reading, such as analysis, inference, summary, and evaluating texts. Students will enter ENGL 0399 through Texas Success Initiative (TSI) mandated remediation. (Not counted toward graduation)

ENGL 1301 Writing and Rhetoric I
3 Semester Credit Hours (3 Lecture Hours)
English 1301 introduces students to writing studies, rhetoric, academic research, and information literacy. Students will critically read and reflect on threshold concepts in writing studies. They will practice recursive writing and research processes for various situations. Sections will be offered both online and in person each semester.

TCCNS: ENGL 1301

ENGL 1302 Writing and Rhetoric II
3 Semester Credit Hours (3 Lecture Hours)
English 1302 builds on the foundation in writing studies, rhetoric, academic research, and information literacy introduced in ENGL 1301. Students will read, apply, and reflect on the current research and scholarship in writing studies and rhetoric. Students will practice transferring, deepening, and extending their ability to use writing in discipline-specific, workplace, and civic contexts. Sections will be offered both online and in person each semester.

Prerequisite: ENGL 1301.

TCCNS: ENGL 1302

ENGL 2303 Introduction to Writing Studies
3 Semester Credit Hours (3 Lecture Hours)
This course will review current scholarship on writing studies, including threshold concepts, activity theory, and genre studies. It will consider various perspectives on the uses of writing to provide students with an intellectual and practical understanding of writing. This course provides a starting point for the more specific studies of writing that occur in other writing studies courses.

ENGL 2316 Literature and Culture
3 Semester Credit Hours (3 Lecture Hours)
Introduction to literatures that raise aesthetic, cultural, social, and/or political issues that affect and reflect the human condition across regions, cultures, and nations. Sample topics: Crossing Borders, The City in Literature, Islands and Islanders, Science and Fiction.

TCCNS: ENGL 2331

ENGL 2332 Literature of the Western World: From the Classics to the Renaissance
3 Semester Credit Hours (3 Lecture Hours)
Study of important literary texts from the Ancient World to the Renaissance.

TCCNS: ENGL 2332

ENGL 2333 Literature of the Western World: From the Enlightenment to the Present
3 Semester Credit Hours (3 Lecture Hours)
Study of important literary texts from the Enlightenment to the present.

TCCNS: ENGL 2333

ENGL 2360 Language and Gender
3 Semester Credit Hours (3 Lecture Hours)
In this class, we explore how language reflects, and is reflected upon, one facet of our identities: gender. We will explore the complex relationships between gender and aspects of language such as conversation, narrative, pronunciation, grammar, and pragmatic norms. We will also discuss the intersection of gender and other social factors, such as race or culture, as manifested in the language use. Students will also have an opportunity to discuss how gender is represented in the media and online, as well as how gender is situated in institutional contexts, such as home, school, work, and law. There is no prior knowledge of linguistics or social theory required for this class. Course activities include lectures, class discussions, in-class article presentation, language observations, hands-on data analysis, and a final project.

ENGL 2370 Introduction to Literary Studies
3 Semester Credit Hours
An introduction to literary analysis and scholarship for the intermediate writer. Emphasis placed on genres of literature, literary research, and expository and analytical composition. Familiarizes students with the various disciplines and related conversations within English Studies. Should be taken by sophomore-level English majors in the Literary Studies emphasis, and by Literary Studies and Creative Writing minors.

Prerequisite: ENGL 1302.

ENGL 2371 Exploring Social Media
3 Semester Credit Hours (3 Lecture Hours)
In this course we will examine and discuss current issues related to social media within a rhetorical framework. We will use different social media platforms to share and discuss in order to provide hands-on experience in these environments. Social media will be explored at the micro level as students will review their online social media presence to better understand how readers view them online. From the macro level we will identify current topics that affect the design and use of social media platforms and applications.

ENGL 3167 English as a Second/Foreign Language Tutoring
1 Semester Credit Hour
Students pursuing the Advanced TESOL Certificate will supplement ENGL 3367 (TESOL Seminar: Methods) with practical experience tutoring English learners. Students will write reflectively about those experiences. As needed, students will undergo site-specific training.

Co-requisite: ENGL 3367.

ENGL 3301 Technical and Professional Writing
3 Semester Credit Hours
A course designed to help students gain practical experience in finding and interpreting information and writing reports and documents for specialized audiences in the technical and professional world. ENGL 3301 will be held in a computer-assisted classroom.

ENGL 3302 Techniques of Creative Writing
3 Semester Credit Hours (3 Lecture Hours)
Introduces students to the theoretical knowledge and practical experience used in creative writing. Focuses on poetry, creative nonfiction, and short fiction. For all majors.
ENGL 3310 Technical and Professional Writing for Computer Science
3 Semester Credit Hours (3 Lecture Hours)
Designed specifically for computer science majors, this course focuses on developing students' ability to (1) use writing to communicate effectively with a range of audiences about technology; (2) identify, analyze, and appropriately integrate relevant information in their writing; (3) make informed judgments about their uses of writing based on ACM's and IEEE's code of ethics; and (4) develop their ability to function effectively individually and as members of a team to establish goals, plan tasks, meet deadlines, manage risk, and produce deliverables.

ENGL 3321 Film and Literature
3 Semester Credit Hours (3 Lecture Hours)
3 sem. hrs. Studies the connections between the formal elements of literature and of film, with emphasis on theme, narrative style, and genre. By viewing films based on literary sources, students will analyze how literature is adapted into film as well as identify strategies to view and read critically. For all majors.

ENGL 3323 Young Adult Fiction
3 Semester Credit Hours (3 Lecture Hours)
Literary study of young adult literature through analysis, discussion, and interpretation. The course emphasizes literary issues connected with society, culture, history, and genre.

ENGL 3325 Interdisciplinary Approaches to Literature
3 Semester Credit Hours (3 Lecture Hours)
In recent decades, it has become common to study literature in light of other disciplinary perspectives and to study other disciplines as they are depicted in literature. From these interdisciplinary approaches has emerged a distinct mode of analysis that examines texts within their broader social and cultural milieu. In this course students will earn to use cross-disciplinary methods to interpret literature and culture. Topics will vary, but may include Religion, Medicine, and American Literature, Disability Narratives in the Eighteenth Century, Trauma and the City in Twentieth-Century Literature.

ENGL 3330 Current Events and Literature
3 Semester Credit Hours (3 Lecture Hours)
This course examines literature in the context of current issues and events. Students will place literature in conversation with social, political, and cultural trends as a means of engaging with and understanding these trends and the debates associated with them. Using reading, writing, and discussion as modes of critical inquiry, students will discover the critical role that literature plays in representing, responding to, and shaping current events.

ENGL 3339 Introduction to Linguistics
3 Semester Credit Hours (3 Lecture Hours)
Introductory survey course covering phonetics, morphology, syntax, semantics, sociolinguistics, neurolinguistics, and language acquisition.

ENGL 3340 Grammar
3 Semester Credit Hours (3 Lecture Hours)
Presents a general descriptive overview of English grammar and provides a structural framework for analyzing English sentences.

ENGL 3341 British Literature before 1800
3 Semester Credit Hours (3 Lecture Hours)
Study of significant works of poetry, drama, and prose before 1800 with emphasis on historical context and the exploration of literary and cultural values through written texts.
Prerequisite: (ENGL 2370*) or (ENGL 3303*) or (ENGL 2303*).
* May be taken concurrently.

ENGL 3345 British Literature since 1800
3 Semester Credit Hours (3 Lecture Hours)
Study of significant works of British poetry, drama, and prose since 1800 with emphasis on historical context and the exploration of literary and cultural values through written texts.
Prerequisite: (ENGL 2370*) or (ENGL 3303*) or (ENGL 2303*).
* May be taken concurrently.

ENGL 3348 Drama
3 Semester Credit Hours (3 Lecture Hours)
A genre-oriented study of dramatic literature, using a wide range of texts. Variable content.

ENGL 3349 Poetry
3 Semester Credit Hours (3 Lecture Hours)
A genre-oriented study of poetry using a wide range of texts. Variable content.

ENGL 3354 American Literatures before 1900
3 Semester Credit Hours (3 Lecture Hours)
Study of significant works of American poetry, drama, and prose from the country's pre-European beginnings to 1900 with emphasis on historical context and the exploration of literary and cultural values through written texts.
Prerequisite: (ENGL 2370*) or (ENGL 3303*) or (ENGL 3303*).
* May be taken concurrently.

ENGL 3355 American Literatures since 1900
3 Semester Credit Hours (3 Lecture Hours)
Study of significant works of American poetry, drama, and prose from 1900 to the present with emphasis on historical context and the exploration of literary and cultural values through written texts.
Prerequisite: (ENGL 2370*) or (ENGL 2303*) or (ENGL 3303*).
* May be taken concurrently.

ENGL 3360 Current Approaches to Composition and Literature
3 Semester Credit Hours (3 Lecture Hours)
Prepares prospective teachers to create developmentally appropriate learning environments and tasks that enable student success in writing and the study of literature in Language Arts and English courses. Prepares students to meet the increased writing and reading expectations in all subject areas, including their own writing.

ENGL 3361 Strategies and Genres of Advanced Writing
3 Semester Credit Hours (3 Lecture Hours)
Students will practice-writing in situated contexts (such as their majors, careers, and/or other professional interests) and across genres to develop more advanced and reflective writing strategies. By studying theories of writing; engaging in writing as a craft; and drafting, revising, and editing texts; students will refine and become more reflective in their writing processes.

ENGL 3362 Creative Writing Workshop: Survey and Practice of Genres
3 Semester Credit Hours (3 Lecture Hours)
Develops students' skills as critics and writers of fiction, poetry, and creative nonfiction in a workshop setting. For all majors.

ENGL 3363 Foundations of Rhetoric
3 Semester Credit Hours (3 Lecture Hours)
This course will study the historical and theoretical development of rhetoric through the works of principal thinkers. Students will analyze rhetorical concepts in their relation to civic, cultural, political, and pedagogical developments and the construction of knowledge and will use rhetorical concepts to produce logical, ethical, and moral arguments.
ENGL 3364 Strategies of Writing Creative Nonfiction
3 Semester Credit Hours (3 Lecture Hours)
Explores the uses of creative nonfiction through reading and writing about published works of experienced writers and scholars in the field and practicing a variety of creative nonfiction techniques and genres (e.g. literary journalism, memoir, and the personal narrative).

ENGL 3365 Second Language Acquisition
3 Semester Credit Hours (3 Lecture Hours)
This course is an introduction to second language acquisition. The course is designed to be accessible to students from a wide variety of backgrounds and no basic knowledge of the linguistic structure of English will be assumed. This course will address issues related to how second language is learned by both children and adults.

ENGL 3366 Language in Society
3 Semester Credit Hours (3 Lecture Hours)
An introduction to the study of language as a function of several societal variables. Introduces basic concepts of language such as linguistic varieties, dialect, speech communities, and linguistic attitudes.

ENGL 3367 TESOL Seminar
3 Semester Credit Hours (3 Lecture Hours)
This course presents an introduction to and a critique of current and traditional methodologies of teaching English to speakers of other languages, with emphasis on aural comprehension; speaking, reading, and writing skills; testing and assessment; and linguistic-cultural differences. This course is open to all majors, but is required for students seeking the Certificate in TESOL.
Prerequisite: ENGL 3365.

ENGL 3369 Topics in Linguistics
3 Semester Credit Hours (3 Lecture Hours)
Exploration of topics such as second language acquisition, language assessment, history of English, and contrastive analysis. May be repeated when topics vary.

ENGL 3378 Document Design and Publishing
3 Semester Credit Hours (3 Lecture Hours)
Focuses on the integration of text and visual rhetoric, such as graphics, for all kinds of professional publications including technical documents, media, public relations pieces, and advertisements.

ENGL 3379 Writing for the Web
3 Semester Credit Hours (3 Lecture Hours)
Emphasizes practical concepts related to writing and communication on the internet and the World Wide Web. Attention is given to finding and analyzing information; analyzing and designing WWW sites and other digital, hypertextual environments; and analyzing and composing hypertext-hypermedia materials for digital, networked environments. For all majors.

ENGL 3380 Visual Rhetoric
3 Semester Credit Hours (3 Lecture Hours)
Focuses on the analysis, design, and production of visual representations and multi-modal texts that integrate visual elements.

ENGL 4123 Nonprofit Writing Project
1 Semester Credit Hour
Students will gain practical experience with a nonprofit agency by developing a significant project that meets an agency identified need. Students should take this course in the last semester of their nonprofit certificate program in conjunction with one of the following: ENGL 3378, ENGL 3379, ENGL 4322, or ENGL 4321. The students' professor in the regular course will be the instructor of record for a the projects course.

ENGL 4300 Technologies and Cultures of the Book
3 Semester Credit Hours (3 Lecture Hours)
Working with a range of print media, students will learn to analyze the interplay between the text's content and its formal features. Students will build the skills to think and write analytically about the materiality of texts.

ENGL 4305 Major Authors
3 Semester Credit Hours (3 Lecture Hours)
This course studies the significant works of a major literary author. Texts are viewed through a variety of critical perspectives and placed in the context of the writer's life and of the society, culture, and history of the times. May be repeated once for credit when authors vary.

ENGL 4320 Professional Writing Workshop
3 Semester Credit Hours (3 Lecture Hours)
This course is tailored for individual students' writing and publishing projects in their disciplines.

ENGL 4321 Grants and Proposals
3 Semester Credit Hours (3 Lecture Hours)
This course will teach students the grant proposal writing process, including identifying sources of funding, conducting research to support funding applications, and tailoring each proposal to a specific funding agency. Students will receive experience writing actual proposals on behalf of local organizations and agencies.

ENGL 4322 Writing in the Nonprofit Agencies
3 Semester Credit Hours (3 Lecture Hours)
Focuses on the specific kinds writing of professionals in the nonprofit world do, including internal communication in an agency, writing for the public, document creation, fund raising, board relations, and other relevant topics.

ENGL 4324 Editing & Style
3 Semester Credit Hours (3 Lecture Hours)
Practice in methods, tools, and principles of editing for nonfiction and technical publications. Emphasis on a rhetorical understanding of levels of editing, managing the editorial process, and grammar and style.

ENGL 4325 Writing Across Cultures and Contexts
3 Semester Credit Hours (3 Lecture Hours)
Through writing, students will study how groups perceive, understand, and communicate with and about each other. The course may focus on a specific type of writing (cross cultural expository writing, travel writing, cross cultural writing in industry), or on the linguistic and rhetorical practices of a cross-cultural community (latino/a rhetoric, African-American rhetorics, etc).

ENGL 4335 Creative Writing Studio: Development of Craft
3 Semester Credit Hours (3 Lecture Hours)
Develops students' skills as critics and writers of fiction, poetry, and creative nonfiction in a studio setting. Guides students to focus on a major project in one genre with sustained practice of techniques and revision. Open to students of all levels, from the novice to the advanced. For all majors.

ENGL 4340 The Novel
3 Semester Credit Hours (3 Lecture Hours)

ENGL 4345 Rhetorics, Literacies, and Writing
3 Semester Credit Hours (3 Lecture Hours)
This course examines the history and major theories of rhetoric, literacy, and composition, and explores how they influence contemporary cultural productions.
ENGL 4350  Studies in Poetics: Theory, Form, and Practice  
3 Semester Credit Hours (3 Lecture Hours)
Develops students' theoretical knowledge of poetics and practical experience of writing in traditional forms, from the Anglo-American tradition to the culturally diverse movements and innovation of form. Focusing on works written by poets about poetry and poetics primarily from the 19th to the 21st centuries. For all majors.

ENGL 4351  Senior Capstone: Literature and Writing  
3 Semester Credit Hours (3 Lecture Hours)
A study of literature in English for graduating seniors in the Literary Studies Emphasis. Emphasis is placed on genre, research, and analytical expository writing. 
Prerequisite: ENGL 2370, 3303 or 2303.

ENGL 4352  Capstone in Writing Studies  
3 Semester Credit Hours (3 Lecture Hours)
This course is the culminating experience for the Writing Studies emphasis in English. Students review, reflect on, integrate, and apply their learning from previous courses and experiences. Students create digital portfolios for career and publishing opportunities, emphasizing selection, revision, reflection, and presentation. In addition, students identify, evaluate, and annotate texts and resources to include in a curated digital collection/publication that will be available for students in future Writing Studies courses.

ENGL 4360  Gender, Sexuality and Literature  
3 Semester Credit Hours (3 Lecture Hours)
This course introduces students to literature that explores issues of gender and sexuality. It focuses on relevant literary periods and conventions, as well as on the historical, social, and cultural contexts of artistic productions. Sample topics: women's literature, queer literature, literature and masculinity.

ENGL 4361  Race and Ethnicity in Literature  
3 Semester Credit Hours (3 Lecture Hours)
Topics focus on a variety of cross-cultural issues in historical and/or contemporary texts by Caribbean, British Indian, Native American, African American, Chicano/a, and/or other underrepresented authors.

ENGL 4362  Texts and Contexts  
3 Semester Credit Hours (3 Lecture Hours)
Study of literary and cultural texts that raise issues of community and social relations, diversity, multiculturalism, and/or globalization. Sample topics: Medicine and Religion in American Literature, Traveling Histories, the Global City, and Literary Regionalism in Transnational Context. May be repeated once for credit when topics vary.

ENGL 4370  Oral Interpretation of Children's Literature  
3 Semester Credit Hours (3 Lecture Hours)
A study, primarily through the medium of performance, of various types and forms of literature for children. Strongly oriented toward teaching literature in the elementary school classroom. (Credit may not be given for both this course or THEA 4323.)

ENGL 4380  Critical Approaches to Literature and Culture  
3 Semester Credit Hours (3 Lecture Hours)
A study of selected perspectives and critical approaches to literature and culture, including an examination of some of the theoretical assumptions upon which they are based, as well as their implications for the way we think about literature, human identity, and the power of language. 
Prerequisite: ENGL 2370.

ENGL 4385  Studies in Creative Writing  
3 Semester Credit Hours (3 Lecture Hours)
Students will focus on the craft of a specific genre or type of writing through reading experts' advice, reading and analyzing examples written by practitioners, and engaging in peer-response workshops with classmates. Attention will be paid to publication opportunities available for writers in that genre.

ENGL 4390  Topics in Literary Studies  
3 Semester Credit Hours (3 Lecture Hours)
May be repeated when topics vary—see S.A.I.L. or advisor for further information.

ENGL 4391  Topics in Writing Studies  
3 Semester Credit Hours (3 Lecture Hours)
May be repeated when topics vary—see S.A.I.L. or advisor for further information.

ENGL 4396  Directed Individual Study  
1-3 Semester Credit Hours (1-3 Lecture Hours)
See College description.

ENGL 4398  Applied Experience  
3 Semester Credit Hours (3 Lecture Hours)
See College description.

ENGL 4399  TESOL Practicum  
3 Semester Credit Hours
Practical experience teaching English to second language learners. Students will observe, plan, and teach ESL lessons. Instructional support provides opportunities to discuss and reflect upon teaching experiences and help students connect theory, methods, and practice. This course enhances the TESOL Certification, but is not required for it. Cannot be repeated for credit.

Spanish/English Translation, Certificate

Program Description
The Translation Certificate is available to Spanish majors, Spanish minors, Students in Business, International Studies and Nursing, and general public from the Corpus Christi community who wish to specialize in English-Spanish and Spanish-English translation. Translators produce a written document that was originally written in another language. Students completing this program will develop or enhance their skills to obtain employment as business, financial, healthcare and legal translators. The Certificate will require completion of 16 credits and an Exit Examination.

Student Learning Outcomes
Upon Completion of this certificate, students will:

- Analyze original texts for translation and examine the conventions of the text and genre
- Differentiate type of texts, tools, language and strategies for specialized translation
- Translate specialized texts from English into Spanish and Spanish into English in the business, financial, healthcare, commercial, and legal areas at a near-professional level

Courses

SPAN 1100 Introduction to Service Learning
1 Semester Credit Hour

This is a one-credit course in which students in Spanish 1311 or 1312 may enroll and participate. This service learning course aims to promote collaborative learning between college students learning Spanish and people in the community. Available upon application. Repeatable up to 2 hours.

SPAN 1311 Spanish I
3 Semester Credit Hours (3 Lecture Hours)
Introduction to listening, speaking, reading and writing skills within a Spanish cultural framework. For students without previous knowledge of the language. (Language laboratory required. One hour per week.) *A lab fee is required for these courses.

SPAN 1312 Spanish II
3 Semester Credit Hours (3 Lecture Hours)
Continued practice in listening, speaking, reading and writing skills within a Spanish cultural framework. (Language laboratory required. One hour per week.) A lab fee is required for these courses.

Prerequisite: (SPAN 1311).

SPAN 2311 Spanish III
3 Semester Credit Hours (3 Lecture Hours)
Study of more complex Spanish sentence structure to further listening, speaking, reading and writing skills at an intermediate level within a Spanish cultural framework.

Prerequisite: SPAN 1312.

TCCNS: SPAN 2311

SPAN 2312 Continuing Spanish
3 Semester Credit Hours (3 Lecture Hours)
Continued development and review of all language skills at an intermediate level within a Spanish framework with an emphasis in the linguistic and cultural perspective.

Prerequisite: SPAN 2311.

TCCNS: SPAN 2312

SPAN 2313 Spanish for Heritage Speakers
3 Semester Credit Hours (3 Lecture Hours)
An introductory course designed for bilingual students who wish to enhance their linguistic skills (speaking, listening, reading and writing). This course will focus on the cultural and historical aspects related to the heritage Spanish speaker.

TCCNS: SPAN 2313

SPAN 2315 Language and Culture for Heritage Learners
3 Semester Credit Hours (3 Lecture Hours)
This course is designed to guide Spanish heritage language learners, as well as advanced learners of Spanish, in the development of their oral proficiency, written communication, and grammatical accuracy while exploring different cultural aspects from the Spanish-speaking world. It is highly recommended for students who have taken SPAN 2313 and/or who are transitioning into upper-division Spanish courses.

Prerequisite: SPAN 2313.

SPAN 3302 Spanish Composition
3 Semester Credit Hours (3 Lecture Hours)
A course designed to develop analytical perspectives in literary criticism and to strengthen reading and writing skills in Spanish through intensive reading of Spanish, Spanish American, and Chicano fiction.

Prerequisite: SPAN 2312.

SPAN 3303 Spanish Conversation
3 Semester Credit Hours (3 Lecture Hours)
A course designed to strengthen the student’s oral proficiency in the language through selected readings, videos and oral presentations.

Prerequisite: SPAN 2312.

</tbody>
</table>
SPAN 4303 Spanish in the Southwest
3 Semester Credit Hours (3 Lecture Hours)
Cultural and linguistic dimensions of Spanish dialects of the Southwestern United States, with special attention to Texas Spanish and its sociolinguistic perspectives in the bilingual community at large.
Prerequisite: SPAN 2312.

SPAN 4304 Miguel de Cervantes' Don Quijote
3 Semester Credit Hours (3 Lecture Hours)
An advanced course designed to provide an introduction to Miguel de Cervantes' Don Quijote.

SPAN 4305 Latin American Novel
3 Semester Credit Hours (3 Lecture Hours)
This course explores major novels from Latin America from the 20th century to the present. It examines the different problems, discourses, voices, contexts, and geographies that define this genre in Latin America.

SPAN 4306 Modern Spanish Literature
3 Semester Credit Hours (3 Lecture Hours)
A course that focuses on modern Spanish literature. It is highly recommended that students take any of the following before taking this course: SPAN 2313, 2315, 3302, 3303, have advanced proficiency or faculty permit. Conducted in Spanish, unless otherwise stated.

SPAN 4313 Spanish Interpretation
3 Semester Credit Hours (3 Lecture Hours)
This course presents an introduction to methodologies, requirements, terminology, and practice of interpretation, with emphasis on simultaneous, consecutive, and sight interpretation.

SPAN 4320 Spanish in the Americas
3 Semester Credit Hours (3 Lecture Hours)
A study of the Spanish that was brought to the Americas, its development, propagation and contact with native-American languages, including the sociocultural factors that have contributed to the linguistic variation in contemporary Spanish-speaking societies.

SPAN 4322 Medical, Scientific and Technical Translation
3 Semester Credit Hours (3 Lecture Hours)
An advanced course in translation concentrating on medical, scientific and technical translation. The course is designed to extend student's knowledge of translation theory and consolidate their skills in specialized translation.
Prerequisite: (SPAN 3313).

SPAN 4327 Methods in Foreign Language Instruction
3 Semester Credit Hours (3 Lecture Hours)
This course is designed to study the current methods in foreign languages, their application in maximizing language proficiency, and the role of the students' culture and language during the learning process.

SPAN 4390 Topics in Spanish
3 Semester Credit Hours (3 Lecture Hours)
Study of specialized topics in language or literature. These courses may also be designed to develop terminology and overall Spanish proficiency regarding specific professions: Business, Medical, Criminal Justice, Sociology, etc. May be repeated when topics vary.

SPAN 4396 Directed Individual Study
1-3 Semester Credit Hours (1-3 Lecture Hours)
See College description.

SPAN 4398 Applied Experience
3 Semester Credit Hours
A practical work experience related to the Spanish area and related careers. It is intended to provide an opportunity for a student to gain firsthand experience in an unfamiliar field. Consequently, Applied Experience credit may not be granted for a student's regular work assignment or for previous work experience. Registration is by application. The application must include a clearly written description of the duties and responsibilities involved in the Applied Experience project, and be signed by the student, the on-site supervisor, and the faculty supervisor. Completed applications must be received in the Dean's Office by the last class day of the semester preceding intended registration. This course is graded "credit" or "no credit." No more than three semester hours of Applied Experience credit may be counted toward the baccalaureate degree. Undergraduate Applied Experience course will include no less than one hundred hours and no more than 150 hours of work experience per semester.

SPAN 4421 Business, Commercial, and Legal Translation
4 Semester Credit Hours (4 Lecture Hours)
An advanced course in translation concentrating on business, commercial and legal texts. The course is designed to extend student's knowledge of translation theory and consolidate their skills in specialized translation.
Prerequisite: (SPAN 3313).

TESOL, Certificate

Program Description
The TESOL (Teachers of English to Speakers of Other Languages) Certificate provides a pathway for students to acquire skills needed for teaching English internationally or teaching English to adult second language learners in the U.S. The certificate consists of 12 semester hours of four core courses. Students must have at least an overall GPA of 2.75 in the four courses. All courses must be passed with a C or better. Students must have completed ENGL 1302 Writing and Rhetoric II (3 sch) and core curriculum Language Philosophy and Culture requirements (ENGL 2332, ENGL 2333, PHIL 1301, PHIL 2306, SPAN 3307, SPAN 3308, SPAN 3309, or SPAN 3310) with a C or better. Students must pursue the certificate in conjunction with their bachelor's degree; the certificate will be awarded upon completion of their degree. Students already holding a bachelor's degree may also pursue a TESOL certificate.

**NOTE:** While three courses (ENGL 3339, ENGL 3340, ENGL 3365) can be taken with multiple courses in the same semester, we recommend that ENGL 3365 is taken prior to ENGL 3367. Taking ENGL 3365 and ENGL 3367 in the same semester requires instructor approval.

**Courses**

**ENGL 0001  Grammar I**  
0 Semester Credit Hours (3 Lecture Hours)  
Grammatical structures that enable students to better comprehend and use academic English are the focus of the course. Students will learn to appreciate the relevance of acquiring and applying grammatical knowledge to express themselves confidently and appropriately in different academic situations, as well as social situations relevant to the American college context.

**ENGL 0002  Listening and Speaking I**  
0 Semester Credit Hours (3 Lecture Hours)  
This course provides short and focused activities to help students improve their English listening and speaking skills. It includes practice in both mastering the larger message and key words, phrases and specific sounds to assist students in developing better speaking and comprehension skills. Students will practice giving academic presentations as well as practice speaking in small groups and individually.

**ENGL 0003  Reading I**  
0 Semester Credit Hours (3 Lecture Hours)  
In this course, students will develop the reading skills essential for academic learning and inquiry in the context of authentic academic reading tasks. Students will work to build fluency, comprehension, and vocabulary skills through extensive and intensive reading tasks of increasing complexity. Contemporary academic and literary texts will be used to develop students’ critical reading and vocabulary, writing, listening, and speaking skills.

**ENGL 0004  Writing I**  
0 Semester Credit Hours (3 Lecture Hours)  
In this course, students will learn and apply the writing skills essential for academic success including sentence, paragraph, and basic essay writing. This course is aimed at students planning to study, or are already studying, at university level in English.

**ENGL 0005  Recitation I**  
0 Semester Credit Hours (3 Lecture Hours)  
This course provides students with a structured, scheduled academic environment providing the opportunity to complete assignments and work closely with their language instructor. Instructors utilize materials from student courses to facilitate activities and discussions that will increase comprehension of academic material and further students’ abilities to work independently in academic settings. Each week, the course will focus on the language skills and vocabulary needed for the students’ courses. Additionally, there will be a focus on study skills and time management needed for success in academic settings. Students will leave the course better equipped for university level academic course work and a thorough understanding of time management and appropriate study habits for the university.

**ENGL 0011  Grammar II**  
0 Semester Credit Hours (3 Lecture Hours)  
This course will focus on high-intermediate grammatical structures that enable students to better comprehend and use academic English. Students will learn to appreciate the relevance of acquiring and applying grammatical knowledge to express themselves confidently and appropriately in different academic situations, as well as social situation relevant to the American college context.

**ENGL 0012  Listening and Speaking II**  
0 Semester Credit Hours (3 Lecture Hours)  
In this course, students will learn and apply the listening, note-taking, and presentation skills essential for academic learning, inquiry, and communication in the context of authentic academic listening and speaking tasks. Students will work to build fluency, comprehension, and vocabulary skills through extensive and intensive listening tasks of increasing complexity. Contemporary academic lectures and seminars will be used to develop students’ critical thinking skills.

**ENGL 0013  Reading II**  
0 Semester Credit Hours (3 Lecture Hours)  
In this course, students will study texts across several different academic disciplines in order to deepen their understanding of the rhetorical styles and conventions used and applied within the English language. Students will practice identifying audience, purpose, theme, main ideas, and details within several different genres of writing. Students will also develop a variety of strategies to improve their reading comprehension and efficiency, including annotation, vocabulary-building, and discussions regarding written materials.

**ENGL 0014  Writing II**  
0 Semester Credit Hours  
In this course, students will develop a foundation in the writing skills critical to academic success. Students will apply knowledge of audience, purpose, voice, arrangement, and style in varied writing tasks by writing across several different genres. Genres practiced in this course may include, but are not limited to: emails, newsletters, personal narratives, fiction, academic essays, and magazine/news articles. Students will learn grammar and vocabulary conventions as they apply to different genres and apply these skills in writing tasks of increasing complexity throughout the semester.
ENGL 0022 Listening and Speaking III
0 Semester Credit Hours (3 Lecture Hours)
In this course students will learn and apply listening, note-taking, and presentation skills essential for academic learning, inquiry, and discourse in the context of authentic academic listening and speaking tasks. Students will work to build fluency, comprehension, and vocabulary skills through extensive and intensive listening tasks of increasing complexity. Contemporary academic lectures and seminar will be used to develop students’ critical thinking skills.

ENGL 0023 Reading and Writing III
0 Semester Credit Hours (3 Lecture Hours)
In this course students will improve upon and apply the reading skills essential for academic learning, inquiry, and discourse in the context of authentic academic reading tasks. Students will build vocabulary through extensive and intensive reading tasks of increasing complexity. Contemporary academic tests about writing will be used to develop students’ critical reading, academic vocabulary, and complex writing skills. There will be a number of in-class written tasks and prompts that will stimulate free writing practice and introduce students to various styles of writing. Students will also use these written tasks to develop editing skills through the writing process. The final project will be a collection of these written tasks in the form of a portfolio.

ENGL 0036 US Culture
0 Semester Credit Hours (3 Lecture Hours)
This course will offer English Language Learners a means for analyzing and evaluating the complex social and moral issues that are specific to the social and moral landscape of the United States. As students examine their own cultures and compare them with others, culture shock and cultural conflict may be lessened and appreciation for cultural differences may be strengthened. Students will engage in interactive tasks, including researching and case analysis of topics and social, academic and professional issues, especially those suggested by the extensive reading component of this course. Through the process of reading, discussion, analysis and writing, students in this class will enrich their understanding of today’s global society while at the same time they are sharpening their academic English skills.

ENGL 0037 Critical Thinking
0 Semester Credit Hours (3 Lecture Hours)
The purpose of this course is to develop the critical thinking skills needed to interpret and assess arguments and information. This course will highlight the language skills essential for critically analyzing and discussing the quality of the information and opinions presented in authentic texts and listening selections. The course will concentrate on detecting errors of reasoning in short and long passages, evaluating evidence in written and verbal arguments, detecting logical inconsistencies, removing vagueness and ambiguity through word choice and phrasing, and identifying the point or purpose of someone’s remarks. Through examining these topics, students will be able to thoughtfully respond to others' opinions in a clear, logical, and informed way. Students will leave the course better prepared to collect, synthesize, and evaluate information and feel more confident in presenting their perspectives in an academic setting.

ENGL 0099 Integrated Reading and Writing Non-Course Based Development
0 Semester Credit Hours
ENGL 0099 is designed to develop student’s critical reading and academic writing skills on an individualized basis through tutoring. The course fulfills TSI requirements for reading and writing. TSI compliance staff will approve each student for this course. Approval is based on test score and/or by academic standing.

ENGL 0399 Integrated Reading and Writing
3 Semester Credit Hours (3 Lecture Hours)
A portfolio-based course with required tutoring (lab) time focused on the writing and reading processes, including strategies for invention, revision, and editing, and techniques of active reading, such as analysis, inference, summary, and evaluating texts. Students will enter ENGL 0399 through Texas Success Initiative (TSI) mandated remediation. (Not counted toward graduation)

ENGL 1301 Writing and Rhetoric I
3 Semester Credit Hours (3 Lecture Hours)
English 1301 introduces students to writing studies, rhetoric, academic research, and information literacy. Students will critically read and reflect on threshold concepts in writing studies. They will practice recursive writing and research processes for various situations. Sections will be offered both online and in person each semester.

TCCNS: ENGL 1301

ENGL 1302 Writing and Rhetoric II
3 Semester Credit Hours (3 Lecture Hours)
English 1302 builds on the foundation in writing studies, rhetoric, academic research, and information literacy introduced in ENGL 1301. Students will read, apply, and reflect on the current research and scholarship in writing studies and rhetoric. Students will practice transferring, deepening, and extending their ability to use writing into discipline-specific, workplace, and civic contexts. Sections will be offered both online and in person each semester.

Prerequisite: ENGL 1301.

TCCNS: ENGL 1302

ENGL 2303 Introduction to Writing Studies
3 Semester Credit Hours (3 Lecture Hours)
This course will review current scholarship on writing studies, including threshold concepts, activity theory, and genre studies. It will consider various perspectives on the uses of writing to provide students with an intellectual and practical understanding of writing. This course provides a starting point for the more specific studies of writing that occur in other writing studies courses.

TCCNS: ENGL 2331

ENGL 2332 Literature of the Western World: From the Classics to the Renaissance
3 Semester Credit Hours (3 Lecture Hours)
Study of important literary texts from the Ancient World to the Renaissance.

TCCNS: ENGL 2332

ENGL 2333 Literature of the Western World: From the Enlightenment to the Present
3 Semester Credit Hours (3 Lecture Hours)
Study of important literary texts from the Enlightenment to the present.

TCCNS: ENGL 2333
ENGL 2360 Language and Gender  
3 Semester Credit Hours (3 Lecture Hours)  
In this class, we explore how language reflects, and is reflected upon, one facet of our identities: gender. We will explore the complex relationships between gender and aspects of language such as conversation, narrative, pronunciation, grammar, and pragmatic norms. We will also discuss the intersection of gender and other social factors, such as race or culture, as manifested in the language use. Students will also have an opportunity to discuss how gender is represented in the media and online, as well as how gender is situated in institutional contexts, such as home, school, work, and law. There is no prior knowledge of linguistics or social theory required for this class. Course activities include lectures, class discussions, in-class article presentation, language observations, hands-on data analysis, and a final project.

ENGL 3302 Technical and Professional Writing for Computer Science  
3 Semester Credit Hours (3 Lecture Hours)  
Designed specifically for computer science majors, this course focuses on developing students' ability to (1) write to communicate effectively with a range of audiences about technology; (2) identify, analyze, and appropriately integrate relevant information in their writing; (3) make informed judgments about their uses of writing based on ACM's and IEEE's code of ethics; and (4) develop their ability to function effectively individually and as members of a team to establish goals, plan tasks, meet deadlines, manage risk, and produce deliverables.

ENGL 3303 Twentieth-Century Literature  
3 Semester Credit Hours (3 Lecture Hours)  
This course examines literature in the context of current issues and events. Students will place literature in conversation with social, political, and cultural trends as a means of engaging with and understanding these trends and the debates associated with them. Using reading, writing, and discussion as modes of critical inquiry, students will discover the critical role that literature plays in representing, responding to, and shaping current events.

ENGL 3304 Grammar  
3 Semester Credit Hours (3 Lecture Hours)  
Presents a general descriptive overview of English grammar and provides a structural framework for analyzing English sentences.

ENGL 3305 British Literature before 1800  
3 Semester Credit Hours (3 Lecture Hours)  
Study of significant works of poetry, drama, and prose before 1800 with emphasis on historical context and the exploration of literary and cultural values through written texts.  
Prerequisite: (ENGL 2370) or (ENGL 3303) or (ENGL 2303)  
*May be taken concurrently.
ENGL 3345  British Literature since 1800
3 Semester Credit Hours (3 Lecture Hours)
Study of significant works of British poetry, drama, and prose since 1800 with emphasis on historical context and the exploration of literary and cultural values through written texts. 
Prerequisite: (ENGL 2370*) or (ENGL 3303*) or (ENGL 2303*).
* May be taken concurrently.

ENGL 3348  Drama
3 Semester Credit Hours (3 Lecture Hours)
A genre-oriented study of dramatic literature, using a wide range of texts. Variable content.

ENGL 3349  Poetry
3 Semester Credit Hours (3 Lecture Hours)
A genre-oriented study of poetry using a wide range of texts. Variable content.

ENGL 3354  American Literatures before 1900
3 Semester Credit Hours (3 Lecture Hours)
Study of significant works of American poetry, drama, and prose from the country’s pre-European beginnings to 1900 with emphasis on historical context and the exploration of literary and cultural values through written texts. 
Prerequisite: (ENGL 2370*) or (ENGL 2303*) or (ENGL 3303*).
* May be taken concurrently.

ENGL 3364  Strategies of Writing Creative Nonfiction
3 Semester Credit Hours (3 Lecture Hours)
Explores the uses of creative nonfiction through reading and writing about published works of experienced writers and scholars in the field and practicing a variety of creative nonfiction techniques and genres (e.g., literary journalism, memoir, and the personal narrative).

ENGL 3365  Second Language Acquisition
3 Semester Credit Hours (3 Lecture Hours)
This course is an introduction to second language acquisition. The course is designed to be accessible to students from a wide variety of backgrounds and no basic knowledge of the linguistic structure of English will be assumed. This course will address issues related to how second language is learned by both children and adults.

ENGL 3366  Language in Society
3 Semester Credit Hours (3 Lecture Hours)
An introduction to the study of language as a function of several societal variables. Introduces basic concepts of language such as linguistic varieties, dialect, speech communities, and linguistic attitudes.

ENGL 3367  TESOL Seminar
3 Semester Credit Hours (3 Lecture Hours)
This course presents an introduction to and a critique of current and traditional methodologies of teaching English to speakers of other languages, with emphasis on aural comprehension; speaking, reading, and writing skills; testing and assessment; and linguistic-cultural differences. This course is open to all majors, but is required for students seeking the Certificate in TESOL. 
Prerequisite: ENGL 3365.

ENGL 3369  Topics in Linguistics
3 Semester Credit Hours (3 Lecture Hours)
Exploration of topics such as second language acquisition, language assessment, history of English, and contrastive analysis. May be repeated when topics vary.

ENGL 3370  Document Design and Publishing
3 Semester Credit Hours (3 Lecture Hours)
Focuses on the integration of text and visual rhetoric, such as graphics, for all kinds of professional publications including technical documents, media, public relations pieces, and advertisements.

ENGL 3379  Writing for the Web
3 Semester Credit Hours (3 Lecture Hours)
Focuses on the analysis, design, and production of visual representations and multi-modal texts that integrate visual elements.

ENGL 4123  Nonprofit Writing Project
1 Semester Credit Hour
Students will gain practical experience with a nonprofit agency by developing a significant project that meets an agency identified need. Students should take this course in the last semester of their nonprofit certificate program in conjunction with one of the following: ENGL 3378, ENGL 3379, ENGL 4322, or ENGL 4321. The students’ professor in the regular course will be the instructor of record for the a the projects course.
ENGL 4300 Technologies and Cultures of the Book
3 Semester Credit Hours (3 Lecture Hours)
Working with a range of print media, students will learn to analyze the interplay between the text’s content and its formal features. Students will build the skills to think and write analytically about the materiality of texts.

ENGL 4305 Major Authors
3 Semester Credit Hours (3 Lecture Hours)
This course studies the significant works of a major literary author. Texts are viewed through a variety of critical perspectives and placed in the context of the writer’s life and of the society, culture, and history of the times. May be repeated once for credit when authors vary.

ENGL 4320 Professional Writing Workshop
3 Semester Credit Hours (3 Lecture Hours)
This course is tailored for individual students’ writing and publishing projects in their disciplines.

ENGL 4321 Grants and Proposals
3 Semester Credit Hours (3 Lecture Hours)
This course will teach students the grant proposal writing process, including identifying sources of funding, conducting research to support funding applications, and tailoring each proposal to a specific funding agency. Students will receive experience writing actual proposals on behalf of local organizations and agencies.

ENGL 4322 Writing in the Nonprofit Agencies
3 Semester Credit Hours (3 Lecture Hours)
Focuses on the specific kinds writing of professionals in the nonprofit world do, including internal communication in an agency, writing for the public, document creation, fund raising, board relations, and other relevant topics.

ENGL 4324 Editing & Style
3 Semester Credit Hours (3 Lecture Hours)
Practice in methods, tools, and principles of editing for nonfiction and technical publications. Emphasis on a rhetorical understanding of levels of editing, managing the editorial process, and grammar and style.

ENGL 4325 Writing Across Cultures and Contexts
3 Semester Credit Hours (3 Lecture Hours)
Through writing, students will study how groups perceive, understand, and communicate with and about each other. The course may focus on a specific type of writing (cross cultural expository writing, travel writing, cross cultural writing in industry), or on the linguistic and rhetorical practices of a cross-cultural community (latina/o rhetoric, African-American rhetorics, etc).

ENGL 4335 Creative Writing Studio: Development of Craft
3 Semester Credit Hours (3 Lecture Hours)
Develops students’ skills as critics and writers of fiction, poetry, and creative nonfiction in a studio setting. Guides students to focus on a major project in one genre with sustained practice of techniques and revision. Open to students of all levels, from the novice to the advanced. For all majors.

ENGL 4340 The Novel
3 Semester Credit Hours (3 Lecture Hours)

ENGL 4345 Rhetorics, Literacies, and Writing
3 Semester Credit Hours (3 Lecture Hours)
This course examines the history and major theories of rhetoric, literacy, and composition, and explores how they influence contemporary cultural productions.

ENGL 4350 Studies in Poetics: Theory, Form, and Practice
3 Semester Credit Hours (3 Lecture Hours)
Develops students’ theoretical knowledge of poetics and practical experience of writing in traditional forms, from the Anglo-American tradition to the culturally diverse movements and innovation of form. Focusing on works written by poets about poetry and poetics primarily from the 19th to the 21st centuries. For all majors.

ENGL 4351 Senior Capstone: Literature and Writing
3 Semester Credit Hours (3 Lecture Hours)
A study of literature in English for graduating seniors in the Literary Studies Emphasis. Emphasis is placed on genre, research, and analytical expository writing.
Prerequisite: ENGL 2370, 3303 or 2303.

ENGL 4352 Capstone in Writing Studies
3 Semester Credit Hours (3 Lecture Hours)
This course is the culminating experience for the Writing Studies emphasis in English. Students review, reflect on, integrate, and apply their learning from previous courses and experiences. Students create digital portfolios for career and publishing opportunities, emphasizing selection, revision, reflection, and presentation. In addition, students identify, evaluate, and annotate texts and resources to include in a curated digital collection/publication that will be available for students in future Writing Studies courses.

ENGL 4360 Gender, Sexuality and Literature
3 Semester Credit Hours (3 Lecture Hours)
This course introduces students to literature that explores issues of gender and sexuality. It focuses on relevant literary periods and conventions, as well as on the historical, social, and cultural contexts of artistic productions. Sample topics: women’s literature, queer literature, literature and masculinity.

ENGL 4361 Race and Ethnicity in Literature
3 Semester Credit Hours (3 Lecture Hours)
Topics focus on a variety of cross-cultural issues in historical and/or contemporary texts by Caribbean, British Indian, Native American, African American, Chicano/a, and/or other underrepresented authors.

ENGL 4362 Texts and Contexts
3 Semester Credit Hours (3 Lecture Hours)
Study of literary and cultural texts that raise issues of community and social relations, diversity, multiculturalism, and/or globalization. Sample topics: Medicine and Religion in American Literature, Traveling Histories, the Global City, and Literary Regionalism in Transnational Context. May be repeated once for credit when topics vary.

ENGL 4370 Oral Interpretation of Children's Literature
3 Semester Credit Hours (3 Lecture Hours)
A study, primarily through the medium of performance, of various types and forms of literature for children. Strongly oriented toward teaching literature in the elementary school classroom. (Credit may not be given for both this course or THEA 4323.)

ENGL 4380 Critical Approaches to Literature and Culture
3 Semester Credit Hours (3 Lecture Hours)
A study of selected perspectives and critical approaches to literature and culture, including an examination of some of the theoretical assumptions upon which they are based, as well as their implications for the way we think about literature, human identity, and the power of language.
Prerequisite: ENGL 2370.
ENGL 4385 Studies in Creative Writing
3 Semester Credit Hours (3 Lecture Hours)
Students will focus on the craft of a specific genre or type of writing through reading experts’ advice, reading and analyzing examples written by practitioners, and engaging in peer-response workshops with classmates. Attention will be paid to publication opportunities available for writers in that genre.

ENGL 4390 Topics in Literary Studies
3 Semester Credit Hours (3 Lecture Hours)
May be repeated when topics vary—see S.A.I.L. or advisor for further information.

ENGL 4391 Topics in Writing Studies
3 Semester Credit Hours (3 Lecture Hours)
May be repeated when topics vary—see S.A.I.L. or advisor for further information.

ENGL 4396 Directed Individual Study
1-3 Semester Credit Hours (1-3 Lecture Hours)
See College description.

ENGL 4398 Applied Experience
3 Semester Credit Hours (3 Lecture Hours)
See College description.

ENGL 4399 TESOL Practicum
3 Semester Credit Hours
Practical experience teaching English to second language learners. Students will observe, plan, and teach ESL lessons. Instructional support provides opportunities to discuss and reflect upon teaching experiences and help students connect theory, methods, and practice. This course enhances the TESOL Certification, but is not required for it. Cannot be repeated for credit.

Writing for Non-Profits, Certificate

Program Description
The Writing for Non-Profits Certificate is a fully online program available to students in all majors and disciplines who wish to develop or enhance their skills to obtain employment in hospital research and development departments, corporate writing departments, military installations, and non-profit agencies. Students completing this program will develop a portfolio, suitable for presentation to an employer, that will demonstrate the ability to adjust to real world expectations and engage a setting that is less controlled and less predictable than the classroom.

Student Learning Outcomes
Upon completion of this certificate, students will:

- Demonstrate competence with the kinds of writing most commonly used in nonprofit agencies.
- Acquire experience working in conjunction with leaders/administrators of nonprofit agencies.
- Create a portfolio of professional work to present to their employers and to prospective employers. ¹

¹ Every semester, each student will store his/her projects in an e-portfolio. With each additional course, each student will continue to build the e-portfolio.

Certificate Programs - School of Arts, Media & Communication

Dance, Certificate

Program Description
The Dance Certificate is available to all majors in all disciplines and professions or for educators seeking a certificate to develop their skill and knowledge in the area of Dance. This Certificate will enhance the marketability of those students who are working towards Teacher Certification and would like to teach Dance as a second discipline and for Theatre majors who are looking to pursue careers as professionals in the arts or for those graduates who are looking to enhance their careers working in arts education, community Theatre or health therapies.

Student Learning Outcomes
- Students obtaining a certificate in Dance will demonstrate proficiency in the technical, historical, cultural and choreographic dimensions of dance. Specifically the student will have the ability to:
- Develop relationships with world dance cultures and choreographic elements;
- Demonstrate written competencies in the historical, cultural and critical analysis of Dance;
- Demonstrate competencies in ballet, jazz and modern Dance technique.

Program Requirements
In order to receive a Dance Certificate, 16 semester hours with at least 9 semester hours in residence is required.

1 Courses may be repeated for credit.

Students pursuing a Teaching Certificate in Theatre or any other field, may also qualify to certify in dance as well; please see your advisor for details.
Courses

DANC 1141 Ballet I
1 Semester Credit Hour (3 Lab Hours)
A beginning ballet dance course aligned with the Theatre, Dance, and Musical Theatre disciplines. The student will learn fundamentals of classical ballet; terminology, alignment, barre and floor technique, as well as genres of the contemporary styles.
Co-requisite: SMTE 0098.

DANC 1147 Jazz Dance I
1 Semester Credit Hour (3 Lab Hours)
A beginning jazz dance course aligned with the Theatre, Dance, and Musical Theatre disciplines. Students will be introduced to genres of the jazz dance from primitive ritual through contemporary musical theatre compositions.
Co-requisite: SMTE 0098.

DANC 1148 Modern Dance I
1 Semester Credit Hour (3 Lab Hours)
A beginning modern dance course aligned with the Theatre, Dance, and Musical Theatre disciplines. Students will be introduced to the fundamentals of Modern Dance using a variety of modern dance styles, including technique, progressive movement and dance performance.
Co-requisite: SMTE 0098.

DANC 1304 Dance in Performance
3 Semester Credit Hours (3 Lecture Hours)
Students will be introduced to the fundamentals of choreography using a variety of dance styles and, using those skills, create dance intended for public performance. May be repeated for credit.
Co-requisite: SMTE 0098.

DANC 2141 Ballet II
1 Semester Credit Hour (3 Lab Hours)
This course focuses on further development of classical ballet as an art form with an emphasis on intermediate to advanced level technique, musicality and performance.
Co-requisite: SMTE 0098.

DANC 2147 Jazz Dance II
1 Semester Credit Hour (3 Lab Hours)
This course is for the student with previous jazz dance training. Jazz Dance II emphasizes technique and terminology. The course will focus on improving quality of movement and developing complex rhythms and patterns through the understanding and flexibility of the variety of jazz styles taught.
Co-requisite: SMTE 0098.

DANC 2148 Modern Dance II
1 Semester Credit Hour (3 Lab Hours)
This course is geared toward the student with previous modern dance training. The student will continue to develop physical, conceptual and aesthetic skills and explore the principles of movement and language common with variety of modern dance techniques.
Co-requisite: SMTE 0098.

DANC 3141 Ballet III
1 Semester Credit Hour (1 Lab Hour)
This course focuses on further development of classical ballet, based on previous training in Ballet I and II, as an art form with an emphasis on intermediate/advanced level technique, musicality and performance.
Prerequisite: (DANC 1141 and 2141).
Co-requisite: SMTE 0098.

DANC 3147 Jazz Dance III
1 Semester Credit Hour (1 Lab Hour)
This course focuses on the student who has taken Jazz I and II and executes the movement at an intermediate/advanced level. The course will focus on improving artistic expression within the quality of movement and developing complex technique and style through the understanding on rhythms and patterns of a variety of jazz styles.
Prerequisite: (DANC 1147 and 2147).
Co-requisite: SMTE 0098.

DANC 3148 Modern Dance III
1 Semester Credit Hour (1 Lab Hour)
This course focuses on the student who has taken Modern Dance I and II. The student will continue to develop physical, conceptual and aesthetic skills and explore principles of movement and language common with the variety of modern dance techniques.
Prerequisite: (DANC 1148 and 2148).
Co-requisite: SMTE 0098.

DANC 3303 World Dance and Culture
3 Semester Credit Hours (3 Lecture Hours)
Offers a cross cultural and historical view of a variety of theatrical, vernacular and sacred dance forms and investigates ways that dance functions across societies. No background in dance is necessary to successfully complete this course.
Co-requisite: SMTE 0098.

DANC 3306 Dance Choreography I
3 Semester Credit Hours (3 Lecture Hours)
Introduction to techniques and principles of the craft and art of choreography. Solo and group choreography is expected. May be repeated for credit.
Co-requisite: SMTE 0098.

DANC 3310 History of Dance
3 Semester Credit Hours (3 Lecture Hours)
In this course, the student will explore the history of dance from an interactive arts approach, examining and investigating dance from ancient civilization throughout the world to the emerging times of dance in the U.S.

DANC 4141 Ballet IV
1 Semester Credit Hour (1 Lab Hour)
This course focuses on further development of classical ballet, based on previous training in Ballet I, II and III as an art form with an emphasis on advanced level technique, musicality and performance. Can be repeated for credit.
Prerequisite: (DANC 1141, 2141 and 3141).
Co-requisite: SMTE 0098.

DANC 4147 Jazz Dance IV
1 Semester Credit Hour (1 Lab Hour)
This course focuses on the student who has taken Jazz Dance I, II and III and executes the movement at an advanced level. The course will focus on improving artistic expression within the quality of movement from Jazz Dance III and developing complex technique and jazz styles. Can be repeated for credit.
Prerequisite: (DANC 1147, 2147 and 3147).
Co-requisite: SMTE 0098.
DANC 4148 Modern Dance IV
1 Semester Credit Hour (1 Lab Hour)
This course focuses on the student who has taken Modern Dance I, II and III. The student will continue to develop physical, conceptual and aesthetic skills and explore the principles of movement and language common with a variety of modern and contemporary modern dance techniques. Can be repeated for credit.
Prerequisite: (DANC 1148, 2148 and 3148).
Co-requisite: SMTE 0098.

DANC 4306 Dance Choreography II
3 Semester Credit Hours (3 Lecture Hours)
Demonstrate choreographic tools in the dance making process as it relates to group work; explore and create movement studies in groups as it pertains to art. May be repeated for credit.
Prerequisite: DANC 3306.
Co-requisite: SMTE 0098.

DANC 4310 Dance Instruction
3 Semester Credit Hours (3 Lecture Hours)
In this course, the student will research and explore the various modern philosophies of instruction and learn to apply those that are congruous with instructing dance as art in a variety of settings and to different age levels. Observation and instruction, combined with research satisfies the practical application portion of the course, while critiques from professionals in the field will serve as encouragement and confidence building for the future instructor in dance. May be repeated for credit.
Co-requisite: SMTE 0098.

DANC 4390 Topics in Dance
1-3 Semester Credit Hours
This course will explore aspects of various dance techniques (ballet, jazz, contemporary, and hip hop infused) at the intermediate/advanced level, as well as repertory and yoga for dancers. Time allowing, we will delve into basic elements of choreographic composition.
Co-requisite: SMTE 0098.

DANC 4396 Directed Individual Study (DIS)
1-3 Semester Credit Hours (1-3 Lecture Hours)
See course description. Course is available by application.

DANC 4398 Applied Experience
3 Semester Credit Hours (3 Lecture Hours)
See course description. Course is available by application.

Creative Writing, Minor
Program Description
This minor is for students who have a desire to develop their creative writing skills (mainly in short fiction and poetry) through the imaginative consideration of literature, including published American literature and their own and their peers’ writing. Students of all majors are welcome. The minor consists of 18 semester hours and includes four core courses. Prerequisite courses for the minor are ENGL 1302 Writing and Rhetoric II (3 sch)*, and core curriculum literature (ENGL 2316, ENGL 2332, ENGL 2333, or SPAN 2315, SPAN 3304, SPAN 3305, SPAN 3320 and SPAN 3325) passed with a C or better. Student may take individual courses in the minor as long as they have met the prerequisites.

Students who select this minor must consult with an Academic Advisor in the College of Liberal Arts prior to completing 6 hours of coursework listed for the program. Students are also encouraged to discuss the program with faculty members who teach the courses. The minor plan must be filed with an Academic Advisor in the College of Liberal Arts and certified prior to application for graduation by the Dean of the College in which the major study degree will be awarded. In order to graduate with a minor in Creative Writing, students must maintain an overall grade point average of 2.0 in courses in the minor.

For more information visit our main Creative Writing Program page: https://www.tamucc.edu/liberal-arts/departments/english/creative_writing/index.php (https://www.tamucc.edu/liberal-arts/departments/english/creative_writing/)

Total Hours 18
Courses

ENGL 0001 Grammar I
0 Semester Credit Hours (3 Lecture Hours)
Grammatical structures that enable students to better comprehend and use academic English are the focus of the course. Students will learn to appreciate the relevance of acquiring and applying grammatical knowledge to express themselves confidently and appropriately in different academic situations, as well as social situations relevant to the American college context.

ENGL 0002 Listening and Speaking I
0 Semester Credit Hours (3 Lecture Hours)
This course provides short and focused activities to help students improve their English listening and speaking skills. It includes practice in both mastering the larger message and key words, phrases and specific sounds to assist students in developing better speaking and comprehension skills. Students will practice giving academic presentations as well as practice speaking in small groups and individually.

ENGL 0003 Reading I
0 Semester Credit Hours (3 Lecture Hours)
In this course, students will develop the reading skills essential for academic learning and inquiry in the context of authentic academic reading tasks. Students will work to build fluency, comprehension, and vocabulary skills through extensive and intensive reading tasks of increasing complexity. Contemporary academic and literary texts will be used to develop students' critical reading and vocabulary, writing, listening, and speaking skills.

ENGL 0004 Writing I
0 Semester Credit Hours (3 Lecture Hours)
In this course, students will learn and apply the writing skills essential for academic success including sentence, paragraph, and basic essay writing. This course is aimed at students planning to study, or are already studying, at university level in English.

ENGL 0005 Recitation I
0 Semester Credit Hours (3 Lecture Hours)
This course provides students with a structured, scheduled academic environment providing the opportunity to complete assignments and work closely with their language instructor. Instructors utilize materials from student courses to facilitate activities and discussions that will increase comprehension of academic material and further students’ abilities to work independently in academic settings. Each week, the course will focus on the language skills and vocabulary needed for the students' courses. Additionally, there will be a focus on study skills and time management needed for success in academic settings. Students will leave the course better equipped for university level academic course work and a thorough understanding of time management and appropriate study habits for the university.

ENGL 0011 Grammar II
0 Semester Credit Hours (3 Lecture Hours)
This course will focus on high-intermediate grammatical structures that enable students to better comprehend and use academic English. Students will learn to appreciate the relevance of acquiring and applying grammatical knowledge to express themselves confidently and appropriately in different academic situations, as well as social situations relevant to the American college context.

ENGL 0012 Listening and Speaking II
0 Semester Credit Hours (3 Lecture Hours)
In this course, students will learn and apply the listening, note-taking, and presentation skills essential for academic learning, inquiry, and communication in the context of authentic academic listening and speaking tasks. Students will work to build fluency, comprehension, and vocabulary skills through extensive and intensive listening tasks of increasing complexity. Contemporary academic lectures and seminars will be used to develop students’ critical thinking skills.

ENGL 0013 Reading II
0 Semester Credit Hours (3 Lecture Hours)
In this course, students will study texts across several different academic disciplines in order to deepen their understanding of the rhetorical styles and conventions used and applied within the English language. Students will practice identifying audience, purpose, theme, main ideas, and details within several different genres of writing. Students will also develop a variety of strategies to improve their reading comprehension and efficiency, including annotation, vocabulary-building, and discussions regarding written materials.

ENGL 0014 Writing II
0 Semester Credit Hours (3 Lecture Hours)
In this course, students will develop a foundation in the writing skills critical to academic success. Students will apply knowledge of audience, purpose, voice, arrangement, and style in varied writing tasks by writing across several different genres. Genres practiced in this course may include, but are not limited to: emails, newsletters, personal narratives, fiction, academic essays, and magazine/news articles. Students will learn grammar and vocabulary conventions as they apply to different genres and apply these skills in writing tasks of increasing complexity throughout the semester.

ENGL 0022 Listening and Speaking III
0 Semester Credit Hours (3 Lecture Hours)
In this course students will learn and apply listening, note-taking, and presentation skills essential for academic learning, inquiry, and discourse in the context of authentic academic listening and speaking tasks. Students will work to build fluency, comprehension, and vocabulary skills through extensive and intensive listening tasks of increasing complexity. Contemporary academic lectures and seminars will be used to develop students’ critical thinking skills.

ENGL 0023 Reading and Writing III
0 Semester Credit Hours (3 Lecture Hours)
In this course students will improve upon and apply the reading skills essential for academic learning, inquiry, and discourse in the context of authentic academic reading tasks. Students will build vocabulary through extensive and intensive reading tasks of increasing complexity. Contemporary academic tests about writing will be used to develop students’ critical reading, academic vocabulary, and complex writing skills. There will be a number of in-class written tasks and prompts that will stimulate free writing practice and introduce students to various styles of writing. Students will also use these written tasks to develop editing skills through the writing process. The final project will be a collection of these written tasks in the form of a portfolio.
ENGL 0036  US Culture
0 Semester Credit Hours (3 Lecture Hours)
This course will offer English Language Learners a means for analyzing and evaluating the complex social and moral issues that are specific to the social and moral landscape of the United States. As students examine their own cultures and compare them with others, culture shock and cultural conflict may be lessened and appreciation for cultural differences may be strengthened. Students will engage in interactive tasks, including researching and case analysis of topics and social, academic and professional issues, especially those suggested by the extensive reading component of this course. Through the process of reading, discussion, analysis and writing students in this class will enrich their understanding of today's global society while at the same time they are sharpening their academic English skills.

ENGL 0037  Critical Thinking
0 Semester Credit Hours (3 Lecture Hours)
The purpose of this course is to develop the critical thinking skills needed to interpret and assess arguments and information. This course will highlight the language skills essential for critically analyzing and discussing the quality of the information and opinions presented in authentic texts and listening selections. The course will concentrate on detecting errors of reasoning in short and long passages, evaluating evidence in written and verbal arguments, detecting logical inconsistencies, removing vagueness and ambiguity through word choice and phrasing, and identifying the point or purpose of someone's remarks. Through examining these topics, students will be able to thoughtfully respond to others' opinions in a clear, logical, and informed way. Students will leave the course better prepared to collect, synthesize, and evaluate information and feel more confident in presenting their perspectives in an academic setting.

ENGL 0099  Integrated Reading and Writing Non-Course Based Development
0 Semester Credit Hours
ENGL 0099 is designed to develop students' critical reading and academic writing skills on an individualized basis through tutoring. The course fulfills TSI requirements for reading and writing. TSI compliance staff will approve each student for this course. Approval is based on test score and/or by academic standing.

ENGL 0399  Integrated Reading and Writing
3 Semester Credit Hours (3 Lecture Hours)
A portfolio-based course with required tutoring (lab) time focused on the writing and reading processes, including strategies for invention, revision, and editing, and techniques of active reading, such as analysis, inference, summary, and evaluating texts. Students will enter ENGL 0399 through Texas Success Initiative (TSI) mandated remediation. (Not counted toward graduation)

ENGL 1301  Writing and Rhetoric I
3 Semester Credit Hours (3 Lecture Hours)
English 1301 introduces students to writing studies, rhetoric, academic research, and information literacy. Students will critically read and reflect on threshold concepts in writing studies. They will practice recursive writing and research processes for various situations. Sections will be offered both online and in person each semester.
TCCNS: ENGL 1301

ENGL 1302  Writing and Rhetoric II
3 Semester Credit Hours (3 Lecture Hours)
English 1302 builds on the foundation in writing studies, rhetoric, academic research, and information literacy introduced in ENGL 1301. Students will read, apply, and reflect on the current research and scholarship in writing studies and rhetoric. Students will practice transferring, deepening, and extending their ability to use writing into discipline-specific, workplace, and civic contexts. Sections will be offered both online and in person each semester.
Prerequisite: ENGL 1301.
TCCNS: ENGL 1302

ENGL 2303  Introduction to Writing Studies
3 Semester Credit Hours (3 Lecture Hours)
This course will review current scholarship on writing studies, including threshold concepts, activity theory, and genre studies. It will consider various perspectives on the uses of writing to provide students with an intellectual and practical understanding of writing. This course provides a starting point for the more specific studies of writing that occur in other writing studies courses.

ENGL 2316  Literature and Culture
3 Semester Credit Hours (3 Lecture Hours)
Introduction to literatures that raise aesthetic, cultural, social, and/or political issues that affect and reflect the human condition across regions, cultures, and nations. Sample topics: Crossing Borders, The City in Literature, Islands and Islanders, Science and Fiction.
TCCNS: ENGL 2331

ENGL 2332  Literature of the Western World: From the Classics to the Renaissance
3 Semester Credit Hours (3 Lecture Hours)
Study of important literary texts from the Ancient World to the Renaissance.
TCCNS: ENGL 2332

ENGL 2333  Literature of the Western World: From the Enlightenment to the Present
3 Semester Credit Hours (3 Lecture Hours)
Study of important literary texts from the Enlightenment to the present.
TCCNS: ENGL 2333

ENGL 2360  Language and Gender
3 Semester Credit Hours (3 Lecture Hours)
In this class, we explore how language reflects, and is reflected upon, one facet of our identities: gender. We will explore the complex relationships between gender and aspects of language such as conversation, narrative, pronunciation, grammar, and pragmatic norms. We will also discuss the intersection of gender and other social factors, such as race or culture, as manifested in the language use. Students will also have an opportunity to discuss how gender is represented in the media and online, as well as how gender is situated in institutional contexts, such as home, school, work, and law. There is no prior knowledge of linguistics or social theory required for this class. Course activities include lectures, class discussions, in-class article presentation, language observations, hands-on data analysis, and a final project.

<tr>
<th>Course Code</th>
<th>Course Title</th>
<th>Semester Credit Hours</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ENGL 2370</td>
<td>Introduction to Literary Studies</td>
<td>3</td>
<td>An introduction to literary analysis and scholarship for the intermediate writer. Emphasis placed on genres of literature, literary research, and expository and analytical composition. Familiarizes students with the various disciplines and related conversations within English Studies. Should be taken by sophomore-level English majors in the Literary Studies emphasis, and by Literary Studies and Creative Writing minors. Prerequisite: ENGL 1302.</td>
</tr>
<tr>
<td>ENGL 2371</td>
<td>Exploring Social Media</td>
<td>3</td>
<td>In this course we will examine and discuss current issues related to social media within a rhetorical framework. We will use different social media platforms to share and discuss in order to provide hands-on experience in these environments. Social media will be explored at the micro level as students will review their online social media presence to better understand how readers view them online. From the macro level we will identify current topics that affect the design and use of social media platforms and applications.</td>
</tr>
<tr>
<td>ENGL 3167</td>
<td>English as a Second/Foreign Language Tutoring</td>
<td>1</td>
<td>Students pursuing the Advanced TESOL Certificate will supplement ENGL 3367 (TESOL Seminar: Methods) with practical experience tutoring English learners. Students will write reflectively about those experiences. As needed, students will undergo site-specific training. Co-requisite: ENGL 3367.</td>
</tr>
<tr>
<td>ENGL 3301</td>
<td>Technical and Professional Writing</td>
<td>3</td>
<td>A course designed to help students gain practical experience in finding and interpreting information and writing reports and documents for specialized audiences in the technical and professional world. ENGL 3301 will be held in a computer-assisted classroom.</td>
</tr>
<tr>
<td>ENGL 3302</td>
<td>Techniques of Creative Writing</td>
<td>3</td>
<td>Introduces students to the theoretical knowledge and practical experience used in creative writing. Focuses on poetry, creative nonfiction, and short fiction. For all majors.</td>
</tr>
<tr>
<td>ENGL 3310</td>
<td>Technical and Professional Writing for Computer Science</td>
<td>3</td>
<td>Designed specifically for computer science majors, this course focuses on developing students ability to (1) use writing to communicate effectively with a range of audiences about technology; (2) identify, analyze, and appropriately integrate relevant information in their writing; (3) make informed judgments about their uses of writing based on ACM’s and IEEE’s code of ethics; and (4) develop their ability to function effectively individually and as members of a team to establish goals, plan tasks, meet deadlines, manage risk, and produce deliverables.</td>
</tr>
<tr>
<td>ENGL 3321</td>
<td>Film and Literature</td>
<td>3</td>
<td>3 sem. hrs. Studies the connections between the formal elements of literature and of film, with emphasis on theme, narrative style, and genre. By viewing films based on literary sources, students will analyze how literature is adapted into film as well as identify strategies to view and read critically. For all majors.</td>
</tr>
<tr>
<td>ENGL 3323</td>
<td>Young Adult Fiction</td>
<td>3</td>
<td>Literary study of young adult literature through analysis, discussion, and interpretation. The course emphasizes literary issues connected with society, culture, history, and genre.</td>
</tr>
<tr>
<td>ENGL 3325</td>
<td>Interdisciplinary Approaches to Literature</td>
<td>3</td>
<td>In recent decades, it has become common to study literature in light of other disciplinary perspectives and to study other disciplines as they are depicted in literature. From these interdisciplinary approaches has emerged a distinct mode of analysis that examines texts within their broader social and cultural milieu. In this course students will earn to use cross-disciplinary methods to interpret literature and culture. Topics will vary, but may include Religion, Medicine, and American Literature, Disability Narratives in the Eighteenth Century, Trauma and the City in Twentieth-Century Literature.</td>
</tr>
<tr>
<td>ENGL 3330</td>
<td>Current Events and Literature</td>
<td>3</td>
<td>This course examines literature in the context of current issues and events. Students will place literature in conversation with social, political, and cultural trends as a means of engaging with and understanding these trends and the debates associated with them. Using reading, writing, and discussion as modes of critical inquiry, students will discover the critical role that literature plays in representing, responding to, and shaping current events.</td>
</tr>
<tr>
<td>ENGL 3339</td>
<td>Introduction to Linguistics</td>
<td>3</td>
<td>Presents a general descriptive overview of English grammar and provides a structural framework for analyzing English sentences.</td>
</tr>
<tr>
<td>ENGL 3340</td>
<td>Grammar</td>
<td>3</td>
<td>3 Semester Credit Hours (3 Lecture Hours)</td>
</tr>
<tr>

<td>3</td>
<td>3 Semester Credit Hours (3 Lecture Hours)</td>
</tr>
</tbody>
</table>
ENGL 3355 American Literatures since 1900
3 Semester Credit Hours (3 Lecture Hours)
Study of significant works of American poetry, drama, and prose from 1900 to the present with emphasis on historical context and the exploration of literary and cultural values through written texts. 
Prerequisite: (ENGL 2370) or (ENGL 2303) or (ENGL 3303). 
May be taken concurrently.

ENGL 3360 Current Approaches to Composition and Literature
3 Semester Credit Hours (3 Lecture Hours)
Prepares prospective teachers to create developmentally appropriate learning environments and tasks that enable student success in writing and the study of literature in Language Arts and English courses. Prepares students to meet the increased writing and reading expectations in all subject areas, including their own writing.

ENGL 3361 Strategies and Genres of Advanced Writing
3 Semester Credit Hours (3 Lecture Hours)
Students will practice-writing in situated contexts (such as their majors, careers, and/or other professional interests) and across genres to develop more advanced and reflective writing strategies. By studying theories of writing; engaging in writing as a craft; and drafting, revising, and editing texts; students will refine and become more reflective in their writing processes.

ENGL 3362 Creative Writing Workshop: Survey and Practice of Genres
3 Semester Credit Hours (3 Lecture Hours)
Develops students' skills as critics and writers of fiction, poetry, and creative nonfiction in a workshop setting. For all majors.

ENGL 3363 Foundations of Rhetoric
3 Semester Credit Hours (3 Lecture Hours)
This course will study the historical and theoretical development of rhetoric through the works of principal thinkers. Students will analyze rhetorical concepts in their relation to civic, cultural, political, and pedagogical developments and the construction of knowledge and will use rhetorical concepts to produce logical, ethical, and moral arguments.

ENGL 3364 Strategies of Writing Creative Nonfiction
3 Semester Credit Hours (3 Lecture Hours)
Explores the uses of creative nonfiction through reading and writing about published works of experienced writers and scholars in the field and practicing a variety of creative nonfiction techniques and genres (e.g. literary journalism, memoir, and the personal narrative).

ENGL 3365 Second Language Acquisition
3 Semester Credit Hours (3 Lecture Hours)
This course is an introduction to second language acquisition. The course is designed to be accessible to students from a wide variety of backgrounds and no basic knowledge of the linguistic structure of English will be assumed. This course will address issues related to how second language is learned by both children and adults.

ENGL 3366 Language in Society
3 Semester Credit Hours (3 Lecture Hours)
An introduction to the study of language as a function of several societal variables. Introduces basic concepts of language such as linguistic varieties, dialect, speech communities, and linguistic attitudes.

ENGL 3367 TESOL Seminar
3 Semester Credit Hours (3 Lecture Hours)
This course presents an introduction to and a critique of current and traditional methodologies of teaching English to speakers of other languages, with emphasis on aural comprehension; speaking, reading, and writing skills; testing and assessment; and linguistic-cultural differences. This course is open to all majors, but is required for students seeking the Certificate in TESOL. 
Prerequisite: ENGL 3365.

ENGL 3369 Topics in Linguistics
3 Semester Credit Hours (3 Lecture Hours)
Exploration of topics such as second language acquisition, language assessment, history of English, and contrastive analysis. May be repeated when topics vary.

ENGL 3378 Document Design and Publishing
3 Semester Credit Hours (3 Lecture Hours)
Focuses on the integration of text and visual rhetoric, such as graphics, for all kinds of professional publications including technical documents, media, public relations pieces, and advertisements.

ENGL 3379 Writing for the Web
3 Semester Credit Hours (3 Lecture Hours)
Emphasizes practical concepts related to writing and communication on the internet and the World Wide Web. Attention is given to finding and analyzing information; analyzing and designing WWW sites and other digital, hypertextual environments; and analyzing and composing hypertext-hypermedia materials for digital, networked environments. For all majors.

ENGL 3380 Visual Rhetoric
3 Semester Credit Hours (3 Lecture Hours)
Focuses on the analysis, design, and production of visual representations and multi-modal texts that integrate visual elements.

ENGL 4123 Nonprofit Writing Project
1 Semester Credit Hour
Students will gain practical experience with a nonprofit agency by developing a significant project that meets an agency identified need. Students should take this course in the last semester of their nonprofit certificate program in conjunction with one of the following: ENGL 3378, ENGL 3379, ENGL 4322, or ENGL 4321. The students’ professor in the regular course will be the instructor of record for a the projects course.

ENGL 4300 Technologies and Cultures of the Book
3 Semester Credit Hours (3 Lecture Hours)
Working with a range of print media, students will learn to analyze the interplay between the text’s content and its formal features. Students will build the skills to think and write analytically about the materiality of texts.

ENGL 4305 Major Authors
3 Semester Credit Hours (3 Lecture Hours)
This course studies the significant works of a major literary author. Texts are viewed through a variety of critical perspectives and placed in the context of the writer’s life and of the society, culture, and history of the times. May be repeated once for credit when authors vary.

ENGL 4320 Professional Writing Workshop
3 Semester Credit Hours (3 Lecture Hours)
This course is tailored for individual students’ writing and publishing projects in their disciplines.
ENGL 4321  Grants and Proposals  
3 Semester Credit Hours (3 Lecture Hours)
This course will teach students the grant proposal writing process, including identifying sources of funding, conducting research to support funding applications, and tailoring each proposal to a specific funding agency. Students will receive experience writing actual proposals on behalf of local organizations and agencies.

ENGL 4322  Writing in the Nonprofit Agencies  
3 Semester Credit Hours (3 Lecture Hours)
Focusing on works written by poets about poetry and poetics primarily from the 19th to the 21st centuries. For all majors.

ENGL 4324  Editing & Style  
3 Semester Credit Hours (3 Lecture Hours)
Practice in methods, tools, and principles of editing for nonfiction and technical publications. Emphasis on a rhetorical understanding of levels of editing, managing the editorial process, and grammar and style.

ENGL 4325  Writing Across Cultures and Contexts  
3 Semester Credit Hours (3 Lecture Hours)
Through writing, students will study how groups perceive, understand, and communicate with and about each other. The course may focus on a specific type of writing (cross cultural expository writing, travel writing, cross cultural writing in industry), or on the linguistic and rhetorical practices of a cross-cultural community (latino/a rhetoric, African-American rhetorics, etc).

ENGL 4328  Creative Writing Studio: Development of Craft  
3 Semester Credit Hours (3 Lecture Hours)
Develops students' skills as critics and writers of fiction, poetry, and creative nonfiction in a studio setting. Guides students to focus on a major project in one genre with sustained practice of techniques and revision. Open to students of all levels, from the novice to the advanced. For all majors.

ENGL 4340  The Novel  
3 Semester Credit Hours (3 Lecture Hours)

ENGL 4345  Rhetorics, Literacies, and Writing  
3 Semester Credit Hours (3 Lecture Hours)
This course examines the history and major theories of rhetoric, literacy, and composition, and explores how they influence contemporary cultural productions.

ENGL 4350  Studies in Poetics: Theory, Form, and Practice  
3 Semester Credit Hours (3 Lecture Hours)
Develops students' theoretical knowledge of poetics and practical experience of writing in traditional forms, from the Anglo-American tradition to the culturally diverse movements and innovation of form. Focusing on works written by poets about poetry and poetics primarily from the 19th to the 21st centuries. For all majors.

ENGL 4351  Senior Capstone: Literature and Writing  
3 Semester Credit Hours (3 Lecture Hours)
A study of literature in English for graduating seniors in the Literary Studies emphasis. Emphasis is placed on genre, research, and analytical expository writing.
Prerequisite: ENGL 2370, 3303 or 2303.

ENGL 4352  Capstone in Writing Studies  
3 Semester Credit Hours (3 Lecture Hours)
This course is the culminating experience for the Writing Studies emphasis in English. Students review, reflect on, integrate, and apply their learning from previous courses and experiences. Students create digital portfolio options for career and publishing opportunities, emphasizing selection, revision, reflection, and presentation. In addition, students identify, evaluate, and annotate texts and resources to include in a curated digital collection/publication that will be available for students in future Writing Studies courses.

ENGL 4360  Gender, Sexuality and Literature  
3 Semester Credit Hours (3 Lecture Hours)
This course introduces students to literature that explores issues of gender and sexuality. It focuses on relevant literary periods and conventions, as well as on the historical, social, and cultural contexts of artistic productions. Sample topics: women's literature, queer literature, literature and masculinity.

ENGL 4361  Race and Ethnicity in Literature  
3 Semester Credit Hours (3 Lecture Hours)
Topics focus on a variety of cross-cultural issues in historical and/or contemporary texts by Caribbean, British Indian, Native American, African American, Chicano/a, and/or other underrepresented authors.

ENGL 4362  Texts and Contexts  
3 Semester Credit Hours (3 Lecture Hours)
Study of literary and cultural texts that raise issues of community and social relations, diversity, multiculturalism, and/or globalization. Sample topics: Medicine and Religion in American Literature, Traveling Histories, the Global City, and Literary Regionalism in Transnational Context. May be repeated once for credit when topics vary.

ENGL 4370  Oral Interpretation of Children's Literature  
3 Semester Credit Hours (3 Lecture Hours)
A study, primarily through the medium of performance, of various types and forms of literature for children. Strongly oriented toward teaching literature in the elementary school classroom. (Credit may not be given for both this course or THEA 4323.)

ENGL 4380  Critical Approaches to Literature and Culture  
3 Semester Credit Hours (3 Lecture Hours)
A study of selected perspectives and critical approaches to literature and culture, including an examination of some of the theoretical assumptions upon which they are based, as well as their implications for the way we think about literature, human identity, and the power of language.
Prerequisite: ENGL 2370.

ENGL 4385  Studies in Creative Writing  
3 Semester Credit Hours (3 Lecture Hours)
Students will focus on the craft of a specific genre or type of writing through reading experts' advice, reading and analyzing examples written by practitioners, and engaging in peer-response workshops with classmates. Attention will be paid to publication opportunities available for writers in that genre.

ENGL 4390  Topics in Literary Studies  
3 Semester Credit Hours (3 Lecture Hours)
May be repeated when topics vary—see S.A.I.L. or advisor for further information.

ENGL 4391  Topics in Writing Studies  
3 Semester Credit Hours (3 Lecture Hours)
May be repeated when topics vary—see S.A.I.L. or advisor for further information.
ENGL 4396 Directed Individual Study  
1-3 Semester Credit Hours (1-3 Lecture Hours)  
See College description.  

ENGL 4398 Applied Experience  
3 Semester Credit Hours (3 Lecture Hours)  
See College description.  

ENGL 4399 TESOL Practicum  
3 Semester Credit Hours  
Practical experience teaching English to second language learners. Students will observe, plan, and teach ESL lessons. Instructional support provides opportunities to discuss and reflect upon teaching experiences and help students connect theory, methods, and practice. This course enhances the TESOL Certification, but is not required for it. Cannot be repeated for credit.

## Criminal Justice, Minor

### Program Requirements

The minor in Criminal Justice consists of 18 semester hours of Criminal Justice coursework, 15 of which must be at the upper-division level. The 18 semester hours for the Minor in Criminal Justice must be selected from the following courses.

- CRIJ 1306 Court Systems and Processes
- CRIJ 4312 Law and Evidence
- CRIJ 4313 Criminal Procedure

**Law Enforcement**

- CRIJ 3302 Police and Society
- or CRIJ 4351 Police Supervision and Management

**Elective**

Three credit hours of electives.

**Total Hours**  
18

1 Either the three credit Systems requirement or the Elective requirement may be satisfied by lower-division transfer credit.

### Courses

**CRIJ 1301 Introduction to Criminal Justice**  
3 Semester Credit Hours (3 Lecture Hours)  
History and philosophy of criminal justice. Overview of criminal justice system: police, prosecution and defense, courts, trial process, and corrections as they affect the individual, as well as their impact on society. The definition, nature, and impact of crime. The functions of criminal justice agencies will be examined in relation to common analytical themes such as ethics and discretion.  
**TCCNS:** CRIJ 1301

**CRIJ 1306 Court Systems and Processes**  
3 Semester Credit Hours (3 Lecture Hours)  
Examination of the civil and criminal legal systems and the roles played by political, social and economic factors in the administration of justice. Consideration of the roles and interests of litigants, defendants, police, attorneys, and the judiciary in the process.  
**TCCNS:** CRIJ 1306

**CRIJ 1310 Fundamentals of Criminal Law**  
3 Semester Credit Hours (3 Lecture Hours)  
The course will introduce students to the study of criminal law. Major topics include the sources of criminal law, the operation of the criminal courts, constitutional limitations on criminal law, the elements of criminal liability, and the classification of and punishments for different types of criminal offenses. Defenses to criminal liability will also be explored.  
**TCCNS:** CRIJ 1310

**CRIJ 2313 Correctional Systems & Practices**  
3 Semester Credit Hours (3 Lecture Hours)  
This course is a survey of institutional and non-institutional corrections. Emphasis will be placed on the organization and operation of correctional systems; treatment and rehabilitation; populations served; Constitutional issues; and current and future issues.  
**TCCNS:** CRIJ 2313

**CRIJ 2328 Police Systems and Practices**  
3 Semester Credit Hours (3 Lecture Hours)  
The history and development of police in America. Topics examined include: the police profession, organization of law enforcement systems, the policing role, police discretion, ethics, police-community interaction, current and future issues, and research findings.  
**TCCNS:** CRIJ 2328

**CRIJ 3302 Police and Society**  
3 Semester Credit Hours (3 Lecture Hours)  
Examination of policing in a democratic society. A critical review of various professional and community influences on police behavior, together with a consideration of social problems created by such forces, and potential remedial actions.  

**CRIJ 3310 The Judicial Process**  
3 Semester Credit Hours (3 Lecture Hours)  
THE JUDICIAL PROCESS Examination of the civil and criminal legal systems and the roles played by political, social and economic factors in the administration of justice. Consideration of the roles and interests of litigants, defendants, police, attorneys, and the judiciary in the process.  

**CRIJ 3313 The Juvenile Justice System**  
3 Semester Credit Hours (3 Lecture Hours)  
The administration of the juvenile justice process. Historical and philosophical origins of the juvenile justice system. A systematic analysis of problems and procedures at each stage of the process.

<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>CRIJ 3320</td>
<td>Issues in Corrections</td>
<td>3</td>
<td>Analysis of contemporary developments, controversies and management concerns in the field of corrections. Includes examination of theoretical foundations of correctional policy.</td>
</tr>
<tr>
<td>CRIJ 3325</td>
<td>Community-Based Corrections</td>
<td>3</td>
<td>Examination of the correctional strategies and facilities available in community settings including diversion programs, probation, parole, halfway houses, boot camps, and restitution centers.</td>
</tr>
<tr>
<td>CRIJ 3340</td>
<td>Comparative Criminal Justice</td>
<td>3</td>
<td>Comparison of the police in selected countries with the U.S. criminal justice system. Particular emphasis on social, political, and economic factors in the development and change in law enforcement.</td>
</tr>
<tr>
<td>CRIJ 3341</td>
<td>Terrorism</td>
<td>3</td>
<td>An examination of political violence from criminological, legal, and political perspectives. Application to contemporary events is emphasized. The sociology, psychology, and organization of terrorist groups are also explored as well as counter-terrorism strategies, methods, and dilemmas.</td>
</tr>
<tr>
<td>CRIJ 3360</td>
<td>Organized Crime</td>
<td>3</td>
<td>The course analyzes and discusses how criminal organizations carry out their illegal activities while laundering money through legal enterprises. It discusses why people belong to organized crime syndicates despite the risks of death and imprisonment. The linkages of poverty, lack of education, social and economic inequalities, and the glorification of capitalist ideology by the phenomenon of organized crime are examined.</td>
</tr>
<tr>
<td>CRIJ 3361</td>
<td>Drugs, the Drug War, and Criminal Justice</td>
<td>3</td>
<td>This course is an analysis and discussion of drugs, the war on drugs, and how these two phenomena impact the criminal justice system in American society. There is a review of the common assumptions about drugs and its social implications. An examination of the sociocultural interconnections of the nature of drugs, drug use, drug trafficking, and drug policy from a justice perspective is presented.</td>
</tr>
<tr>
<td>CRIJ 3365</td>
<td>Sex Crimes</td>
<td>3</td>
<td>This course analyzes the nature, etiology, and theories related to sex offenses and sex offenders. It explores the history and current practices employed by the criminal justice systems to deal with sex offending. The course also examines multiple types of sexual offenses, perpetrators and victims, as well as the legal consequences of sexual offenses and its sociocultural ramifications to grasp the complexity of these crimes.</td>
</tr>
<tr>
<td>CRIJ 3370</td>
<td>Crime in the Media</td>
<td>3</td>
<td>This course will cover the portrayal of crime, criminals, the criminal justice system, and criminal justice practitioners in the media. Specifically, the course will address the goals of the media and how those affect their coverage of crime and the CJ system.</td>
</tr>
</tbody>
</table>
CRIJ 4325  Diversity in Criminal Justice  
3 Semester Credit Hours (3 Lecture Hours)  
This course is an investigation into the impact of social diversity (race, ethnicity, gender, sexual orientation, disability, and more) on crime and the criminal justice system. Students will examine the impact of these factors on both offenders and criminal justice system employees, and will discuss and critically examine historical trends, contemporary events, and criminal justice system policies and laws.

CRIJ 4330  Understanding Criminal Behavior  
3 Semester Credit Hours (3 Lecture Hours)  
This course examines various aspects of human behavior from a criminal justice perspective and is designed to give students a basic understanding of criminal behavior and psychological disorders which are encountered by criminal justice professionals.

CRIJ 4331  Juvenile Delinquency  
3 Semester Credit Hours (3 Lecture Hours)  
Examination of the nature and extent of juvenile crime today. Analysis of the history and theory of delinquency and society’s response to it. (Credit may not be given for both this course and SOCI 4331.) Cross listed with SOCI 4331.

CRIJ 4335  Criminology  
3 Semester Credit Hours (3 Lecture Hours)  
An examination of the major sociological explanations for crime, criminal behavior, and the social responses to crime. (Credit may not be given for both this course and SOCI 4335.) Cross listed with SOCI 4335.

CRIJ 4340  Criminal Investigation  
3 Semester Credit Hours (3 Lecture Hours)  
Critical examination of investigation methods and comparison of these to research methods. Advanced examination of investigative procedures, theory, supervision, and evaluative research. Some practical applications.

CRIJ 4345  Research Methods in Criminal Justice  
3 Semester Credit Hours (3 Lecture Hours)  
This course is designed to help students gain a working understanding of the research process with direct application to criminal justice research. Attention will focus on various aspects of the research process including quantitative and qualitative methods. Students will complete literature reviews, create research proposals, conduct observations/interviews, and construct surveys in addition to various assignments and activities.  
Prerequisite: CRIJ 1301 or 1313.

CRIJ 4351  Police Supervision and Management  
3 Semester Credit Hours (3 Lecture Hours)  
Study of contemporary theories of management and supervision as they relate to law enforcement. Management concerns considered include planning, motivation, organizational communication, discipline, productivity, ethics, conflict, and job stress.

CRIJ 4360  Intimate Relationship Violence  
3 Semester Credit Hours (3 Lecture Hours)  
Violence involving acquaintance, spouse, child, and elder abuse is examined within a theoretical construct relating violence to social responses. Alternative causal theories, prevention, counseling, administration, innovative programs, and inter-agency coordination are addressed.

CRIJ 4365  White Collar Crime  
3 Semester Credit Hours (3 Lecture Hours)  
Critical examination of widespread forms of offending and offenders typically omitted from traditional criminology and criminal justice courses. Critical exploration of white collar, corporate, environmental and governmental crimes/criminals.

CRIJ 4390  Topics in Criminal Justice  
3 Semester Credit Hours (3 Lecture Hours)  
May be repeated for credit when topics vary.

CRIJ 4396  Directed Individual Study  
1-3 Semester Credit Hours  
See College description.

CRIJ 4398  Applied Experience  
3 Semester Credit Hours  
See College description.

History, Minor

Program Description

The History minor is designed for students who are interested in history but cannot commit to it as their major. It makes an excellent companion for students majoring in pre-law and criminal justice, political science, literature and modern languages, philosophy, and sociology.

Program Requirements

The minor requires just eighteen credit hours beyond the history core and can usually be completed in one academic year. After completing six hours of lower-division history surveys (HIST 2311, 2312, 2322), students choose two courses each from two large clusters of upper-division electives.

Courses

HIST 1301  U.S. History to 1865
3 Semester Credit Hours (3 Lecture Hours)
A survey of the political, social, economic, military, cultural, and intellectual history of the United States from 1492 to 1865.
TCCNS: HIST 1301

HIST 1302  U.S. History Since 1865
3 Semester Credit Hours (3 Lecture Hours)
A survey of the political, social, economic, military, cultural, and intellectual history of the United States from 1865 to the present.
TCCNS: HIST 1302

HIST 2301  Texas History
3 Semester Credit Hours (3 Lecture Hours)
Spanish colonial period, Mexican statehood, independence, the development of the Republic, annexation and growth as a state.
TCCNS: HIST 2301

HIST 2311  Western Civilization I
3 Semester Credit Hours (3 Lecture Hours)
Survey of the cultures and civilizations of the Ancient Mediterranean world and the political, social, economic, military, cultural, and intellectual influences shaping the emergence and development of Europe to 1500.
TCCNS: HIST 2311

HIST 2312  Western Civilization II
3 Semester Credit Hours (3 Lecture Hours)
A survey of the political, social, economic, military, cultural, and intellectual development of Europe from 1500 to the present.
TCCNS: HIST 2312

HIST 2322  World History Since 1500
3 Semester Credit Hours (3 Lecture Hours)
examines major global issues over the past 500 years. Topics may include European expansion and colonialism, the integration of the Americans into world economic systems, changes in science and technology, decolonization, and modern environmental problems. This course will help students understand historical events within a global framework.

HIST 3301  History of World Religions
3 Semester Credit Hours (3 Lecture Hours)
Surveys the key beliefs, practices, rituals, figures, and historical developments of the world’s major religious traditions, including Hinduism, Buddhism, Confucianism, Judaism, Christianity, Islam, and New Age religions. Gives particular attention to their encounter with modernity and their complicated place in today’s global, diverse, post-modern world.

HIST 3303  Colonial Latin America
3 Semester Credit Hours (3 Lecture Hours)
An overview of Latin American history from pre-Columbian times until Independence.

HIST 3304  Modern Latin America
3 Semester Credit Hours (3 Lecture Hours)
A study of the major political, economic and cultural processes that marked the development of modern Latin America.

HIST 3307  The Ancient World
3 Semester Credit Hours (3 Lecture Hours)
This course examines the ancient history of the human race. It begins with the evolution of Homo sapiens in Africa and continues through approximately the 4th century CE. Topics examined include the formation of cultures, societies, states, and empires around the world including those in Egypt, Southwest Asia, India, China, and the Mediterranean.

HIST 3315  Europe 1750-1815
3 Semester Credit Hours (3 Lecture Hours)
Explores the processes which contributes to the establishment of a new political, economic, and social order in Europe. The course includes an in-depth focus upon the causes and consequences of the French Revolution as well as an examination of the European response to Napoleon.

HIST 3316  Colonial North America
3 Semester Credit Hours (3 Lecture Hours)
Covers early North American history from pre-contact through 1763, with a focus on the territory that would eventually become the United States. Examines the varieties of colonial worlds created by Europeans and native peoples, the nature and impact of European colonization, the development of slave societies, the emergence of regional economies and modern culture, the consolidation of European empires in the early and mid-18th century, and the imperial wars that finally set the stage for the coming of the American Revolution.
HIST 3317  Europe 1815-1914  
3 Semester Credit Hours (3 Lecture Hours)
The evolution of European industrial society from the Congress of Vienna to the outbreak of World War I. Themes include changes in the nature of work and family life, urbanization, and the emergence and growth of liberalism, socialism, nationalism, and romanticism as competing ideologies.

HIST 3318  The American Revolution  
3 Semester Credit Hours (3 Lecture Hours)
Covers the history of the American Revolution from the end of the Seven Years' War in 1763 to the ratification on the new federal constitution in 1789. Covers the political and social history of the independence movement, the Declaration of Independence, the military, social, and indigenous history of the Revolutionary War, and the making of the Constitution.

HIST 3319  Europe 1914 to the Present  
3 Semester Credit Hours (3 Lecture Hours)
Covers political, social, economic and cultural developments since 1914: the impact of World War I, the Russian Revolution, Fascism, the origin of the Cold War, the tension between European unification and growing ethnic tensions and the dissolution of the Soviet empire.

HIST 3320  Colonial and Revolutionary U.S.  
3 Semester Credit Hours (3 Lecture Hours)
Traces regional economic, social, and political change in the Americas from 1607 to the end of the Revolution.

HIST 3321  The Early American Republic  
3 Semester Credit Hours (3 Lecture Hours)
This course examines American history from the end of the revolutionary war to 1850. Political, economic, and social issues including, but not limited to, the creation of the Constitution, the development of the first and second party systems, the market revolution, antebellum reform, the Old South, and westward expansion.

HIST 3322  Civil War and Reconstruction  
3 Semester Credit Hours (3 Lecture Hours)
Background and causes of the Civil War; military, political, diplomatic, and economic developments during the war; Reconstruction and postwar adjustments.

HIST 3324  U.S. Gilded Age and Progressive Era  
3 Semester Credit Hours (3 Lecture Hours)
An examination of the dramatic period when the United States definitively settled the remaining portions of the continent and decisively moved towards becoming an industrial, urban nation with world-wide economic and political influence.

HIST 3325  Emergence of Modem U.S.  
3 Semester Credit Hours (3 Lecture Hours)
Study of American life from World War I through World War II. Topics include America's rise to a world power, the social, cultural, and political effects of corporate enterprise, urbanization, and immigration, women's suffrage, the Twenties, and the New Deal.

HIST 3326  U.S. Since 2nd World War  
3 Semester Credit Hours (3 Lecture Hours)
A study of American life and development as a world power since World War II.

HIST 3335  The U.S. Urban Experience  
3 Semester Credit Hours (3 Lecture Hours)
A general survey of the social, cultural, and political history of the American city, with particular emphasis on Corpus Christi and the ways our city illustrates these larger trends.

HIST 3337  Modern Asia  
3 Semester Credit Hours (3 Lecture Hours)
This course will examine Asia from 1600 to the present. Topics include politics, the nation state, colonialism, empire, war, nationalism, the Cold War and revolution, all in a historical context.

HIST 3340  Modern Asia  
3 Semester Credit Hours (3 Lecture Hours)
Examines the role of nature in the nation's past, looking beyond more traditional historical topics to discover how the environment has shaped society and the ways in which humans, in turn, have shaped nature throughout American history. Community-engaged learning component.

HIST 3350  Dictators and Dirty Wars in Latin America  
3 Semester Credit Hours (3 Lecture Hours)
Explores the rise of dictatorships and military regimes in twentieth century Latin America. Focuses on human rights struggles and popular movements in Mexico, Central America and the Southern Cone.

HIST 3368  Introduction to Public History  
3 Semester Credit Hours (3 Lecture Hours)
A Project-centered class that examines public history practices and debates, including the changing field over time, the relationship between history and memory, and the interpretive and sometimes controversial nature of historical sites and exhibits. Students will also learn methods and practices of museums, archives, oral history, digital history, and more. Includes community-engaged learning, workshops, local field trips.

HIST 3370  Introduction to Public History  
3 Semester Credit Hours (3 Lecture Hours)
Prerequisite: (HIST 1301, 1302 and 2311) or (HIST 2312).

HIST 4320  U.S. Cultural Experience  
3 Semester Credit Hours (3 Lecture Hours)
Explores ways that the myriad groups who have made up American society from the colonial period to the "information age" understood and expressed themselves and related to each other. (The chronological scope of this course may vary.)

HIST 4327  U.S. Modern Popular Culture  
3 Semester Credit Hours (3 Lecture Hours)
The historical development of modern popular culture—including television, movies, fiction, newspapers, music and consumption—and its effect on the structure and experience of U.S. society and work from the nineteenth century to the present.
HIST 4335  The Military and United States History
3 Semester Credit Hours (3 Lecture Hours)
The development of U.S. military strategy and policy from the Colonial Wars through Vietnam.

HIST 4336  Mexican American History
3 Semester Credit Hours (3 Lecture Hours)
Spanish and Mesoamerican backgrounds, conquest and mestizaje, settlement of Aztlán, interaction with Anglo-Americans, 20th century immigration, urbanization, identity, the Chicano Movement, and Mexican American organizational/political development.

HIST 4337  United States Women's History
3 Semester Credit Hours (3 Lecture Hours)
Themes include transformations in the notion of womanhood and of sexual differences, changes in the structure, function, and concept of "family" and "household," and historical factors that have shaped women's role in the work force and public life.

HIST 4340  European Women's History
3 Semester Credit Hours (3 Lecture Hours)
Study of the experiences of European women from the 18th to the 20th centuries. Also addresses the role that gender has played in the development of modern European societies. Some topics covered are women and the French Revolution, gender and class in industrial Europe, feminism and suffrage, and women and fashion.

HIST 4342  The Holocaust
3 Semester Credit Hours (3 Lecture Hours)
Examines the Holocaust by exploring the role of racism and anti-Semitism, the rise of Nazi policies, Jewish responses and resistance to them, deportation and genocide, the role of war, and the aftermath and memory of an event "beyond human imagination."

HIST 4345  European Thought and Culture, 1750-present
3 Semester Credit Hours (3 Lecture Hours)
Survey of the major European intellectual and cultural movements from the Enlightenment to the present. Broader than a traditional course in intellectual history, special attention will be given to the emergence and development of the concepts of "modernity" and the challenges of "postmodernism."

HIST 4346  The Search for Modern China: From 1600 to the Present
3 Semester Credit Hours (3 Lecture Hours)
This course surveys modern Chinese history from the late Ming dynasty to the present, with an emphasis on the late 19th and 20th centuries. Topics include empire, colonialism, nationalism, the nation state, modernization, revolution and the Cold War, all in a historical context.

HIST 4347  The History of Sexuality in the West
3 Semester Credit Hours
This course will examine how ideas about sexuality as well as sexual practices and identities have evolved over time and in different places; how the categories of homosexuality and heterosexuality were created and how they have been perceived. The course will focus on the 19th and 20th centuries in Europe and the United States, and address the themes of gender, body, race, class, image, representation, and the law.

HIST 4349  Transnational Histories of Asia and the Pacific
3 Semester Credit Hours (3 Lecture Hours)
Explores the transnational relations of Asia and the Pacific with the West from the 19th century to the present day. Themes include colonialism and imperialism, diaspora and migration, labor and economy, war and displacement. Topics include the Opium Wars, Immigration and Exclusion, Atomic Bombing of Hiroshima, Military War Brides, Third World Radicalism, Transnational Adoption Complex, and Environmentalism and Globalization.

HIST 4350  Narratives of World War II in the Pacific
3 Semester Credit Hours (3 Lecture Hours)
Examines how the relations between history, memory, and contemporary politics in post-WWII U.S. and Asia-Pacific have shaped the meaning of various contentious issues related to the Pacific War-such as war origins and responsibility, atrocities, racism, reparations, and nationalism-in textbooks, monuments, literature, art, films, political debates, exhibits, commemorative events, and scholarly works in different social and temporal contexts.

HIST 4352  Mexican American Women's History
3 Semester Credit Hours (3 Lecture Hours)
Examines the broad political, economic, social, and cultural trends in the lives of Mexican American women since 1848.

HIST 4374  Mexico: the National Period
3 Semester Credit Hours (3 Lecture Hours)
Traces economic, social, and political change in Mexico from independence to the present.

HIST 4375  Cold War Kids: Youth in Modern Latin America
3 Semester Credit Hours (3 Lecture Hours)
An examination of the experiences of Latin American youth in modern Latin America. Special emphasis on the role of young people in the revolutions and rebellions that marked the Cold War period.

HIST 4385  Historical Research and Writing
3 Semester Credit Hours (3 Lecture Hours)
The study and writing of history, with emphasis on historical analysis, research, and writing. Designed as the capstone course for history majors and prospective social science teachers. This course will feature a senior research paper, and should be taken during the student's final year of undergraduate study. Prerequisite: HIST 3385 or READ 3353.

HIST 4390  Topics in History
3 Semester Credit Hours (3 Lecture Hours)
Study of significant periods, countries, regions, or themes in history. May be repeated when topics vary.

HIST 4396  Directed Individual Study
1-3 Semester Credit Hours
See College description.

HIST 4398  Applied Experience
3 Semester Credit Hours
See College description.

HIST 4399  Internship
3 Semester Credit Hours
Best practices and methods in digital archives, museums, and /or public history through field work at a local organization or museum. Offered on application. Repeatable up to 6 hours.
Latin American Studies, Minor

Program Description
This interdisciplinary minor invites students to study the history, politics, languages, cultures, and economics of Latin America. Such a course of study can benefit a range of majors from Business, Education, the Social Sciences, and the Humanities. Course work must include Spanish beyond the 6 hour College of Liberal Arts Second Language requirement or the equivalent 1.

1
This requirement can be satisfied through an equivalency test. See Spanish section of the catalog for details.

3 Semester Credit Hours

A survey of the political, social, economic, military, cultural and intellectual history of the United States from 1492 to 1865.

A survey of the political, social, economic, military, cultural and intellectual history of the United States from 1865 to the present.

Spanish colonial period, Mexican statehood, independence, the development of the Republic, annexation and growth as a state.

Survey of the cultures and civilizations of the Ancient Mediterranean world and the political, social, economic, military, cultural, and intellectual influences shaping the emergence and development of Europe to 1500.

Survey of the political, social, economic, military, cultural, and intellectual development of Europe from 1500 to the present.

examines major global issues over the past 500 years. Topics may include European expansion and colonialism, the integration of the Americans into world economic systems, changes in science and technology, decolonization, and modern environmental problems. This course will help students understand historical events within a global framework.

Surveys the key beliefs, practices, rituals, figures, and historical developments of the world’s major religious traditions, including Hinduism, Buddhism, Confucianism, Judaism, Christianity, Islam, and New Age religions. Gives particular attention to their encounter with modernity and their complicated place in today’s global, diverse, post-modern world.

An overview of Latin American history from pre-Columbian times until Independence.

A study of the major political, economic and cultural processes that marked the development of modern Latin America.
HIST 3307 The Ancient World
3 Semester Credit Hours (3 Lecture Hours)
This course examines the ancient history of the human race. It begins with the evolution of Homo sapiens in Africa and continues through approximately the 4th century CE. Topics examined include the formation of cultures, societies, states, and empires around the world including those in Egypt, Southwest Asia, India, China, and the Mediterranean.

HIST 3315 Europe 1750-1815
3 Semester Credit Hours (3 Lecture Hours)
Explores the processes which contributes to the establishment of a new political, economic, and social order in Europe. The course includes an in-depth focus upon the causes and consequences of the French Revolution as well as an examination of the European response to Napoleon.

HIST 3316 Colonial North America
3 Semester Credit Hours (3 Lecture Hours)
Covers early North American history from pre-contact through 1763, with a focus on the territory that would eventually become the United States. Examines the varieties of colonial worlds created by Europeans and native peoples, the nature and impact of European colonization, the development of slave societies, the emergence of regional economies and modern culture, the consolidation of European empires in the early and mid-18th century, and the imperial wars that finally set the stage for the coming of the American Revolution.

HIST 3317 Europe 1815-1914
3 Semester Credit Hours (3 Lecture Hours)
The evolution of European industrial society from the Congress of Vienna to the outbreak of World War I. Themes include changes in the nature of work and family life, urbanization, and the emergence and growth of liberalism, socialism, nationalism, and romanticism as competing ideologies.

HIST 3318 The American Revolution
3 Semester Credit Hours (3 Lecture Hours)
Covers the history of the American Revolution from the end of the Seven Years’ War in 1763 to the ratification on the new federal constitution in 1789. Covers the political and social history of the independence movement, the Declaration of Independence, the military, social, and indigenous history of the Revolutionary War, and the making of the Constitution.

HIST 3319 Europe 1914 to the Present
3 Semester Credit Hours (3 Lecture Hours)
Political, social, economic and cultural developments since 1914: includes the impact of World War I, the Russian Revolution, Fascism, the origins of the Cold War, the tension between European unification and growing ethnic tensions and the dissolution of the Soviet empire.

HIST 3320 Colonial and Revolutionary U.S.
3 Semester Credit Hours (3 Lecture Hours)
Traces regional economic, social, and political change in the Americas from 1607 to the end of the Revolution.

HIST 3321 The Early American Republic
3 Semester Credit Hours (3 Lecture Hours)
This course examines American history from the end of the revolutionary war to 1850. Political, economic, and social issues including, but not limited to, the creation of the Constitution, the development of the first and second party systems, the market revolution, antebellum reform, the Old South, and westward expansion.

HIST 3323 Civil War and Reconstruction
3 Semester Credit Hours (3 Lecture Hours)
Background and causes of the Civil War; military, political, diplomatic, and economic developments during the War; Reconstruction and post-war adjustments.

HIST 3324 U.S. Gilded Age and Progressive Era
3 Semester Credit Hours (3 Lecture Hours)
An examination of the dramatic period when the United States definitively settled the remaining portions of the continent and decisively moved towards becoming an industrial, urban nation with world-wide economic and political influence.

HIST 3325 Emergence of Modern U.S.
3 Semester Credit Hours (3 Lecture Hours)
Study of American life from World War I through World War II. Topics include America’s rise to a world power, the social, cultural, and political effects of corporate enterprise, urbanization, and immigration, women’s suffrage, the Twenties, and the New Deal.

HIST 3326 U.S. Since 2nd World War
3 Semester Credit Hours (3 Lecture Hours)
A study of American life and development as a world power since World War II.

HIST 3335 The U.S. Urban Experience
3 Semester Credit Hours (3 Lecture Hours)
A general survey of the social, cultural, and political history of the American city, with particular emphasis on Corpus Christi and the ways our city illustrates these larger trends.

HIST 3330 Modern Asia
3 Semester Credit Hours (3 Lecture Hours)
This course will examine Asia from 1600 to the present. Topics include politics, the nation state, colonialism, empire, war, nationalism, the Cold War and revolution, all in a historical context.

HIST 3345 America by Nature
3 Semester Credit Hours (3 Lecture Hours)
Examines the role of nature in the nation’s past, looking beyond more traditional historical topics to discover how the environment has shaped society and the ways in which humans, in turn, have shaped nature throughout American history. Community-engaged learning component.

HIST 3350 Dictators and Dirty Wars in Latin America
3 Semester Credit Hours (3 Lecture Hours)
Explores the rise of dictatorships and military regimes in twentieth century Latin America. Focuses on human rights struggles and popular movements in Mexico, Central America and the Southern Cone.

HIST 3360 Introduction to Museum Studies
3 Semester Credit Hours (1.5 Lecture Hours)
In this cross-disciplinary class, students of history, sciences, the arts, and more will be introduced to the different departments of a museum and gain experience in programming, exhibits, research, public engagement, and other various aspects of museum management through their participation in a real working museum (Corpus Christi Museum of Science and History).

HIST 3370 Introduction to Public History
3 Semester Credit Hours (3 Lecture Hours)
A Project-centered class that examines public history practices and debates, including the changing field over time, the relationship between history and memory, and the interpretive and sometimes controversial nature of historical sites and exhibits. Students will also learn methods and practices of museums, archives, oral history, digital history, and more. Includes community-engaged learning, workshops, local field trips.
HIST 3373  Oral History and Podcasting
3 Semester Credit Hours (3 Lecture Hours)
A project-based course designed to teach students oral history, audio recording, and editing. Topics include oral history theory and methods, the role of testimony and memory in constructing historical narratives, interview techniques, archival practices, and the technical aspects of audio production, audio storytelling, and podcasting.

HIST 3385  The Art and Practice of History
3 Semester Credit Hours (3 Lecture Hours)
Introduces students to the most significant historiographical problems that face historians, focusing on recent and current controversies that have shaken the profession and been the subject of public and political debate. Provides examples of how historians think about and do history. Prerequisite: (HIST 1301, 1302 and 2311) or (HIST 2312).

HIST 4320  U.S. Cultural Experience
3 Semester Credit Hours (3 Lecture Hours)
Explores ways that the myriad groups who have made up American society from the colonial period to the "information age" understood and expressed themselves and related to each other. (The chronological scope of this course may vary.)

HIST 4327  U.S. Modern Popular Culture
3 Semester Credit Hours (3 Lecture Hours)
The historical development of modern popular culture—including television, movies, fiction, newspapers, music and consumption—and its effect on the structure and experience of U.S. society and work from the nineteenth century to the present.

HIST 4335  The Military and United States History
3 Semester Credit Hours (3 Lecture Hours)
The development of U.S. military strategy and policy from the Colonial Wars through Vietnam.

HIST 4336  Mexican American History
3 Semester Credit Hours (3 Lecture Hours)
Spanish and Mesoamerican backgrounds, conquest and mestizaje, settlement of Aztlán, interaction with Anglo-Americans, 20th century immigration, urbanization, identity, the Chicano Movement, and Mexican American organizational/political development.

HIST 4337  United States Women's History
3 Semester Credit Hours (3 Lecture Hours)
Themes include transformations in the notion of womanhood and of sexual differences, changes in the structure, function, and concept of "family" and "household," and historical factors that have shaped women's role in the work force and public life.

HIST 4340  European Women's History
3 Semester Credit Hours (3 Lecture Hours)
Study of the experiences of European women from the 18th to the 20th centuries. Also addresses the role that gender has played in the development of modern European societies. Some topics covered are women and the French Revolution, gender and class in industrial Europe, feminism and suffrage, and women and fashion.

HIST 4342  The Holocaust
3 Semester Credit Hours (3 Lecture Hours)
Examines the Holocaust by exploring the role of racism and anti-Semitism, the rise of Nazi policies, Jewish responses and resistance to them, deportation and genocide, the role of war, and the aftermath and memory of an event "beyond human imagination."

HIST 4345  European Thought and Culture, 1750-present
3 Semester Credit Hours (3 Lecture Hours)
Survey of the major European intellectual and cultural movements from the Enlightenment to the present. Broader than a traditional course in intellectual history, special attention will be given to the emergence and development of the concepts of "modernity" and the challenges of "postmodernism."

HIST 4346  The Search for Modern China: From 1600 to the Present
3 Semester Credit Hours (3 Lecture Hours)
This course surveys modern Chinese history from the late Ming dynasty to the present, with an emphasis on the late 19th and 20th centuries. Topics include empire, colonialism, nationalism, the nation state, modernization, revolution and the Cold War, all in a historical context.

HIST 4347  The History of Sexuality in the West
3 Semester Credit Hours
This course will examine how ideas about sexuality as well as sexual practices and identities have evolved over time and in different places; how the categories of homosexuality and heterosexuality were created and how they have been perceived. The course will focus on the 19th and 20th centuries in Europe and the United States, and address the themes of gender, body, race, class, image, representation, and the law.

HIST 4349  Transnational Histories of Asia and the Pacific
3 Semester Credit Hours (3 Lecture Hours)
Explores the transnational relations of Asia and the Pacific with the West from the 19th century to the present day. Themes include colonialism and imperialism, diaspora and migration, labor and economy, war and displacement. Topics include the Opium Wars, Immigration and Exclusion, Atomic Bombing of Hiroshima, Military War Brides, Third World Radicalism, Transnational Adoption Complex, and Environmentalism and Globalization.

HIST 4350  Narratives of World War II in the Pacific
3 Semester Credit Hours (3 Lecture Hours)
Examines how the relations between history, memory, and contemporary politics in post-WWII U.S. and Asia-Pacific have shaped the meaning of various contentious issues related to the Pacific War-such as war origins and responsibility, atrocities, racism, repatriations, and nationalism-in textbooks, monuments, literature, art, films, political debates, exhibits, commemorative events, and scholarly works in different social and temporal contexts.

HIST 4352  Mexican American Women's History
3 Semester Credit Hours (3 Lecture Hours)
Examines the broad political, economic, social, and cultural trends in the lives of Mexican American women since 1848.

HIST 4374  Mexico: the National Period
3 Semester Credit Hours (3 Lecture Hours)
Traces economic, social, and political change in Mexico from independence to the present.

HIST 4375  Cold War Kids: Youth in Modern Latin America
3 Semester Credit Hours (3 Lecture Hours)
An examination of the experiences of Latin American youth in modern Latin America. Special emphasis on the role of young people in the revolutions and rebellions that marked the Cold War period.
HIST 4385  Historical Research and Writing
3 Semester Credit Hours (3 Lecture Hours)
The study and writing of history, with emphasis on historical analysis, research, and writing. Designed as the capstone course for history majors and prospective social science teachers. This course will feature a senior research paper, and should be taken during the student's final year of undergraduate study.
Prerequisite: HIST 3385 or READ 3353.

HIST 4390  Topics in History
3 Semester Credit Hours (3 Lecture Hours)
Study of significant periods, countries, regions, or themes in history. May be repeated when topics vary.

HIST 4396  Directed Individual Study
1-3 Semester Credit Hours
See College description.

HIST 4398  Applied Experience
3 Semester Credit Hours
See College description.

HIST 4399  Internship
3 Semester Credit Hours
Best practices and methods in digital archives, museums, and/or public history through field work at a local organization or museum. Offered on application. Repeatable up to 6 hours.

Spanish Courses
SPAN 1100  Introduction to Service Learning
1 Semester Credit Hour
This is a one-credit course in which students in Spanish 1311 or 1312 may enroll and participate. This service learning course aims to promote collaborative learning between college students learning Spanish and people in the community. Available upon application. Repeatable up to 2 hours.

SPAN 1311  Spanish I
3 Semester Credit Hours (3 Lecture Hours)
Introduction to listening, speaking, reading and writing skills within a Spanish cultural framework. For students without previous knowledge of the language. (Language laboratory required. One hour per week.) *A lab fee is required for these courses.

SPAN 1312  Spanish II
3 Semester Credit Hours (3 Lecture Hours)
Continued practice in listening, speaking, reading and writing skills within a Spanish cultural framework. (Language laboratory required. One hour per week.) A lab fee is required for these courses.
Prerequisite: (SPAN 1311).

SPAN 2311  Spanish III
3 Semester Credit Hours (3 Lecture Hours)
Study of more complex Spanish sentence structure to further listening, speaking, reading and writing skills at an intermediate level within a Spanish cultural framework.
Prerequisite: SPAN 1312.
TCCNS: SPAN 2311

SPAN 2312  Continuing Spanish
3 Semester Credit Hours (3 Lecture Hours)
Continued development and review of all language skills at an intermediate level within a Spanish framework with an emphasis in the linguistic and cultural perspective.
Prerequisite: SPAN 2311.
TCCNS: SPAN 2312

SPAN 2313  Spanish for Heritage Speakers
3 Semester Credit Hours (3 Lecture Hours)
An introductory course designed for bilingual students who wish to enhance their linguistic skills (speaking, listening, reading and writing). This course will focus on the cultural and historical aspects related to the heritage Spanish speaker.
TCCNS: SPAN 2313

SPAN 2315  Language and Culture for Heritage Learners
3 Semester Credit Hours (3 Lecture Hours)
This course is designed to guide Spanish heritage language learners, as well as advanced learners of Spanish, in the development of their oral proficiency, written communication, and grammatical accuracy while exploring different cultural aspects from the Spanish-speaking world. It is highly recommended for students who have taken SPAN 2313 and/or who are transitioning into upper-division Spanish courses.
Prerequisite: SPAN 2313.

SPAN 3302  Spanish Composition
3 Semester Credit Hours (3 Lecture Hours)
A course designed to develop analytical perspectives in literary criticism and to strengthen reading and writing skills in Spanish through intensive reading of Spanish, Spanish American, and Chicano fiction.
Prerequisite: SPAN 2312.

SPAN 3303  Spanish Conversation
3 Semester Credit Hours (3 Lecture Hours)
A course designed to strengthen the student's oral proficiency in the language through selected readings, videos and oral presentations.
Prerequisite: SPAN 2312.

SPAN 3304  Spanish Civilization
3 Semester Credit Hours (3 Lecture Hours)
This course has been designed to provide a general overview of the cultural, linguistic, and historical experience of the Spanish people within its larger European context. Conducted in Spanish unless otherwise stated. This course may be used to satisfy the university core curriculum requirement in Language, Philosophy, and Culture.
Prerequisite: SPAN 2312.

SPAN 3305  Latin American Civilization
3 Semester Credit Hours (3 Lecture Hours)
This course is designed to provide a general overview of the cultural, linguistic, and historical experience of Latin American people before and after Columbus. Conducted in Spanish unless otherwise stated. This course may be used to satisfy the university core curriculum in Language, Philosophy, and Culture.
Prerequisite: SPAN 2312.

SPAN 3307  Spanish Literature I
3 Semester Credit Hours (3 Lecture Hours)
A critical approach to the study of early Spanish literature from the Middle Ages through the Eighteenth Century. Literary selections include masterpieces that establish and reflect Spain's literary tradition within its larger European context.

SPAN 3308  Spanish Literature II
3 Semester Credit Hours (3 Lecture Hours)
A continuation of a critical approach to the study of Spanish literature from the Nineteenth Century through the present. Representative works of Spanish Romanticism, Realism, Naturalism, and contemporary literature are studied within their larger European context.
SPAN 3309  Spanish American Literature I
3 Semester Credit Hours (3 Lecture Hours)
A critical approach to the study of early Spanish American literature from the Pre-Columbian Period through the Nineteenth Century. Selected readings in all literary genres, major themes, writers, and early literary movements will be studied within their larger Latin American context.

SPAN 3310  Spanish American Literature II
3 Semester Credit Hours (3 Lecture Hours)
A continuation of a critical approach to the study of Spanish American literature from the Twentieth Century through the present. Representative works of Latin American writers and literary movements: Modernism, Realism, Avant-Garde, Regionalism, Magic-Realism are studied within their larger Latin American context.

SPAN 3311  Spanish Phonetics
3 Semester Credit Hours (3 Lecture Hours)
A course designed to study the production and discrimination of the Spanish sound system with a general overview of the geographical and social distribution of phonemic and allophonic variants.

SPAN 3312  Spanish Grammar
3 Semester Credit Hours (3 Lecture Hours)
The course will serve to expand vocabulary, further develop writing skills; understand, apply, and use Spanish grammatical structures, and communicate more accurately in written and oral Spanish within a Hispanic cultural context.

SPAN 3313  Introduction to Translation
3 Semester Credit Hours (3 Lecture Hours)
This course is an introduction to the theory, methods and practice of English to Spanish and Spanish to English translation of general texts from different fields. Challenges related to culture and language, as well as professional ethics will be examined.

SPAN 3315  Civilizations of the Spanish-Speaking World
3 Semester Credit Hours (3 Lecture Hours)
This course has been designed to provide a general overview of the historical, sociocultural and political experience of peoples from the Spanish-Speaking world, both from Spain and Spanish America. 
Prerequisite: SPAN 2312.

SPAN 3316  Spanish for the Professions
3 Semester Credit Hours (3 Lecture Hours)
The course stresses Health, Business and Legal terminology in Spanish to enhance communication skills and cultural knowledge that will help to serve the South Texas Spanish speaking population as well as to conduct interactions with Spanish speakers and/or businesses through the United States and the world.

SPAN 3317  Introduction to Hispanic Linguistics
3 Semester Credit Hours (3 Lecture Hours)
This course introduces the study of language, the main subfields of Hispanic linguistics, and their application to other sciences.

SPAN 3320  Introduction to Spanish Literature
3 Semester Credit Hours (3 Lecture Hours)
A critical approach to the study of Spanish literature from the Middle Ages through the present. Representative works of Spanish literature are studied within their larger European context. It is highly recommended that students take any of the following before taking this course: SPAN 2313, 2315, 3302, 3303 have advanced proficiency or faculty permit. Conducted in Spanish, unless otherwise stated. This course may be used to satisfy the University Core Curriculum requirement in Language, Philosophy, and Culture.

SPAN 3325  Introduction to Latin American Literature
3 Semester Credit Hours (3 Lecture Hours)
A critical approach to the study of Latin American literature from the Pre-Columbian Period through the present. Selected readings in all literary genres, major themes, writers, and literary movements will be studied with a wide Latin American context. It is highly recommended that students take any of the following before taking this course: SPAN 2313, 2315, 3302, 3303, have advanced proficiency or faculty permit. Conducted in Spanish, unless otherwise stated. This course may be used to satisfy the University Core Curriculum requirement in Language, Philosophy, and Culture.

SPAN 4100  Service Learning
1 Semester Credit Hour
This is a one-credit course designed specifically for students who are preparing themselves to serve the community using their Spanish language skills. Students in this course will familiarize themselves with the methodology of a particular field (heritage language teaching, translation, interpreting, etc) to be able to interact and serve Spanish-speaking individuals in the community. Available upon application. Repeatable up to 3 hours.

SPAN 4301  Spanish Civil War and Literature
3 Semester Credit Hours (3 Lecture Hours)
Significance of the Civil War for Spanish, European, and world history. Effect of war on literary and cultural life of the country and the response of writers from Spain and Latin America. Conducted in Spanish.

SPAN 4302  Mexican Narrative
3 Semester Credit Hours (3 Lecture Hours)
Examination of representative novels and short stories reflecting the emergence of a post-revolutionary society in Mexico. Conducted in Spanish.

SPAN 4303  Spanish in the Southwest
3 Semester Credit Hours (3 Lecture Hours)
Cultural and linguistic dimensions of Spanish dialects of the Southwestern United States, with special attention to Texas Spanish and its sociolinguistic perspectives in the bilingual community at large. 
Prerequisite: SPAN 2312.

SPAN 4304  Miguel de Cervantes' Don Quijote
3 Semester Credit Hours (3 Lecture Hours)
An advanced course designed to provide an introduction to Miguel de Cervantes' Don Quijote.

SPAN 4305  Latin American Novel
3 Semester Credit Hours (3 Lecture Hours)
This course explores major novels from Latin America from the 20th century to the present. It examines the different problems, discourses, voices, contexts, and geographies that define this genre in Latin America.

SPAN 4306  Modern Spanish Literature
3 Semester Credit Hours (3 Lecture Hours)
A course that focuses on modern Spanish literature. It is highly recommended that students take any of the following before taking this course: SPAN 2313, 2315, 3302, 3303, have advanced proficiency or faculty permit. Conducted in Spanish, unless otherwise stated.

SPAN 4313  Spanish Interpretation
3 Semester Credit Hours (3 Lecture Hours)
This course presents an introduction to methodologies, requirements, terminology, and practice of interpretation, with emphasis on simultaneous, consecutive, and sight interpretation.
SPAN 4320  Spanish in the Americas
3 Semester Credit Hours (3 Lecture Hours)
A study of the Spanish that was brought to the Americas, its
development, propagation and contact with native-American
languages, including the sociocultural factors that have contributed to
the linguistic variation in contemporary Spanish-speaking societies.

SPAN 4322  Medical, Scientific and Technical Translation
3 Semester Credit Hours (3 Lecture Hours)
An advanced course in translation concentrating on medical, scientific
and technical translation. The course is designed to extend student’s
knowledge of translation theory and consolidate their skills in specialized
translation.
Prerequisite: (SPAN 3313).

SPAN 4327  Methods in Foreign Language Instruction
3 Semester Credit Hours (3 Lecture Hours)
This course is designed to study the current methods in foreign
languages, their application in maximizing language proficiency, and the
role of the students’ culture and language during the learning process.

SPAN 4390  Topics in Spanish
3 Semester Credit Hours (3 Lecture Hours)
Study of specialized topics in language or literature. These courses may
also be designed to develop terminology and overall Spanish proficiency
regarding specific professions: Business, Medical, Criminal Justice,
Sociology, etc. May be repeated when topics vary.

SPAN 4396  Directed Individual Study
1-3 Semester Credit Hours (1-3 Lecture Hours)
See College description.

SPAN 4398  Applied Experience
3 Semester Credit Hours
A practical work experience related to the Spanish area and related
careers. It is intended to provide an opportunity for a student to gain first-hand
experience in an unfamiliar field. Consequently, Applied Experience
credit may not be granted for a student’s regular work assignment
or for previous work experience. Registration is by application. The
application must include a clearly written description of the duties
and responsibilities involved in the Applied Experience project, and be
signed by the student, the on-site supervisor, and the faculty supervisor.
Completed applications must be received in the Dean’s Office by the last
class day of the semester preceding intended registration. This course is
graded “credit” or “no credit.” No more than three semester hours of
Applied Experience credit may be counted toward the baccalaureate
degree. Undergraduate Applied Experience course will include no less
than one hundred hours and no more than 150 hours of work experience
per semester.

SPAN 4421  Business, Commercial, and Legal Translation
4 Semester Credit Hours (4 Lecture Hours)
An advanced course in translation concentrating on business,
commercial and legal texts. The course is designed to extend student’s
knowledge of translation theory and consolidate their skills in specialized
translation.
Prerequisite: (SPAN 3313).

Literary Studies, Minor
Program Requirements
The minor in Literary Studies consists of 18 semester hours of English
coursework in addition to the core requirements in English, and must
include ENGL 2370 Introduction to Literary Studies (3 sch), two 3000-
level courses, two 4000-level courses, and one elective 3000–4000-level
course all in Literary Studies.

Courses
ENGL 0399  Integrated Reading and Writing
3 Semester Credit Hours (3 Lecture Hours)
A portfolio-based course with required tutoring (lab) time focused on the
writing and reading processes, including strategies for invention, revision,
and editing, and techniques of active reading, such as analysis, inference,
summary, and evaluating texts. Students will enter ENGL 0399 through
Texas Success Initiative (TSI) mandated remediation. (Not counted
toward graduation)

ENGL 1301  Writing and Rhetoric I
3 Semester Credit Hours (3 Lecture Hours)
English 1301 introduces students to writing studies, rhetoric, academic
research, and information literacy. Students will critically read and reflect
on threshold concepts in writing studies. They will practice recursive
writing and research processes for various situations. Sections will be
offered both online and in person each semester.
TCCNS: ENGL 1301

ENGL 1302  Writing and Rhetoric II
3 Semester Credit Hours (3 Lecture Hours)
English 1302 builds on the foundation in writing studies, rhetoric, academic
research, and information literacy introduced in ENGL 1301. Students will read, apply, and reflect on the current research
and scholarship in writing studies and rhetoric. Students will practice
transferring, deepening, and extending their ability to use writing into
discipline-specific, workplace, and civic contexts. Sections will be offered
both online and in person each semester.
Prerequisite: ENGL 1301.
TCCNS: ENGL 1302

ENGL 2303  Introduction to Writing Studies
3 Semester Credit Hours (3 Lecture Hours)
This course will review current scholarship on writing studies, including
threshold concepts, activity theory, and genre studies. It will consider
various perspectives on the uses of writing to provide students with an
intellectual and practical understanding of writing. This course provides
a starting point for the more specific studies of writing that occur in other
writing studies courses.

ENGL 2316  Literature and Culture
3 Semester Credit Hours (3 Lecture Hours)
Introduction to literatures that raise aesthetic, cultural, social, and/
or political issues that affect and reflect the human condition across
regions, cultures, and nations. Sample topics: Crossing Borders, The City
in Literature, Islands and Islanders, Science and Fiction.
TCCNS: ENGL 2331

ENGL 2332  Literature of the Western World: From the Classics to the
Renaissance
3 Semester Credit Hours (3 Lecture Hours)
Study of important literary texts from the Ancient World to the
Renaissance.
TCCNS: ENGL 2332

ENGL 2333  Literature of the Western World: From the Enlightenment to
the Present
3 Semester Credit Hours (3 Lecture Hours)
Study of important literary texts from the Enlightenment to the present.
TCCNS: ENGL 2333
ENGL 2360 Language and Gender
3 Semester Credit Hours (3 Lecture Hours)
In this class, we explore how language reflects, and is reflected upon, one facet of our identities: gender. We will explore the complex relationships between gender and aspects of language such as conversation, narrative, pronunciation, grammar, and pragmatic norms. We will also discuss the intersection of gender and other social factors, such as race or culture, as manifested in the language use. Students will also have an opportunity to discuss how gender is represented in the media and online, as well as how gender is situated in institutional contexts, such as home, school, work, and law. There is no prior knowledge of linguistics or social theory required for this class. Course activities include lectures, class discussions, in-class article presentation, language observations, hands-on data analysis, and a final project.

ENGL 2370 Introduction to Literary Studies
3 Semester Credit Hours
An introduction to literary analysis and scholarship for the intermediate writer. Emphasis placed on genres of literature, literary research, and expository and analytical composition. Familiarizes students with the various disciplines and related conversations within English Studies. Should be taken by sophomore-level English majors in the Literary Studies emphasis, and by Literary Studies and Creative Writing minors.
Prerequisite: ENGL 1302.

ENGL 2371 Exploring Social Media
3 Semester Credit Hours (3 Lecture Hours)
In this course we will examine and discuss current issues related to social media within a rhetorical framework. We will use different social media platforms to share and discuss in order to provide hands-on experience in these environments. Social media will be explored at the micro level as students will review their online social media presence to better understand how readers view them online. From the macro level we will identify current topics that affect the design and use of social media platforms and applications.

ENGL 3167 English as a Second/Foreign Language Tutoring
1 Semester Credit Hour
Students pursuing the Advanced TESOL Certificate will supplement ENGL 3367 (TESOL Seminar: Methods) with practical experience tutoring English learners. Students will write reflectively about those experiences. As needed, students will undergo site-specific training.
Co-requisite: ENGL 3367.

ENGL 3301 Technical and Professional Writing
3 Semester Credit Hours
A course designed to help students gain practical experience in finding and interpreting information and writing reports and documents for specialized audiences in the technical and professional world. ENGL 3301 will be held in a computer-assisted classroom.

ENGL 3302 Techniques of Creative Writing
3 Semester Credit Hours (3 Lecture Hours)
Introduces students to the theoretical knowledge and practical experience used in creative writing. Focuses on poetry, creative nonfiction, and short fiction. For all majors.

ENGL 3310 Technical and Professional Writing for Computer Science
3 Semester Credit Hours (3 Lecture Hours)
Designed specifically for computer science majors, this course focuses on developing students ability to (1) use writing to communicate effectively with a range of audiences about technology; (2) identify, analyze, and appropriately integrate relevant information in their writing; (3) make informed judgments about their uses of writing based on ACM's and IEEE's code of ethics; and (4) develop their ability to perform effectively individually and as members of a team to establish goals, plan tasks, meet deadlines, manage risk, and produce deliverables.

ENGL 3321 Film and Literature
3 Semester Credit Hours (3 Lecture Hours)
3 sem. hrs. Studies the connections between the formal elements of literature and of film, with emphasis on theme, narrative style, and genre. By viewing films based on literary sources, students will analyze how literature is adapted into film as well as identify strategies to view and read critically. For all majors.

ENGL 3323 Young Adult Fiction
3 Semester Credit Hours (3 Lecture Hours)
Literary study of young adult literature through analysis, discussion, and interpretation. The course emphasizes literary issues connected with society, culture, history, and genre.

ENGL 3325 Interdisciplinary Approaches to Literature
3 Semester Credit Hours (3 Lecture Hours)
In recent decades, it has become common to study literature in light of other disciplinary perspectives and to study other disciplines as they are depicted in literature. From these interdisciplinary approaches has emerged a distinct mode of analysis that examines texts within their broader social and cultural milieu. In this course students will earn to use cross-disciplinary methods to interpret literature and culture. Topics will vary, but may include Religion, Medicine, and American Literature, Disability Narratives in the Eighteenth Century, Trauma and the City in Twentieth-Century Literature.

ENGL 3330 Current Events and Literature
3 Semester Credit Hours (3 Lecture Hours)
This course examines literature in the context of current issues and events. Students will place literature in conversation with social, political, and cultural trends as a means of engaging with and understanding these trends and the debates associated with them. Using reading, writing, and discussion as modes of critical inquiry, students will discover the critical role that literature plays in representing, responding to, and shaping current events.

ENGL 3339 Introduction to Linguistics
3 Semester Credit Hours (3 Lecture Hours)
Introductory survey course covering phonetics, morphology, syntax, semantics, sociolinguistics, neurolinguistics, and language acquisition.

ENGL 3340 Grammar
3 Semester Credit Hours (3 Lecture Hours)
Prerequisite: (ENGL 2370)* or (ENGL 3303*) or (ENGL 2303*).
May be taken concurrently.
ENGL 3345  British Literature since 1800  
3 Semester Credit Hours (3 Lecture Hours)
Study of significant works of British poetry, drama, and prose since 1800 with emphasis on historical context and the exploration of literary and cultural values through written texts.  
Prerequisite: (ENGL 2370 †) or (ENGL 3303 ‡) or (ENGL 2303 ‡).  
* May be taken concurrently.  

ENGL 3348 Drama  
3 Semester Credit Hours (3 Lecture Hours)
A genre-oriented study of dramatic literature, using a wide range of texts. Variable content.  

ENGL 3349 Poetry  
3 Semester Credit Hours (3 Lecture Hours)
A genre-oriented study of poetry using a wide range of texts. Variable content.  

ENGL 3354 American Literatures before 1900  
3 Semester Credit Hours (3 Lecture Hours)
Study of significant works of American poetry, drama, and prose from the country’s pre-European beginnings to 1900 with emphasis on historical context and the exploration of literary and cultural values through written texts.  
Prerequisite: (ENGL 2370 †) or (ENGL 2303 ‡) or (ENGL 3303 ‡).  
* May be taken concurrently.  

ENGL 3355 American Literatures since 1900  
3 Semester Credit Hours (3 Lecture Hours)
Study of significant works of American poetry, drama, and prose from 1900 to the present with emphasis on historical context and the exploration of literary and cultural values through written texts.  
Prerequisite: (ENGL 2370 †) or (ENGL 2303 ‡) or (ENGL 3303 ‡).  
* May be taken concurrently.  

ENGL 3356 Current Approaches to Composition and Literature  
3 Semester Credit Hours (3 Lecture Hours)
Prepares prospective teachers to create developmentally appropriate learning environments and tasks that enable student success in writing and the study of literature in Language Arts and English courses. Prepares students to meet the increased writing and reading expectations in all subject areas, including their own writing.  

ENGL 3361 Strategies and Genres of Advanced Writing  
3 Semester Credit Hours (3 Lecture Hours)
Students will practice-writing in situated contexts (such as their majors, careers, and/or other professional interests) and across genres to develop more advanced and reflective writing strategies. By studying theories of writing; engaging in writing as a craft; and drafting, revising, and editing texts; students will refine and become more reflective in their writing processes.  

ENGL 3362 Creative Writing Workshop: Survey and Practice of Genres  
3 Semester Credit Hours (3 Lecture Hours)
Develops students’ skills as critics and writers of fiction, poetry, and creative nonfiction in a workshop setting. For all majors.  

ENGL 3363 Foundations of Rhetoric  
3 Semester Credit Hours (3 Lecture Hours)
This course will study the historical and theoretical development of rhetoric through the works of principal thinkers. Students will analyze rhetorical concepts in their relation to civic, cultural, political, and pedagogical developments and the construction of knowledge and will use rhetorical concepts to produce logical, ethical, and moral arguments.  

ENGL 3364 Strategies of Writing Creative Nonfiction  
3 Semester Credit Hours (3 Lecture Hours)
Explores the uses of creative nonfiction through reading and writing about published works of experienced writers and scholars in the field and practicing a variety of creative nonfiction techniques and genres (e.g. literary journalism, memoir, and the personal narrative).  

ENGL 3365 Second Language Acquisition  
3 Semester Credit Hours (3 Lecture Hours)
This course is an introduction to second language acquisition. The course is designed to be accessible to students from a wide variety of backgrounds and no basic knowledge of the linguistic structure of English will be assumed. This course will address issues related to how second language is learned by both children and adults.  

ENGL 3366 Language in Society  
3 Semester Credit Hours (3 Lecture Hours)
An introduction to the study of language as a function of several societal variables. Introduces basic concepts of language such as linguistic varieties, dialect, speech communities, and linguistic attitudes.  

ENGL 3367 TESOL Seminar  
3 Semester Credit Hours (3 Lecture Hours)
This course presents an introduction to and a critique of current and traditional methodologies of teaching English to speakers of other languages, with emphasis on aural comprehension; speaking, reading, and writing skills; testing and assessment; and linguistic-cultural differences. This course is open to all majors, but is required for students seeking the Certificate in TESOL.  
Prerequisite: ENGL 3365.  

ENGL 3369 Topics in Linguistics  
3 Semester Credit Hours (3 Lecture Hours)
Exploration of topics such as second language acquisition, language assessment, history of English, and contrastive analysis. May be repeated when topics vary.  

ENGL 3378 Document Design and Publishing  
3 Semester Credit Hours (3 Lecture Hours)
Focuses on the integration of text and visual rhetoric, such as graphics, for all kinds of professional publications including technical documents, media, public relations pieces, and advertisements.  

ENGL 3379 Writing for the Web  
3 Semester Credit Hours (3 Lecture Hours)
Emphasizes practical concepts related to writing and communication on the internet and the World Wide Web. Attention is given to finding and analyzing information; analyzing and designing WWW sites and other digital, hypertextual environments; and analyzing and composing hypertext-hypermedia materials for digital, networked environments. For all majors.  

ENGL 3380 Visual Rhetoric  
3 Semester Credit Hours (3 Lecture Hours)
Focuses on the analysis, design, and production of visual representations and multi-modal texts that integrate visual elements.  

ENGL 4123 Nonprofit Writing Project  
1 Semester Credit Hour
Students will gain practical experience with a nonprofit agency by developing a significant project that meets an agency identified need. Students should take this course in the last semester of their nonprofit certificate program in conjunction with one of the following: ENGL 3378, ENGL 3379, ENGL 4322, or ENGL 4321. The students’ professor in the regular course will be the instructor of record for a the projects course.
ENGL 4300 Technologies and Cultures of the Book
3 Semester Credit Hours (3 Lecture Hours)
Working with a range of print media, students will learn to analyze the interplay between the text's content and its formal features. Students will build the skills to think and write analytically about the materiality of texts.

ENGL 4305 Major Authors
3 Semester Credit Hours (3 Lecture Hours)
This course studies the significant works of a major literary author. Texts are viewed through a variety of critical perspectives and placed in the context of the writer’s life and of the society, culture, and history of the times. May be repeated once for credit when authors vary.

ENGL 4320 Professional Writing Workshop
3 Semester Credit Hours (3 Lecture Hours)
This course is tailored for individual students’ writing and publishing projects in their disciplines.

ENGL 4321 Grants and Proposals
3 Semester Credit Hours (3 Lecture Hours)
This course will teach students the grant proposal writing process, including identifying sources of funding, conducting research to support funding applications, and tailoring each proposal to a specific funding agency. Students will receive experience writing actual proposals on behalf of local organizations and agencies.

ENGL 4322 Writing in the Nonprofit Agencies
3 Semester Credit Hours (3 Lecture Hours)
Focuses on the specific kinds writing of professionals in the nonprofit world do, including internal communication in an agency, writing for the public, document creation, fund raising, board relations, and other relevant topics.

ENGL 4324 Editing & Style
3 Semester Credit Hours (3 Lecture Hours)
Practice in methods, tools, and principles of editing for nonfiction and technical publications. Emphasis on a rhetorical understanding of levels of editing, managing the editorial process, and grammar and style.

ENGL 4325 Writing Across Cultures and Contexts
3 Semester Credit Hours (3 Lecture Hours)
Through writing, students will study how groups perceive, understand, and communicate with and about each other. The course may focus on a specific type of writing (cross cultural expository writing, travel writing, cross cultural writing in industry), or on the linguistic and rhetorical practices of a cross-cultural community (latino/a rhetoric, African-American rhetorics, etc).

ENGL 4335 Creative Writing Studio: Development of Craft
3 Semester Credit Hours (3 Lecture Hours)
Develops students' skills as critics and writers of fiction, poetry, and creative nonfiction in a studio setting. Guides students to focus on a major project in one genre with sustained practice of techniques and revision. Open to students of all levels, from the novice to the advanced. For all majors.

ENGL 4340 The Novel
3 Semester Credit Hours (3 Lecture Hours)

ENGL 4345 Rhetorics, Literacies, and Writing
3 Semester Credit Hours (3 Lecture Hours)
This course examines the history and major theories of rhetoric, literacy, and composition, and explores how they influence contemporary cultural productions.

ENGL 4350 Studies in Poetics: Theory, Form, and Practice
3 Semester Credit Hours (3 Lecture Hours)
Develops students' theoretical knowledge of poetics and practical experience of writing in traditional forms, from the Anglo-American tradition to the culturally diverse movements and innovation of form. Focusing on works written by poets about poetry and poetics primarily from the 19th to the 21st centuries. For all majors.

ENGL 4351 Senior Capstone: Literature and Writing
3 Semester Credit Hours (3 Lecture Hours)
A study of literature in English for graduating seniors in the Literary Studies Emphasis. Emphasis is placed on genre, research, and analytical expository writing.
Prerequisite: ENGL 2370, 3303 or 2303.

ENGL 4352 Capstone in Writing Studies
3 Semester Credit Hours (3 Lecture Hours)
This course is the culminating experience for the Writing Studies emphasis in English. Students review, reflect on, integrate, and apply their learning from previous courses and experiences. Students create digital portfolios for career and publishing opportunities, emphasizing selection, revision, reflection, and presentation. In addition, students identify, evaluate, and annotate texts and resources to include in a curated digital collection/publication that will be available for students in future Writing Studies courses.

ENGL 4360 Gender, Sexuality and Literature
3 Semester Credit Hours (3 Lecture Hours)
This course introduces students to literature that explores issues of gender and sexuality. It focuses on relevant literary periods and conventions, as well as on the historical, social, and cultural contexts of artistic productions. Sample topics: women's literature, queer literature, literature and masculinity.

ENGL 4361 Race and Ethnicity in Literature
3 Semester Credit Hours (3 Lecture Hours)
Topics focus on a variety of cross-cultural issues in historical and/or contemporary texts by Caribbean, British Indian, Native American, African American, Chicano/a, and/or other underrepresented authors.

ENGL 4362 Texts and Contexts
3 Semester Credit Hours (3 Lecture Hours)
Study of literary and cultural texts that raise issues of community and social relations, diversity, multiculturalism, and/or globalization. Sample topics: Medicine and Religion in American Literature, Traveling Histories, the Global City, and Literary Regionalism in Transnational Context. May be repeated once for credit when topics vary.

ENGL 4370 Oral Interpretation of Children's Literature
3 Semester Credit Hours (3 Lecture Hours)
A study, primarily through the medium of performance, of various types and forms of literature for children. Strongly oriented toward teaching literature in the elementary school classroom. (Credit may not be given for both this course or THEA 4323.)

ENGL 4380 Critical Approaches to Literature and Culture
3 Semester Credit Hours (3 Lecture Hours)
A study of selected perspectives and critical approaches to literature and culture, including an examination of some of the theoretical assumptions upon which they are based, as well as their implications for the way we think about literature, human identity, and the power of language.
Prerequisite: ENGL 2370.
ENGL 4385  Studies in Creative Writing  
3 Semester Credit Hours (3 Lecture Hours)  
Students will focus on the craft of a specific genre or type of writing through reading experts' advice, reading and analyzing examples written by practitioners, and engaging in peer-response workshops with classmates. Attention will be paid to publication opportunities available for writers in that genre.

ENGL 4390  Topics in Literary Studies  
3 Semester Credit Hours (3 Lecture Hours)  
May be repeated when topics vary—see S.A.I.L. or advisor for further information.

ENGL 4391  Topics in Writing Studies  
3 Semester Credit Hours (3 Lecture Hours)  
May be repeated when topics vary—see S.A.I.L. or advisor for further information.

ENGL 4396  Directed Individual Study  
1-3 Semester Credit Hours (1-3 Lecture Hours)  
See College description.

ENGL 4398  Applied Experience  
3 Semester Credit Hours (3 Lecture Hours)  
See College description.

ENGL 4399  TESOL Practicum  
3 Semester Credit Hours  
Practical experience teaching English to second language learners. Students will observe, plan, and teach ESL lessons. Instructional support provides opportunities to discuss and reflect upon teaching experiences and help students connect theory, methods, and practice. This course enhances the TESOL Certification, but is not required for it. Cannot be repeated for credit.

**Mexican American Studies, Minor**

**Program Description**

Mexican American Studies (also known as Chicano Studies) is a multidisciplinary concentration that exposes students to a wide range of topics relevant to the Mexican-American experience. This course of study offers students valuable insights and skills to complement most majors including Nursing, Business, Education, Social Sciences, Arts, and Humanities.

**Minor**

The Mexican American Studies Minor requires a minimum of 18 hours of designated coursework. Students who select this minor must consult with and have approval of the Mexican American Studies Coordinator or the Academic Advisor to establish a degree plan. This should be done prior to completing 6 semester hours of coursework listed for the program.

**Program Requirements**

Students may choose from the following courses. All courses are taught in English except for SPAN.

**Total Hours 21**

**Note:**

Students may elect to count six hours from either their major towards the minor in Mexican American Studies or students may elect to count up to six hours from the college foreign language requirement (SPAN 2311 Spanish III (3 sch) and SPAN 2312 Continuing Spanish (3 sch)).

Topics (4390) courses can be taken in any participating discipline as electives when the topics are appropriate and approved by the program coordinator.

**Courses**

**History Courses**

**HIST 1301  U.S. History to 1865**  
3 Semester Credit Hours (3 Lecture Hours)  
A survey of the political, social, economic, military, cultural and intellectual history of the United States from 1492 to 1865.  
**TCCNS:** HIST 1301

**HIST 1302  U.S. History Since 1865**  
3 Semester Credit Hours (3 Lecture Hours)  
A survey of the political, social, economic, military, cultural and intellectual history of the United States from 1865 to the present.  
**TCCNS:** HIST 1302

**HIST 2301  Texas History**  
3 Semester Credit Hours (3 Lecture Hours)  
Spanish colonial period, Mexican statehood, independence, the development of the Republic, annexation and growth as a state.  
**TCCNS:** HIST 2301

**HIST 2311  Western Civilization I**  
3 Semester Credit Hours (3 Lecture Hours)  
Survey of the cultures and civilizations of the Ancient Mediterranean world and the political, social, economic, military, cultural, and intellectual influences shaping the emergence and development of Europe to 1500.  
**TCCNS:** HIST 2311
HIST 2312 Western Civilization II
3 Semester Credit Hours (3 Lecture Hours)
A survey of the political, social, economic, military, cultural, and intellectual development of Europe from 1500 to the present.
TCCNS: HIST 2312

HIST 2322 World History Since 1500
3 Semester Credit Hours (3 Lecture Hours)
examines major global issues over the past 500 years. Topics may include European expansion and colonialism, the integration of the Americans into world economic systems, changes in science and technology, decolonization, and modern environmental problems. This course will help students understand historical events within a global framework.

HIST 3301 History of World Religions
3 Semester Credit Hours (3 Lecture Hours)
Surveys the key beliefs, practices, rituals, figures, and historical developments of the world’s major religious traditions, including Hinduism, Buddhism, Confucianism, Judaism, Christianity, Islam, and New Age religions. Gives particular attention to their encounter with modernity and their complicated place in today’s global, diverse, post-modern world.

HIST 3303 Colonial Latin America
3 Semester Credit Hours (3 Lecture Hours)
An overview of Latin American history from pre-Columbian times until Independence.

HIST 3304 Modern Latin America
3 Semester Credit Hours (3 Lecture Hours)
A study of the major political, economic and cultural processes that marked the development of modern Latin America.

HIST 3307 The Ancient World
3 Semester Credit Hours (3 Lecture Hours)
This course examines the ancient history of the human race. It begins with the evolution of Homo sapiens in Africa and continues through approximately the 4th century CE. Topics examined include the formation of cultures, societies, states, and empires around the world including those in Egypt, Southwest Asia, India, China, and the Mediterranean.

HIST 3315 Europe 1750-1815
3 Semester Credit Hours (3 Lecture Hours)
Explores the processes which contributes to the establishment of a new political, economic, and social order in Europe. The course includes an in-depth focus upon the causes and consequences of the French Revolution as well as an examination of the European response to Napoleon.

HIST 3316 Colonial North America
3 Semester Credit Hours (3 Lecture Hours)
Covers early North American history from pre-contact through 1763, with a focus on the territory that would eventually become the United States. Examines the varieties of colonial worlds created by Europeans and native peoples, the nature and impact of European colonization, the development of slave societies, the emergence of regional economies and modern culture, the consolidation of European empires in the early and mid-18th century, and the imperial wars that finally set the stage for the coming of the American Revolution.

HIST 3317 Europe 1815-1914
3 Semester Credit Hours (3 Lecture Hours)
The evolution of European industrial society from the Congress of Vienna to the outbreak of World War I. Themes include changes in the nature of work and family life, urbanization, and the emergence and growth of liberalism, socialism, nationalism, and romanticism as competing ideologies.

HIST 3318 The American Revolution
3 Semester Credit Hours (3 Lecture Hours)
Covers the history of the American Revolution from the end of the Seven Years’ War in 1763 to the ratification of the new federal constitution in 1789. Covers the political and social history of the independence movement, the Declaration of Independence, the military, social, and indigenous history of the Revolutionary War, and the making of the Constitution.

HIST 3319 Europe 1914 to the Present
3 Semester Credit Hours (3 Lecture Hours)
Political, social, economic and cultural developments since 1914: includes the impact of World War I, the Russian Revolution, Fascism, the origins of the Cold War, the tension between European unification and growing ethnic tensions and the dissolution of the Soviet empire.

HIST 3320 Colonial and Revolutionary U.S.
3 Semester Credit Hours (3 Lecture Hours)
Traces regional economic, social, and political change in the Americas from 1607 to the end of the Revolution.

HIST 3321 The Early American Republic
3 Semester Credit Hours (3 Lecture Hours)
This course examines American history from the end of the revolutionary war to 1850. Political, economic, and social issues including, but not limited to, the creation of the Constitution, the development of the first and second party systems, the market revolution, antebellum reform, the Old South, and westward expansion.

HIST 3323 Civil War and Reconstruction
3 Semester Credit Hours (3 Lecture Hours)
Background and causes of the Civil War; military, political, diplomatic, and economic developments during the War; Reconstruction and post-war adjustments.

HIST 3324 U.S. Gilded Age and Progressive Era
3 Semester Credit Hours (3 Lecture Hours)
An examination of the dramatic period when the United States definitively settled the remaining portions of the continent and decisively moved towards becoming an industrial, urban nation with world-wide economic and political influence.

HIST 3325 Emergence of Modern U.S.
3 Semester Credit Hours (3 Lecture Hours)
Study of American life from World War I through World War II. Topics include America’s rise to a world power, the social, cultural, and political effects of corporate enterprise, urbanization, and immigration, women’s suffrage, the Twenties, and the New Deal.

HIST 3326 U.S. Since 2nd World War
3 Semester Credit Hours (3 Lecture Hours)
A study of American life and development as a world power since World War II.

HIST 3335 The U.S. Urban Experience
3 Semester Credit Hours (3 Lecture Hours)
A general survey of the social, cultural, and political history of the American city, with particular emphasis on Corpus Christi and the ways our city illustrates these larger trends.
HIST 3340 Modern Asia
3 Semester Credit Hours (3 Lecture Hours)
This course will examine Asia from 1600 to the present. Topics include politics, the nation state, colonialism, empire, war, nationalism, the Cold War and revolution, all in a historical context.

HIST 3345 America by Nature
3 Semester Credit Hours (3 Lecture Hours)
Examines the role of nature in the nation's past, looking beyond more traditional historical topics to discover how the environment has shaped society and the ways in which humans, in turn, have shaped nature throughout American history. Community-engaged learning component.

HIST 3350 Dictators and Dirty Wars in Latin America
3 Semester Credit Hours (3 Lecture Hours)
Explores the rise of dictatorships and military regimes in twentieth century Latin America. Focuses on human rights struggles and popular movements in Mexico, Central America and the Southern Cone.

HIST 3360 Introduction to Museum Studies
3 Semester Credit Hours (1.5 Lecture Hours)
In this cross-disciplinary class, students of history, sciences, the arts, and more will be introduced to the different departments of a museum and gain experience in programming, exhibits, research, public engagement, and other various aspects of museum management through their participation in a real working museum (Corpus Christi Museum of Science and History).

HIST 3370 Introduction to Public History
3 Semester Credit Hours (3 Lecture Hours)
A Project-centered class that examines public history practices and debates, including the changing field over time, the relationship between history and memory, and the interpretive and sometimes controversial nature of historical sites and exhibits. Students will also learn methods and practices of museums, archives, oral history, digital history, and more. Includes community-engaged learning, workshops, local field trips.

HIST 3373 Oral History and Podcasting
3 Semester Credit Hours (3 Lecture Hours)
A project-based course designed to teach students oral history, audio recording, and editing. Topics include oral history theory and methods, the role of testimony and memory in constructing historical narratives, interview techniques, archival practices, and the technical aspects of audio production, audio storytelling, and podcasting.

HIST 3385 The Art and Practice of History
3 Semester Credit Hours (3 Lecture Hours)
Introduces students to the most significant historiographical problems that face historians, focusing on recent and current controversies that have shaken the profession and been the subject of public and political debate. Provides examples of how historians think about and do history. Prerequisite: (HIST 1301, 1302 and 2311) or (HIST 2312).

HIST 4320 U.S. Cultural Experience
3 Semester Credit Hours (3 Lecture Hours)
Explores ways that the myriad groups who have made up American society from the colonial period to the "information age" understood and expressed themselves and related to each other. (The chronological scope of this course may vary.)

HIST 4327 U.S. Modern Popular Culture
3 Semester Credit Hours (3 Lecture Hours)
The historical development of modern popular culture—including television, movies, fiction, newspapers, music and consumption—and its effect on the structure and experience of U.S. society and work from the nineteenth century to the present.

HIST 4330 The Military and United States History
3 Semester Credit Hours (3 Lecture Hours)
The development of U.S. military strategy and policy from the Colonial Wars through Vietnam.

HIST 4336 Mexican American History
3 Semester Credit Hours (3 Lecture Hours)
Spanish and Mesoamerican backgrounds, conquest and mestizaje, settlement of Aztlan, interaction with Anglo-Americans, 20th century immigration, urbanization, identity, the Chicano Movement, and Mexican American organizational/political development.

HIST 4337 United States Women's History
3 Semester Credit Hours (3 Lecture Hours)
Themes include transformations in the notion of womanhood and of sexual differences, changes in the structure, function, and concept of "family" and "household," and historical factors that have shaped women's role in the work force and public life.

HIST 4340 European Women's History
3 Semester Credit Hours (3 Lecture Hours)
Study of the experiences of European women from the 18th to the 20th centuries. Also addresses the role that gender has played in the development of modern European societies. Some topics covered are women and the French Revolution, gender and class in industrial Europe, feminism and suffrage, and women and fashion.

HIST 4342 The Holocaust
3 Semester Credit Hours (3 Lecture Hours)
Examines the Holocaust by exploring the role of racism and anti-Semitism, the rise of Nazi policies, Jewish responses and resistance to them, deportation and genocide, the role of war, and the aftermath and memory of an event "beyond human imagination."

HIST 4345 European Thought and Culture, 1750-present
3 Semester Credit Hours (3 Lecture Hours)
Survey of the major European intellectual and cultural movements from the Enlightenment to the present. Broader than a traditional course in intellectual history, special attention will be given to the emergence and development of the concepts of "modernity" and the challenges of "postmodernism."

HIST 4346 The Search for Modern China: From 1600 to the Present
3 Semester Credit Hours (3 Lecture Hours)
This course surveys modern Chinese history from the late Ming dynasty to the present, with an emphasis on the late 19th and 20th centuries. Topics include empire, colonialism, nationalism, the nation state, modernization, revolution and the Cold War, all in a historical context.

HIST 4347 The History of Sexuality in the West
3 Semester Credit Hours
This course will examine how ideas about sexuality as well as sexual practices and identities have evolved over time and in different places; how the categories of homosexuality and heterosexuality were created and how they have been perceived. The course will focus on the 19th and 20th centuries in Europe and the United States, and address the themes of gender, body, race, class, image, representation, and the law.
HIST 4349 Transnational Histories of Asia and the Pacific
3 Semester Credit Hours (3 Lecture Hours)
Explores the transnational relations of Asia and the Pacific with the West from the 19th century to the present day. Themes include colonialism and imperialism, diaspora and migration, labor and economy, war and displacement. Topics include the Opium Wars, Immigration and Exclusion, Atomic Bombing of Hiroshima, Military War Brides, Third World Radicalism, Transnational Adoption Complex, and Environmentalism and Globalization.

HIST 4350 Narratives of World War II in the Pacific
3 Semester Credit Hours (3 Lecture Hours)
Examines how the relations between history, memory, and contemporary politics in post-WWII U.S. and Asia-Pacific have shaped the meaning of various contentious issues related to the Pacific War—such as war origins and responsibility, atrocities, racism, reparations, and nationalism—in textbooks, monuments, literature, art, films, political debates, exhibits, commemorative events, and scholarly works in different social and temporal contexts.

HIST 4352 Mexican American Women's History
3 Semester Credit Hours (3 Lecture Hours)
Examines the broad political, economic, social, and cultural trends in the lives of Mexican American women since 1848.

HIST 4374 Mexico: the National Period
3 Semester Credit Hours (3 Lecture Hours)
Traces economic, social, and political change in Mexico from independence to the present.

HIST 4375 Cold War Kids: Youth in Modern Latin America
3 Semester Credit Hours (3 Lecture Hours)
An examination of the experiences of Latin American youth in modern Latin America. Special emphasis on the role of young people in the revolutions and rebellions that marked the Cold War period.

HIST 4385 Historical Research and Writing
3 Semester Credit Hours (3 Lecture Hours)
The study and writing of history, with emphasis on historical analysis, research, and writing. Designed as the capstone course for history majors and prospective social science teachers. This course will feature a senior research paper, and should be taken during the student's final year of undergraduate study.
Prerequisite: HIST 3385 or READ 3353.

HIST 4390 Topics in History
3 Semester Credit Hours (3 Lecture Hours)
Study of significant periods, countries, regions, or themes in history. May be repeated when topics vary.

HIST 4396 Directed Individual Study
1-3 Semester Credit Hours
See College description.

HIST 4398 Applied Experience
3 Semester Credit Hours
See College description.

HIST 4399 Internship
3 Semester Credit Hours
Best practices and methods in digital archives, museums, and/or public history through field work at a local organization or museum. Offered on application. Repeatable up to 6 hours.

Spanish Courses
SPAN 1100 Introduction to Service Learning
1 Semester Credit Hour
This is a one-credit course in which students in Spanish 1311 or 1312 may enroll and participate. This service learning course aims to promote collaborative learning between college students learning Spanish and people in the community. Available upon application. Repeatable up to 2 hours.

SPAN 1311 Spanish I
3 Semester Credit Hours (3 Lecture Hours)
Introduction to listening, speaking, reading and writing skills within a Spanish cultural framework. For students without previous knowledge of the language. (Language laboratory required. One hour per week.) *A lab fee is required for these courses.

SPAN 1312 Spanish II
3 Semester Credit Hours (3 Lecture Hours)
Continued practice in listening, speaking, reading and writing skills within a Spanish cultural framework. (Language laboratory required. One hour per week.) A lab fee is required for these courses.
Prerequisite: (SPAN 1311).

SPAN 2311 Spanish III
3 Semester Credit Hours (3 Lecture Hours)
Study of more complex Spanish sentence structure to further listening, speaking, reading and writing skills at an intermediate level within a Spanish cultural framework.
Prerequisite: SPAN 1312.
TCCNS: SPAN 2311

SPAN 2312 Continuing Spanish
3 Semester Credit Hours (3 Lecture Hours)
Continued development and review of all language skills at an intermediate level within a Spanish framework with an emphasis in the linguistic and cultural perspective.
Prerequisite: SPAN 2311.
TCCNS: SPAN 2312

SPAN 2313 Spanish for Heritage Speakers
3 Semester Credit Hours (3 Lecture Hours)
An introductory course designed for bilingual students who wish to enhance their linguistic skills (speaking, listening, reading and writing). This course will focus on the cultural and historical aspects related to the heritage Spanish speaker.
TCCNS: SPAN 2313

SPAN 2315 Language and Culture for Heritage Learners
3 Semester Credit Hours (3 Lecture Hours)
This course is designed to guide Spanish heritage language learners, as well as advanced learners of Spanish, in the development of their oral proficiency, written communication, and grammatical accuracy while exploring different cultural aspects from the Spanish-speaking world. It is highly recommended for students who have taken SPAN 2313 and/or who are transitioning into upper-division Spanish courses.
Prerequisite: SPAN 2313.

SPAN 3302 Spanish Composition
3 Semester Credit Hours (3 Lecture Hours)
A course designed to develop analytical perspectives in literary criticism and to strengthen reading and writing skills in Spanish through intensive reading of Spanish, Spanish American, and Chicano fiction.
Prerequisite: SPAN 2312.
SPAN 3303 Spanish Conversation
3 Semester Credit Hours (3 Lecture Hours)
A course designed to strengthen the student's oral proficiency in the language through selected readings, videos and oral presentations.
Prerequisite: SPAN 2312.

SPAN 3304 Spanish Civilization
3 Semester Credit Hours (3 Lecture Hours)
This course has been designed to provide a general overview of the cultural, linguistic, and historical experience of the Spanish people within its larger European context. Conducted in Spanish unless otherwise stated. This course may be used to satisfy the university core curriculum requirement in Language, Philosophy, and Culture.
Prerequisite: SPAN 2312.

SPAN 3305 Latin American Civilization
3 Semester Credit Hours (3 Lecture Hours)
This course is designed to provide a general overview of the cultural, linguistic, and historical experience of Latin American people before and after Columbus. Conducted in Spanish unless otherwise stated. This course may be used to satisfy the university core curriculum in Language, Philosophy, and Culture.
Prerequisite: SPAN 2312.

SPAN 3307 Spanish Literature I
3 Semester Credit Hours (3 Lecture Hours)
A critical approach to the study of early Spanish literature from the Middle Ages through the Eighteenth Century. Literary selections include masterpieces that establish and reflect Spain's literary tradition within its larger European context.

SPAN 3308 Spanish Literature II
3 Semester Credit Hours (3 Lecture Hours)
A continuation of a critical approach to the study of Spanish literature from the Nineteenth Century through the present. Representative works of Spanish Romanticism, Realism, Naturalism, and contemporary literature are studied within their larger European context.

SPAN 3309 Spanish American Literature I
3 Semester Credit Hours (3 Lecture Hours)
A critical approach to the study of early Spanish American literature from the Pre-Columbian Period through the Nineteenth Century. Selected readings in all literary genres, major themes, writers, and early literary movements will be studied within their larger Latin American context.

SPAN 3310 Spanish American Literature II
3 Semester Credit Hours (3 Lecture Hours)
A continuation of a critical approach to the study of Spanish American literature from the Twentieth Century through the present. Representative works of Latin American writers and literary movements: Modernism, Realism, Avant-Garde, Regionalism, Magic-Realism are studied within their larger Latin American context.

SPAN 3311 Spanish Phonetics
3 Semester Credit Hours (3 Lecture Hours)
A course designed to study the production and discrimination of the Spanish sound system with a general overview of the geographical and social distribution of phonemic and allophonic variants.

SPAN 3312 Spanish Grammar
3 Semester Credit Hours (3 Lecture Hours)
The course will serve to expand vocabulary, further develop writing skills; understand, apply, and use Spanish grammatical structures, and communicate more accurately in written and oral Spanish within a Hispanic cultural context.

SPAN 3313 Introduction to Translation
3 Semester Credit Hours (3 Lecture Hours)
This course is an introduction to the theory, methods and practice of English to Spanish and Spanish to English translation of general texts from different fields. Challenges related to culture and language, as well as professional ethics will be examined.

SPAN 3315 Civilizations of the Spanish-Speaking World
3 Semester Credit Hours (3 Lecture Hours)
This course has been designed to provide a general overview of the historical, sociocultural and political experience of peoples from the Spanish-Speaking world, both from Spain and Spanish America.
Prerequisite: SPAN 2312.

SPAN 3316 Spanish for the Professions
3 Semester Credit Hours (3 Lecture Hours)
The course stresses Health, Business and Legal terminology in Spanish to enhance communication skills and cultural knowledge that will help to serve the South Texas Spanish speaking population as well as to conduct interactions with Spanish speakers and/or businesses through the United States and the world.

SPAN 3317 Introduction to Hispanic Linguistics
3 Semester Credit Hours (3 Lecture Hours)
This course introduces the study of language, the main subfields of Hispanic linguistics, and their application to other sciences.

SPAN 3320 Introduction to Spanish Literature
3 Semester Credit Hours (3 Lecture Hours)
A critical approach to the study of Spanish literature from the Middle Ages through the present. Representative works of Spanish literature are studied within their larger European context. It is highly recommended that students take any of the following before taking this course: SPAN 2313, 2315, 3302, 3303 have advanced proficiency or faculty permit. Conducted in Spanish, unless otherwise stated. This course may be used to satisfy the University Core Curriculum requirement in Language, Philosophy, and Culture.

SPAN 3325 Introduction to Latin American Literature
3 Semester Credit Hours (3 Lecture Hours)
A critical approach to the study of Latin American literature from the Pre-Columbian Period through the present. Selected readings in all literary genres, major themes, writers, and literary movements will be studied with a wide Latin American context. It is highly recommended that students take any of the following before taking this course: SPAN 2313, 2315, 3302, 3303 have advanced proficiency or faculty permit. Conducted in Spanish, unless otherwise stated. This course may be used to satisfy the University Core Curriculum requirement in Language, Philosophy, and Culture.

SPAN 4100 Service Learning
1 Semester Credit Hour
This is a one-credit course designed specifically for students who are preparing themselves to serve the community using their Spanish language skills. Students in this course will familiarize themselves with the methodology of a particular field (heritage language teaching, translation, interpreting, etc) to be able to interact and serve Spanish-speaking individuals in the community. Available upon application. Repeatable up to 3 hours.

SPAN 4301 Spanish Civil War and Literature
3 Semester Credit Hours (3 Lecture Hours)
Significance of the Civil War for Spanish, European, and world history. Effect of war on literary and cultural life of the country and the response of writers from Spain and Latin America. Conducted in Spanish.
SPAN 4302 Mexican Narrative
3 Semester Credit Hours (3 Lecture Hours)
Examination of representative novels and short stories reflecting the emergence of a post-revolutionary society in Mexico. Conducted in Spanish.

SPAN 4303 Spanish in the Southwest
3 Semester Credit Hours (3 Lecture Hours)
Cultural and linguistic dimensions of Spanish dialects of the Southwestern United States, with special attention to Texas Spanish and its sociolinguistic perspectives in the bilingual community at large.
Prerequisite: SPAN 2312.

SPAN 4304 Miguel de Cervantes’ Don Quijote
3 Semester Credit Hours (3 Lecture Hours)
An advanced course designed to provide an introduction to Miguel de Cervantes’ Don Quijote.

SPAN 4305 Latin American Novel
3 Semester Credit Hours (3 Lecture Hours)
This course explores major novels from Latin America from the 20th century to the present. It examines the different problems, discourses, voices, contexts, and geographies that define this genre in Latin America.

SPAN 4306 Modern Spanish Literature
3 Semester Credit Hours (3 Lecture Hours)
A course that focuses on modern Spanish literature. It is highly recommended that students take any of the following before taking this course: SPAN 2313, 2315, 3302, 3303, have advanced proficiency or faculty permit. Conducted in Spanish, unless otherwise stated.

SPAN 4313 Spanish Interpretation
3 Semester Credit Hours (3 Lecture Hours)
This course presents an introduction to methodologies, requirements, terminology, and practice of interpretation, with emphasis on simultaneous, consecutive, and sight interpretation.

SPAN 4320 Spanish in the Americas
3 Semester Credit Hours (3 Lecture Hours)
A study of the Spanish that was brought to the Americas, its development, propagation and contact with native-American languages, including the sociocultural factors that have contributed to the linguistic variation in contemporary Spanish-speaking societies.

SPAN 4322 Medical, Scientific and Technical Translation
3 Semester Credit Hours (3 Lecture Hours)
An advanced course in translation concentrating on medical, scientific and technical translation. The course is designed to extend student's knowledge of translation theory and consolidate their skills in specialized translation.
Prerequisite: (SPAN 3313).

SPAN 4327 Methods in Foreign Language Instruction
3 Semester Credit Hours (3 Lecture Hours)
This course is designed to study the current methods in foreign languages, their application in maximizing language proficiency, and the role of the students' culture and language during the learning process.

SPAN 4390 Topics in Spanish
3 Semester Credit Hours (3 Lecture Hours)
Study of specialized topics in language or literature. These courses may also be designed to develop terminology and overall Spanish proficiency regarding specific professions: Business, Medical, Criminal Justice, Sociology, etc. May be repeated when topics vary.

SPAN 4396 Directed Individual Study
1-3 Semester Credit Hours (1-3 Lecture Hours)
See College description.

SPAN 4398 Applied Experience
3 Semester Credit Hours
A practical work experience related to the Spanish area and related careers. It is intended to provide an opportunity for a student to gain first-hand experience in an unfamiliar field. Consequently, Applied Experience credit may not be granted for a student's regular work assignment or for previous work experience. Registration is by application. The application must include a clearly written description of the duties and responsibilities involved in the Applied Experience project, and be signed by the student, the on-site supervisor, and the faculty supervisor. Completed applications must be received in the Dean's Office by the last class day of the semester preceding intended registration. This course is graded "credit" or "no credit." No more than three semester hours of Applied Experience credit may be counted toward the baccalaureate degree. Undergraduate Applied Experience course will include no less than one hundred hours and no more than 150 hours of work experience per semester.

SPAN 4421 Business, Commercial, and Legal Translation
4 Semester Credit Hours (4 Lecture Hours)
An advanced course in translation concentrating on business, commercial and legal texts. The course is designed to extend student's knowledge of translation theory and consolidate their skills in specialized translation.
Prerequisite: (SPAN 3313).

Philosophy, Minor
Program Requirements
The philosophy minor requires a minimum of 21 semester hours of philosophy course work. At least 12 of those hours must be at the upper-division level.

PHIL 4396  Directed Individual Study

Total Hours 21

1 Students are encouraged to take PHIL 1301 Introduction to Philosophy (3 sch) and PHIL 2303 Introduction to Logic and Critical Thinking (3 sch) as early as possible in their pursuit of the minor.

Courses

PHIL 1301  Introduction to Philosophy
3 Semester Credit Hours (3 Lecture Hours)
An examination of major philosophical issues such as the existence of God, freedom and determinism, moral rights and obligations, and the nature and limits of human knowledge.
TCCNS: PHIL 1301

PHIL 2303  Introduction to Logic and Critical Thinking
3 Semester Credit Hours (3 Lecture Hours)
Basic principles and techniques used in understanding, constructing, and evaluating arguments. Topics covered may include formal methods of analyzing arguments, informal fallacies, scientific reasoning, and moral arguments.
TCCNS: PHIL 2303

PHIL 2306  Introduction to Ethics
3 Semester Credit Hours (3 Lecture Hours)
This course includes a study of ethical theories and principles, and application of those theories and principles to ethical issues.
TCCNS: PHIL 2306

PHIL 3306  History of Eastern Philosophy I
3 Semester Credit Hours (3 Lecture Hours)
An historical and critical examination of traditional Indian philosophical and religious systems (such as various versions of Hinduism, Jainism, and Buddhism) and their relevance for contemporary people and societies.

PHIL 3307  History of Eastern Philosophy II
3 Semester Credit Hours (3 Lecture Hours)
A historical and critical examination of some of the philosophical and religious systems developed in China, Tibet, and Japan (such as various schools of Mahayana Buddhism, Taoism, Confucianism, and Zen Buddhism).

PHIL 3327  American Philosophy
3 Semester Credit Hours (3 Lecture Hours)
An introduction to American philosophy and the influential movement known as Pragmatism. The course focuses on the works of C.S. Peirce, William James, John Dewey, and George Santayana. Issues addressed include skepticism, the rejection of foundationalism, the role of belief in inquiry, verification and meaning, and the nature of truth.

PHIL 3342  Philosophy of Love and Sex
3 Semester Credit Hours (3 Lecture Hours)
This course is a study of the ethics of human relationships. Topics include friendship, romance, marriage, sexual orientation, adultery, promiscuity, sexual consent, sexual harassment, rape, pornography, and prostitution.

PHIL 3343  Philosophy of Law
3 Semester Credit Hours (3 Lecture Hours)
An introduction to philosophical issues concerning the law, such as the nature of law, relations between law and morality, theories of legal responsibility, and the role of law in society.

PHIL 3344  Social and Political Philosophy
3 Semester Credit Hours (3 Lecture Hours)
A survey of classical and contemporary material in social and political philosophy, covering topics such as individual liberty and government intervention, the role of government, and social justice.

PHIL 3345  The Meaning of Life
3 Semester Credit Hours (3 Lecture Hours)
An exploration of a variety of views concerning the meaning of life. Three kinds of responses to the question of life's meaning will be examined: theistic responses; non-theistic responses focusing on the creation of personal meaning within a natural universe; and responses that challenge the intelligibility of the question regarding the meaning of life.

PHIL 3346  Elementary Formal Logic
3 Semester Credit Hours (3 Lecture Hours)
A course on technical methods and foundational issues in Philosophy, Computer Science, and Mathematics. Topics include the Propositional Calculus, First-Order Predicate Calculus, meta-theoretic results (such as consistency, soundness, completeness, and decidability), and Zermelo-Fraenkel Set Theory.

PHIL 3347  Philosophy and Science Fiction
3 Semester Credit Hours (3 Lecture Hours)
An exploration of issues in contemporary philosophy such as the nature of life, personhood and self, knowledge and skepticism, time travel, and obligations to the non-human world. The course combines the reading of purely philosophical works with an examination of contemporary works of science fiction (including novels, short stories, and films).

PHIL 3348  Ethics, War, and Terrorism
3 Semester Credit Hours (3 Lecture Hours)
Why is it wrong to kill? Is killing an innocent person ever justified? Under what conditions can we justify war? How should we respond to terrorist threats? The course explores ethical theories in application to these and similar issues.

PHIL 4303  Minds and Machines
3 Semester Credit Hours (3 Lecture Hours)
A study of the relationship of the mental to the physical as it pertains to the foundations of psychology, artificial intelligence, and robotics.
PHIL 4304  Metaphysics  
3 Semester Credit Hours (3 Lecture Hours)  
An examination of issues in contemporary metaphysics, such as freedom of the will and determinism, the nature of causation, the mind-body problem, and the existence of abstract and concrete entities.

PHIL 4305  Truth, Knowledge, and Justification  
3 Semester Credit Hours (3 Lecture Hours)  
In this course, we will discuss the following questions among others: What is the nature of truth? Should truth be understood as correspondence with reality? What is it to know something? Is knowledge of the external world possible at all? Can I conclusively rule out the possibility that I might be dreaming right now, or that I might be just a brain in a vat? Are there any privileged beliefs that can be said to constitute the foundation for all of our knowledge? Are the standards for rationality and justification absolute or rather relative to cultural norms? Can there be rational disagreement between equally intelligent people who share the same body of evidence?

PHIL 4321  Ancient Philosophy  
3 Semester Credit Hours (3 Lecture Hours)  
A survey of the ancient Western philosophical tradition, including the Presocratics, Plato, Aristotle, and the Hellenistic Philosophers.

PHIL 4322  Modern Philosophy  
3 Semester Credit Hours (3 Lecture Hours)  
A study of some of the major philosophical developments of the 17th -20th centuries, focusing on topics such as the relation between mind and body, religious belief and the problem of evil, rationalism and empiricism, and the limits of human knowledge.

PHIL 4323  Contemporary Philosophy  
3 Semester Credit Hours (3 Lecture Hours)  
A course on important trends in contemporary philosophy beginning with the Fregean linguistic turn, and examining the major works of philosophers such as Frege, Russell, Wittgenstein, Quine, Davidson, Dummett, Putnam, Kripke, and Lewis.

PHIL 4330  Philosophy and History of Science and Technology  
3 Semester Credit Hours (3 Lecture Hours)  
An exploration of important issues concerning the natural and formal sciences from the standpoint of historical disputes and technological advances. Issues include the nature of science and of scientific progress, the justification of scientific theories, the possibility of objective knowledge of the world, the distinction between science and pseudo-science, and the relationship between faith and science.

PHIL 4331  Issues in Philosophy of Religion  
3 Semester Credit Hours (3 Lecture Hours)  
Standard philosophical methods will be used to explore issues such as the existence and nature of God, the problem of evil, and the relationship between morality and religion.

PHIL 4332  Moral Issues in Contemporary Medicine  
3 Semester Credit Hours (3 Lecture Hours)  
An examination of moral issues that arise in medicine, focusing on topics such as euthanasia, genetic interventions, medical research involving vulnerable subjects, and the distribution of medical resources.

PHIL 4333  Environmental Ethics  
3 Semester Credit Hours (3 Lecture Hours)  
An examination of our ethical obligations with respect to animals, plants, and environmental systems, and of the foundations of environmental law and policy. Can be cross listed with ESCI 4490, BIOL 4590 or BIMS 4590.

PHIL 4335  Moral Philosophy  
3 Semester Credit Hours (3 Lecture Hours)  
A study of moral theories, and of moral issues such as whether morality is subjective, whether there are moral facts, and the justification of practices such as capital punishment and abortion.

PHIL 4336  Advanced Seminar in Philosophy  
3 Semester Credit Hours (3 Lecture Hours)  
In-depth exploration of philosophical topics, designed for philosophy majors, with emphasis on student research and presentations.

PHIL 4337  Philosophy of Language  
3 Semester Credit Hours (3 Lecture Hours)  
A philosophical investigation into the nature of language. Topics include meaning, truth, theories of mediated reference, theories of direct reference, and speech acts.

PHIL 4390  Topics in Philosophy  
1-3 Semester Credit Hours  
Study of important philosophical themes and figures. May be repeated for credit when topics vary. Topics may include, for example, Minds and Machines, Eastern Philosophy, Ancient Philosophy, Environmental Ethics, American Philosophy, and Moral Issues in Contemporary Medicine.

PHIL 4396  Directed Individual Study  
1-3 Semester Credit Hours  
See College description.

**Political Science, Minor**

**Program Requirements**

To earn a minor in political science, a student must complete a minimum of 18 semester hours of political science courses beyond the requirements of the Core Curriculum Program.

**Courses**

**POLS 2304 Introduction to Political Science**
3 Semester Credit Hours (3 Lecture Hours)
Introductory survey of the discipline of political science focusing on the scope and methods of the field, and the substantive topics in the discipline including the theoretical foundations of politics, political interaction, political institutions and how political systems function. 
**TCCNS:** GOVT 2304

**POLS 2305 U.S. Government and Politics**
3 Semester Credit Hours (3 Lecture Hours)
A basic survey of American government, including fundamental political institutions, with special attention to the United States and Texas Constitutions. 
**TCCNS:** GOVT 2305

**POLS 2306 State and Local Government**
3 Semester Credit Hours (3 Lecture Hours)
The politics, government, and administration of American states, counties, cities, and special districts, with special emphasis on Texas. 
**TCCNS:** GOVT 2306

**POLS 2311 Mexican American and Latinx Politics**
3 Semester Credit Hours (3 Lecture Hours)
The study of Mexican American and Latinx politics within the American political experience. Topics include historical, cultural, socioeconomic, and constitutional issues that pertain to the study of Mexican Americans and other Latinx populations in the United States. Other topics such as political participation, governmental institutions, electoral politics, political representation, demographic trends, and other contemporary public policy debates will also be addressed. 
**TCCNS:** GOVT 2311

**POLS 2318 Politics, Groups, & Society**
3 Semester Credit Hours (3 Lecture Hours)
This course explores the role of groups in political and social change in society. In doing so, the course explores the formal and informal institutions which aid and constrain group effectiveness. An emphasis is placed on contemporary examples. 

**POLS 2319 Religion and Politics**
3 Semester Credit Hours (3 Lecture Hours)
The course will examine the intersection of religion and politics historically and during contemporary times with an emphasis on beliefs, behaviors, institutions, and policies. 

**POLS 3303 Contemporary Political Analysis**
3 Semester Credit Hours (3 Lecture Hours)
Analysis of current problems in national and international politics. Emphasis is on methods of analysis, particularly the use of computers. Includes a segment on career opportunities for political science majors. 

**POLS 3311 Women and Politics**
3 Semester Credit Hours (3 Lecture Hours)
The course will examine public policies affecting women, political participation, women in public office, and political attitudes of women. 

**POLS 3312 Campaigns and Elections**
3 Semester Credit Hours (3 Lecture Hours)
A survey of the literature on campaigns and elections including theories of voter choice; effects of mass media and campaign finance regulations on the conduct and outcome of elections; effects of elections on policy; emphasis on U.S. national elections. 

**POLS 3313 The Legislative Process**
3 Semester Credit Hours (3 Lecture Hours)
Survey and description of the legislative process in the United States Congress with relevant comparisons to practices within the several states and foreign nations. Emphasis upon the law-making process explained in terms of structure, participants, groups, associations and power relationships. 

**POLS 3314 Public Opinion**
3 Semester Credit Hours (3 Lecture Hours)
An analysis of the kinds and distributions of opinions and attitudes in the mass public and the effects of those opinions on activities of policy makers, with special attention to problems of linking public opinion to public policy. 

**POLS 3315 Political Parties**
3 Semester Credit Hours (3 Lecture Hours)
Organization, history, and activities of political parties and functions they serve in national, state, and local politics in the United States and elsewhere. 

**POLS 3316 The American Presidency**
3 Semester Credit Hours (3 Lecture Hours)
A study of the federal executive branch with an emphasis upon the American Presidency with its relationships to other American political institutions and processes. 

**POLS 3317 Judicial Politics**
3 Semester Credit Hours (3 Lecture Hours)
This course examines the political factors that influence judicial selection, decision-making and the policy-making role of courts. Furthermore, attention is directed at the impact of court decisions and the structure of the judiciary. 

**POLS 3321 Comparative Politics**
3 Semester Credit Hours (3 Lecture Hours)
Concepts, theories and analytical frameworks for comparing different types of political systems around the world. Emphasis is placed on learning about different political systems and using the comparative method to evaluate and develop a richer understanding of politics, political culture, political behavior, and political institutions. 

**POLS 3331 International Relations**
3 Semester Credit Hours (3 Lecture Hours)
Examination of the structure and function of the international system focusing on the power relationships among states, international organizations, and the critical issues animating contemporary international relations. 

**POLS 3341 Introduction to Public Administration**
3 Semester Credit Hours (3 Lecture Hours)
Study of organization and management theories and practices of public administration affecting federal and subnational governments. Bureaucratic structures and procedures will be examined for their effects on policy, program development and evaluation.
**POLS 3342 Introduction to Public Policy**  
3 Semester Credit Hours (3 Lecture Hours)  
A survey of the policy process in the United States. The course will examine factors affecting the development, implementation and impact of public policies as well as a discussion of policy alternatives and controversies.

**POLS 3343 Bureaucracy**  
3 Semester Credit Hours (3 Lecture Hours)  
Examines the concept of the political role of the bureaucracy and the impact of other government institutions on bureaucratic structures, functions and behavior. The role of bureaucracy in public policy making and the influence of politics on implementation is analyzed.

**POLS 3351 Civil Rights & Liberties**  
3 Semester Credit Hours (3 Lecture Hours)  
This course explores the provision of civil rights and liberties, including First Amendment freedoms and criminal rights, through the lens of Supreme Court decisions. While historical cases are examined, special emphasis is put on contemporary Court decisions.

**POLS 3361 Western Political Theory**  
3 Semester Credit Hours (3 Lecture Hours)  
The fundamental concepts and problems of political theory, as viewed by the major classical philosophers and contemporary theorists, including justice, power, authority, obligation, freedom, equality.

**POLS 3365 Political Theory and Ideologies**  
3 Semester Credit Hours (3 Lecture Hours)  
Major 19th and 20th-Century political theorists and ideological movements. Includes a review of capitalism, socialism, fascism, and liberalism.

**POLS 4303 Seminar in Political Science**  
3 Semester Credit Hours (3 Lecture Hours)  
Capstone course for political science majors, examines significant developments and issues in American politics as they are addressed in the professional literature of political science. Offers the opportunity of an intensive study of a selected topic. Emphasis on supervised research on selected topic.  
Prerequisite: POLS 3303.

**POLS 4311 Urban Politics**  
3 Semester Credit Hours (3 Lecture Hours)  
The institutions, political processes and policy issues of urban areas of the United States.

**POLS 4312 Government Budgeting and Finance**  
3 Semester Credit Hours (3 Lecture Hours)  
Study of the politics and processes of governmental budgeting at local, state, and federal levels with emphasis on the interrelatedness of governmental units through budgeting.

**POLS 4314 Media and Politics**  
3 Semester Credit Hours (3 Lecture Hours)  
Impact of mass media coverage on American political institutions, the election process, and public opinion in general and the appropriate role of media and news in a society.

**POLS 4320 The Politics of the European Union**  
3 Semester Credit Hours (3 Lecture Hours)  
Examination of the institutional, economic and political forces that led to the creation and development of the European Union. Emphasis on the impact the European Union has had on world affairs.
Elective Courses (15 hours)

Students in the pre-law minor must take five courses (15 hours) from the additional categories. It is recommended they consult with the pre-law advisor to address areas that might not be emphasized in their major.

Courses

Business Law Courses

BLAW 3310 Legal Environment of Business
3 Semester Credit Hours (3 Lecture Hours)
An introduction to the legal systems of government, business and society. Includes coverage of ethics, the judicial process, basics of contracts law, constitutional issues, business torts and crimes, creditor/debtor relationships, business organizations, international law, environmental law, and various aspects of regulation of business.
Prerequisite: BUSI 0011.

BLAW 3320 Law for Personal Business
3 Semester Credit Hours (3 Lecture Hours)
A study of the laws that influence each individual in the conduct of personal life and business affairs. Includes such topics as the court and legal system, family law, torts, property law, insurance, wills and trusts, contracts, and other areas of current interest.

BLAW 4342 Law for Professional Certification
3 Semester Credit Hours (3 Lecture Hours)
Designed as a second course in business law for students who desire a more in-depth knowledge. Individuals planning to take professional certification exams that contain a business law component are encouraged to enroll in this course.
Prerequisite: (BLAW 3310).

BLAW 4350 Human Resource Law
3 Semester Credit Hours (3 Lecture Hours)
A study of the laws relating to human resource management in today's business environment. Covers discrimination, labor law, retirement regulations, safety issues and employee/management topics. Emphasis on current issues, cases and legislation. May be used as a management major elective or business elective.

BLAW 4390 Current Topics in Business Law
1-3 Semester Credit Hours (1-3 Lecture Hours)
Selected topics for special study related to laws impacting business, organizations and human resources. May be repeated for credit when topics vary.

BLAW 4396 Directed Individual Study
1-3 Semester Credit Hours
Individual supervised study and a final report.

Criminal Justice Courses

CRIJ 1301 Introduction to Criminal Justice
3 Semester Credit Hours (3 Lecture Hours)
History and philosophy of criminal justice. Overview of criminal justice system: police, prosecution and defense, courts, trial process, and corrections as they affect the individual, as well as their impact on society. The definition, nature, and impact of crime. The functions of criminal justice agencies will be examined in relation to common analytical themes such as ethics and discretion.
TCCNS: CRIJ 1301
CRIJ 1306 Court Systems and Processes
3 Semester Credit Hours (3 Lecture Hours)
Examination of the civil and criminal legal systems and the roles played by political, social and economic factors in the administration of justice. Consideration of the roles and interests of litigants, defendants, police, attorneys, and the judiciary in the process.
TCCNS: CRIJ 1306

CRIJ 1310 Fundamentals of Criminal Law
3 Semester Credit Hours (3 Lecture Hours)
The course will introduce students to the study of criminal law. Major topics include the sources of criminal law, the operation of the criminal courts, constitutional limitations on criminal law, the elements of criminal liability, and the classification of and punishments for different types of criminal offenses. Defenses to criminal liability will also be explored.
TCCNS: CRIJ 1310

CRIJ 2313 Correctional Systems & Practices
3 Semester Credit Hours (3 Lecture Hours)
This course is a survey of institutional and non-institutional corrections. Emphasis will be placed on the organization and operation of correctional systems; treatment and rehabilitation; populations served; Constitutional issues; and current and future issues.
TCCNS: CRIJ 2313

CRIJ 2328 Police Systems and Practices
3 Semester Credit Hours (3 Lecture Hours)
The history and development of police in America. Topics examined include: the police profession, organization of law enforcement systems, the policing role, police discretion, ethics, police-community interaction, current and future issues, and research findings.
TCCNS: CRIJ 2328

CRIJ 3302 Police and Society
3 Semester Credit Hours (3 Lecture Hours)
Examination of policing in a democratic society. A critical review of various professional and community influences on police behavior, together with a consideration of social problems created by such forces, and potential remedial actions.

CRIJ 3310 The Judicial Process
3 Semester Credit Hours (3 Lecture Hours)
THE JUDICIAL PROCESS Examination of the civil and criminal legal systems and the roles played by political, social and economic factors in the administration of justice. Consideration of the roles and interests of litigants, defendants, police, attorneys, and the judiciary in the process.

CRIJ 3313 The Juvenile Justice System
3 Semester Credit Hours (3 Lecture Hours)
The administration of the juvenile justice process. Historical and philosophical origins of the juvenile justice system. A systematic analysis of problems and procedures at each stage of the process.

CRIJ 3315 Crime Prevention
3 Semester Credit Hours (3 Lecture Hours)

CRIJ 3320 Issues in Corrections
3 Semester Credit Hours (3 Lecture Hours)
Analysis of contemporary developments, controversies and management concerns in the field of corrections. Includes examination of theoretical foundations of correctional policy.

CRIJ 3325 Community-Based Corrections
3 Semester Credit Hours (3 Lecture Hours)
Examination of the correctional strategies and facilities available in community settings including diversion programs, probation, parole, half-way houses, boot camps, and restitution centers.

CRIJ 3340 Comparative Criminal Justice
3 Semester Credit Hours (3 Lecture Hours)
Comparison of the police in selected countries with the U.S. criminal justice system. Particular emphasis on social, political, and economic factors in the development and change in law enforcement.

CRIJ 3341 Terrorism
3 Semester Credit Hours (3 Lecture Hours)
An examination of political violence from criminological, legal, and political perspectives. Application to contemporary events is emphasized. The sociology, psychology, and organization of terrorist groups are also explored as well as counter-terrorism strategies, methods, and dilemmas.

CRIJ 3360 Organized Crime
3 Semester Credit Hours (3 Lecture Hours)
The course analyzes and discusses how criminal organizations carry out their illegal activities while laundering money through legal enterprises. It discusses why people belong to organized crime syndicates despite the risks of death and imprisonment. The linkages of poverty, lack of education, social and economic inequalities, and the glorification of capitalist ideology by the phenomenon of organized crime are examined.

CRIJ 3361 Drugs, the Drug War, and Criminal Justice
3 Semester Credit Hours (3 Lecture Hours)
This course is an analysis and discussion of drugs, the war on drugs, and how these two phenomena impact the criminal justice system in American society. There is a review of the common assumptions about drugs and its social implications. An examination of the sociocultural interconnections of the nature of drugs, drug use, drug trafficking, and drug policy from a justice perspective is presented.

CRIJ 3365 Sex Crimes
3 Semester Credit Hours (3 Lecture Hours)
This course analyzes the nature, etiology, and theories related to sex offenses and sex offenders. It explores the history and current practices employed by the criminal justice systems to deal with sex offending. The course also examines multiple types of sexual offenses, perpetrators and victims, as well as the legal consequences of sexual offenses and its sociocultural ramifications to grasp the complexity of these crimes.

CRIJ 3370 Crime in the Media
3 Semester Credit Hours (3 Lecture Hours)
This course will cover the portrayal of crime, criminals, the criminal justice system, and criminal justice practitioners in the media. Specifically, the course will address the goals of the media and how those affect their coverage of crime and the CJ system.

CRIJ 3375 Applied Statistics in Criminal Justice
3 Semester Credit Hours (3 Lecture Hours)
This course will teach students the step-by-step process for using statistical techniques that are most applicable in the field of criminal justice. It will teach them when, where, and why each statistical analysis is necessary and/or useful, and it will help students learn those skills by applying them to an actual project.
CRJ 3380  Victimology
3 Semester Credit Hours (3 Lecture Hours)
This course is the scientific study of crime victims and focuses on the physical, emotional, and financial harm victims suffer due to crime. The purpose of this course is to examine victim-offender relationships, the interactions between victims and the criminal justice system, and the connections between victims and other institutions (such as the media, advocacy groups, and government). In exploring these connections, students will address the theory, research, legislation, and policy implications related to victimization.
Prerequisite: CRJ 1301.

CRJ 4310 Constitutional Law
3 Semester Credit Hours (3 Lecture Hours)
A case study of American constitutional law based on the leading decisions of the U.S. Supreme Court. Examination of the evolution of judicial review and the development of due process and the protection of individual rights.

CRJ 4312 Law and Evidence
3 Semester Credit Hours (3 Lecture Hours)
A detailed examination of the use, admissibility, and presentation of evidence. Issues and problems dealing with the rules of evidence and the theories on which those rules are based.

CRJ 4313 Criminal Procedure
3 Semester Credit Hours (3 Lecture Hours)
A detailed examination of the legal constraints on investigation and prosecution of criminal offenses. Analysis of the Texas Code of Criminal Procedure and of Search and Seizure Law under the Fourth Amendment, as well as other due process issues arising under the Fifth and Sixth Amendments.

CRJ 4320 Offender Rehabilitation
3 Semester Credit Hours (3 Lecture Hours)
Theories of rehabilitation, treatment, and correction of criminal offenders. Includes analysis of the historical development of the rehabilitative ideal and contemporary controversies surrounding it, and a survey of therapeutic models and methods.

CRJ 4321 American Prisons and Prisoners
3 Semester Credit Hours (3 Lecture Hours)
Analysis of the history, philosophy, and function of prisons. Examination of control and treatment of offenders in institutional settings. Focus is upon current developments, controversies and management problems.

CRJ 4322 Crime and Punishment in Literature
3 Semester Credit Hours (3 Lecture Hours)
A study of selected literary classics that treat of crime and punishment. The works of literary artists from various cultures which describe experience with crime and the criminal justice system will be placed in historical and theoretical perspective.

CRJ 4324 Women and Criminal Justice
3 Semester Credit Hours (3 Lecture Hours)
An historical and ideological analysis of the role of women in the criminal justice system as offenders, reformers, and professionals.

CRJ 4325 Diversity in Criminal Justice
3 Semester Credit Hours (3 Lecture Hours)
This course is an investigation into the impact of social diversity (race, ethnicity, gender, sexual orientation, disability, and more) on crime and the criminal justice system. Students will examine the impact of these factors on both offenders and criminal justice system employees, and will discuss and critically examine historical trends, contemporary events, and criminal justice system policies and laws.
Psychology, Minor

Program Requirements

To obtain a minor in psychology, the student must declare the minor with the academic advisor and complete the 18 semester hours required for a minor, 12 hours of which must be upper division courses.

* Online offering

Courses

PSYC 2301 General Psychology
3 Semester Credit Hours (3 Lecture Hours)
An introduction to the fundamental concepts and theories in psychology. Topics include biological processes, development, learning, personality, abnormal behavior, therapy, and social interactions.
TCCNS: PSYC 2301

PSYC 2314 Lifespan Developmental Psychology
3 Semester Credit Hours (3 Lecture Hours)
The study of normal physical, cognitive, social, and emotional development from infancy to late adulthood.
TCCNS: PSYC 2314

PSYC 2319 Social Psychology
3 Semester Credit Hours (3 Lecture Hours)
The scientific study of how a person's thoughts and behavior are influenced by others. Topics will include social cognition, attitudes, persuasion, interpersonal relationships, and group behavior. (Credit may not be given for both this course and SOCI 2326.) Cross listed with SOCI 2319.
TCCNS: PSYC 2319

PSYC 2390 Topics in Psychology
3 Semester Credit Hours (3 Lecture Hours)
This is a lower-level special topics course. Various topics, which will change from semester to semester, are presented by Psychology department faculty. They cover topics of special interest which will not be made a regular on-going part of the curriculum. May be repeated for credit.
Prerequisite: PSYC 2301.

PSYC 3325 Close Relationships
3 Semester Credit Hours (3 Lecture Hours)
This course is designed as an overview to the field of close relationships. The major theories of close relationships will be emphasized, including examinations of evolutionary, attachment, interdependence, and cognitive approaches. Additional topics include attraction, relationship development and maintenance, infidelity, and relationship violence.

PSYC 3335 Forensic Psychology
3 Semester Credit Hours (3 Lecture Hours)
This course examines the relationship between the practice of psychology and the functioning of the legal system. The course surveys many aspects of clinical forensic psychology, including assessment, treatment, and consultation services.

PSYC 3342 Cognitive Psychology
3 Semester Credit Hours (3 Lecture Hours)
A survey of current research and theory in the field of human cognition, emphasizing the information processing model. Topics include attention, memory, language, and problem solving.

PSYC 3343 Learning and Behavior
3 Semester Credit Hours (3 Lecture Hours)
The study of the fundamental principles of learning through a consideration of theories and constructs, such as associations, reinforcement, punishment, generalization, discrimination, and modeling.

PSYC 3346 Psychology of Language
3 Semester Credit Hours (3 Lecture Hours)
The purpose of the course is to introduce students to a multidisciplinary study of language. This course will provide an introduction to psychological, sociolinguistic, and social-interactive theories of language use, acquisition/development, knowledge, context, perception, disorders, and related cognitive and social processes.

PSYC 3350 Evolutionary Psychology
3 Semester Credit Hours (3 Lecture Hours)
Evolutionary psychologists argue that much of human behavior is the output of neural and psychological adaptations that evolved to solve recurrent problems in human ancestral environments. Some challenges addressed in this course involve survival, mating, familial relationships, and living in social groups.

PSYC 3360 Health Psychology
3 Semester Credit Hours (3 Lecture Hours)
This course will provide an overview of the field of health psychology, examining how psychological theories and research are applied to enhance health and well-being and to prevent and treat illness.

PSYC 3361 Psychology of Personality
3 Semester Credit Hours (3 Lecture Hours)
An introduction to major theories of personality. Personality processes and development are discussed from psychoanalytic, behavioral, humanistic, and other perspectives.
Prerequisite: and discussing peer-reviewed and primary source work, completing a education. Core components of the Capstone courses include reading and culminating experience at the end of each student's undergraduate Psychology at an advanced level. The goal is to provide an enriching Psychology through intensive, integrative work on a specific topic in senior Psychology majors to demonstrate comprehensive learning in that completes the Psychology curriculum, provides an opportunity for graduate. 3 Semester Credit Hours (3 Lecture Hours)

PSYC 4310 Psychology Capstone Seminar

3 Semester Credit Hours (3 Lecture Hours)

All TAMU-CC Psychology students take a Capstone course in order to graduate. The Psychology Capstone Seminar, the final and required class that completes the Psychology curriculum, provides an opportunity for senior Psychology majors to demonstrate comprehensive learning in Psychology through intensive, integrative work on a specific topic in Psychology at an advanced level. The goal is to provide an enriching and culminating experience at the end of each student's undergraduate education. Core components of the Capstone courses include reading and discussing peer-reviewed and primary source work, completing a final project, and presentations of ongoing and final projects.

Prerequisite: PSYC 3411.

PSYC 4332 Cross-cultural Psychology

3 Semester Credit Hours (3 Lecture Hours)

This course is designed to provide students with both a theoretical and a practical understanding of the effects of culture on human thinking, values, and behavior. As such, it is focused on the effects of culture on the nature and behavior of individuals, their adaptations to institutions and environments, and their relations with others within and outside their culture. Knowledge presented in the class is drawn from both qualitative and quantitative research.

PSYC 4344 Drug Use and Abuse

3 Semester Credit Hours (3 Lecture Hours)

Study of the physiological, psychological, and social effects of drug use and abuse. Following a review of basic neuroanatomy and pharmacology, the actions and known effects of specific drugs of use and abuse will be examined. Treatments and prevention issues related to substance abuse will also be discussed.

PSYC 4352 Physiological Psychology

3 Semester Credit Hours (3 Lecture Hours)

This course is an introduction to the physiological mechanisms that underlie behavior with emphasis on the nervous, the endocrine and sensory systems.

PSYC 4354 Sensation and Perception

3 Semester Credit Hours (3 Lecture Hours)

Basic sensory processes as they relate to the sensory experience and to the construction of our conception of physical reality.

PSYC 4367 Gender Issues in Psychology

3 Semester Credit Hours (3 Lecture Hours)

This course is designed to introduce the undergraduate student to the theoretical and empirical issues related to the psychology of gender. Both traditional and contemporary theories that focus on the unique aspects in the psychological development of women as well as men will be examined.

PSYC 4370 Feminism & Science

3 Semester Credit Hours (3 Lecture Hours)

Science has been and continues to be thought of as the objective, empirical pursuit of natural facts. In this class we will discuss feminist approaches to science that encourage us to question such fundamental tenets, to understand how such an approach is biased, and ironically, quite far from objective in its over-reliance on masculine, patriarchal frameworks.

Prerequisite: PSYC 2301.

PSYC 4372 Psychological Testing

3 Semester Credit Hours (3 Lecture Hours)

Statistical and research basis for test construction. Instruction in use of group and individual tests in intelligence, achievement, interest and personality. Understanding of individual measures in these areas.

Prerequisite: MATH 1442.

PSYC 4377 Industrial/Organizational Psychology

3 Semester Credit Hours (3 Lecture Hours)

This course will provide an Introduction to Industrial and Organizational Psychology, a scientific discipline that studies human behavior in the workplace. Topics will include the history of Industrial/Organizational psychology, job analysis, psychological assessments, personnel decisions, training and development, organizational change, teamwork, motivation, leadership and work stress and health.

Prerequisite: (PSYC 2301).
PSYC 4390  Topics in Psychology
3 Semester Credit Hours (3 Lecture Hours)
May be repeated for credit when topics vary.
Prerequisite: PSYC 2301.

PSYC 4395  Undergraduate Research
3 Semester Credit Hours
A research project in psychology designed in consultation with a faculty director. The study is to be conducted by the student under the supervision and direction of the faculty member and may culminate in a formal report written in APA journal style.

PSYC 4396  Directed Individual Study
1-3 Semester Credit Hours
See College description.

PSYC 4398  Applied Experience
3 Semester Credit Hours
See College description.

Social Work, Minor

Program Description
This minor is an interdisciplinary program for undergraduate students who are interested in the field of social work or social services and want more in-depth study in this area than other courses provide. This program is designed to complement undergraduate study programs at the University.

The purpose of the minor is to give students a basic understanding of social work practice. This includes the history, function, and processes with emphasis on skill application.

Social work is concerned with human well-being. Social workers help people function within their environment and work for improved social conditions. They provide services to people in areas such as counseling, education, health, mental healthcare, public welfare. In addition, providing services to the aged, for the intellectually disabled, family services, criminal justice and child welfare services.

Program Requirement
To obtain a minor in social work, the student must declare a minor with their academic advisor and complete the 18 semester hours required for a minor; 12 hours of which must be upper division courses. The minor also requires an additional two elective courses from those listed below in social work, psychology, sociology, or criminal justice. However, the elective courses may not overlap with coursework in the student’s declared major (e.g. a psychology major cannot take two psychology electives to meet the social work minor requirement).

The student must complete the 12 hours of social work classes listed below.

Courses

SOCW 2361  Introduction to Social Work
3 Semester Credit Hours (3 Lecture Hours)
An introductory survey of the field of social work including the nature, function, and types of social work practice. This course is designed to acquaint the student with the history, terminology, scope, and values of the profession of social work.

SOCW 3310  Approaches to Social Welfare
3 Semester Credit Hours (3 Lecture Hours)
Origin, development, and present status of social service programs with particular emphasis on the relationship of program resources, human needs, and the methods through which services are provided.

SOCW 3320  Social Services in the Community
3 Semester Credit Hours (3 Lecture Hours)
An introduction to the organizations and agencies involved in social service delivery. Exploration of the range and characteristics of the human service delivery system with particular emphasis on the social work profession.
Prerequisite: SOCW 3310.
SOCW 3350 Social Work Practice
3 Semester Credit Hours (3 Lecture Hours)
Social Work practice from a generalist perspective of social work intervention. Data collection, assessment, intervention, planning/implementation, and evaluation are covered.
Prerequisite: SOCW 3301.

SOCW 4396 Directed Individual Study
1-3 Semester Credit Hours
See College description.

SOCW 4398 Applied Experience
3 Semester Credit Hours (3 Lecture Hours)
One semester course of field work in a selected agency. (See college description.)

Sociology, Minor
Program Description
To obtain a minor in sociology the student must register with the academic advisor and complete the 18 semester hours required for a minor. Of these, 12 hours must be upper division. The student must complete SOCI 1301 Introduction to Sociology (3 sch), at least two courses from Inequalities category and at least three courses from the electives category.

SOCI 4445 Social Research Methods
Total Hours 18
1
Elective coursework may include courses in Sociology as selected by the student in consultation with a faculty advisor. Electives are designed to meet students' needs and interests.

Courses

SOCI 1301 Introduction to Sociology
3 Semester Credit Hours (3 Lecture Hours)
An introduction to the basic concepts, methods, and theories used in Sociology. Topics illustrate the systematic understanding of social interaction, social organization, and social institutions. Reciprocal relationships between individuals and society are examined. Topics may include – but are not limited to – socialization, culture, social stratification, race and ethnicity, sex and gender, deviance, family, work, and social change.
TCCNS: SOCI 1301

SOCI 2301 Social Problems
3 Semester Credit Hours (3 Lecture Hours)
A survey and exploration of the causes and consequences of major social problems in the U.S. society, including contemporary issues of poverty, unemployment, income inequality, health care, crime, climate change, and other issues of social class, racial, ethnic, and gender inequality.
TCCNS: SOCI 1306

SOCI 2319 Social Psychology
3 Semester Credit Hours (3 Lecture Hours)
The scientific study of how a person's thoughts and behavior are influenced by others. Topics will include social cognition, attitudes, persuasion, interpersonal relationships, and group behavior. (Credit may not be given for both this course and PSYC 2326.) Cross listed with PSYC 2319.
TCCNS: SOCI 2326

SOCI 2350 Sociology of Sexuality
3 Semester Credit Hours (3 Lecture Hours)
An examination of sexuality from a sociological perspective. This course will consider the historical evolution of sexuality, the social construction of sexual identities, sexual inequalities and power, how sexualities and sex acts are defined as normal or deviant, and applications of sociological, queer, and feminist theories.

SOCI 3310 Sociology through Film
3 Semester Credit Hours (3 Lecture Hours)
The examination of film as a culture artifact to illustrate sociological concepts, theories, and perspectives. Specific attention will be given to narratives of film as they illustrate culture, aging, social class, gender, race/ethnicity, identity, and other sociological concepts.

SOCI 3312 Racial and Ethnic Relations
3 Semester Credit Hours (3 Lecture Hours)
The study of cultural, religious, ethnic and racial groups, and the treatment accorded them in society. Prejudice, discrimination and the outcomes of discrimination in relation to both dominant and subordinate groups are considered.
An examination of the roots, nature and social construction of gender roles including socialization of men and women, gender role relationships from the perspectives of sociology. Issues of family, education, work and the economy, religion, politics and law, feminist organizations, feminist theory, and men's and women's movements will be considered.

SOC 3340 Sociology of the Family
3 Semester Credit Hours (3 Lecture Hours)
The study of the family, relationships among its members, and the relationship of family to other social institutions.

SOC 3349 Sociology of Deviant Behavior
3 Semester Credit Hours (3 Lecture Hours)
A systematic and critical study of the nature, patterns, and processes of violations of significant social norms by members of society. Specific attention is given to violations such as drug abuse, violence in and outside the family, and white-collar offenses.

SOC 3350 Sociology of Education
3 Semester Credit Hours (3 Lecture Hours)
Employing a sociological lens to examine formal education in the United States and other countries, students will explore various schools of thought and controversies surrounding education in modern societies. They will examine important issues related to formal education, such as the expansion of schooling, equality of educational opportunity, unequal achievement of groups of students, the reproduction of inequality in education, schools' roles in the transmission of culture, and the social organization of schools.

SOC 4301 Social Theory
3 Semester Credit Hours (3 Lecture Hours)
Combines an analysis of the major ideas and theories in sociology and their relationship to social research with an understanding of social processes and structures.
Prerequisite: SOCI 1301.

SOC 4310 Sociology of Work and Occupations
3 Semester Credit Hours (3 Lecture Hours)
The study of work as a social phenomenon, including the social organization of work, occupations, and professions in society. The labor force, work culture, workers mobility, career lines, and leisure in contrast to work are considered.

SOC 4312 Power, Privilege, and Poverty
3 Semester Credit Hours (3 Lecture Hours)
The study of social inequality in society, with emphasis on the social class structure of the United States, its origins, development, and consequences for individuals, groups, and society.

SOC 4315 Complex Organizations
3 Semester Credit Hours (3 Lecture Hours)
The development of a theoretical and applied understanding of those social institutions where most of us will be employed. Topics include organizational effectiveness, decision making, designs, politics, cultures, as well as gender and racial inequality.

SOC 4320 Sociology of Sports
3 Semester Credit Hours (3 Lecture Hours)
This course critically examines the relationships between organized sports and the rest of society. It will undertake a sociological analysis of how organized sports affect, and are affected by, major social institutions such as the economy, racial and gender relations, mass media, and religion, to mention but a few.

SOC 4325 Medical Sociology
3 Semester Credit Hours (3 Lecture Hours)
Examination of the social contexts of physical and mental health, illness and medical care. Topics include the social, environmental, and occupational factors in health and disease; socialization of health care providers; doctor-patient relationships; the structure and processes of health care organizations; and health care and social change.

SOC 4331 Juvenile Delinquency
3 Semester Credit Hours (3 Lecture Hours)
Examination of the extent and pattern of juvenile crime today. History and theory of delinquency and society's response to it. (Credit may not be given for both this course and CRIJ 4331.) Cross listed with CRIJ 4331.

SOC 4335 Criminology
3 Semester Credit Hours (3 Lecture Hours)
An examination of the major sociological explanations for crime, criminal behavior, and the social responses to crime. (Credit may not be given for both this course and CRIJ 4335.) Cross listed with CRIJ 4335.

SOC 4385 Senior Seminar in Sociology
3 Semester Credit Hours
This is a capstone course required of all students graduating with a major in sociology. The course is designed to enable faculty to assess each student's expertise in applying sociological concepts and practices. Students demonstrate this expertise through the completion of a final project that combines a minimum of classroom hours with substantial research activity. The course is team taught by the entire sociology faculty. Students are allowed considerable flexibility in selecting either survey research or evaluation research for their project. (Offered Spring Only.)

SOC 4390 Topics in Sociology
3 Semester Credit Hours (3 Lecture Hours)
A consideration of various topics on social behavior and social structure. May be repeated when topics vary.

SOC 4396 Directed Individual Study
1-3 Semester Credit Hours
See College description.

SOC 4398 Applied Experience
3 Semester Credit Hours (3 Lecture Hours)
See College description.

SOC 4445 Social Research Methods
4 Semester Credit Hours (4 Lecture Hours)
A survey of the basic research techniques and methods used in sociology including content analysis, field research, sampling, surveys, polls, and computerized data analysis.
Prerequisite: SOCI 1301.
Spanish, Minor

Program Requirements

Students planning to minor in Spanish must complete 18 semester hours in Spanish or Spanish related areas, at least 12 of which must be at the upper-division level.

Required Courses

Select 12 hours from the following: 12

- SPAN 3302 Spanish Composition
- SPAN 3303 Spanish Conversation
- SPAN 3304 Spanish Civilization
- SPAN 3305 Latin American Civilization
- SPAN 3311 Spanish Phonetics
- SPAN 3312 Spanish Grammar
- SPAN 3313 Introduction to Translation
- SPAN 3315 Civilizations of the Spanish-Speaking World
- SPAN 3316 Spanish for the Professions
- SPAN 3317 Introduction to Hispanic Linguistics
- SPAN 3320 Introduction to Spanish Literature
- SPAN 3325 Introduction to Latin American Literature
- SPAN 4302 Mexican Narrative
- SPAN 4303 Spanish in the Southwest
- SPAN 4304 Miguel de Cervantes' Don Quijote
- SPAN 4305 Latin American Novel
- SPAN 4313 Spanish Interpretation
- SPAN 4320 Spanish in the Americas
- SPAN 4421 Business, Commercial, and Legal Translation
- SPAN 4322 Medical, Scientific and Technical Translation
- SPAN 4327 Methods in Foreign Language Instruction
- SPAN 4390 Topics in Spanish

Select 6 hours from the following: 6

- SPAN 2XXX, 3XXX, 4XXX (or credit by examination)
- ARTS 4350 Pre-Columbian Art of Mesoamerica
- ARTS 4352 Modern Art of Mexico
- ENGL 4361 Race and Ethnicity in Literature
- HIST 3303 Colonial Latin America
- HIST 3304 Modern Latin America
- HIST 3350 Dictators and Dirty Wars in Latin America
- HIST 4336 Mexican American History
- HIST 4337 United States Women's History
- HIST 4375 Cold War Kids: Youth in Modern Latin America
- MXAS 3301 Mexican American Literature
- MXAS 4390 Topics in Mexican American Studies
- POLS 2311 Mexican American and Latinx Politics
- POLS 4325 Politics in Latin America
- PORT 2315 Portuguese for Spanish Speakers
- SOCI 3321 Mexican American Women

Total Hours 18

Courses

SPAN 1100 Introduction to Service Learning
1 Semester Credit Hour

This is a one-credit course in which students in Spanish 1311 or 1312 may enroll and participate. This service learning course aims to promote collaborative learning between college students learning Spanish and people in the community. Available upon application. Repeatable up to 2 hours.

SPAN 1311 Spanish I
3 Semester Credit Hours (3 Lecture Hours)
Introduction to listening, speaking, reading and writing skills within a Spanish cultural framework. For students without previous knowledge of the language. (Language laboratory required. One hour per week.) *A lab fee is required for these courses.

SPAN 1312 Spanish II
3 Semester Credit Hours (3 Lecture Hours)
Continued practice in listening, speaking, reading and writing skills within a Spanish cultural framework. (Language laboratory required. One hour per week.) A lab fee is required for these courses.

Prerequisite: (SPAN 1311).

SPAN 2311 Spanish III
3 Semester Credit Hours (3 Lecture Hours)
Study of more complex Spanish sentence structure to further listening, speaking, reading and writing skills at an intermediate level within a Spanish cultural framework.

Prerequisite: SPAN 1312.
TCCNS: SPAN 2311

SPAN 2312 Continuing Spanish
3 Semester Credit Hours (3 Lecture Hours)
Continued development and review of all language skills at an intermediate level within a Spanish framework with an emphasis in the linguistic and cultural perspective.

Prerequisite: SPAN 2311.
TCCNS: SPAN 2312

SPAN 2313 Spanish for Heritage Speakers
3 Semester Credit Hours (3 Lecture Hours)
An introductory course designed for bilingual students who wish to enhance their linguistic skills (speaking, listening, reading and writing). This course will focus on the cultural and historical aspects related to the heritage Spanish speaker.

TCCNS: SPAN 2313

SPAN 2315 Language and Culture for Heritage Learners
3 Semester Credit Hours (3 Lecture Hours)
This course is designed to guide Spanish heritage language learners, as well as advanced learners of Spanish, in the development of their oral proficiency, written communication, and grammatical accuracy while exploring different cultural aspects from the Spanish-speaking world. It is highly recommended for students who have taken SPAN 2313 and/or who are transitioning into upper-division Spanish courses.

Prerequisite: SPAN 2313.

SPAN 3302 Spanish Composition
3 Semester Credit Hours (3 Lecture Hours)
A course designed to develop analytical perspectives in literary criticism and to strengthen reading and writing skills in Spanish through intensive reading of Spanish, Spanish American, and Chicano fiction.

Prerequisite: SPAN 2312.
SPAN 3303 Spanish Conversation
3 Semester Credit Hours (3 Lecture Hours)
A course designed to strengthen the student's oral proficiency in the language through selected readings, videos and oral presentations.
Prerequisite: SPAN 2312.

SPAN 3304 Spanish Civilization
3 Semester Credit Hours (3 Lecture Hours)
This course has been designed to provide a general overview of the cultural, linguistic, and historical experience of the Spanish people within its larger European context. Conducted in Spanish unless otherwise stated. This course may be used to satisfy the university core curriculum requirement in Language, Philosophy, and Culture.
Prerequisite: SPAN 2312.

SPAN 3305 Latin American Civilization
3 Semester Credit Hours (3 Lecture Hours)
This course is designed to provide a general overview of the cultural, linguistic, and historical experience of Latin American people before and after Columbus. Conducted in Spanish unless otherwise stated. This course may be used to satisfy the university core curriculum in Language, Philosophy, and Culture.
Prerequisite: SPAN 2312.

SPAN 3307 Spanish Literature I
3 Semester Credit Hours (3 Lecture Hours)
A critical approach to the study of early Spanish literature from the Middle Ages through the Eighteenth Century. Literary selections include masterpieces that establish and reflect Spain's literary tradition within its larger European context.

SPAN 3308 Spanish Literature II
3 Semester Credit Hours (3 Lecture Hours)
A continuation of a critical approach to the study of Spanish literature from the Nineteenth Century through the present. Representative works of Spanish Romanticism, Realism, Naturalism, and contemporary literature are studied within their larger European context.

SPAN 3309 Spanish American Literature I
3 Semester Credit Hours (3 Lecture Hours)
A critical approach to the study of early Spanish American literature from the Pre-Columbian Period through the Nineteenth Century. Selected readings in all literary genres, major themes, writers, and early literary movements will be studied within their larger Latin American context.

SPAN 3310 Spanish American Literature II
3 Semester Credit Hours (3 Lecture Hours)
A continuation of a critical approach to the study of Spanish American literature from the Twentieth Century through the present. Representative works of Latin American writers and literary movements: Modernism, Realism, Avant-Garde, Regionalism, Magic-Realism are studied within their larger Latin American context.

SPAN 3311 Spanish Phonetics
3 Semester Credit Hours (3 Lecture Hours)
A course designed to study the production and discrimination of the Spanish sound system with a general overview of the geographical and social distribution of phonemic and allophonic variants.

SPAN 3312 Spanish Grammar
3 Semester Credit Hours (3 Lecture Hours)
The course will serve to expand vocabulary, further develop writing skills; understand, apply, and use Spanish grammatical structures, and communicate more accurately in written and oral Spanish within a Hispanic cultural context.

SPAN 3313 Introduction to Translation
3 Semester Credit Hours (3 Lecture Hours)
This course is an introduction to the theory, methods and practice of English to Spanish and Spanish to English translation of general texts from different fields. Challenges related to culture and language, as well as professional ethics will be examined.
Prerequisite: SPAN 2312.

SPAN 3315 Civilizations of the Spanish-Speaking World
3 Semester Credit Hours (3 Lecture Hours)
This course has been designed to provide a general overview of the historical, sociocultural and political experience of peoples from the Spanish-Speaking world, both from Spain and Spanish America.
Prerequisite: SPAN 2312.

SPAN 3316 Spanish for the Professions
3 Semester Credit Hours (3 Lecture Hours)
The course stresses Health, Business and Legal terminology in Spanish to enhance communication skills and cultural knowledge that will help to serve the South Texas Spanish speaking population as well as to conduct interactions with Spanish speakers and/or businesses through the United States and the world.

SPAN 3317 Introduction to Hispanic Linguistics
3 Semester Credit Hours (3 Lecture Hours)
This course introduces the study of language, the main subfields of Hispanic linguistics, and their application to other sciences.

SPAN 3320 Introduction to Spanish Literature
3 Semester Credit Hours (3 Lecture Hours)
A critical approach to the study of Spanish literature from the Middle Ages through the present. Representative works of Spanish literature are studied within their larger European context. It is highly recommended that students take any of the following before taking this course:
SPAN 2313, 2315, 3302, 3303 have advanced proficiency or faculty permit. Conducted in Spanish, unless otherwise stated. This course may be used to satisfy the University Core Curriculum requirement in Language, Philosophy, and Culture.

SPAN 3325 Introduction to Latin American Literature
3 Semester Credit Hours (3 Lecture Hours)
A critical approach to the study of Latin American literature from the Pre-Columbian Period through the present. Selected readings in all literary genres, major themes, writers, and literary movements will be studied with a wide Latin American context. It is highly recommended that students take any of the following before taking this course:
SPAN 2313, 2315, 3302, 3303 have advanced proficiency or faculty permit. Conducted in Spanish, unless otherwise stated. This course may be used to satisfy the University Core Curriculum requirement in Language, Philosophy, and Culture.

SPAN 4100 Service Learning
1 Semester Credit Hour
This is a one-credit course designed specifically for students who are preparing themselves to serve the community using their Spanish language skills. Students in this course will familiarize themselves with the methodology of a particular field (heritage language teaching, translation, interpreting, etc.) to be able to interact and serve Spanish-speaking individuals in the community. Available upon application. Repeatable up to 3 hours.

SPAN 4301 Spanish Civil War and Literature
3 Semester Credit Hours (3 Lecture Hours)
Significance of the Civil War for Spanish, European, and world history. Effect of war on literary and cultural life of the country and the response of writers from Spain and Latin America. Conducted in Spanish.
SPAN 4302 Mexican Narrative
3 Semester Credit Hours (3 Lecture Hours)
Examination of representative novels and short stories reflecting the emergence of a post-revolutionary society in Mexico. Conducted in Spanish.

SPAN 4303 Spanish in the Southwest
3 Semester Credit Hours (3 Lecture Hours)
Cultural and linguistic dimensions of Spanish dialects of the Southwestern United States, with special attention to Texas Spanish and its sociolinguistic perspectives in the bilingual community at large.
Prerequisite: SPAN 2312.

SPAN 4304 Miguel de Cervantes’ Don Quijote
3 Semester Credit Hours (3 Lecture Hours)
An advanced course designed to provide an introduction to Miguel de Cervantes’ Don Quijote.

SPAN 4305 Latin American Novel
3 Semester Credit Hours (3 Lecture Hours)
This course explores major novels from Latin America from the 20th century to the present. It examines the different problems, discourses, voices, contexts, and geographies that define this genre in Latin America.

SPAN 4306 Modern Spanish Literature
3 Semester Credit Hours (3 Lecture Hours)
A course that focuses on modern Spanish literature. It is highly recommended that students take any of the following before taking this course: SPAN 2313, 2315, 3302, 3303, have advanced proficiency or faculty permit. Conducted in Spanish, unless otherwise stated.

SPAN 4313 Spanish Interpretation
3 Semester Credit Hours (3 Lecture Hours)
This course presents an introduction to methodologies, requirements, terminology, and practice of interpretation, with emphasis on simultaneous, consecutive, and sight interpretation.

SPAN 4320 Spanish in the Americas
3 Semester Credit Hours (3 Lecture Hours)
A study of the Spanish that was brought to the Americas, its development, propagation and contact with native-American languages, including the sociocultural factors that have contributed to the linguistic variation in contemporary Spanish-speaking societies.

SPAN 4322 Medical, Scientific and Technical Translation
3 Semester Credit Hours (3 Lecture Hours)
An advanced course in translation concentrating on medical, scientific and technical translation. The course is designed to extend student’s knowledge of translation theory and consolidate their skills in specialized translation.
Prerequisite: (SPAN 3313).

SPAN 4327 Methods in Foreign Language Instruction
3 Semester Credit Hours (3 Lecture Hours)
This course is designed to study the current methods in foreign languages, their application in maximizing language proficiency, and the role of the students’ culture and language during the learning process.

SPAN 4398 Applied Experience
3 Semester Credit Hours
A practical work experience related to the Spanish area and related careers. It is intended to provide an opportunity for a student to gain first-hand experience in an unfamiliar field. Consequently, Applied Experience credit may not be granted for a student's regular work assignment or for previous work experience. Registration is by application. The application must include a clearly written description of the duties and responsibilities involved in the Applied Experience project, and be signed by the student, the on-site supervisor, and the faculty supervisor. Completed applications must be received in the Dean's Office by the last class day of the semester preceding intended registration. This course is graded "credit" or "no credit." No more than three semester hours of Applied Experience credit may be counted toward the baccalaureate degree. Undergraduate Applied Experience course will include no less than one hundred hours and no more than 150 hours of work experience per semester.

SPAN 4421 Business, Commercial, and Legal Translation
4 Semester Credit Hours (4 Lecture Hours)
An advanced course in translation concentrating on business, commercial and legal texts. The course is designed to extend student’s knowledge of translation theory and consolidate their skills in specialized translation.
Prerequisite: (SPAN 3313).

Technical and Professional Writing, Minor

Program Description
This interdisciplinary and flexible minor provides students in all majors with writing experiences, including problem-solving, communications (both online and face-to-face), team work, sensitivity to diversity, and ethical decision making, that will enhance their education and prepare them to meet the demands of professional life, whatever their chosen career path. Students, in consultation with advisors, will design the series of minor courses to meet their needs and goals.

Students who select this minor must maintain an overall grade point average of 2.0 in courses in the minor. Students who select this minor must consult with an academic advisor in the College of Liberal Arts prior to completing 6 hours of coursework listed for the program.

The Technical and Professional Writing Minor can be completed fully online. Courses not designated as ENGL may not be offered online.

**Courses**

**ENGL 0099 Integrated Reading and Writing Non-Course Based Development**  
0 Semester Credit Hours  
ENGL 0099 is designed to develop student's critical reading and academic writing skills on an individualized basis through tutoring. The course fulfills TSI requirements for reading and writing. TSI compliance staff will approve each student for this course. Approval is based on test score and/or by academic standing.

**ENGL 0399 Integrated Reading and Writing**  
3 Semester Credit Hours (3 Lecture Hours)  
A portfolio-based course with required tutoring (lab) time focused on the writing and reading processes, including strategies for invention, revision, and editing, and techniques of active reading, such as analysis, inference, summary, and evaluating texts. Students will enter ENGL 0399 through Texas Success Initiative (TSI) mandated remediation. (Not counted toward graduation)

**ENGL 1301 Writing and Rhetoric I**  
3 Semester Credit Hours (3 Lecture Hours)  
English 1301 introduces students to writing studies, rhetoric, academic research, and information literacy. Students will critically read and reflect on threshold concepts in writing studies. They will practice recursive writing and research processes for various situations. Sections will be offered both online and in person each semester.  
TCCNS: ENGL 1301

**ENGL 1302 Writing and Rhetoric II**  
3 Semester Credit Hours (3 Lecture Hours)  
English 1302 builds on the foundation in writing studies, rhetoric, academic research, and information literacy introduced in ENGL 1301. Students will read, apply, and reflect on the current research and scholarship in writing studies and rhetoric. Students will practice transferring, deepening, and extending their ability to use writing into discipline-specific, workplace, and civic contexts. Sections will be offered both online and in person each semester.  
Prerequisite: ENGL 1301.  
TCCNS: ENGL 1302

**ENGL 2303 Introduction to Writing Studies**  
3 Semester Credit Hours (3 Lecture Hours)  
This course will review current scholarship on writing studies, including threshold concepts, activity theory, and genre studies. It will consider various perspectives on the uses of writing to provide students with an intellectual and practical understanding of writing. This course provides a starting point for the more specific studies of writing that occur in other writing studies courses.

**ENGL 2316 Literature and Culture**  
3 Semester Credit Hours (3 Lecture Hours)  
Introduction to literatures that raise aesthetic, cultural, social, and/or political issues that affect and reflect the human condition across regions, cultures, and nations. Sample topics: Crossing Borders, The City in Literature, Islands and Islanders, Science and Fiction.  
TCCNS: ENGL 2331

**ENGL 2332 Literature of the Western World: From the Classics to the Renaissance**  
3 Semester Credit Hours (3 Lecture Hours)  
Study of important literary texts from the Ancient World to the Renaissance.  
TCCNS: ENGL 2332

**ENGL 2333 Literature of the Western World: From the Enlightenment to the Present**  
3 Semester Credit Hours (3 Lecture Hours)  
Study of important literary texts from the Enlightenment to the present.  
TCCNS: ENGL 2333

**ENGL 2360 Language and Gender**  
3 Semester Credit Hours (3 Lecture Hours)  
In this class, we explore how language reflects, and is reflected upon, one facet of our identities: gender. We will explore the complex relationships between gender and aspects of language such as conversation, narrative, pronunciation, grammar, and pragmatic norms. We will also discuss the intersection of gender and other social factors, such as race or culture, as manifested in the language use. Students will also have an opportunity to discuss how gender is represented in the media and online, as well as how gender is situated in institutional contexts, such as home, school, work, and law. There is no prior knowledge of linguistics or social theory required for this class. Course activities include lectures, class discussions, in-class article presentation, language observations, hands-on data analysis, and a final project.

**ENGL 2370 Introduction to Literary Studies**  
3 Semester Credit Hours  
An introduction to literary analysis and scholarship for the intermediate writer. Emphasis placed on genres of literature, literary research, and expository and analytical composition. Familiarizes students with the various disciplines and related conversations within English Studies. Should be taken by sophomore-level English majors in the Literary Studies emphasis, and by Literary Studies and Creative Writing minors.  
Prerequisite: ENGL 1302.

**ENGL 2371 Exploring Social Media**  
3 Semester Credit Hours (3 Lecture Hours)  
In this course we will examine and discuss current issues related to social media within a rhetorical framework. We will use different social media platforms to share and discuss in order to provide hands-on experience in these environments. Social media will be explored at the micro level as students will review their online social media presence to better understand how readers view them online. From the macro level we will identify current topics that affect the design and use of social media platforms and applications.
ENGL 3167  English as a Second/Foreign Language Tutoring
1 Semester Credit Hour
Students pursuing the Advanced TESOL Certificate will supplement ENGL 3367 (TESOL Seminar: Methods) with practical experience tutoring English learners. Students will write reflectively about those experiences. As needed, students will undergo site-specific training.
Co-requisite: ENGL 3367.

ENGL 3301  Technical and Professional Writing
3 Semester Credit Hours
A course designed to help students gain practical experience in finding and interpreting information and writing reports and documents for specialized audiences in the technical and professional world. ENGL 3301 will be held in a computer-assisted classroom.

ENGL 3302  Techniques of Creative Writing
3 Semester Credit Hours (3 Lecture Hours)
Introduces students to the theoretical knowledge and practical experience used in creative writing. Focuses on poetry, creative nonfiction, and short fiction. For all majors.

ENGL 3310  Technical and Professional Writing for Computer Science
3 Semester Credit Hours (3 Lecture Hours)
Designed specifically for computer science majors, this course focuses on developing students' ability to (1) use writing to communicate effectively with a range of audiences about technology; (2) identify, analyze, and appropriately integrate relevant information in their writing; (3) make informed judgments about their uses of writing based on ACM's and IEEE's code of ethics; and (4) develop their ability to function effectively individually and as members of a team to establish goals, plan tasks, meet deadlines, manage risk, and produce deliverables.

ENGL 3321  Film and Literature
3 Semester Credit Hours (3 Lecture Hours)
3 sem. hrs. Studies the connections between the formal elements of literature and of film, with emphasis on theme, narrative style, and genre. By viewing films based on literary sources, students will analyze how literature is adapted into film as well as identify strategies to view and read critically. For all majors.

ENGL 3323  Young Adult Fiction
3 Semester Credit Hours (3 Lecture Hours)
Literary study of young adult literature through analysis, discussion, and interpretation. The course emphasizes literary issues connected with society, culture, history, and genre.

ENGL 3325  Interdisciplinary Approaches to Literature
3 Semester Credit Hours (3 Lecture Hours)
In recent decades, it has become common to study literature in light of other disciplinary perspectives—and to study other disciplines as they are depicted in literature. From these interdisciplinary approaches has emerged a distinct mode of analysis that examines texts within their broader social and cultural milieu. In this course students will earn to use cross-disciplinary methods to interpret literature and culture. Topics will vary, but may include Religion, Medicine, and American Literature, Disability Narratives in the Eighteenth Century, Trauma and the City in Twentieth-Century Literature.

ENGL 3330  Current Events and Literature
3 Semester Credit Hours (3 Lecture Hours)
This course examines literature in the context of current issues and events. Students will place literature in conversation with social, political, and cultural trends as a means of engaging with and understanding these trends and the debates associated with them. Using reading, writing, and discussion as modes of critical inquiry, students will discover the critical role that literature plays in representing, responding to, and shaping current events.

ENGL 3339  Introduction to Linguistics
3 Semester Credit Hours (3 Lecture Hours)
Introductory survey course covering phonetics, morphology, syntax, semantics, sociolinguistics, neurolinguistics, and language acquisition.

ENGL 3340  Grammar
3 Semester Credit Hours (3 Lecture Hours)
Presents a general descriptive overview of English grammar and provides a structural framework for analyzing English sentences.

ENGL 3341  British Literature before 1800
3 Semester Credit Hours (3 Lecture Hours)
Study of significant works of poetry, drama, and prose before 1800 with emphasis on historical context and the exploration of literary and cultural values through written texts.
Prerequisite: (ENGL 2370) or (ENGL 3303) or (ENGL 2303). * May be taken concurrently.

ENGL 3344  British Literature since 1800
3 Semester Credit Hours (3 Lecture Hours)
Study of significant works of British poetry, drama, and prose since 1800 with emphasis on historical context and the exploration of literary and cultural values through written texts.
Prerequisite: (ENGL 2370) or (ENGL 3303) or (ENGL 2303). * May be taken concurrently.

ENGL 3348  Drama
3 Semester Credit Hours (3 Lecture Hours)
A genre-oriented study of dramatic literature, using a wide range of texts. Variable content.

ENGL 3349  Poetry
3 Semester Credit Hours (3 Lecture Hours)
A genre-oriented study of poetry using a wide range of texts. Variable content.

ENGL 3354  American Literatures before 1900
3 Semester Credit Hours (3 Lecture Hours)
Study of significant works of American poetry, drama, and prose from the country's pre-European beginnings to 1900 with emphasis on historical context and the exploration of literary and cultural values through written texts.
Prerequisite: (ENGL 2370) or (ENGL 3303) or (ENGL 3303). * May be taken concurrently.

ENGL 3355  American Literatures since 1900
3 Semester Credit Hours (3 Lecture Hours)
Study of significant works of American poetry, drama, and prose from 1900 to the present with emphasis on historical context and the exploration of literary and cultural values through written texts.
Prerequisite: (ENGL 2370) or (ENGL 3303) or (ENGL 3303). * May be taken concurrently.
ENGL 3360  Current Approaches to Composition and Literature
3 Semester Credit Hours (3 Lecture Hours)
Prepares prospective teachers to create developmentally appropriate learning environments and tasks that enable student success in writing and the study of literature in Language Arts and English courses. Prepares students to meet the increased writing and reading expectations in all subject areas, including their own writing.

ENGL 3361  Strategies and Genres of Advanced Writing
3 Semester Credit Hours (3 Lecture Hours)
Students will practice writing in situated contexts (such as their majors, careers, and/or other professional interests) and across genres to develop more advanced and reflective writing strategies. By studying theories of writing; engaging in writing as a craft; and drafting, revising, and editing texts; students will refine and become more reflective in their writing processes.

ENGL 3362  Creative Writing Workshop: Survey and Practice of Genres
3 Semester Credit Hours (3 Lecture Hours)
Develops students' skills as critics and writers of fiction, poetry, and creative nonfiction in a workshop setting. For all majors.

ENGL 3363  Foundations of Rhetoric
3 Semester Credit Hours (3 Lecture Hours)
This course will study the historical and theoretical development of rhetoric through the works of principal thinkers. Students will analyze rhetorical concepts in their relation to civic, cultural, political, and pedagogical developments and the construction of knowledge and will use rhetorical concepts to produce logical, ethical, and moral arguments.

ENGL 3364  Strategies of Writing Creative Nonfiction
3 Semester Credit Hours (3 Lecture Hours)
Explores the uses of creative nonfiction through reading and writing about published works of experienced writers and scholars in the field and practicing a variety of creative nonfiction techniques and genres (e.g. literary journalism, memoir, and the personal narrative).

ENGL 3365  Second Language Acquisition
3 Semester Credit Hours (3 Lecture Hours)
This course is an introduction to second language acquisition. The course is designed to be accessible to students from a wide variety of backgrounds and no basic knowledge of the linguistic structure of English will be assumed. This course will address issues related to how second language is learned by both children and adults.

ENGL 3366  Language in Society
3 Semester Credit Hours (3 Lecture Hours)
An introduction to the study of language as a function of several societal variables. Introduces basic concepts of language such as linguistic varieties, dialect, speech communities, and linguistic attitudes.

ENGL 3367  TESOL Seminar
3 Semester Credit Hours (3 Lecture Hours)
This course presents an introduction to and a critique of current and traditional methodologies of teaching English to speakers of other languages, with emphasis on aural comprehension; speaking, reading, and writing skills; testing and assessment; and linguistic-cultural differences. This course is open to all majors, but is required for students seeking the Certificate in TESOL.
Prerequisite: ENGL 3365.

ENGL 3369  Topics in Linguistics
3 Semester Credit Hours (3 Lecture Hours)
Exploration of topics such as second language acquisition, language assessment, history of English, and contrastive analysis. May be repeated when topics vary.

ENGL 3378  Document Design and Publishing
3 Semester Credit Hours (3 Lecture Hours)
Focuses on the integration of text and visual rhetoric, such as graphics, for all kinds of professional publications including technical documents, media, public relations pieces, and advertisements.

ENGL 3379  Writing for the Web
3 Semester Credit Hours (3 Lecture Hours)
Focuses on the analysis, design, and production of visual representations and multi-modal texts that integrate visual elements.

ENGL 3380  Visual Rhetoric
3 Semester Credit Hours (3 Lecture Hours)
Focuses on the analysis, design, and production of visual representations and multi-modal texts that integrate visual elements.

ENGL 3381  Nonprofit Writing Project
1 Semester Credit Hour
Students will gain practical experience with a nonprofit agency by developing a significant project that meets an agency identified need. Students should take this course in the last semester of their nonprofit certificate program in conjunction with one of the following: ENGL 3378, ENGL 3379, ENGL 4322, or ENGL 4321. The students’ professor in the regular course will be the instructor of record for a the projects course.

ENGL 3382  Technologies and Cultures of the Book
3 Semester Credit Hours (3 Lecture Hours)
This course studies the significant works of a major literary author. Texts are viewed through a variety of critical perspectives and placed in the context of the writer’s life and of the society, culture, and history of the times. May be repeated once for credit when authors vary.

ENGL 3383  Professional Writing Workshop
3 Semester Credit Hours (3 Lecture Hours)
This course is tailored for individual students’ writing and publishing projects in their disciplines.

ENGL 3384  Grants and Proposals
3 Semester Credit Hours (3 Lecture Hours)
This course will teach students the grant proposal writing process, including identifying sources of funding, conducting research to support funding applications, and tailoring each proposal to a specific funding agency. Students will receive experience writing actual proposals on behalf of local organizations and agencies.
ENGL 4322  Writing in the Nonprofit Agencies
3 Semester Credit Hours (3 Lecture Hours)
Foci on the specific kinds writing of professionals in the nonprofit world do, including internal communication in an agency, writing for the public, document creation, fund raising, board relations, and other relevant topics.

ENGL 4324  Editing & Style
3 Semester Credit Hours (3 Lecture Hours)
Practice in methods, tools, and principles of editing for nonfiction and technical publications. Emphasis on a rhetorical understanding of levels of editing, managing the editorial process, and grammar and style.

ENGL 4325  Writing Across Cultures and Contexts
3 Semester Credit Hours (3 Lecture Hours)
Through writing, students will study how groups perceive, understand, and communicate with and about each other. The course may focus on a specific type of writing (cross cultural expository writing, travel writing, cross cultural writing in industry), or on the linguistic and rhetorical practices of a cross-cultural community (latino/a rhetoric, African-American rhetorics, etc).

ENGL 4335  Creative Writing Studio: Development of Craft
3 Semester Credit Hours (3 Lecture Hours)
Develops students' skills as critics and writers of fiction, poetry, and creative nonfiction in a studio setting. Guides students to focus on a major project in one genre with sustained practice of techniques and revision. Open to students of all levels, from the novice to the advanced. For all majors.

ENGL 4340  The Novel
3 Semester Credit Hours (3 Lecture Hours)

ENGL 4345  Rhetorics, Literacies, and Writing
3 Semester Credit Hours (3 Lecture Hours)
This course examines the history and major theories of rhetoric, literacy, and composition, and explores how they influence contemporary cultural productions.

ENGL 4350  Studies in Poetics: Theory, Form, and Practice
3 Semester Credit Hours (3 Lecture Hours)
Develops students' theoretical knowledge of poetics and practical experience of writing in traditional forms, from the Anglo-American tradition to the culturally diverse movements and innovation of form. Focusing on works written by poets about poetry and poets primarily from the 19th to the 21st centuries. For all majors.

ENGL 4351  Senior Capstone: Literature and Writing
3 Semester Credit Hours (3 Lecture Hours)
A study of literature in English for graduating seniors in the Literary Studies Emphasis. Emphasis is placed on genre, research, and analytical expository writing.
Prerequisite: ENGL 2370, 3303 or 2303.

ENGL 4352  Capstone in Writing Studies
3 Semester Credit Hours (3 Lecture Hours)
This course is the culminating experience for the Writing Studies emphasis in English. Students review, reflect on, integrate, and apply their learning from previous courses and experiences. Students create digital portfolios for career and publishing opportunities, emphasizing selection, revision, reflection, and presentation. In addition, students identify, evaluate, and annotate texts and resources to include in a curated digital collection/publication that will be available for students in future Writing Studies courses.

ENGL 4360  Gender, Sexuality and Literature
3 Semester Credit Hours (3 Lecture Hours)
This course introduces students to literature that explores issues of gender and sexuality. It focuses on relevant literary periods and conventions, as well as on the historical, social, and cultural contexts of artistic productions. Sample topics: women's literature, queer literature, literature and masculinity.

ENGL 4361  Race and Ethnicity in Literature
3 Semester Credit Hours (3 Lecture Hours)
Topics focus on a variety of cross-cultural issues in historical and/or contemporary texts by Caribbean, British Indian, Native American, African American, Chicano/a, and/or other underrepresented authors.

ENGL 4362  Texts and Contexts
3 Semester Credit Hours (3 Lecture Hours)
Study of literary and cultural texts that raise issues of community and social relations, diversity, multiculturalism, and/or globalization. Sample topics: Medicine and Religion in American Literature, Traveling Histories, the Global City, and Literary Regionalism in Transnational Context. May be repeated once for credit when topics vary.

ENGL 4370  Oral Interpretation of Children's Literature
3 Semester Credit Hours (3 Lecture Hours)
A study primarily through the medium of performance, of various types and forms of literature for children. Strongly oriented toward teaching literature in the elementary school classroom. (Credit may not be given for both this course or THEA 4323.)

ENGL 4380  Critical Approaches to Literature and Culture
3 Semester Credit Hours (3 Lecture Hours)
A study of selected perspectives and critical approaches to literature and culture, including an examination of some of the theoretical assumptions upon which they are based, as well as their implications for the way we think about literature, human identity, and the power of language.
Prerequisite: ENGL 2370.

ENGL 4385  Studies in Creative Writing
3 Semester Credit Hours (3 Lecture Hours)
Students will focus on the craft of a specific genre or type of writing through reading experts' advice, reading and analyzing examples written by practitioners, and engaging in peer-response workshops with classmates. Attention will be paid to publication opportunities available for writers in that genre.

ENGL 4390  Topics in Literary Studies
3 Semester Credit Hours (3 Lecture Hours)
May be repeated when topics vary—see S.A.I.L. or advisor for further information.

ENGL 4391  Topics in Writing Studies
3 Semester Credit Hours (3 Lecture Hours)
May be repeated when topics vary—see S.A.I.L. or advisor for further information.

ENGL 4396  Directed Individual Study
1-3 Semester Credit Hours (1-3 Lecture Hours)
See College description.

ENGL 4398  Applied Experience
3 Semester Credit Hours (3 Lecture Hours)
See College description.
ENGL 4399 TESOL Practicum
3 Semester Credit Hours
Practical experience teaching English to second language learners. Students will observe, plan, and teach ESL lessons. Instructional support provides opportunities to discuss and reflect upon teaching experiences and help students connect theory, methods, and practice. This course enhances the TESOL Certification, but is not required for it. Cannot be repeated for credit.

Women's, Gender, and Sexuality Studies, Minor

Program Description
This minor is an interdisciplinary program for undergraduate students who desire more in-depth study than can be obtained in one or a few courses on the changing statuses, issues, problems, and future prospects of all genders in contemporary society. The interdisciplinary nature of this program integrates the study of intersections of gender, race, class, and sexuality in multicultural and global contexts. This program is designed to complement undergraduate study programs in the University.

Students who select this minor must consult and have approval of the program advisor to establish a plan of study. This should be done prior to completing 6 hours of coursework listed for the program. The minor plan must be filed with an academic advisor in the College of Liberal Arts and certified prior to application for graduation by the Dean of the College in which the major study degree will be awarded.

Program Requirements
A minimum of 18 semester hours selected from the following courses is required for the minor. Topics courses 1 may be taken for credit when the announced content is appropriate to the minor. At least 12 of the hours must be at the upper division level and 12 must be taken at A&M-Corpus Christi.

1 Courses with a one (1) must be approved by a program coordinator.

Courses

WGST 3301 Introduction to Women and Gender Studies
3 Semester Credit Hours (3 Lecture Hours)
An introduction to the study of women and gender across disciplines and cultures. Designed to engage students in some of the most important methodological and theoretical debates regarding women's experiences and the construction of knowledge about women historically and today. Literary, anthropological, sociological, historical, scientific, and managerial perspectives may be included.

WGST 4380 Senior Seminar in Women and Gender Studies
3 Semester Credit Hours (3 Lecture Hours)
This seminar explores the relationship between theory and application in the field of women and gender studies. This includes the study of feminist theories and methodologies with special attention to the application of these to current debates and social issues. In addition, students must complete a research paper or applied experience project that is relevant for their major field of study.

Art History, Minor

Program Description

The Art History minor is intended for students who are interested in art history to take additional courses in the field as a compliment to other degree programs offered at the university. This minor will assist art majors and graphic design majors with a broader historical basis in their fields of study. The art history minor is also an excellent compliment to many other degree programs, such as history, political science, literature and modern languages, philosophy, psychology and sociology. This minor can also prepare students for advanced study in art history in graduate programs at other institutions.

Courses

ARTS 1301  | Art and Society
3 Semester Credit Hours (3 Lecture Hours)
Designated for non-art majors. Establishes a working vocabulary for evaluating works of art in various media. Objects are interpreted in terms of their specific historical contexts and the changing relationships between art and society. This course does not fulfill the art history requirement for art majors.
TCCNS: ARTS 1301

ARTS 1303  | Art History Survey I
3 Semester Credit Hours (3 Lecture Hours)
An examination of painting, sculpture, architecture, and other arts from the ancient through medieval periods.
TCCNS: ARTS 1303

ARTS 1304  | Art History Survey II
3 Semester Credit Hours (3 Lecture Hours)
A further examination of painting, sculpture, architecture, and other arts from the Renaissance through Modern periods. This course satisfies the university core curriculum requirement in fine arts.
Prerequisite: ARTS 1303.
TCCNS: ARTS 1304

ARTS 1311  | Design I
3 Semester Credit Hours
A studio course concerning the fundamentals of art with emphasis on two-dimensional concepts.
TCCNS: ARTS 1311

ARTS 1312  | Design II
3 Semester Credit Hours
A studio course concerning the fundamentals of art with emphasis on three-dimensional concepts. This 3D foundations course utilizes creative problem-solving strategies and basic sculpture tools to explore spatial relationships and to create sculptural forms in space.
Co-requisite: SMTE 0097.
TCCNS: ARTS 1312

ARTS 1316  | Drawing I
3 Semester Credit Hours (3 Lecture Hours)
A studio course investigating a variety of media techniques, including their descriptive and expressive possibilities.
TCCNS: ARTS 1316

ARTS 1317  | Drawing II
3 Semester Credit Hours
A further investigation of media techniques explored in Drawing I, including their descriptive and expressive possibilities.
Prerequisite: ARTS 1316.
Co-requisite: SMTE 0097.
TCCNS: ARTS 1317

ARTS 2311  | Design III: Color
3 Semester Credit Hours
Investigation of the properties of color. Color is studied and applied to studio-oriented design assignments.
Co-requisite: SMTE 0097.

ARTS 2316  | Painting I
3 Semester Credit Hours (3 Lecture Hours)
A studio course exploring the potentials of painting media.
Prerequisite: ARTS 1316.
Co-requisite: SMTE 0097.
TCCNS: ARTS 2316

ARTS 2323  | Drawing III
3 Semester Credit Hours
A studio course continuing the investigation of media and techniques explored in Drawing I and Drawing II. Students investigate how formal aspects and selected media along with conceptual choices create specific visual ideas.
Prerequisite: ARTS 1317.
Co-requisite: SMTE 0097.
TCCNS: ARTS 2323

ARTS 2326  | Sculpture I
3 Semester Credit Hours
An introductory studio course exploring sculptural approaches, materials, concepts, and technical processes. Materials include wood, plaster, steel, and plastics.
Co-requisite: SMTE 0097.
TCCNS: ARTS 2326
ARTS 2333 Printmaking I
3 Semester Credit Hours
An introductory studio course in basic printmaking processes and techniques.
Prerequisite: ARTS 1316 or 1311.
Co-requisite: SMTE 0097.
TCCNS: ARTS 2333

ARTS 2346 Ceramics I
3 Semester Credit Hours (3 Lecture Hours)
An introductory studio course in basic ceramic processes.
Co-requisite: SMTE 0097.
TCCNS: ARTS 2346

ARTS 2356 Photography I
3 Semester Credit Hours
This course is an introduction to digital photography capture, processing, and basic editing software. While focusing on the fundamentals of digital photography and printing techniques, it will introduce students to the theory and practice of photography and assist them in producing a conceptually devised and technically consistent portfolio.
Co-requisite: SMTE 0097.
TCCNS: ARTS 2356

ARTS 2367 Watercolor
3 Semester Credit Hours (3 Lecture Hours)
A studio course exploring techniques in water-base media.
Co-requisite: SMTE 0097.

ARTS 3301 Life Drawing
3 Semester Credit Hours
Drawing from the model using a variety of techniques and media.
Prerequisite: (ARTS 1317).
Co-requisite: SMTE 0097.

ARTS 3302 Screen Printing
3 Semester Credit Hours
Traditional printmaking processes will be explored using black and white and color techniques, including but not limited to screenprinting.
Prerequisite: ARTS 1311 or 1316.
Co-requisite: SMTE 0097.

ARTS 3303 Intermediate Painting
3 Semester Credit Hours (3 Lecture Hours)
Explores the issues of content, imagery, application, and influences of master artists.
Prerequisite: ARTS 2316.
Co-requisite: SMTE 0097.

ARTS 3304 Fabrication Sculpture
3 Semester Credit Hours
Building upon introductory skills, this course explores construction and fabrication in sculpture focusing on a primary material for the semester and applying advanced techniques and processes for this material. Through this material and techniques, students begin defining and developing their visual vocabulary relative to art history and contemporary sculptural issues.
Prerequisite: ARTS 2326.
Co-requisite: SMTE 0097.

ARTS 3305 Mold Making and Casting Sculpture
3 Semester Credit Hours
This course is designed to build upon the fundamental principles of mold making and casting while exploring more complex concepts, materials, and techniques. Creating multi-part molds, flexible molds, and investment molds, the project assignments incorporate the unique versatility of mold making and casting for exchanging media and making a series of multiples. In addition to making casts, students compare methods for assembling cast forms together to create larger sculptural artworks and installations.
Co-requisite: SMTE 0097.

ARTS 3306 Figurative Sculpture
3 Semester Credit Hours
A study of the human figure from an anatomical and artistic perspective. Examines the skeletal and muscular components of the figure in order to create lifelike and emotive sculptures. Discussion of the figure in both classical and contemporary art. Working with armature and modeling clay.
Co-requisite: SMTE 0097.

ARTS 3307 Lithography and Planographic Process
3 Semester Credit Hours
Traditional printmaking processes will be explored using black and white and color techniques, including but not limited to lithography and monoprinting.
Prerequisite: ARTS 2311 or 1311.
Co-requisite: SMTE 0097.

ARTS 3311 Color Theory
3 Semester Credit Hours
This course develops an understanding of color properties and relationships through formal exercises, research and creative thinking. Students build a vocabulary for analyzing and identifying color and color phenomena. Concepts of color theorists and color use in a variety of fields are examined to understand the application of color theory. Students will investigate the use of color in their own work and in the work of others to understand the conceptual and aesthetic application of color.
Prerequisite: ARTS 1311.

ARTS 3313 Figure Painting
3 Semester Credit Hours
This course addresses the structure and anatomy of the human figure using oil paint. Painting techniques and color theory exercises will familiarize students with tradition painting methods. Students will render proportions, balance, form and mass of the human figure. Research and discussions will address the human form throughout history as well as in the contemporary context. Image presentations, critiques and live model sessions will supplement studio work.
Prerequisite: ARTS 2316.
Co-requisite: SMTE 0097.

ARTS 3316 Art Activities I
3 Semester Credit Hours (3 Lecture Hours)
Practical experience with basic design, drawing, painting, and sculpture, along with a study of art history and criticism. Includes a consideration of how these experiences relate to art curricula in the elementary school.

ARTS 3322 Art Activities II
3 Semester Credit Hours (3 Lecture Hours)
Practical experiences with basic design, drawing, painting, printmaking, sculpture, and crafts, along with a study of art history and criticism. Includes a consideration of how these experiences relate to art curricula in the secondary school.
ARTS 3324  Wheel Throwing
3 Semester Credit Hours
Covers wheel-thrown ceramics (other production techniques may be included), basic glazemaking, and an introduction to kiln firing and loading.
Prerequisite: ARTS 2346.
Co-requisite: SMTE 0097.

ARTS 3325  Handbuilt Ceramic Techniques
3 Semester Credit Hours
This course is a continuation of hand-building covered in Ceramics I ARTS 2346. The course will cover more advanced forming techniques such as extrusion, hump, slump, and press molds, and slip-casting. New surface and firing techniques will include more advanced techniques such as underglazes, onglaze techniques such as majolica, fired decal application, raku, and an introduction to low fire glazes and surfaces.
Prerequisite: ARTS 2346.

ARTS 3350  Art of the United States
3 Semester Credit Hours (3 Lecture Hours)
A survey of the major developments in the art of North America from Pre-Columbian times to the modern era.

ARTS 3352  Modern Art
3 Semester Credit Hours (3 Lecture Hours)
A survey of the major movements of 20th century art and aesthetics, which developed primarily in Europe. Includes a review of late 19th century modernist antecedents with emphasis placed on the principal movements of the early 20th century: Fauvism, German Expressionism, Cubism, Futurism, Abstract Art, Dada, and Surrealism.

ARTS 3353  Art Since 1945
3 Semester Credit Hours (3 Lecture Hours)
An examination of the dispersal of European artists and Modernism, primarily to America, as a result of World War II. Examines the development of Abstract Expressionism in New York in the 1940s and 50s, followed by a survey of recent trends in contemporary art to the present day.

ARTS 3360  Graphic Design I
3 Semester Credit Hours (3 Lecture Hours)
Introduces fundamental graphic communication techniques, software and theory. Explores hand skills by using tools and techniques to produce professional presentations as well as the correct procedures for presenting designs to a client.

ARTS 3365  Photography II
3 Semester Credit Hours
An intermediate studio course using digital cameras and image manipulation software. Prior completion of ARTS 2356 is required. This course will enhance and expand skills developed in Photography I. It is geared toward informing students in the many ways we can make photographs; by seeking them out, framing them, forming them, extracting them, building them, and finally sequencing and presenting them. Students will engage in the theory and practice of photography, refine their photographic technique, and create a conceptually devised and technically consistent portfolio. Emphasis is placed on the development of a strong conceptual foundation from which to approach the making and understanding of photography as an art form. This knowledge will be achieved through photographic assignments, slide lectures of relevant works, and in-class critiques. It can be repeated twice for credit.
Prerequisite: (ARTS 2356).
Co-requisite: SMTE 0097.

ARTS 3366  Analogue Photography
3 Semester Credit Hours
An introductory studio course in analogue photography using film cameras and the silver gelatin darkroom process. While focusing on the fundamentals of black and white, analogue photography and printing techniques this course will assist students in producing a conceptually devised and technically consistent portfolio.
Prerequisite: (ARTS 2356).
Co-requisite: SMTE 0097.

ARTS 3367  Digital Design Tools and Applications
3 Semester Credit Hours
This studio course explores the fundamental principles, standard creative processes and basic digital tools utilized in graphic design. The concepts and software learned are employed in projects specifically targeted to serve the professional and promotional needs of studio artists and design enthusiasts.

ARTS 4085  Senior Capstone
0 Semester Credit Hours
Required for all art students in partial fulfillment of the requirements for the BA in Art, BFA in Art studio track and the BFA with Teacher Certification in Art tracks. This course collects capstone materials for ARTS degrees. The course must be taken in the student's final semester before graduation.

ARTS 4301  Advanced Drawing
3 Semester Credit Hours
Emphasis on the development of content through drawing. Research on contemporary trends and process investigation will aid students in the development of visual ideas and lead to a cohesive body or work. May be taken three times for credit.
Prerequisite: ARTS 2323.
Co-requisite: SMTE 0097.

ARTS 4302  Advanced Printmaking
3 Semester Credit Hours
Furthers competencies attained in Printmaking I and Intermediate I & II courses. May be taken three times for credit.
Prerequisite: ARTS 3302 and 3307.
Co-requisite: SMTE 0097.

ARTS 4303  Advanced Painting
3 Semester Credit Hours (3 Lecture Hours)
Assumes competencies attained in ARTS 3303. May be taken three times for credit.
Co-requisite: SMTE 0097.

ARTS 4304  Advanced Sculpture
3 Semester Credit Hours (3 Lecture Hours)
Assumes competencies attained in ARTS 3304. May be taken three times for credit.
Co-requisite: SMTE 0097.

ARTS 4324  Advanced Ceramics
3 Semester Credit Hours (3 Lecture Hours)
Assumes competencies attained in ARTS 3324. May be taken three times for credit.
Co-requisite: SMTE 0097.

ARTS 4350  Pre-Columbian Art of Mesoamerica
3 Semester Credit Hours (3 Lecture Hours)
Explores the history of Pre-Columbian art from Mexico and Central America, from the Olmec through the Aztec cultures. May be taken three times for credit.
Communication Studies, Minor

Artistic courses include:

**ARTS 4352 Modern Art of Mexico**
3 Semester Credit Hours (3 Lecture Hours)
Explores the history of art during the nineteenth and twentieth centuries in Mexico. May be taken three times for credit.

**ARTS 4354 Global Currents in Contemporary Art**
3 Semester Credit Hours (3 Lecture Hours)
The course will cover key developments in contemporary art from the post-World War II era in the Western context to global currents in the present international arena. From a socio-political perspective, artistic tendencies will be considered as part of a trajectory that saw the center of the art world shift from being Euro- and Anglo-centric in the mid-twentieth century to one without a discernible center in the early twenty-first century. Analysis of artworks from this decentralized cultural climate will focus on the evolution of conceptualism, the persistence of traditional modes of aesthetic practice, the role of the art market, and notions of environmentalism and sustainability as related to these "transnational transition." The course will consider works from Eastern Europe, South and Central America, the Caribbean, East/West/South/ Southeast Asia, Oceania, and Africa.

**ARTS 4356 Contemporary Art Since 1980**
3 Semester Credit Hours (3 Lecture Hours)
The course will examine the evolution of architecture, sculpture, painting, digital media, installation, and interdisciplinary arts in the global context from 1980 to the present, in light of the historical and intellectual background of the period. Topics covered will include the transition from postmodernism to contemporaneity, considering notions of appropriation, commodification, consumerism, memory, history, and globalization. Lectures will be constructed upon thematic analysis of contemporary, primary sources coupled with secondary source material, and complemented by presentation opportunities and class discussion.

**ARTS 4365 Advanced Photography**
3 Semester Credit Hours (3 Lecture Hours)
Assumes competencies attained in ARTS 3365. Covers content as creative expression in addition to basic photographic skills. May be taken three times for credit.

**Co-requisite:** SMTE 0097.

**ARTS 4390 Topics in Art History**
3 Semester Credit Hours (3 Lecture Hours)
May be repeated when topics vary.

**ARTS 4391 Topics in Studio Art**
3 Semester Credit Hours
May be repeated when topics vary.

**ARTS 4396 Directed Individual Study**
1-3 Semester Credit Hours (1-3 Lecture Hours)
See College description. Offered on application

**ARTS 4398 Applied Experience**
3 Semester Credit Hours (3 Lecture Hours)
See College description. Offered on application.

**Co-requisite:** SMTE 0097.

**Courses**

**COMM 1311 Foundation of Communication**
3 Semester Credit Hours (3 Lecture Hours)
This course examines a breadth of topics fundamental to the study of communication and works to improve students' communication skills in three primary contexts: interpersonal relationships, group/teamwork, and presentational speaking.

**TCCNS:** SPCH 1311

**COMM 1315 Public Speaking**
3 Semester Credit Hours (3 Lecture Hours)
Research, composition, organization, and delivery of speeches for various purposes and occasions, with emphasis on listener analysis and on informative and persuasive techniques.

**TCCNS:** SPCH 1315

**COMM 1318 Interpersonal Communication**
3 Semester Credit Hours (3 Lecture Hours)
Predominant issues related to verbal and nonverbal communication with a focus on interpersonal relationships.

**TCCNS:** SPCH 1318

---

**Communication Studies, Minor Program Requirements**

The minor in Communication Studies consists of 18 semester hours of Communication Studies coursework.
COMM 1321 Business and Professional Communication
3 Semester Credit Hours (3 Lecture Hours)
Introduces students to basic skills, principles, and contexts of communication in business and professional settings by combining public speaking with aspects of communication ethics and organizational, small group, and interpersonal communication. Students will learn practical skills via presentations, research, resumes, interviews, meetings, and professional writing grounded in communication theory.

COMM 1342 Voice and Diction
3 Semester Credit Hours (3 Lecture Hours)
Basic voice training, including techniques for vocal production, manipulation, and control. Practical application of the vocal apparatus will be emphasized, including techniques of enunciation, projection, articulation, and the use of dialects. (Credit may not be given for both this course and THEA 1342.)
TCCNS: SPCH 1342

COMM 2330 Introduction to Public Relations
3 Semester Credit Hours (3 Lecture Hours)
An exploration of the history and development of public relations including the theory and process of public relations, and the various publics and careers associated with the public relations industry.
TCCNS: COMM 2330

COMM 2333 Small Group Communication
3 Semester Credit Hours (3 Lecture Hours)
Application of small group theories and techniques as they relate to group process and interaction.
TCCNS: SPCH 2333

COMM 2335 Presentational Communication
3 Semester Credit Hours (3 Lecture Hours)
Advanced study of the principles and methods of formal presentations for various purposes and audiences to further develop students into effective communicators. Course assignments will include various special occasion speeches, dynamic instructional speeches, extemporaneous speaking, creation of effective visual aids, and a group community action presentation.

COMM 3310 Communication Theory
3 Semester Credit Hours (3 Lecture Hours)
The foundations, processes, and effects of human communication. A survey of contemporary theory and research, including language theory, nonverbal and small group communication, persuasion, and mass communication.

COMM 3311 Nonverbal Communication
3 Semester Credit Hours (3 Lecture Hours)
The study of body movement, touch, paralanguage, space, environment, and other nonverbal factors in the communication process.

COMM 3325 Relational Communication
3 Semester Credit Hours (3 Lecture Hours)
This course is an advanced interpersonal communication course that focuses on communication within relationships, such as family, romantic, friendship, and workplace relationships. 
Prerequisite: COMM 1318.

COMM 3326 Research Methods
3 Semester Credit Hours (3 Lecture Hours)
The purpose of this course is to increase student's knowledge of the research process used in the Communication Studies discipline. Specifically, the course will allow students the opportunity to learn the goals of communication research and scrutinize various techniques for creating academic research and assessing academic knowledge.

COMM 3330 Persuasion
3 Semester Credit Hours (3 Lecture Hours)
Various theories and forms of rhetorical persuasion. Topics include practical reasoning skills, psychological theories of persuasion, and critical responses to persuasive messages.

COMM 3331 Public Relations Writing and Design
3 Semester Credit Hours (3 Lecture Hours)
This course will introduce students to the basic principles and formatting requirements for public relations writing. Students will gain theoretical and practical experience in developing content for specific audiences.

COMM 3335 UIL Debate and Speech
3 Semester Credit Hours (3 Lecture Hours)
Understanding the University Interscholastic League debate and speech events. Students explore approaches to analytical reasoning, research delivery, and the conceptual basis for debate and gain practical experience in understanding and judging UIL in the high school setting.

COMM 3350 Leadership
3 Semester Credit Hours (3 Lecture Hours)
Focuses on the communication of influence that takes place to achieve goals or encourage change. Specific attention will be devoted to a variety of approaches, processes, and theories that will provide students general knowledge of leadership.

COMM 4314 Gender Communication
3 Semester Credit Hours (3 Lecture Hours)
Examination of communication about women and men, as well as communication between them. Special course emphasis on explanations of gender, sexist language, media depiction of the sexes, and gender communication in the formation of social and work relationships.

COMM 4315 Communication and Sexuality
3 Semester Credit Hours (3 Lecture Hours)
This course will focus on communication and sexuality, specifically exploring sex and gender identity development and expression, intersections of race/ethnicity and sex/gender, how communication impacts various types of relationships, the role of communication in sexual activity, and power abuses related to sexual activity, with specific focus on consent and sexual safety.

COMM 4331 Public Relations Campaigns
3 Semester Credit Hours (3 Lecture Hours)
An application of the public relations process (including primary and secondary research, goals and objective development, the selection of proper strategies and tactics for implementation, and an evaluation of campaign effectiveness) through the production and presentation of a public relations campaign for a local organization. 
Prerequisite: COMM 2330.

COMM 4335 Crisis Communication
3 Semester Credit Hours (3 Lecture Hours)
An application of crisis communication (including organizational research, risk and vulnerability assessment, strategic communication, and performance and damage evaluation) through the development and presentation of a crisis communication plan for a local organization.

COMM 4345 Intercultural Communication
3 Semester Credit Hours (3 Lecture Hours)
An investigation of the process by which persons and groups of different cultural backgrounds create understanding. Types of knowledge, skills, and sensitivity necessary for intercultural communication are developed.
COMM 4350 Organizational Communication
3 Semester Credit Hours (3 Lecture Hours)
Examination and exploration of realistic applications of communication theories within the framework of an organization. Particular attention will be given to techniques for diagnosing communication problems, as well as strategies for effecting change in communication.

COMM 4360 International Leadership
3 Semester Credit Hours (3 Lecture Hours)
Study of international leadership in the context of communication and in multi-cultural and diverse settings. Influence of global economy, politics, social values in international leadership.

COMM 4380 Senior Seminar in Communication Studies
3 Semester Credit Hours (3 Lecture Hours)
This course serves as the capstone for the Communication Studies degree. It offers students opportunities to synthesize information learned in other Communication courses and demonstrate abilities to think critically, conduct independent research linked to appropriate communication theories, create individual and collaborative projects that demonstrate effective use of communication strategies, and present written and oral work at an advanced level.
Prerequisite: (COMM 2335, 3310 and 3326).

COMM 4390 Topics in Communication Studies
3 Semester Credit Hours (3 Lecture Hours)
Study of specialized topics and themes in communication studies. May be repeated when topics vary.

COMM 4394 Professional PR Portfolio
3 Semester Credit Hours (3 Lecture Hours)
Students prepare documents, explore strategies for enhancing their marketability, and assemble a professional portfolio of public relations work.
Prerequisite: COMM 2330, MEDA 2350, COMM 4331 and 4335.

COMM 4396 Directed Individual Study
1-3 Semester Credit Hours
See College description. By application. Only 3 semester hours of Directed Individual Study credit may be counted toward the major.

COMM 4399 Communication Internship
3 Semester Credit Hours
Practical experience in the field through placement in a communication internship position. Students interested in applying for the internship course must have a minimum cumulative GPA of 3.0; have at least junior standing at the university; be a communication studies major or minor, or public relations minor; have completed at least 12 hours of coursework in the major or minor at TAMU-CC. Preferred applicants will have a minimum communication or public relations GPA of 3.25. All applicants must solicit a recommendation from a Department of Communication and Media faculty member. Course may be taken three times for credit; however only 3 semester hours of internship credit may be counted toward the major. A second internship may apply to the communication studies minor or public relations minor; a third internship may be used as a free elective. Authorization to repeat the internship course is contingent on the students’ successful completion of the previous internship experience. This course is graded Credit/No Credit.

Dance, Minor

Program Description
The Minor in Dance Program at Texas A&M University-Corpus Christi is comprised of technique courses in ballet, modern, and jazz with opportunities to perform in each course as well as perform in the dance performance course. Dance History provides the foundation necessary for the dance student and courses in World Dance & Culture, Choreography, and Dance Instruction enable the student to pursue multiple career opportunities in the arts and the field of dance.

Courses

DANC 1141 Ballet I
1 Semester Credit Hour (3 Lab Hours)
A beginning ballet dance course aligned with the Theatre, Dance, and Musical Theatre disciplines. The student will learn fundamentals of classical ballet; terminology, alignment, barre and floor technique, as well as genres of the contemporary styles.
Co-requisite: SMTE 0098.

DANC 1147 Jazz Dance I
1 Semester Credit Hour (3 Lab Hours)
A beginning jazz dance course aligned with the Theatre, Dance, and Musical Theatre disciplines. Students will be introduced to genres of the jazz dance from primitive ritual through contemporary musical theatre compositions.
Co-requisite: SMTE 0098.

DANC 1148 Modern Dance I
1 Semester Credit Hour (3 Lab Hours)
A beginning modern dance course aligned with the Theatre, Dance, and Musical Theatre disciplines. Students will be introduced to the fundamentals of Modern Dance using a variety of modern dance styles, including technique, progressive movement and dance performance.
Co-requisite: SMTE 0098.
DANC 1304  Dance in Performance
3 Semester Credit Hours (3 Lecture Hours)
Students will be introduced to the fundamentals of choreography using a variety of dance styles and, using those skills, create dance intended for public performance. May be repeated for credit.
Co-requisite: SMTE 0098.

DANC 2141  Ballet II
1 Semester Credit Hour (3 Lab Hours)
This course focuses on further development of classical ballet as an art form with an emphasis on intermediate to advanced level technique, musicality and performance.
Co-requisite: SMTE 0098.

DANC 2147  Jazz Dance II
1 Semester Credit Hour (3 Lab Hours)
This course is for the student with previous jazz dance training. Jazz Dance II emphasizes technique and terminology. The course will focus on improving quality of movement and developing complex rhythms and patterns through the understanding and flexibility of the variety of jazz styles taught.
Co-requisite: SMTE 0098.

DANC 2148  Modern Dance II
1 Semester Credit Hour (3 Lab Hours)
This course is geared toward the student with previous modern dance training. The student will continue to develop physical, conceptual and aesthetic skills and explore the principles of movement and language common with variety of modern dance techniques.
Co-requisite: SMTE 0098.

DANC 3141  Ballet III
1 Semester Credit Hour (1 Lab Hour)
This course focuses on further development of classical ballet, based on previous training in Ballet I and II, as an art form with an emphasis on intermediate/advanced level technique, musicality and performance.
Prerequisite: (DANC 1141 and 2141).
Co-requisite: SMTE 0098.

DANC 3147  Jazz Dance III
1 Semester Credit Hour (1 Lab Hour)
This course focuses on the student who has taken Jazz I and II and executes the movement at an intermediate/advanced level. The course will focus on improving artistic expression within the quality of movement and developing complex technique and style through the understanding on rhythms and patterns of a variety of jazz styles.
Prerequisite: (DANC 1147 and 2147).
Co-requisite: SMTE 0098.

DANC 3148  Modern Dance III
1 Semester Credit Hour (1 Lab Hour)
This course focuses on the student who has taken Modern Dance I and II. The student will continue to develop physical, conceptual and aesthetic skills and explore principles of movement and language common with the variety of modern dance techniques.
Prerequisite: (DANC 1148 and 2148).
Co-requisite: SMTE 0098.

DANC 3303  World Dance and Culture
3 Semester Credit Hours (3 Lecture Hours)
Offers a cross cultural and historical view of a variety of theatrical, vernacular and sacred dance forms and investigates ways that dance functions across societies. No background in dance is necessary to successfully complete this course.
Co-requisite: SMTE 0098.

DANC 3306  Dance Choreography I
3 Semester Credit Hours (3 Lecture Hours)
Introduction to techniques and principles of the craft and art of choreography. Solo and group choreography is expected. May be repeated for credit.
Co-requisite: SMTE 0098.

DANC 3310  History of Dance
3 Semester Credit Hours (3 Lecture Hours)
In this course, the student will explore the history of dance from an interactive arts approach, examining and investigating dance from ancient civilization throughout the world to the emerging times of dance in the U.S.

DANC 4141  Ballet IV
1 Semester Credit Hour (1 Lab Hour)
This course focuses on further development of classical ballet, based on previous training in Ballet I, II and III as an art form with an emphasis on advanced level technique, musicality and performance. Can be repeated for credit.
Prerequisite: (DANC 1141, 2141 and 3141).
Co-requisite: SMTE 0098.

DANC 4147  Jazz Dance IV
1 Semester Credit Hour (1 Lab Hour)
This course focuses on the student who has taken Jazz Dance I, II and III and executes the movement at an advanced level. The course will focus on improving artistic expression within the quality of movement from Jazz Dance III and developing complex technique and jazz styles. Can be repeated for credit.
Prerequisite: (DANC 1147, 2147 and 3147).
Co-requisite: SMTE 0098.

DANC 4148  Modern Dance IV
1 Semester Credit Hour (1 Lab Hour)
This course focuses on the student who has taken Modern Dance I, II and III. The student will continue to develop physical, conceptual and aesthetic skills and explore the principles of movement and language common with a variety of modern and contemporary modern dance techniques. Can be repeated for credit.
Prerequisite: (DANC 1148, 2148 and 3148).
Co-requisite: SMTE 0098.

DANC 4306  Dance Choreography II
3 Semester Credit Hours (3 Lecture Hours)
Demonstrate choreographic tools in the dance making process as it relates to group work; explore and create movement studies in groups as it pertains to art. May be repeated for credit.
Prerequisite: DANC 3306.
Co-requisite: SMTE 0098.

DANC 4310  Dance Instruction
3 Semester Credit Hours (3 Lecture Hours)
In this course, the student will research and explore the various modern philosophies of instruction and learn to apply those that are congruous with instructing dance as art in a variety of settings and to different age levels. Observation and instruction, combined with research satisfies the practical application portion of the course, while critiques from professionals in the field will serve as encouragement and confidence building for the future instructor in dance. May be repeated for credit.
Co-requisite: SMTE 0098.
DANC 4390  Topics in Dance  
1-3 Semester Credit Hours  
This course will explore aspects of various dance techniques (ballet, jazz, contemporary, and hip hop infused) at the intermediate/advanced level, as well as repertory and yoga for dancers. Time allowing, we will delve into basic elements of choreographic composition.  
Co-requisite: SMTE 0098.  

DANC 4396  Directed Individual Study (DIS)  
1-3 Semester Credit Hours (1-3 Lecture Hours)  
See college description. Course is available by application.  

DANC 4398  Applied Experience  
3 Semester Credit Hours (3 Lecture Hours)  
See college description. Course is available by application.  

Digital Journalism, Minor  

Program Description  
The Digital Journalism minor will prepare TAMU-CC students for jobs within the ever-changing field of journalism. Within the core, students will learn the history and development of mass media within the United States, newswriting, legal, and ethical issues surrounding journalism and interviewing skills. Through elective credits, students will have the opportunity to take courses in the supporting areas of graphic design, web development, photography, video production, and media consumption.

Total Hours: 21  

Courses  

MEDA 1305  Film and Culture  
3 Semester Credit Hours (3 Lecture Hours)  
Introduction to film aesthetics, history, and criticism for non-communication majors. Establishes a vocabulary for examining films and their roles in American culture.  

MEDA 1307  Media and Society  
3 Semester Credit Hours (3 Lecture Hours)  
History and development of mass media in the United States as well as the organizational, institutional, and cultural dynamics of today’s major commercial media. Included are substantial components on print media, radio, television, cinema, and computer Internet communication systems. Course themes include media production and consumption, globalization, cultural imperialism, race, class, gender in media and popular culture.  
TCCNS: COMM 1307  

MEDA 1315  Editing  
3 Semester Credit Hours (3 Lecture Hours)  
Intensive instruction in postproduction software, postproduction workflows, and editing techniques for moving images.  

MEDA 1380  Introduction to Media Production  
3 Semester Credit Hours (3 Lecture Hours)  
Overview of tools and skills necessary to produce digital media content such as editing, cinematography, sound recording, producing and directing for film, television and new media.  

MEDA 2311  Media Writing  
3 Semester Credit Hours (3 Lecture Hours)  
This course is designed to teach the fundamentals of writing for the mass media. It includes instruction in professional methods and techniques for gathering, processing and delivering content.  
TCCNS: COMM 2311  

MEDA 2313  Intermediate Production: Documentary  
3 Semester Credit Hours (3 Lecture Hours)  
Principles and techniques of media production with a focus on non-fiction filmmaking.  
Prerequisite: (MEDA 1315 and 1380).  

MEDA 2315  News Reporting  
3 Semester Credit Hours (3 Lecture Hours)  
This course focuses on advanced news-gathering and writing skills. It concentrates on the three-part process of producing news and features, which include discovering the news, reporting the news and writing news in different formats. This course will incorporate all forms of news writing, including: press release, print news, web news and TV and radio broadcast news.  
Prerequisite: MEDA 2311.  

MEDA 2316  Intermediate Production: Narrative  
3 Semester Credit Hours (3 Lecture Hours)  
Principles and techniques of media production with a focus on fictional narrative filmmaking.  
Prerequisite: (MEDA 1315 and 1380).  

MEDA 2350  Media Performance  
3 Semester Credit Hours (3 Lecture Hours)  
This course is designed to teach students articulation, pronunciation, effective writing and on-air performance techniques for all kinds of media environments with videotaped and audio taped presentations.
MEDA 2366 Media Forms
3 Semester Credit Hours (3 Lecture Hours)
Examination of the formal elements of media texts, including cinematography/videography, sound, and editing, across a variety of media platforms and styles. Includes instruction in writing formal analysis.
TCCNS: COMM 2366
MEDA 2367 Media Industries
3 Semester Credit Hours (3 Lecture Hours)
Examination of the media industries, including how they have evolved and now operate, as well as broader theoretical and practical implications of changing media organizations and practices. Includes instruction in researching contemporary and historical modes of media production, distribution, and exhibition.
MEDA 3301 Television Criticism
3 Semester Credit Hours (3 Lecture Hours)
Exploration of how TV communicates through the study of programming content, production practices, and audiences. Includes a laboratory for screening assigned programs.
Prerequisite: MEDA 1307.
MEDA 3302 Film Criticism
3 Semester Credit Hours (3 Lecture Hours)
Exploration of the critical approaches to the study of film from a variety of historical and theoretical perspectives, with an emphasis on narrative film and some consideration of experimental cinema. Includes a laboratory for screening assigned films.
Prerequisite: MEDA 1307.
MEDA 3303 Documentary Studies
3 Semester Credit Hours (3 Lecture Hours)
Historical and critical study of the non-fictional film with attention to changing technologies, to varying uses and styles of documentary, and to contemporary critical and theoretical issues.
Prerequisite: MEDA 1307.
MEDA 3310 Media Theory and Research
3 Semester Credit Hours (3 Lecture Hours)
This course is intended to immerse students in the leading theoretical and methodological approaches employed within the field of media studies to gain understating of media texts, popular culture, and audiences. Closely affiliated with cultural studies, qualitative research methods will be a primary focus. Readings and case studies will offer students insight into the way these methods are being used in the field, including their limitations and strengths. A series of assignments will allow them to propose, design, and conduct multiple sample research projects and analyze data in ways that engage with a variety of theories.
MEDA 3314 Multimedia Journalism
3 Semester Credit Hours (3 Lecture Hours)
This course is designed to strengthen students' digital journalism skills, including field-based news gathering and reporting, on-air performance, interviewing techniques, live reporting, and podcasting. The course will prepare students for modern-based multimedia journalism outside of the studio.
MEDA 3317 Advanced Postproduction
3 Semester Credit Hours (3 Lecture Hours)
Intensive instruction in advanced postproduction software, postproduction workflows and editing techniques for moving images.
Prerequisite: MEDA 1315.
MEDA 3318 Editing & Layout
3 Semester Credit Hours (3 Lecture Hours)
This course will teach the principles of copy editing, with an emphasis on accuracy and fairness, as well as the principles of layout and design for print and web publications.
Prerequisite: MEDA 2311.
MEDA 3340 Photojournalism
3 Semester Credit Hours (3 Lecture Hours)
This course will instruct on photojournalism skills and methods for use in visual communication. It will examine ethical and legal limitations to photography and in editing. Student work in this class will be eligible for possible publication in the student newspaper or its accompanying website.
MEDA 3351 Screen Comedy
3 Semester Credit Hours (3 Lecture Hours)
Examination of the varieties of screen comedy, from silent comedy to contemporary forms, with some attention to the history and theory of comic performance.
Prerequisite: MEDA 1307.
MEDA 3360 Screenplay Writing
3 Semester Credit Hours (3 Lecture Hours)
Writing and analysis of the screenplay for narrative fictional films. Writing projects include problem-solving exercises and work on an original screenplay. Course can be repeated for credit.
MEDA 3361 Sports Writing
3 Semester Credit Hours (3 Lecture Hours)
This course will teach the elements of sports writing and reporting to include interviewing and writing to cover different aspects of sports coverage. This course will address content for print, Internet, radio and television. Campus-related sports assignments will be eligible for publication in the student newspaper and its accompanying website.
MEDA 3380 New Media and Communication
3 Semester Credit Hours (3 Lecture Hours)
Examines how new media technologies impact society and change communication practices. Particular emphasis placed on different modes of cultural expression and social interaction made possible through digital media and the Internet.
MEDA 4305 Interpreting and Making the Visual Culture of Hollywood
3 Semester Credit Hours (3 Lecture Hours)
This course examines the visual culture of Hollywood media production in a focused context, such as during a particular decade, or in relation to a particular genre, star, or cultural topic. The visual culture studied will include not just primary media texts such as films or television programs, but also posters, trailers, and other promotional materials, as well as visual culture not produced directly by the media industries, such as contemporary art. Students will learn and utilize basic design techniques to create their own artwork related to these materials, including movie posters, album covers, and sequential art. As resources and equipment availability allow, these designs will be produced using techniques including print-making.
MEDA 4308 Advanced Production: Commercial
3 Semester Credit Hours (3 Lecture Hours)
Advanced techniques in the creation of client based commercial media content with a focus on conceptualization, production, and delivery of a commercial, PSA, or corporate video project.
Prerequisite: (MEDA 1315, 2313 and 2316).
MEDA 4310  Advanced Production: Documentary
3 Semester Credit Hours (3 Lecture Hours)
Advanced techniques in the creation of documentary media content with a focus on conceptualization, production, and distribution of a short documentary film. Course can be repeated once for credit. This course serves as a capstone for the Media Production Track.
Prerequisite: MEDA 2313.

MEDA 4312  Advanced Production: Narrative
3 Semester Credit Hours (3 Lecture Hours)
Advanced techniques in the creation of narrative media content with a focus on scripting, production, and distribution of a short narrative film. Course can be repeated once for credit. This course serves as a capstone for the Media Production Track.
Prerequisite: MEDA 2316.

MEDA 4317  After Effects
3 Semester Credit Hours (3 Lecture Hours)
Conceptualization and execution of digital media projects using visual effects, motion graphics and composition through the creation of video, animation, special effects and more using Adobe’s After Effects postproduction software.
Prerequisite: MEDA 1315.

MEDA 4340  Advertising Criticism
3 Semester Credit Hours (3 Lecture Hours)
The examination of advertising history through critical and cultural approaches.

MEDA 4341  First Amendment and Ethical Issues in the Media
3 Semester Credit Hours (3 Lecture Hours)
Study of legal and ethical issues in mediated communication, including the First Amendment and free speech, control, and regulation of broadcasting, obscenity in the media.
Prerequisite: MEDA 1307.

MEDA 4342  Global Media and International Communication
3 Semester Credit Hours (3 Lecture Hours)
Examines global media in the context of international communication, diversity of media and cultural production, styles of media practices abroad, including differences between U.S. news values and ethical and moral dimensions across differing societies of the world.

MEDA 4343  News Publication
3 Semester Credit Hours (3 Lecture Hours)
This course will be a hands-on newroom experience with the student newspaper the Island Waves and its accompanying website. Individual assignments will be assigned by editors of the student media. Assignments may include writing, advertising, photography, cartooning and video production and editing. Students are required to work on the staff of the official college publication during prescribed hours under faculty supervision.
Prerequisite: MEDA 2311.

MEDA 4370  Advanced New Media Project
3 Semester Credit Hours (3 Lecture Hours)
As the capstone course for the New Media Arts Certificate, this course guides students through the planning, development, and execution of new media-based project.
Prerequisite: ARTS 2356, MEDA 2313 and 1315.

MEDA 4381  Senior Seminar in Media Studies
3 Semester Credit Hours (3 Lecture Hours)
The capstone course for seniors in the Media Studies offers opportunities to synthesize information learned in other Media Studies courses through in-depth study of a particular topic. Students will demonstrate their abilities to think and write critically, and to conduct independent research or produce media projects at an advanced level. Topics vary by instructor.
Prerequisite: MEDA 1307 and 3310.

MEDA 4390  Topics in Media Arts
3 Semester Credit Hours (3 Lecture Hours)
Study of specialized topics and themes in media arts. May be repeated when topics vary.

MEDA 4396  Directed Individual Study
1-3 Semester Credit Hours
See College description. By application. Only 3 semester hours of Directed Individual Study credit may be counted toward the major.

MEDA 4399  Media Arts Internship
3 Semester Credit Hours
Practical experience in the field through placement in a media internship position. Students interested in applying for the internship course must have a minimum cumulative GPA of 3.0; have at least junior standing at the university; be a media arts (media studies or media production emphasis) major or digital journalism minor; have completed at least 12 hours of coursework in the major or minor at TAMU-CC. Preferred applicants will have a minimum media arts or digital journalism GPA of 3.25. All applicants must solicit a recommendation form from a Department of Communication and Media faculty member. Course may be taken three times for credit; however only 3 semester hours of internship credit may be counted toward the major. A second internship may apply to the digital journalism minor; a third internship may be used as a free elective. Authorization to repeat the internship course is contingent on the students’ successful completion of the previous internship experience. This course is graded Credit/No Credit.

Music Industry, Minor
Program Description
The minor in music industry is designed to provide students with the basic specialized skills required for post-graduate employment opportunities in arts marketing and management, studio technology, and audio recording. Students will have hands-on opportunities to work with up-to-date software packages used in music industry. Finally, students will have a significant opportunity to undertake an independent practical project within a chosen area of the music industry.

Total Hours 18
Courses

MIND 3311 Applications of Music Technology
3 Semester Credit Hours (3 Lecture Hours)
Designed for both music majors and non-majors, this course will focus on hands-on learning in a workshop environment. Students will gain perspective on the people, procedures, data, software and hardware associated with the creation of music. Topics discussed include: computer proficiency, MIDI, computer based music notation, sequencing music evaluation, music and the Internet, and current trends in music technology.

MIND 3312 Recording Techniques I
3 Semester Credit Hours (3 Lecture Hours)
Designed for both music majors and non-majors, this course is an examination of the art of audio recording. The curriculum will cover signal flow of the mixing console as it applies to both recording and sound reinforcement; microphones and techniques of application; use of sonic effects; recording devices (Digital, and Hard Disk); synchronization formats; etc.

MIND 3313 Recording Techniques II
3 Semester Credit Hours (3 Lecture Hours)
A continuation of MIND 3312 Recording Techniques. The curriculum will cover advanced topics regarding digital console technology, power and ground related issues, studio acoustics and design, digital audio technology, multimedia and web applications, amplifiers, noise reduction, monitoring, surround sound, and mastering procedures.

MIND 3314 Live Sound Engineering
3 Semester Credit Hours (3 Lecture Hours)
Designed for both music majors and non-majors, an overview of the basic principles of sound and reinforcement and how audio can be manipulated utilizing current live sound technology. Topics will include signal flow, microphone selection and placement, signal processing, and mixing.

MIND 3315 Musical Acoustics
3 Semester Credit Hours (3 Lecture Hours)
Designed for both music majors and non-majors, an overview of acoustics with emphasis in the areas of scientific knowledge that are relevant to music: the physiological properties of sounds; the effect of acoustical environment; the acoustical behavior of musical instruments; and the various applications of electronics and computers to the production, reproduction, and composition of music.

MIND 3316 Introduction to MIDI Sound Synthesis and Control
3 Semester Credit Hours (3 Lecture Hours)
Designed for both music majors and non-majors, this course introduces students to the Musical Instrument Digital Interface (MIDI) sequencing using computer software and keyboard synthesizers. Students learn concepts, basic theory and techniques, and the application of MIDI techniques to the production of music. Hands-on projects are completed using MIDI keyboard synthesizers and sequencer software.

MIND 3320 Music Business Survey
3 Semester Credit Hours (3 Lecture Hours)
Designed for both music majors and non-majors, this course is an overview of the practices and procedures of the music industry, including such topics as career possibilities, publishing, labels, marketing, and copyrights. It also includes an overview of career options will include performer, composer, record producer and engineer, artist manager, booking agent, concert promoter, sales, marketing, and entertainment attorney.

MIND 3321 Music Business II
3 Semester Credit Hours (3 Lecture Hours)
Designed for both music majors and non-majors, this course is an in-depth examination of the practices and procedures of the music industry that pertain to accounting, taxes, copyright, licensing, marketing and contracts. The primary objective of this course is to develop a working knowledge of the music industry and to remain in compliance with the U.S. legal system.

MIND 3322 Entertainment Law and the Music Industry
3 Semester Credit Hours (3 Lecture Hours)
Designed for both music majors and non-majors, an overview of the legal practices and ramifications of United States law and its influence on the music industry. Topics will include intellectual property, business structures, contracts, distribution regulations, and copyrights. Legal practices for entertainment mediums will include television, film, live stage performances, recording, and publishing.

MIND 4396 Directed Individual Study
1-3 Semester Credit Hours
See College description. Offered on application.

MIND 4398 Applied Experience
3 Semester Credit Hours
See College description. Offered on application.

Music, Minor

Program Description

Students wishing to minor in music should possess a certain degree of musical competence, including the ability to read music and perform as a vocalist or on an instrument at an intermediate level. Students are encouraged to discuss their plans to pursue a music minor with an advisor within the Music Department or the academic advisor prior to enrolling in music coursework.

Program Requirements

The course of study leading to the minor is comprised of 18-19 semester credit hours from the following courses.

Total Hours 18-19

Courses

MUSI 1116  Aural Training I
1 Semester Credit Hour (1 Lecture Hour)
A companion course to MUSI 1311, designed to strengthen the understanding of theoretical principles through the development of aural perception and skills; exercises in melodic, harmonic, and rhythmic dictation; and drill in sight singing.
TCCNS: MUSI 1116

MUSI 1117  Aural Training II
1 Semester Credit Hour (1 Lecture Hour)
Continuation of MUSI 1116; a companion course to MUSI 1312.
Prerequisite: MUSI 1116 and 1311.
TCCNS: MUSI 1117

MUSI 1181  Class Piano I
1 Semester Credit Hour (1 Lab Hour)
Group instruction in piano for music majors, covering piano technique and literature, major and minor scales, transposition, sight reading, and simple harmonization of melodies. In extraordinary circumstances, students may substitute one semester of secondary applied piano for this course. Keyboard majors accepted for degree-level study should substitute four semesters of Secondary Applied Studio.
TCCNS: MUSI 1181

MUSI 1182  Class Piano II
1 Semester Credit Hour (1 Lab Hour)
Group instruction in piano for music majors, covering piano technique and literature, major and minor scales, transposition, sight reading, and simple harmonization of melodies. In extraordinary circumstances, students may substitute one semester of secondary applied piano for this course. Keyboard majors accepted for degree-level study should substitute four semesters of Secondary Applied Studio.
TCCNS: MUSI 1182

MUSI 1301  Fundamentals of Music
3 Semester Credit Hours (3 Lecture Hours)
Designed to teach beginning music students the basic tenet of music theory: note reading, rhythm, scales, key signatures, basic intervals and triads, and solfeggio.

MUSI 1302  Non-major Class Piano I
3 Semester Credit Hours (3 Lecture Hours)
Group instruction in the elements of piano playing, designed for the non-major. No previous experience necessary.

MUSI 1303  Basic Guitar I
3 Semester Credit Hours (3 Lecture Hours)
Group instruction in the fundamentals of guitar playing, designed for the non-major. The student must furnish an acceptable instrument. No previous experience necessary.
TCCNS: MUSI 1303

MUSI 1306  Understanding and Enjoying Music
3 Semester Credit Hours (3 Lecture Hours)
A course for the non-music major. Study of selected music literature of contrasting styles and forms with emphasis on listening to music with understanding.
TCCNS: MUSI 1306

MUSI 1307  Elements of Musical Style
3 Semester Credit Hours (3 Lecture Hours)
A survey of selected western and non-western musical styles, based upon the analysis of the characteristic use of the elements of music. Required for music majors and recommended for non-majors with a significant high school music background.
TCCNS: MUSI 1307

MUSI 1310  History of Rock and Roll
3 Semester Credit Hours (3 Lecture Hours)
A general survey of composers, performers, and styles of rock and roll. Emphasis on understanding stylistic elements of music, including rhythm, texture, form, and harmony.
TCCNS: MUSI 1310

MUSI 1311  Musicianship I
3 Semester Credit Hours (3 Lecture Hours)
First principles of chord progression and phrase harmonization. Theory assessment required prior to enrollment.
TCCNS: MUSI 1311

MUSI 1312  Musicianship II
3 Semester Credit Hours (3 Lecture Hours)
Continuation of MUSI 1311, with a study of more advanced chord structures and their placement within the phrase through written exercises, analysis, and correlated keyboard projects.
Prerequisite: MUSI 1311 and 1116.
TCCNS: MUSI 1312
MUSI 2116  Aural Training III
1 Semester Credit Hour (1 Lecture Hour)
Continuation of MUSI 1117; a companion course to MUSI 2311. Designed to further the understanding of advanced theoretical principles and techniques through related aural exercises, dictation, and sight singing.
Prerequisite: MUSI 1117 and 1312.
TCCNS: MUSI 2116

MUSI 2117  Aural Training IV
1 Semester Credit Hour (1 Lecture Hour)
Continuation of MUSI 2116; a companion course to MUSI 2312.
Prerequisite: MUSI 2116 and 2311.
TCCNS: MUSI 2117

MUSI 2181  Class Piano III
1 Semester Credit Hour (2 Lecture Hours)
Group instruction in piano for music majors, covering piano technique and literature, major and minor scales, transposition, sight reading, and simple harmonization of melodies. In extraordinary circumstances, students may substitute one semester of secondary applied piano for this course. Keyboard majors accepted for degree-level study should substitute four semesters of Secondary Applied Studio.
Prerequisite: MUSI 1182.
TCCNS: MUSI 2181

MUSI 2182  Class Piano IV
1 Semester Credit Hour (1 Lab Hour)
Group instruction in piano for music majors, covering piano technique and literature, major and minor scales, transposition, sight reading, and simple harmonization of melodies. In extraordinary circumstances, students may substitute one semester of secondary applied piano for this course. Keyboard majors accepted for degree-level study should substitute four semesters of Secondary Applied Studio.
TCCNS: MUSI 2182

MUSI 2302  Non-major Class Piano II
3 Semester Credit Hours (3 Lecture Hours)
Extension of skill development begun in MUSI 1302 Non-Major Class Piano I.
Prerequisite: MUSI 1302.

MUSI 2303  Basic Guitar II
3 Semester Credit Hours (3 Lecture Hours)
Extension of skill development begun in MUSI 1303 - BASIC GUITAR I. The student must furnish an acceptable instrument.
Prerequisite: MUSI 1303.

MUSI 2311  Musicianship III
3 Semester Credit Hours (3 Lecture Hours)
Continuation of MUSI 1312. A broad summary of classical and chromatic harmony, explored through written exercises, analysis, and correlated keyboard drill.
Prerequisite: MUSI 1312 and 1117.
TCCNS: MUSI 2311

MUSI 2312  Musicianship IV
3 Semester Credit Hours (3 Lecture Hours)
Continuation of MUSI 2311. An exploration of 20th-century techniques through written exercises, analysis, and correlated keyboard drill.
Prerequisite: MUSI 2311 and 2116.
TCCNS: MUSI 2312

MUSI 3085  Junior Recital
0 Semester Credit Hours
Required for all students presenting a Junior Recital in partial fulfillment of the requirements for the Bachelor of Music in Performance Degree. Specific policies governing the presentation and evaluation of such recitals are given in the document, Preparing and Presenting Degree Recitals, available from the Music Department Chair.

MUSI 3162  Diction for Singers I
1 Semester Credit Hour (1 Lecture Hour)
Learning to use the International Phonetic Alphabet (IPA) with sufficient fluency to effectively teach and learn proper pronunciation of song texts in English and French.

MUSI 3165  Diction for Singers II
1 Semester Credit Hour (1 Lecture Hour)
Learning to use the International Phonetic Alphabet (IPA) with sufficient fluency to effectively teach and learn proper pronunciation of song texts in Italian and German.

MUSI 3166  Woodwind Techniques I
1 Semester Credit Hour (1 Lab Hour)
Basic techniques of playing and teaching the oboe, bassoon, and saxophone. Includes a survey of pedagogical materials and basic performance literature.

MUSI 3167  Woodwind Techniques II
1 Semester Credit Hour (1 Lab Hour)
Basic techniques of playing and teaching the flute and clarinet. Includes a survey of pedagogical materials and basic performance literature.

MUSI 3168  Brass Techniques I
1 Semester Credit Hour (1 Lab Hour)
Basic techniques of playing and teaching the trumpet and French horn. Includes a survey of pedagogical materials and basic performance literature.

MUSI 3169  Brass Techniques II
1 Semester Credit Hour (1 Lab Hour)
Basic techniques of playing and teaching the trombone, euphonium, and tuba. Includes a survey of pedagogical materials and basic performance literature.

MUSI 3170  Voice Techniques for Instrumentalists
1 Semester Credit Hour (1 Lab Hour)
Group instruction and practical experience in the fundamentals of voice production and song interpretation for the instrumental music educator. Includes a survey of pedagogical materials and basic performance literature.

MUSI 3188  Percussion Techniques
1 Semester Credit Hour (1 Lab Hour)
Basic techniques of playing and teaching the instruments of the percussion family. Includes a survey of pedagogical materials and basic performance literature.

MUSI 3189  String Techniques
1 Semester Credit Hour (1 Lab Hour)
Basic techniques of playing and teaching the violin, viola, 'cello, and string bass. Includes a survey of pedagogical materials and basic performance literature.
MUSI 3252 Foundations of Music Programs
2 Semester Credit Hours (2 Lecture Hours)
A survey of the historical, social, and philosophical bases of music education in the United States, psychological theories of learning and musical responsiveness, and studies of how these foundations have been applied in various types of music curricula.
Prerequisite: MUSI 2311 and 2116.

MUSI 3253 Basic Conducting
2 Semester Credit Hours (2 Lecture Hours)
A skills acquisition course designed to give students competence in basic baton techniques and musical control of an ensemble. Includes score study and musical terminology.
Prerequisite: MUSI 2311 and 2116.

MUSI 3310 History of Jazz
3 Semester Credit Hours (3 Lecture Hours)
A study of jazz styles, influences, trends, innovators, and literature. Readings include interviews and articles that discuss origins of jazz, definitions of jazz, and race politics of jazz. No previous experience is necessary.

MUSI 3317 Rap and Hip Hop: Music and Culture
3 Semester Credit Hours (3 Lecture Hours)
This course is recommended for non-music majors and music minors. Rap and Hip Hop Music and Culture traces the ideological, social, historical, and cultural influences of a musical genre that first came to prominence in the mid-1970s in one of New York’s toughest neighborhoods, the South Bronx. This course describes how the arts of DJing, MCing, breakin’ [b-boying], and graffiti developed as a way for this community’s struggle to find its own voice. Addressed will be rap's early successes on the pop charts; its spread to mainstream culture; the growth of “gangsta rap” and mainstream society’s reaction to it; and the commercial success of rap music from the '90s through today. Throughout, this course will highlight key performers, producers, and voices in the rap and hip hop movements, using their stories to illuminate the underlying issues of racism, poverty, prejudice, and artistic freedom that are part of rap and hip hop's ongoing legacy.

MUSI 3327 Music and Film
3 Semester Credit Hours (3 Lecture Hours)
The object of this course is to develop skills in analyzing the soundtrack, music’s role in the soundtrack, and the relation of soundtrack and image track (especially relating to music) on small-scale and large-scale (narrative) levels. The course develops critical listening and viewing skills, but it also offers a particular kind of film-music history survey, one that focuses on the three nodal points in the history of film sound: the introduction of sound, the introduction of stereo, and the introduction of digital sound. We will explore the thesis that each of these technological advances alters the structural relationships among the three relatively autonomous components of the soundtrack—dialogue, music and effects.

MUSI 3334 Music Cultures of the World
3 Semester Credit Hours (3 Lecture Hours)
The course introduces the student to ethnomusicology and the cross-cultural study of music and society. It emphasizes the role of music in human life, and explores music and performance from around the world. The student will learn about classical, folk and popular styles found on all seven continents. This course is appropriate for any student of any musical background.

MUSI 3345 Composition
1-3 Semester Credit Hours
Creative writing with a view toward developing an individual style of musical composition. Variable credit, 1, 2, or 3 hrs. One private lesson per week.
Prerequisite: MUSI 2312 and 2117.

MUSI 3346 Form and Analysis of Tonal Music
3 Semester Credit Hours (3 Lecture Hours)
Analysis of the melodic and harmonic design of tonal music, including the aural and visual analysis of scores for piano, voice, chamber ensembles, and orchestra.
Prerequisite: MUSI 2312 and 2117.

MUSI 3354 Advanced Conducting
3 Semester Credit Hours (3 Lecture Hours)
A continuation of MUSI 3252. Advanced experiences with score preparation and effective ensemble rehearsal and management techniques.
Prerequisite: MUSI 3252.

MUSI 3370 Class Voice
3 Semester Credit Hours (3 Lecture Hours)
Group instruction and practical experience in the fundamentals of voice production, music reading, and song interpretation. Dramatic stage movement and singing will be explored using Classical and Broadway song literature. This course is designed for the non-major. No previous experience is necessary.

MUSI 4085 Senior Recital
0 Semester Credit Hours
Required for all students presenting a Senior Recital in partial fulfillment of the requirements for any music degree. Specific policies governing the presentation and evaluation of such recitals are given in the document, Preparing and Presenting Degree Recitals, available from the Music Program Coordinator.

MUSI 4334 History of Western Music I
3 Semester Credit Hours (3 Lecture Hours)
An in-depth study of the evolution of Western musical style from antiquity through the 18th-century.
Prerequisite: MUSI 1307, 2312 and 2117.

MUSI 4335 History of Western Music II
3 Semester Credit Hours (3 Lecture Hours)
Continuation of MUSI 4334, an in-depth study of the evolution of Western musical style from the age of Beethoven to the present.
Prerequisite: MUSI 4334.

MUSI 4340 Studies in Repertoire
3 Semester Credit Hours
Systematic examination of the history and literature of a specific performance medium.

MUSI 4346 Orchestration and Arranging
3 Semester Credit Hours (3 Lecture Hours)
The compass, timbre, and techniques of arranging and/or orchestration for instruments and/or voices. Practical experience in arranging for orchestra, band, and other instrumental and vocal combinations.
Prerequisite: MUSI 2312 and 2117.

MUSI 4355 Music for Young Children
3 Semester Credit Hours (3 Lecture Hours)
Study of musical development in children in grades K-6. Study of and practical experience with pedagogical approaches and materials appropriate for that age group.
Prerequisite: MUSI 3252.
MUSI 4357  Choral Literature and Techniques  
3 Semester Credit Hours (3 Lecture Hours)  
Advanced study of the literature, pedagogy, and management techniques required for successful vocal ensembles in secondary schools.  
Prerequisite: MUSI 3253.

MUSI 4358  Instrumental Literature and Techniques  
3 Semester Credit Hours (3 Lecture Hours)  
Advanced study of the literature, pedagogy, and management techniques required for successful instrumental ensembles in secondary schools. Includes a segment pertaining to the development of marching band shows.  
Prerequisite: MUSI 3253.

MUSI 4360  Studies in Pedagogy  
3 Semester Credit Hours  
Methods, materials and psychology of presenting musical materials to students at various ages. Evaluation of teaching materials and techniques. Classes are organized by specific performance areas.

MUSI 4385  Senior Capstone  
3 Semester Credit Hours  
The Senior Capstone is intended to provide students seeking the Bachelor of Arts in Music with an opportunity to demonstrate their musical scholarship through scholarly analysis and writing within a field of music of their choosing. May include a performance component, as in a lecture recital, but musical performance may comprise no more than 40% of the capstone project.

MUSI 4390  Topics in Music  
1-3 Semester Credit Hours (1-3 Lecture Hours)  
May be repeated for credit when topics vary.

MUSI 4396  Directed Individual Study  
1-3 Semester Credit Hours  
See College description.

MUSI 4398  Applied Experience  
3 Semester Credit Hours  
See College description.

Public Relations, Minor

Program Description

Public Relations (PR) is a strategic communication process that builds mutually beneficial relationships between an organization and its publics. PR strategy has evolved alongside technological advances, and organizations are now required to connect with diverse publics using a variety of platforms. The core courses in the public relations minor provide students with practical skills in public relations writing and design, research, strategy and crisis communication. Furthermore, students are guided in the development of a career portfolio showcasing this diverse skill set. Students should utilize electives to gain skills in supplemental areas such as media production, digital journalism, marketing, and persuasion.

The minor consists of 18 semester hours, which include 4 core courses. At least 15 hours for the minor must be upper division.

Students who select this minor must consult with the Faculty Adviser to the Public Relations Minor prior to completing 6 semester hours of coursework listed in the program. The minor declaration must be filed with the Advisor in the College of Liberal Arts.

Courses

Communication Courses

COMM 1311  Foundation of Communication  
3 Semester Credit Hours (3 Lecture Hours)  
This course examines a breadth of topics fundamental to the study of communication and works to improve students' communication skills in three primary contexts: interpersonal relationships, group/teamwork, and presentational speaking.  
TCCNS: SPCH 1311

COMM 1315  Public Speaking  
3 Semester Credit Hours (3 Lecture Hours)  
Research, composition, organization, and delivery of speeches for various purposes and occasions, with emphasis on listener analysis and on informative and persuasive techniques.  
TCCNS: SPCH 1315

COMM 1318  Interpersonal Communication  
3 Semester Credit Hours (3 Lecture Hours)  
Predominant issues related to verbal and nonverbal communication with a focus on interpersonal relationships.  
TCCNS: SPCH 1318
COMM 1321  Business and Professional Communication  
3 Semester Credit Hours (3 Lecture Hours)  
Introduces students to basic skills, principles, and contexts of communication in business and professional settings by combining public speaking with aspects of communication ethics and organizational, small group, and interpersonal communication. Students will learn practical skills via presentations, research, resumes, interviews, meetings, and professional writing grounded in communication theory.

COMM 1342  Voice and Diction  
3 Semester Credit Hours (3 Lecture Hours)  
Basic voice training, including techniques for vocal production, manipulation, and control. Practical application of the vocal apparatus will be emphasized, including techniques of enunciation, projection, articulation, and the use of dialects. (Credit may not be given for both this course and THEA 1342.)  
TCCNS: SPCH 1342

COMM 2330  Introduction to Public Relations  
3 Semester Credit Hours (3 Lecture Hours)  
An exploration of the history and development of public relations including the theory and process of public relations, and the various publics and careers associated with the public relations industry.  
TCCNS: COMM 2330

COMM 2333  Small Group Communication  
3 Semester Credit Hours (3 Lecture Hours)  
Application of small group theories and techniques as they relate to group process and interaction.  
TCCNS: SPCH 2333

COMM 2335  Presentational Communication  
3 Semester Credit Hours (3 Lecture Hours)  
Advanced study of the principles and methods of formal presentations for various purposes and audiences to further develop students into effective communicators. Course assignments will include various special occasion speeches, dynamic instructional speeches, extemporaneous speaking, creation of effective visual aids, and a group community action presentation.

COMM 3310  Communication Theory  
3 Semester Credit Hours (3 Lecture Hours)  
The foundations, processes, and effects of human communication. A survey of contemporary theory and research, including language theory, nonverbal and small group communication, persuasion, and mass communication.

COMM 3311  Nonverbal Communication  
3 Semester Credit Hours (3 Lecture Hours)  
The study of body movement, touch, paralanguage, space, environment, and other nonverbal factors in the communication process.

COMM 3325  Relational Communication  
3 Semester Credit Hours (3 Lecture Hours)  
This course is an advanced interpersonal communication course that focuses on communication within relationships, such as family, romantic, friendship, and workplace relationships.  
Prerequisite: COMM 1318.

COMM 3326  Research Methods  
3 Semester Credit Hours (3 Lecture Hours)  
The purpose of this course is to increase student’s knowledge of the research process used in the Communication Studies discipline. Specifically, the course will allow students the opportunity to learn the goals of communication research and scrutinize various techniques for creating academic research and assessing academic knowledge.

COMM 3330  Persuasion  
3 Semester Credit Hours (3 Lecture Hours)  
Various theories and forms of rhetorical persuasion. Topics include practical reasoning skills, psychological theories of persuasion, and critical responses to persuasive messages.

COMM 3331  Public Relations Writing and Design  
3 Semester Credit Hours (3 Lecture Hours)  
This course will introduce students to the basic principles and formatting requirements for public relations writing. Students will gain theoretical and practical experience in developing content for specific audiences.

COMM 3335  UIL Debate and Speech  
3 Semester Credit Hours (3 Lecture Hours)  
Understanding the University Interscholastic League debate and speech events. Students explore approaches to analytical reasoning, research delivery, and the conceptual basis for debate and gain practical experience in understanding and judging UIL in the high school setting.

COMM 3350  Leadership  
3 Semester Credit Hours (3 Lecture Hours)  
focuses on the communication of influence that takes place to achieve goals or encourage change. Specific attention will be devoted to a variety of approaches, processes, and theories that will provide students general knowledge of leadership.

COMM 4314  Gender Communication  
3 Semester Credit Hours (3 Lecture Hours)  
Examination of communication about women and men, as well as communication between them. Special course emphasis on explanations of gender, sexist language, media depiction of the sexes, and gender communication in the formation of social and work relationships.

COMM 4315  Communication and Sexuality  
3 Semester Credit Hours (3 Lecture Hours)  
This course will focus on communication and sexuality, specifically exploring sex and gender identity development and expression, intersections of race/ethnicity and sex/gender, how communication impacts various types of relationships, the role of communication in sexual activity, and power abuses related to sexual activity, with specific focus on consent and sexual safety.

COMM 4331  Public Relations Campaigns  
3 Semester Credit Hours (3 Lecture Hours)  
An application of the public relations process (including primary and secondary research, goals and objective development, the selection of proper strategies and tactics for implementation, and an evaluation of campaign effectiveness) through the production and presentation of a public relations campaign for a local organization.  
Prerequisite: COMM 2330.

COMM 4335  Crisis Communication  
3 Semester Credit Hours (3 Lecture Hours)  
An application of crisis communication (including organizational research, risk and vulnerability assessment, strategic communication, and performance and damage evaluation) through the development and presentation of a crisis communication plan for a local organization.

COMM 4345  Intercultural Communication  
3 Semester Credit Hours (3 Lecture Hours)  
An investigation of the process by which persons and groups of different cultural backgrounds create understanding. Types of knowledge, skills, and sensitivity necessary for intercultural communication are developed.
COMM 4350 Organizational Communication
3 Semester Credit Hours (3 Lecture Hours)
Examination and exploration of realistic applications of communication theories within the framework of an organization. Particular attention will be given to techniques for diagnosing communication problems, as well as strategies for effecting change in communication.

COMM 4360 International Leadership
3 Semester Credit Hours (3 Lecture Hours)
Study of international leadership in the context of communication and in multi-cultural and diverse settings. Influence of global economy, politics, social values in international leadership.

COMM 4380 Senior Seminar in Communication Studies
3 Semester Credit Hours (3 Lecture Hours)
This course serves as the capstone for the Communication Studies degree. It offers students opportunities to synthesize information learned in other Communication courses and demonstrate abilities to think critically, conduct independent research linked to appropriate communication theories, create individual and collaborative projects that demonstrate effective use of communication strategies, and present written and oral work at an advanced level.
Prerequisite: (COMM 2335, 3310 and 3326).

COMM 4390 Topics in Communication Studies
3 Semester Credit Hours (3 Lecture Hours)
Study of specialized topics and themes in communication studies. May be repeated when topics vary.

COMM 4394 Professional PR Portfolio
3 Semester Credit Hours (3 Lecture Hours)
Students prepare documents, explore strategies for enhancing their marketability, and assemble a professional portfolio of public relations work.
Prerequisite: COMM 2330, MEDA 2350, COMM 4331 and 4335.

COMM 4396 Directed Individual Study
1-3 Semester Credit Hours
See College description. By application. Only 3 semester hours of Directed Individual Study credit may be counted toward the major.

COMM 4399 Communication Internship
3 Semester Credit Hours
Practical experience in the field through placement in a communication internship position. Students interested in applying for the internship course must have a minimum cumulative GPA of 3.0; have at least junior standing at the university; be a communication studies major or minor, or public relations minor; have completed at least 12 hours of coursework in the major or minor at TAMU-CC. Preferred applicants will have a minimum communication or public relations GPA of 3.25. All applicants must solicit a recommendation from a Department of Communication and Media faculty member. Course may be taken three times for credit; however only 3 semester hours of internship credit may be counted toward the major. A second internship may apply to the communication studies minor or public relations minor; a third internship may be used as a free elective. Authorization to repeat the internship course is contingent on the students’ successful completion of the previous internship experience. This course is graded Credit/No Credit.

Media Courses
MEDA 1305 Film and Culture
3 Semester Credit Hours (3 Lecture Hours)
Introduction to film aesthetics, history, and criticism for non-communication majors. Establishes a vocabulary for examining films and their roles in American culture.

MEDA 1307 Media and Society
3 Semester Credit Hours (3 Lecture Hours)
History and development of mass media in the United States as well as the organizational, institutional, and cultural dynamics of today’s major commercial media. Included are substantial components on print media, radio, television, cinema, and computer Internet communication systems. Course themes include media production and consumption, globalization, cultural imperialism, race, class, gender in media and popular culture.
TCCNS: COMM 1307

MEDA 1315 Editing
3 Semester Credit Hours (3 Lecture Hours)
Intensive instruction in postproduction software, postproduction workflows, and editing techniques for moving images.

MEDA 1380 Introduction to Media Production
3 Semester Credit Hours (3 Lecture Hours)
Overview of tools and skills necessary to produce digital media content such as editing, cinematography, sound recording, producing and directing for film, television and new media.

MEDA 2311 Media Writing
3 Semester Credit Hours (3 Lecture Hours)
This course is designed to teach the fundamentals of writing for the mass media. It includes instruction in professional methods and techniques for gathering, processing and delivering content.
TCCNS: COMM 2311

MEDA 2313 Intermediate Production: Documentary
3 Semester Credit Hours (3 Lecture Hours)
Principles and techniques of media production with a focus on non-fiction filmmaking.
Prerequisite: (MEDA 1315 and 1380).

MEDA 2315 News Reporting
3 Semester Credit Hours (3 Lecture Hours)
This course focuses on advanced news-gathering and writing skills. It concentrates on the three-part process of producing news and features, which include discovering the news, reporting the news and writing news in different formats. This course will incorporate all forms of news writing, including: press release, print news, web news and TV and radio broadcast news.
Prerequisite: MEDA 2311.

MEDA 2316 Intermediate Production: Narrative
3 Semester Credit Hours (3 Lecture Hours)
Principles and techniques of media production with a focus on fictional narrative filmmaking.
Prerequisite: (MEDA 1315 and 1380).

MEDA 2350 Media Performance
3 Semester Credit Hours (3 Lecture Hours)
This course is designed to teach students articulation, pronunciation, effective writing and on-air performance techniques for all kinds of media environments with videotaped and audio taped presentations.
MEDA 2366 Media Forms
3 Semester Credit Hours (3 Lecture Hours)
Examination of the formal elements of media texts, including cinematography/videography, sound, and editing, across a variety of media platforms and styles. Includes instruction in writing formal analysis.
TCCNS: COMM 2366

MEDA 2367 Media Industries
3 Semester Credit Hours (3 Lecture Hours)
Examination of the media industries, including how they have evolved and now operate, as well as broader theoretical and practical implications of changing media organizations and practices. Includes instruction in researching contemporary and historical modes of media production, distribution, and exhibition.

MEDA 3301 Television Criticism
3 Semester Credit Hours (3 Lecture Hours)
Exploration of how TV communicates through the study of programming content, production practices, and audiences. Includes a laboratory for screening assigned programs.
Prerequisite: MEDA 1307.

MEDA 3302 Film Criticism
3 Semester Credit Hours (3 Lecture Hours)
Exploration of the critical approaches to the study of film from a variety of historical and theoretical perspectives, with an emphasis on narrative film and some consideration of experimental cinema. Includes a laboratory for screening assigned films.
Prerequisite: MEDA 1307.

MEDA 3303 Documentary Studies
3 Semester Credit Hours (3 Lecture Hours)
Historical and critical study of the non-fictional film with attention to changing technologies, to varying uses and styles of documentary, and to contemporary critical and theoretical issues.
Prerequisite: MEDA 1307.

MEDA 3310 Media Theory and Research
3 Semester Credit Hours (3 Lecture Hours)
This course is intended to immerse students in the leading theoretical and methodological approaches employed within the field of media studies to gain understating of media texts, popular culture, and audiences. Closely affiliated with cultural studies, qualitative research methods will be a primary focus. Readings and case studies will offer students insight into the way these methods are being used in the field, including their limitations and strengths. A series of assignments will allow them to propose, design, and conduct multiple sample research projects and analyze data in ways that engage with a variety of theories.

MEDA 3314 Multimedia Journalism
3 Semester Credit Hours (3 Lecture Hours)
This course is designed to strengthen students’ digital journalism skills, including field-based news gathering and reporting, on-air performance, interviewing techniques, live reporting, and podcasting. The course will prepare students for modern-based multimedia journalism outside of the studio.

MEDA 3317 Advanced Postproduction
3 Semester Credit Hours (3 Lecture Hours)
Intensive instruction in advanced postproduction software, postproduction workflows and editing techniques for moving images.
Prerequisite: MEDA 1315.

MEDA 3318 Editing & Layout
3 Semester Credit Hours (3 Lecture Hours)
This course will teach the principles of copy editing, with an emphasis on accuracy and fairness, as well as the principles of layout and design for print and web publications.
Prerequisite: MEDA 2311.

MEDA 3340 Photographic Journalism
3 Semester Credit Hours (3 Lecture Hours)
This course will instruct on photojournalism skills and methods for use in visual communication. It will examine ethical and legal limitations to photography and in editing. Student work in this class will be eligible for possible publication in the student newspaper or its accompanying website.

MEDA 3351 Screen Comedy
3 Semester Credit Hours (3 Lecture Hours)
Examination of the varieties of screen comedy, from silent comedy to contemporary forms, with some attention to the history and theory of comic performance.
Prerequisite: MEDA 1307.

MEDA 3360 Screenplay Writing
3 Semester Credit Hours (3 Lecture Hours)
Writing and analysis of the screenplay for narrative fictional films. Writing projects include problem-solving exercises and work on an original screenplay. Course can be repeated for credit.

MEDA 3361 Sports Writing
3 Semester Credit Hours (3 Lecture Hours)
This course will teach the elements of sports writing and reporting to include interviewing and writing to cover different aspects of sports coverage. This course will address content for print, Internet, radio and television. Campus-related sports assignments will be eligible for publication in the student newspaper and its accompanying website.

MEDA 3380 New Media and Communication
3 Semester Credit Hours (3 Lecture Hours)
Examines how new media technologies impact society and change communication practices. Particular emphasis placed on different modes of cultural expression and social interaction made possible through digital media and the Internet.

MEDA 4305 Interpreting and Making the Visual Culture of Hollywood
3 Semester Credit Hours (3 Lecture Hours)
This course examines the visual culture of Hollywood media production in a focused context, such as during a particular decade, or in relation to a particular genre, star, or cultural topic. The visual culture studied will include not just primary media texts such as films or television programs, but also posters, trailers, and other promotional materials, as well as visual culture not produced directly by the media industries, such as contemporary art. Students will learn and utilize basic design techniques to create their own artwork related to these materials, including movie posters, album covers, and sequential art. As resources and equipment availability allow, these designs will be produced using techniques including print-making.

MEDA 4308 Advanced Production: Commercial
3 Semester Credit Hours (3 Lecture Hours)
Advanced techniques in the creation of client based commercial media content with a focus on conceptualization, production, and delivery of a commercial, PSA, or corporate video project.
Prerequisite: (MEDA 1315, 2313 and 2316).
MEDA 4310  Advanced Production: Documentary
3 Semester Credit Hours (3 Lecture Hours)
Advanced techniques in the creation of documentary media content with a focus on conceptualization, production, and distribution of a short documentary film. Course can be repeated once for credit. This course serves as a capstone for the Media Production Track.
Prerequisite: MEDA 2313.

MEDA 4312  Advanced Production: Narrative
3 Semester Credit Hours (3 Lecture Hours)
Advanced techniques in the creation of narrative media content with a focus on scripting, production, and distribution of a short narrative film. Course can be repeated once for credit. This course serves as a capstone for the Media Production Track.
Prerequisite: MEDA 2316.

MEDA 4317  After Effects
3 Semester Credit Hours (3 Lecture Hours)
Conceptualization and execution of digital media projects using visual effects, motion graphics and composition through the creation of video, animation, special effects and more using Adobe’s After Effects postproduction software.
Prerequisite: MEDA 1315.

MEDA 4340  Advertising Criticism
3 Semester Credit Hours (3 Lecture Hours)
The examination of advertising history through critical and cultural approaches.

MEDA 4341  First Amendment and Ethical Issues in the Media
3 Semester Credit Hours (3 Lecture Hours)
Study of legal and ethical issues in mediated communication, including the First Amendment and free speech, control, and regulation of broadcasting, obscenity in the media.
Prerequisite: MEDA 1307.

MEDA 4342  Global Media and International Communication
3 Semester Credit Hours (3 Lecture Hours)
Examines global media in the context of international communication, diversity of media and cultural production, styles of media practices abroad, including differences between U.S. news values and ethical and moral dimensions across differing societies of the world.

MEDA 4343  News Publication
3 Semester Credit Hours (3 Lecture Hours)
This course will be a hands-on newsroom experience with the student newspaper the Island Waves and its accompanying website. Individual assignments will be assigned by editors of the student media. Assignments may include writing, advertising, photography, cartooning and video production and editing. Students are required to work on the staff of the official college publication during prescribed hours under faculty supervision.
Prerequisite: MEDA 2311.

MEDA 4370  Advanced New Media Project
3 Semester Credit Hours (3 Lecture Hours)
As the capstone course for the New Media Arts Certificate, this course guides students through the planning, development, and execution of new media-based project.
Prerequisite: ARTS 2356, MEDA 2313 and 1315.

MEDA 4381  Senior Seminar in Media Studies
3 Semester Credit Hours (3 Lecture Hours)
The capstone course for seniors in the Media Studies offers opportunities to synthesize information learned in other Media Studies courses through in-depth study of a particular topic. Students will demonstrate their abilities to think and write critically, and to conduct independent research or produce media projects at an advanced level. Topics vary by instructor.
Prerequisite: MEDA 1307 and 3310.

MEDA 4390  Topics in Media Arts
3 Semester Credit Hours (3 Lecture Hours)
Study of specialized topics and themes in media arts. May be repeated when topics vary.

MEDA 4396  Directed Individual Study
1-3 Semester Credit Hours
See College description. By application. Only 3 semester hours of Directed Individual Study credit may be counted toward the major.

MEDA 4399  Media Arts Internship
3 Semester Credit Hours
Practical experience in the field through placement in a media internship position. Students interested in applying for the internship course must have a minimum cumulative GPA of 3.0; have at least junior standing at the university; be a media arts (media studies or media production emphasis) major or digital journalism minor; have completed at least 12 hours of coursework in the major or minor at TAMU-CC. Preferred applicants will have a minimum media arts or digital journalism GPA of 3.25. All applicants must solicit a recommendation form from a Department of Communication and Media faculty member. Course may be taken three times for credit; however only 3 semester hours of internship credit may be counted toward the major. A second internship may apply to the digital journalism minor; a third internship may be used as a free elective. Authorization to repeat the internship course is contingent on the students’ successful completion of the previous internship experience. This course is graded Credit/No Credit.

**Studio Art, Minor**

**Program Requirements**

This minor is for students who have a desire to develop their creative problem solving and artmaking skills alongside a major in another college or department. By minoring in Studio Art, a student can complement their undergraduate studies by demonstrating their abilities to visually communicate concepts and to utilize interdisciplinary approaches to critical thinking. The minor consists of 21 semester hours in Studio Art courses (7 classes).

The Studio Art Minor introduces students to the creative process and visual thinking in foundation courses. Through several options for upper level courses, a student can examine a wide range of visual and artistic traditions as they develop a more individualized approach to their area(s) of interest.

Total Hours 21

Courses  

ARTS 1301 Art and Society  
3 Semester Credit Hours (3 Lecture Hours)  
Designated for non-art majors. Establishes a working vocabulary for evaluating works of art in various media. Objects are interpreted in terms of their specific historical contexts and the changing relationships between art and society. This course does not fulfill the art history requirement for art majors.  

TCCNS: ARTS 1301

ARTS 1303 Art History Survey I  
3 Semester Credit Hours (3 Lecture Hours)  
An examination of painting, sculpture, architecture, and other arts from the ancient through medieval periods.  

TCCNS: ARTS 1303

ARTS 1304 Art History Survey II  
3 Semester Credit Hours (3 Lecture Hours)  
A further examination of painting, sculpture, architecture, and other arts from the Renaissance through Modern periods. This course satisfies the university core curriculum requirement in fine arts.  

Prerequisite: ARTS 1303.  

TCCNS: ARTS 1304

ARTS 1311 Design I  
3 Semester Credit Hours  
A studio course concerning the fundamentals of art with emphasis on two-dimensional concepts.  

TCCNS: ARTS 1311

ARTS 1312 Design II  
3 Semester Credit Hours  
A studio course concerning the fundamentals of art with emphasis on three-dimensional concepts. This 3D foundations course utilizes creative problem-solving strategies and basic sculpture tools to explore spatial relationships and to create sculptural forms in space.  

Co-requisite: SMTE 0097.  

TCCNS: ARTS 1312

ARTS 1316 Drawing I  
3 Semester Credit Hours (3 Lecture Hours)  
A studio course investigating a variety of media techniques, including their descriptive and expressive possibilities.  

TCCNS: ARTS 1316

ARTS 1317 Drawing II  
3 Semester Credit Hours  
A further investigation of media techniques explored in Drawing I, including their descriptive and expressive possibilities.  

Prerequisite: ARTS 1316.  

Co-requisite: SMTE 0097.  

TCCNS: ARTS 1317

ARTS 2311 Design III: Color  
3 Semester Credit Hours  
Investigation of the properties of color. Color is studied and applied to studio-oriented design assignments.  

Co-requisite: SMTE 0097.  

ARTS 2316 Painting I  
3 Semester Credit Hours (3 Lecture Hours)  
A studio course exploring the potentials of painting media.  

Prerequisite: ARTS 1316.  

Co-requisite: SMTE 0097.  

TCCNS: ARTS 2316

ARTS 2323 Drawing III  
3 Semester Credit Hours  
A studio course continuing the investigation of media and techniques explored in Drawing I and Drawing II. Students investigate how formal aspects and selected media along with conceptual choices create specific visual ideas.  

Prerequisite: ARTS 1317.  

Co-requisite: SMTE 0097.  

TCCNS: ARTS 2323
ARTS 2326  Sculpture I
3 Semester Credit Hours
An introductory studio course exploring sculptural approaches, materials, concepts, and technical processes. Materials include wood, plaster, steel, and plastics.
Co-requisite: SMTE 0097.
TCCNS: ARTS 2326

ARTS 2333  Printmaking I
3 Semester Credit Hours
An introductory studio course in basic printmaking processes and techniques.
Prerequisite: ARTS 1316 or 1311.
Co-requisite: SMTE 0097.
TCCNS: ARTS 2333

ARTS 2346  Ceramics I
3 Semester Credit Hours (3 Lecture Hours)
An introductory studio course in basic ceramic processes.
Co-requisite: SMTE 0097.
TCCNS: ARTS 2346

ARTS 2356  Photography I
3 Semester Credit Hours
This course is an introduction to digital photography capture, processing, and basic editing software. While focusing on the fundamentals of digital photography and printing techniques, it will introduce students to the theory and practice of photography and assist them in producing a conceptually devised and technically consistent portfolio.
Co-requisite: SMTE 0097.
TCCNS: ARTS 2356

ARTS 2367  Watercolor
3 Semester Credit Hours (3 Lecture Hours)
A studio course exploring techniques in water-base media.
Co-requisite: SMTE 0097.

ARTS 3301  Life Drawing
3 Semester Credit Hours
Drawing from the model using a variety of techniques and media.
Prerequisite: (ARTS 1317).
Co-requisite: SMTE 0097.

ARTS 3302  Screen Printing
3 Semester Credit Hours
Traditional printmaking processes will be explored using black and white and color techniques, including but not limited to screenprinting.
Prerequisite: ARTS 1311 or 1316.
Co-requisite: SMTE 0097.

ARTS 3303  Intermediate Painting
3 Semester Credit Hours (3 Lecture Hours)
Explores the issues of content, imagery, application, and influences of master artists.
Prerequisite: ARTS 2316.
Co-requisite: SMTE 0097.

ARTS 3304  Fabrication Sculpture
3 Semester Credit Hours
Building upon introductory skills, this course explores construction and fabrication in sculpture focusing on a primary material for the semester and applying advanced techniques and processes for this material. Through this material and techniques, students begin defining and developing their visual vocabulary relative to art history and contemporary sculptural issues.
Prerequisite: ARTS 2326.
Co-requisite: SMTE 0097.

ARTS 3305  Mold Making and Casting Sculpture
3 Semester Credit Hours
This course is designed to build upon the fundamental principles of mold making and casting while exploring more complex concepts, materials, and techniques. Creating multi-part molds, flexible molds, and investment molds, the project assignments incorporate the unique versatility of mold making and casting for exchanging media and making a series of multiples. In addition to making casts, students compare methods for assembling cast forms together to create larger sculptural artworks and installations.
Co-requisite: SMTE 0097.

ARTS 3306  Figurative Sculpture
3 Semester Credit Hours
A study of the human figure from an anatomical and artistic perspective. Examines the skeletal and muscular components of the figure in order to create lifelike and emotive sculptures. Discussion of the figure in both classical and contemporary art. Working with armature and modeling clay.
Co-requisite: SMTE 0097.

ARTS 3307  Lithography and Planographic Process
3 Semester Credit Hours
Traditional printmaking processes will be explored using black and white and color techniques, including but not limited to lithography and monoprinting.
Prerequisite: ARTS 2311 or 1316.
Co-requisite: SMTE 0097.

ARTS 3311  Color Theory
3 Semester Credit Hours
This course develops an understanding of color properties and relationships through formal exercises, research and creative thinking. Students build a vocabulary for analyzing and identifying color and color phenomena. Concepts of color theorists and color use in a variety of fields are examined to understand the application of color theory. Students will investigate the use of color in their own work and in the work of others to understand the conceptual and aesthetic application of color.
Prerequisite: ARTS 1311.

ARTS 3313  Figure Painting
3 Semester Credit Hours
This course addresses the structure and anatomy of the human figure using oil paint. Painting techniques and color theory exercises will familiarize students with tradition painting methods. Students will render proportions, balance, form and mass of the human figure. Research and discussions will address the human form throughout history as well as in the contemporary context. Image presentations, critiques and live model sessions will supplement studio work.
Prerequisite: ARTS 2316.
Co-requisite: SMTE 0097.
ARTS 3316  Art Activities I  
3 Semester Credit Hours (3 Lecture Hours)  
Practical experience with basic design, drawing, painting, and sculpture, along with a study of art history and criticism. Includes a consideration of how these experiences relate to art curricula in the elementary school.

ARTS 3322  Art Activities II  
3 Semester Credit Hours (3 Lecture Hours)  
Practical experiences with basic design, drawing, painting, printmaking, sculpture, and crafts, along with a study of art history and criticism. Includes a consideration of how these experiences relate to art curricula in the secondary school.

ARTS 3324  Wheel Throwing  
3 Semester Credit Hours  
Covers wheel-thrown ceramics (other production techniques may be included), basic glazemaking, and an introduction to kiln firing and loading.  
Prerequisite: ARTS 2346.  
Co-requisite: SMTE 0097.

ARTS 3325  Handbuilt Ceramic Techniques  
3 Semester Credit Hours  
This course is a continuation of hand-building covered in Ceramics I ARTS 2346. The course will cover more advanced forming techniques such as extrusion, hump, slump, and press molds, and slip-casting. New surface and firing techniques will include more advanced techniques such as underglazes, onglaze techniques such as majolica, fired decal application, raku, and an introduction to low fire glazes and surfaces.  
Prerequisite: ARTS 2346.

ARTS 3350  Art of the United States  
3 Semester Credit Hours (3 Lecture Hours)  
A survey of the major developments in the art of North America from Pre-Columbian times to the modern era

ARTS 3352  Modern Art  
3 Semester Credit Hours (3 Lecture Hours)  
A survey of the major movements of 20th century art and aesthetics, which developed primarily in Europe. Includes a review of late 19th century modernist antecedents with emphasis placed on the principal movements of the early 20th century: Fauvism, German Expressionism, Cubism, Futurism, Abstract Art, Dada, and Surrealism.

ARTS 3353  Art Since 1945  
3 Semester Credit Hours (3 Lecture Hours)  
An examination of the dispersal of European artists and Modernism, primarily to America, as a result of World War II. Examines the development of Abstract Expressionism in New York in the 1940s and 50s, followed by a survey of recent trends in contemporary art to the present day.

ARTS 3360  Graphic Design I  
3 Semester Credit Hours (3 Lecture Hours)  
Introduce fundamental graphic communication techniques, software and theory. Explores hand skills by using tools and techniques to produce professional presentations as well as the correct procedures for presenting designs to a client.

ARTS 3365  Photography II  
3 Semester Credit Hours  
An intermediate studio course using digital cameras and image manipulation software. Prior completion of ARTS 2356 is required. This course will enhance and expand skills developed in Photography I. It is geared toward informing students in the many ways we can make photographs; by seeking them out, framing them, forming them, extracting them, building them, and finally sequencing and presenting them. Students will engage in the theory and practice of photography, refine their photographic technique, and create a conceptually devised and technically consistent portfolio. Emphasis is placed on the development of a strong conceptual foundation from which to approach the making and understanding of photography as an art form. This knowledge will be achieved through photographic assignments, slide lectures of relevant works, and in-class critiques. It can be repeated twice for credit.  
Prerequisite: (ARTS 2356).  
Co-requisite: SMTE 0097.

ARTS 3366  Analogue Photography  
3 Semester Credit Hours  
An introductory studio course in analogue photography using film cameras and the silver gelatin darkroom process. While focusing on the fundamentals of black and white, analogue photography and printing techniques this course will assist students in producing a conceptually devised and technically consistent portfolio.  
Prerequisite: (ARTS 2356).  
Co-requisite: SMTE 0097.

ARTS 3367  Digital Design Tools and Applications  
3 Semester Credit Hours  
This studio course explores the fundamental principles, standard creative processes and basic digital tools utilized in graphic design. The concepts and software learned are employed in projects specifically targeted to serve the professional and promotional needs of studio artists and design enthusiasts.

ARTS 4085  Senior Capstone  
0 Semester Credit Hours  
Required for all art students in partial fulfillment of the requirements for the BA in Art, BFA in Art studio track and the BFA with Teacher Certification in Art tracks. This course collects capstone materials for ARTS degrees. The course must be taken in the student’s final semester before graduation.

ARTS 4301  Advanced Drawing  
3 Semester Credit Hours  
Emphasis on the development of content through drawing. Research on contemporary trends and process investigation will aid students in the development of visual ideas and lead to a cohesive body or work. May be taken three times for credit.  
Prerequisite: ARTS 2323.  
Co-requisite: SMTE 0097.

ARTS 4302  Advanced Printmaking  
3 Semester Credit Hours  
Furthers competencies attained in Printmaking I and Intermediate I & II courses. May be taken three times for credit.  
Prerequisite: ARTS 3302 and 3307.  
Co-requisite: SMTE 0097.
ARTS 4303 Advanced Painting
3 Semester Credit Hours (3 Lecture Hours)
Assumes competencies attained in ARTS 3303. May be taken three times for credit.
Co-requisite: SMTE 0097.

ARTS 4304 Advanced Sculpture
3 Semester Credit Hours (3 Lecture Hours)
Assumes competencies attained in ARTS 3304. May be taken three times for credit.
Co-requisite: SMTE 0097.

ARTS 4324 Advanced Ceramics
3 Semester Credit Hours (3 Lecture Hours)
Assumes competencies attained in ARTS 3324. May be taken three times for credit.
Co-requisite: SMTE 0097.

ARTS 4350 Pre-Columbian Art of Mesoamerica
3 Semester Credit Hours (3 Lecture Hours)
Explores the history of Pre-Columbian art from Mexico and Central America, from the Olmec through the Aztec cultures. May be taken three times for credit.

ARTS 4352 Modern Art of Mexico
3 Semester Credit Hours (3 Lecture Hours)
Explores the history of art during the nineteenth and twentieth centuries in Mexico. May be taken three times for credit.

ARTS 4354 Global Currents in Contemporary Art
3 Semester Credit Hours (3 Lecture Hours)
The course will cover key developments in contemporary art from the post-World War II era in the Western context to global currents in the present international arena. From a socio-political perspective, artistic tendencies will be considered as part of a trajectory that saw the center of the art world shift from being Euro- and Anglo-centric in the mid-twentieth century to one without a discernible center in the early twenty-first century. Analysis of artworks from this decentralized cultural climate will focus on the evolution of conceptualism, the persistence of traditional modes of aesthetic practice, the role of the art market, and notions of environmentalism and sustainability as related to these "transnational transition." The course will consider works from Eastern Europe, South and Central America, the Caribbean, East/West/South/ Southeast Asia, Oceania, and Africa.

ARTS 4356 Contemporary Art Since 1980
3 Semester Credit Hours (3 Lecture Hours)
The course will examine the evolution of architecture, sculpture, painting, digital media, installation, and interdisciplinary arts in the global context from 1980 to the present, in light of the historical and intellectual background of the period. Topics covered will include the transition from postmodernism to contemporaneity, considering notions of appropriation, commodification, consumerism, memory, history, and globalization. Lectures will be constructed upon thematic analysis of contemporary, primary sources coupled with secondary source material, and complemented by presentation opportunities and class discussion.

ARTS 4365 Advanced Photography
3 Semester Credit Hours (3 Lecture Hours)
Assumes competencies attained in ARTS 3365. Covers content as creative expression in addition to basic photographic skills. May be taken three times for credit.
Co-requisite: SMTE 0097.

ARTS 4390 Topics in Art History
3 Semester Credit Hours (3 Lecture Hours)
May be repeated when topics vary.

ARTS 4391 Topics in Studio Art
3 Semester Credit Hours
May be repeated when topics vary.
Co-requisite: SMTE 0097.

ARTS 4396 Directed Individual Study
1-3 Semester Credit Hours (1-3 Lecture Hours)
See College description. Offered on application
Co-requisite: SMTE 0097.

ARTS 4398 Applied Experience
3 Semester Credit Hours (3 Lecture Hours)
See College description. Offered on application.
Co-requisite: SMTE 0097.

Theatre, Minor
Program Description
The Theatre minor is designed for students who wish to pursue the study of Theatre but who plan to major in another field. The Theatre minor consists of a minimum 19 semester hours of Theatre, including 12 upper-level hours.

Students who select this minor must consult with their Faculty Advisor for the Theatre Minor prior to completing 6 semester hours of coursework listed in the program. The minor plan must be filed with the Academic Advisor in the College of Liberal Arts and certified prior to application for graduation by the Dean of the College in which their major field of study is awarded.

Total Hours: 19

Courses

THEA 1120 Theatre Practicum 1
1 Semester Credit Hour (1 Lab Hour)
Practicum in theater open to all students with emphasis on technique and procedures with experience gained in play productions. Linked with THEA 1342 - Costume Technology.
Co-requisite: SMTE 0098, THEA 1371.
THEA 1121 Theatre Practicum 2
1 Semester Credit Hour (1 Lab Hour)
Practicum in theater open to all students with emphasis on technique and procedures with experience gained in play productions. Linked with THEA 1330 - Theatre Stagecraft.
Co-requisite: SMTE 0098, THEA 1330.

THEA 1310 Theatre Appreciation
3 Semester Credit Hours (3 Lecture Hours)
Survey of theatre including its history, dramatic works, stage techniques, production procedures, and relation to other art forms. Participation in productions may be required.
TCCNS: DRAM 1310

THEA 1330 Theatre Stagecraft
3 Semester Credit Hours (3 Lab Hours)
Study and application of the methods and components of theatrical production which may include one or more of the following: theater facilities, scenery construction and painting, properties, lighting, and sound.
Co-requisite: SMTE 0098, THEA 1121.

THEA 1341 Stage Makeup
3 Semester Credit Hours (3 Lecture Hours)
A practical exploration of basic stage makeup techniques. The student will also investigate the relationships of character to makeup and begin to understand the work needed to design makeup for a production.
Co-requisite: SMTE 0098.
TCCNS: DRAM 1341

THEA 1351 Acting I
3 Semester Credit Hours (3 Lecture Hours)
The development of basic skills and techniques of acting, including sensory awareness, ensemble performing, character analysis, and script analysis. Emphasis on the mechanics of voice, body, emotion, and analysis as tools for the actor.
TCCNS: DRAM 1351

THEA 1352 Acting II
3 Semester Credit Hours (3 Lecture Hours)
A continuation of Acting I with emphasis on characterization and working with extended realism. The student will study the theories of Constantin Stanislavski.
Prerequisite: THEA 1351.
TCCNS: DRAM 1352

THEA 1371 Costume Technology
3 Semester Credit Hours (3 Lecture Hours)
A BEGINNING OVERVIEW OF THE VOCABULARY AND BASIC SEWING METHODS OF THEATRICAL COSTUMING.
Co-requisite: SMTE 0098, THEA 1120.
TCCNS: DRAM 1342

THEA 2120 Theatre Practicum 3
1 Semester Credit Hour (1 Lab Hour)
Practicum in theater open to all students with emphasis on technique and procedures with experience gained in play productions.
Co-requisite: SMTE 0098.

THEA 2121 Theatre Practicum 4
1 Semester Credit Hour (1 Lab Hour)
Practicum in theater open to all students with emphasis on technique and procedures with experience gained in play productions.
Co-requisite: SMTE 0098.

THEA 2336 Voice for the Actor
3 Semester Credit Hours (3 Lecture Hours)
Principles, practices, and exercises in awareness, relaxation, freedom, flexibility, and expressiveness in the actor's vocal instrument.

THEA 2355 Script Analysis
3 Semester Credit Hours (3 Lecture Hours)
Students will learn the principles, techniques, and processes of dramatic structure found in written scripts as seen through the perception of the stage director, actor, and designer. A written intensive analysis of each script studied during the semester will be required. Focus will be on the theories of Aristotle and Eugene Scribe's "Well Made Play Formula".
Prerequisite: THEA 1330 and 1371.

THEA 3120 Theatre Practicum 5
1 Semester Credit Hour (1 Lab Hour)
Practicum in theater open to all students with emphasis on technique and procedures with experience gained in play productions.
Co-requisite: SMTE 0098.

THEA 3121 Theatre Practicum 6
1 Semester Credit Hour (1 Lab Hour)
Practicum in theater open to all students with emphasis on technique and procedures with experience gained in play productions.
Co-requisite: SMTE 0098.

THEA 3165 The Design and Technical Portfolio.
1 Semester Credit Hour (1 Lecture Hour)
A basic course in the development of the student portfolio for the areas of design and technology with emphasis in the theatrical job market or graduate school.

THEA 3300 Stage Movement
3 Semester Credit Hours (3 Lecture Hours)
Students will gain insights into the physical skills, practices, exercises, and staging techniques developed and used by actors and directors in theatrical performance, with an emphasis on relaxation, freedom, expressiveness, spatial relationships, and composition.
Prerequisite: THEA 1351 and 1352.

THEA 3302 Creative Dramatics
3 Semester Credit Hours (3 Lecture Hours)
Theories and practices incorporating the techniques of creative drama in the elementary, middle, and high school classroom. Especially recommended for elementary education, recreation, and the social sciences.

THEA 3303 Theatre in the Public Schools
3 Semester Credit Hours (3 Lecture Hours)
Theories and practices of incorporating theatre activities in the public schools. Especially recommended to students of elementary and secondary education, recreation, and the social sciences.

THEA 3310 Contemporary Theatre
3 Semester Credit Hours (3 Lecture Hours)
An overview of the nature and function of theatre in our contemporary society with discussion of representative plays and playwrights, theatrical styles, and avant-garde theatre. Students will explore multicultural, political, and experimental themes, attend theatrical productions, and meet with actors, designers, and directors to discuss contemporary practices.
THEA 3312 Stage Combat I
3 Semester Credit Hours (1 Lecture Hour, 2 Lab Hours)
Stage combat is a unique form of acting and movement; integral to the training of the professional actor and an extremely marketable skill. This course is an introduction to the stage fight discipline. It is important as actors that we develop a keen sense of duality in performance; a seemingly impromptu, theatrically engaging moment of violence built upon a foundation of safe, consistent physical dialogue. In this way, we can enhance the physical lives of all the characters we play; especially those engaged in acts of violence. This course explores many fundamental acting techniques in a new light including responsibility to a partner, listening and responding, projection, articulation, spatial awareness and above all intent. May be repeated for credit.

THEA 3335 UIL Debate and Speech
3 Semester Credit Hours (3 Lecture Hours)
This course will prepare students to coach High School speech events as extra-curricular and co-curricular activities. The class will focus primarily on Texas University Interscholastic Leagues (UIL competitions) but will also cover events sponsored by the Texas Forensics Association (TFA) and the National Forensics League (NFL). Areas covered will include oral interpretation, extemporaneous speaking, and debate.

THEA 3340 Audition Preparation
3 Semester Credit Hours (3 Lecture Hours)
Provides the student with the information and skills needed for auditioning in both professional and educational theatre.
Prerequisite: THEA 1351 and 1352.

THEA 3350 Production Management
3 Semester Credit Hours (3 Lecture Hours)
This course is a survey of stage management and theatre administration. Topics to be studied include stage management, production management, professional unions, publicity/marketing, box office and house management.
Prerequisite: THEA 1371, 1330 and 2355.

THEA 3370 History of the Theatre I
3 Semester Credit Hours (3 Lecture Hours)
Historical investigation of the nature and function of theatre from primitive rituals through the Renaissance periods with discussions of representative plays/playwrights, theatrical styles and stage design.
Prerequisite: THEA 2355.

THEA 3371 History of the Theatre II
3 Semester Credit Hours (3 Lecture Hours)
Historical investigation of theatre from the Restoration era to the present. Focus on the nature and function as well as the critical analysis of theatre and design, various movements, and influential people.
Prerequisite: THEA 2355.

THEA 3373 Principles of Design
3 Semester Credit Hours (3 Lecture Hours)
Builds upon the student’s practical lab experience and understanding of theatrical design begun in costume construction and theatre stagecraft. Students will explore the creative process of theatre production as it pertains to lighting, set, sound, props, and costume design projects.
Prerequisite: THEA 1371 and 1330.

THEA 3375 Acting III: Period Styles
3 Semester Credit Hours (3 Lecture Hours)
Specific training for actors in period plays. Emphasis on training the actor for the Classical, Renaissance, Shakespearean, and Modern Periods.
Prerequisite: THEA 1351 and 1352.

THEA 3377 Acting Shakespeare
3 Semester Credit Hours (3 Lecture Hours)
Advance study in the analysis and performance of heightened text as written by William Shakespeare. Coursework includes in-depth application of Elizabeth theatre practices and how these practices may be adapted for 21st century actors, directors, and audiences.

THEA 3380 History of Theatrical Styles
3 Semester Credit Hours (3 Lecture Hours)
A survey and research-oriented course which studies the major impact of the visual, artistic, historical, and social period movements. The course will focus on the approach that the actor, designer, director, and playwright take in developing the understanding of the environment of a play's location and time period.

THEA 3381 Drawing and Rendering for the Stage
3 Semester Credit Hours (3 Lecture Hours)
Examination of the uses of the various materials used and the development of the techniques employed in the creation and presentation of theatrical renderings and models.
Co-requisite: SMTE 0098.

THEA 3382 Drafting and Computer-Aided Design for the Stage
3 Semester Credit Hours (3 Lecture Hours)
Practical examination and practice in theatrical drafting conventions with an emphasis on the development of hand drafting techniques and CAD (computer-aided design).
Prerequisite: THEA 1330.

THEA 3385 Musical Theatre
3 Semester Credit Hours (3 Lecture Hours)
The focus of the course is on musical theatre history, exploring trends in the genre, audition techniques, characterization, staging and choreography.

THEA 3386 Playwriting
3 Semester Credit Hours (3 Lecture Hours)
is a fundamentals course in writing for the stage. The course will cover playwriting for monologues, 10 Minute Plays, and One Act Plays. Completion of Script Analysis is strongly suggested but not required. May be repeated for credit.

THEA 3387 Dramaturgy
3 Semester Credit Hours (3 Lecture Hours)
This class will provide a brief overview of many of the skills and tools that dramaturgs possess. We will study the history of the field and learn about currently working dramaturgs, while also covering the foundational skills of historical research, structural analysis, and theoretical application. Completion of Script Analysis is strongly suggested but not required. May be repeated for credit.

THEA 4100 Senior Seminar
1 Semester Credit Hour (1 Lecture Hour)
A seminar class for the graduating senior. The student will be given the opportunity to address individual weaknesses and strengths in preparation for graduate school or entering the job market.

THEA 4200 Senior Capstone
2 Semester Credit Hours (2 Lab Hours)
The course is designed to provide the graduating senior an opportunity to complete a final project in the acting/directing or design/tech focus areas. The student’s project will be juried by the entire faculty and include a research and production component.
THEA 4312 Stage Combat II
3 Semester Credit Hours (1 Lecture Hour, 2 Lab Hours)
Stage combat is a continuation of the skills of acting and movement; integral to the training of the professional actor and an extremely marketable skill. This course is an advanced weaponry course in the stage fight discipline. It is important as actors that we develop a keen sense of duality in performance; a seemingly impromptu, theatrically engaging moment of violence built upon a foundation of safe, consistent physical dialogue. In this way, we can enhance the physical lives of all the characters we play; especially those engaged in acts of violence. May be repeated for credit.

Prerequisite: THEA 3312.

THEA 4313 Theatre Technologies
3 Semester Credit Hours (3 Lecture Hours)
Designed to provide a forum for intensive study of a particular aspect of modern theatrical technologies. Various topics may be selected based on current industry trends, student needs and available resources.

Prerequisite: THEA 1330, 3381 and 3382.

THEA 4314 Collaborative Approaches to Design
3 Semester Credit Hours (3 Lecture Hours)
An advanced design course where the student will examine the process of design from the standpoint of the relationship created within the design team. Through class projects, the student will participate in a design process which fosters communication of ideas, written analysis and collaboration in pursuit of a unified design in all aspects of production.

Prerequisite: THEA 3373.
Co-requisite: SMTE 0098.

THEA 4323 Oral Interpretation of Children's Literature
3 Semester Credit Hours (3 Lecture Hours)
A study, primarily through the medium of performance, of various types and forms of literature for children. Strongly oriented toward teaching literature in the elementary school classroom. (Credit may not be given for both this course and COMM 4323 or ENGL 4370.)

THEA 4333 Technical Direction
3 Semester Credit Hours (3 Lecture Hours)
An advanced technical class geared for the student who wishes to receive training and employment as a technical director.

THEA 4360 Stage Direction I
3 Semester Credit Hours (3 Lecture Hours)
The study and practical application of directing principals for the beginning director. Elements of script analysis, blocking, movement, character development, tempo, and design will be investigated as part of the directing process. The student will direct a ten-minute play for public performance.

Prerequisite: THEA 1352 and 2355.

THEA 4361 Stage Direction II
3 Semester Credit Hours (3 Lecture Hours)
An advanced study in directing with actual experience in organization, interpretation, casting, and producing the one-act play. The student will direct a one-act play for public performance.

Prerequisite: THEA 4360.

THEA 4364 Costume Crafts
3 Semester Credit Hours (4 Lecture Hours)
Students will learn to identify, comprehend, and demonstrate practical knowledge of tools, machines, and techniques practiced in a costume crafts studio. They will learn to recognize the different materials, chemicals, and tools used in costume crafts. They will know what the above items are best suited for and what type of project they should be applied to. The student will gain basic crafting skills. These skills are gained by extensive hands-on experience by working on projects in the costume studio. They will gain the ability to purchase, layout, cut, and construct any specialty project in the costuming area.

Prerequisite: THEA 1371 and 2370.

THEA 4365 Costume Design
3 Semester Credit Hours (3 Lecture Hours)
A study of the theory and practice of costume design utilizing the human form as a design element for the stage. Encompasses theatre form, style, and textural applications. Students are required to work on University Theatre productions as part of this course.

THEA 4366 Scene Painting
3 Semester Credit Hours
The examination and practice of the various materials and techniques of professional scenic painting, including material mixing, faux techniques, and textural applications.

THEA 4370 Set Design
3 Semester Credit Hours (3 Lecture Hours)
A study of the theory and practice of set design. Students will learn the fundamentals of theatre design and will apply this knowledge to projects. Projects will encompass theatre form, style, and concept utilization. Students are required to work on University Theatre productions as a part of this course.

Co-requisite: SMTE 0098.

THEA 4371 Acting for the Camera
3 Semester Credit Hours (3 Lecture Hours)
Emphasizes the practice of various acting styles for television, video, and film. The student will receive practical experience in commercial styles, public service announcements, television and video style acting, and film scene study. (Credit may not be given for both this course and COMM 4371.)

THEA 4372 Theatre Practicum
3 Semester Credit Hours (3 Lecture Hours)
Advanced practice and participation in set construction, lighting implementation, and stagecraft. Students will build upon skills in the areas of theatre production and design for production in the University Theatre. Class meets twice weekly with additional crew/lab work requirements as well. Students are required to work on University Theatre productions as a part of this course. May be repeated twice for credit.

THEA 4373 Improvisation Skills Level I
3 Semester Credit Hours (3 Lecture Hours)
is a fundamentals of improvisation course that teaches the guidelines for successful improvisation skills. The course emphasizes the basics of successful improvisation as it pertains to Theatre, Communication, and the student who wants to improve their communication skills. May be repeated for credit.
THEA 4374  Improvisation Skills Level II  
3 Semester Credit Hours (3 Lecture Hours)  
is a continuation of improvisation course level I that instructs the student in the guidelines for advanced improvisation skills. The course teaches the skills necessary for advanced individual and group improvisation. Emphasis is on ensemble performance. May be repeated for credit.  
Prerequisite: THEA 4373.  
THEA 4375  Lighting Design  
3 Semester Credit Hours (3 Lecture Hours)  
A study of the theory and practice of lighting design. Practical experiences in University Theatre are included to provide exposure to the total design and implementation of lighting design. Students will become familiar with the techniques and aesthetics of lighting theatrical performances and will apply skills to create designs for projects and actual plays. Students are required to work on University Theatre productions as a part of this course.  
THEA 4380  Advanced Stage Makeup  
3 Semester Credit Hours (3 Lecture Hours)  
A study of the theory and practice of designing makeup for the stage. Students will learn about aesthetics, application, and techniques of stage makeup. Students will do makeup designs as projects in the class. Students are required to work on University Theatre productions as part of this course.  
THEA 4384  Theatre Production  
1-3 Semester Credit Hours (1-3 Lecture Hours)  
An applied production experience in which students perform in a play, work back stage or on a stage crew, or learn to design a play or musical from conception to final production. Students enrolling in the course but not cast in the shows will work backstage (technical production) or in another production capacity. Enrollment is by application only, and must be approved by the instructor in advance of registration. As part of the application process the number of credit hours will be determined by the instructor. May be repeated for credit.  
THEA 4390  Topics in Theatre  
1-3 Semester Credit Hours (1-3 Lecture Hours)  
Study of specialized topics and themes in the areas of acting, directing, and theatre history. May be repeated when topics vary.  
THEA 4396  Directed Individual Study  
1-3 Semester Credit Hours (1-3 Lecture Hours)  
See College description. By application.  
THEA 4398  Applied Experience  
3 Semester Credit Hours  
See College description. By application.  

College of Nursing and Health Sciences  

Mission  
The College of Nursing & Health Sciences positively impacts the health of the global population through the education of health care leaders and providers of tomorrow with innovative educational programs in the nursing and health professions. The College identifies, attracts, and graduates students of high potential, especially from groups who have been historically under-represented in the organization and provision of health care. This work is enhanced through faculty contributions to community service, leadership, practice and research. These activities are fostered in a collaborative interprofessional and multicultural learning environment promoting a sense of community and caring.  

College of Nursing and Health Sciences Goals  
The goals of the College of Nursing and Health Sciences assist the College in implementing the university and college missions:  
1. To develop within the student the knowledge and skills necessary for beginning professional and advanced health care practice, cultivating basic and specialized abilities needed to successfully pursue a career.  
2. To promote the concept of caring and facilitate attainment of a care delivery system sensitive to multicultural diverse communities and their health values.  
3. To offer individuals the opportunity to increase the breadth and depth of the theoretical and ethical base for health care practice, enhance and expand competence, prepare for role specialization and contribute to the discovery of new health care knowledge.  
4. To provide an educational environment of respect within which students may evolve as broadly educated, responsible and accountable professionals dedicated to the principles of lifelong learning.  
5. To build a foundation for lifelong learning & systematic practice, and  
6. To ethically serve diverse communities as health care experts, leaders, consultants, and advocates of resources.  

Undergraduate Degrees  
The College of Nursing and Health Sciences offers course work leading to the following undergraduate degrees:  
- Bachelor of Science in Clinical Laboratory Science (BS)  
- Bachelor of Science in Nursing (BSN)  
- Bachelor of Science in Healthcare Administration (BS)  
- Bachelor of Science in Health Sciences (BSHS) (Being phased out)  

Undergraduate Courses  
All course descriptions are located in Courses A-Z (p. 640).  

Programs  
- Bachelor Degree Programs (p. 467)  
  - Clinical Laboratory Science, BS (p. 468)  
  - Health Sciences, BSHS (p. 471)  
  - Nursing, BSN (p. 477)  
  - Post-Baccalaureate Certificates (p. 489)  
    - Clinical Laboratory Science, Post-Baccalaureate Certificate (p. 489)  
  - Minors (p. 490)  
    - Health Sciences, Minor (p. 491)  
    - Healthcare Administration, Minor (p. 492)  

Bachelor Degree Programs  
- Clinical Laboratory Science, BS (p. 468)  
- Health Sciences, BSHS (p. 471)
Clinical Laboratory Science, BS

Program Description

The Bachelor of Science in CLS degree prepares students to function as clinical laboratory scientists in a wide variety of settings including hospital laboratories, clinics, research labs, physician office laboratories, public health laboratories and reference labs. The requirements the first 3 years include courses in biology, chemistry, math, social sciences, and humanities. The senior year includes advanced study in the CLS disciplines along with clinical practice in the clinical facilities.

Student Learning Outcomes

Students will:

- Possess a broad understanding of science and its in-depth applications, techniques, principles, and instruments used to their specific option within the clinical laboratory sciences major.
- Demonstrate critical thinking skills
- Practice the skills necessary to analyze and interpret test results through knowledge of physiological and pathological conditions that affect testing.

Admission to the CLS program is one time per year. Students must complete an application to the CLS program and submit to the Program Director before June 30. An interview may be requested. Students should consult their Academic Advisor for additional information.

Clinical Laboratory Science Certification

The clinical laboratory scientist holds a key position in life-and-death matters involving the diagnosis and treatment of patients. Therefore, the practice of clinical laboratory science is regulated both from within the profession and, in some states, by law. In addition to the coursework for the baccalaureate degree, employment as a clinical laboratory scientist requires professional certification. A student may obtain one of three certifications in clinical laboratory science: generalist, clinical chemist, or medical microbiologist. Complete information (and an application for the certification examination in any area) may be obtained from the clinical laboratory science director. To apply for certification, a student must earn a "C" or better in all CLSC courses; and an interview and reference letters also may be required.

Clinical Laboratory Science at Texas A&M University-Corpus Christi is approved through the National Accrediting Agency for Clinical Laboratory Science (NAACLS).

General Requirements

The Bachelor of Science in Clinical Laboratory Science degree requires a minimum of 120 semester hours: 42 are from designated Core Curriculum Program courses, 20 are from clinical laboratory core courses, 12-14 are required Foundation courses and 44 are Clinical courses. After their sophomore year (60 semester hours), students must have (and maintain) a cumulative GPA of 2.70 or above in their course work, with no course work older than 6 years. No “D” or “F” grades will be accepted as credit within the clinical laboratory core or clinical courses (see Notes).

Students entering with some college credit may not be required to take one or both of the First-Year Seminar courses (see The First Year Learning Communities Program (http://catalog.tamucc.edu/undergraduate/university-college/programs/first-year-learning-communities-program/) for rules and exceptions concerning these courses). Clinical Laboratory Science students must take CLSC 4200 Professional Skills for Clinical Laboratory Scientists (2 sch) whether or not they have taken none, one or both First Year Seminars.

The 3 hours of lecture is included in the University Core of the Math Foundations area, and the 1 hour of lab is included in the Component Area Option.

Admission to these courses is limited to students who have a minimum GPA of 2.7, and who have a “C” or better in all prerequisite Biology, Chemistry, and Biomedical Sciences courses. Full-time students will be given preference for admission to these courses.

Notes:

1. If a student earns a grade of D, F or W in a CLSC course, that course must be repeated. A course in which a grade of less than C (i.e., D, F or W-withdrawal) was earned may be repeated only once.

2. A student who has earned a grade of less than C (i.e., D, F or W-withdrawal) in two CLSC courses or who has earned a grade of less than C (D, F or W-withdrawal) twice in the same CLSC course will be dismissed from the CLSC program.

3. Students receiving a grade of D, F or W (withdrawal) or I (Incomplete) in a CLSC course may not progress to courses for which that course is a pre-requisite.

4. Following dismissal, students may apply for reinstatement to the CLSC program. Reinstatement is competitive and is based upon space availability.

5. In order for students to progress through the program, they must be in compliance with immunizations and hospital orientation regulations.

Notes:

1. If a student earns a grade of D, F or W in a CLSC course, that course must be repeated. A course in which a grade of less than C (i.e., D, F or W-withdrawal) was earned may be repeated only once.

2. A student who has earned a grade of less than C (i.e., D, F or W-withdrawal) in two CLSC courses or who has earned a grade of less than C (D, F or W-withdrawal) twice in the same CLSC course will be dismissed from the CLSC program.

3. Students receiving a grade of D, F or W (withdrawal) or I (Incomplete) in a CLSC course may not progress to courses for which that course is a pre-requisite.

4. Following dismissal, students may apply for reinstatement to the CLSC program. Reinstatement is competitive and is based upon space availability.

5. In order for students to progress through the program, they must be in compliance with immunizations and hospital orientation regulations.
### Courses

#### CLSC 3102 Essentials Laboratory for Clinical Laboratory Science
1 Semester Credit Hour (1 Lab Hour)
Application of essential practices for clinical laboratory science. Offered fall semester every year.

**Co-requisite:** SMTE 0092.

#### CLSC 3200 Essentials for Applied Laboratory Sciences
2 Semester Credit Hours (1 Lecture Hour)
Introduction to general laboratory procedures, laboratory safety and regulations, quality assurance, professional ethics, specimen acquisition, sample maintenance and microscopy. Includes an introduction to the health care, public health and criminal investigation system. Offered fall, spring and summer semesters every year.

**Prerequisite:** BIOL 1407 and CHEM 1412.

#### CLSC 4120 Hemostasis
1 Semester Credit Hour (1 Lecture Hour)
Studies of blood coagulation with an emphasis on the interaction of blood vessels, platelets, and certain plasma proteins. Disorders of hemostasis will be discussed along with diagnostic testing.

**Prerequisite:** BIOL 2416 and CHEM 4401.

#### CLSC 4182 Seminar – Clinical Correlations
1 Semester Credit Hour (1 Lecture Hour)
Informal lectures covering the newest developments in laboratory medicine. Includes discussion of the patient's clinical laboratory results, selection and interpretation of laboratory tests, and presentation of research. Requires permission of instructor and application. Offered summer semester (summer II only) every year.

#### CLSC 4200 Professional Skills for Clinical Laboratory Scientists
2 Semester Credit Hours (2 Lecture Hours)
Study of the role of the medical laboratory professional in the health care system. Includes professional ethics, legal responsibility, medical laboratory management, instructional methods, evaluation of clinical laboratory methods, medical laboratory instrument selection, clinical research and current professional topics. Requires permission of instructor and application. Offered summer semester (summer I only) every year.

#### CLSC 4280 Introduction to the Clinical Laboratory Profession
2 Semester Credit Hours (2 Lecture Hours)
Studies of the latest instrumentation, instrument selection, basic research, quality assurance and statistics used in the clinical laboratory.

**Prerequisite:** (CLSC 3200, CHEM 4401 and MATH 1442).

#### CLSC 4297 Professional Practicum I
2 Semester Credit Hours (2 Lecture Hours)
Supervised learning experience in selected departments of the clinical laboratories.

#### CLSC 4325 Clinical Chemistry I
3 Semester Credit Hours (3 Lecture Hours)
Continuation of CLSC 4297 - Professional Practicum I. Supervised learning experience in selected departments of the clinical laboratories. Includes the methodology of diagnostic tests and normal and abnormal human physiology as applied to diagnosis of pathological conditions.

**Prerequisite:** CHEM 4401.

**Co-requisite:** SMTE 0092.

#### CLSC 4326 Clinical Chemistry II
3 Semester Credit Hours (3 Lecture Hours)
Continuation of CLSC 4325 - Clinical Chemistry I. Emphasis on advanced clinical chemistry topics and procedures.

**Prerequisite:** CLSC 4325.

#### CLSC 4370 Clinical Microbiology I
3 Semester Credit Hours (3 Lecture Hours)
Lecture and laboratory studies of common pathogenic bacteria. Emphasis is on staining, cultural, and differential biochemical characteristics, methods of isolation from body fluids and susceptibility to therapeutic agents.

**Prerequisite:** BIOL 2421.

**Co-requisite:** SMTE 0092.

#### CLSC 4371 Clinical Microbiology II
3 Semester Credit Hours (2 Lecture Hours, 3 Lab Hours)
Lecture and laboratory studies of parasitic, viral, mycological and unusual bacterial human pathogens. Emphasis on methods of isolation from body fluids, identification methods and correlation with pathology.

**Prerequisite:** CLSC 4370.

#### CLSC 4382 Advanced Medical Laboratory Procedures
3 Semester Credit Hours (3 Lecture Hours)
Lecture and laboratory studies of the newest development in laboratory diagnostic medicine. Includes advanced clinical chemistry, immunology and molecular diagnostic procedures.

**Prerequisite:** CLSC 4325 and BIMS 4406 or BIOL 4406 and CHEM 4401.

#### CLSC 4420 Hematology
4 Semester Credit Hours (4 Lecture Hours)
Studies of the formation, function and identifying characteristics of the cellular elements of human blood and other body fluids in health and diseased states and laboratory studies on blood coagulation. Lecture and laboratory emphasize the enumeration, morphology and staining characteristics of normal and abnormal cells and hemostasis.

**Prerequisite:** BIOL 2416 and CHEM 4401.

**Co-requisite:** SMTE 0092.

#### CLSC 4430 Clinical Immunology
4 Semester Credit Hours (4 Lecture Hours)
Theoretical aspects of the immune response and its relationship to the diagnosis of disease and clinical immunohematology. Lecture and laboratory stress the detection, identification and characterization of antibodies, blood grouping and typing, compatibility testing, blood component therapy, HLA testing and diagnosis of pathological conditions.

**Prerequisite:** BIMS 4406 or BIOL 4406.

**Co-requisite:** SMTE 0092.

#### CLSC 4598 Professional Practicum II
5 Semester Credit Hours (5 Lecture Hours)
Continuation of CLSC 4297 - Professional Practicum I. Supervised learning experience in selected departments of the clinical laboratories.

**Prerequisite:** CLSC 4297.
CLSC 4599 Professional Practicum III
5 Semester Credit Hours (5 Lecture Hours)
Continuation of CLSC 4598 - Professional Practicum II. Supervised learning experience in selected departments of the clinical laboratories.
Prerequisite: CLSC 4598.

Health Sciences, BSHS
Program Description
Program Closure Date: 14 August 2023. Last term students can complete the Health Science Major: Summer 2023.

Effective start date of Healthcare Administration Major: Fall 2020.

Students may remain in the HLSC degree program or transfer to the Bachelor of Science in Healthcare Administration Program (BSHA) which begins Fall 2020. Intent to transfer must be made to advising by 1 March 2020.

Date the program provider will cease recommending candidates to the BSHS degree program: 1 December 2019.

The Bachelor of Science in Health Sciences (BSHS) prepares graduates for a variety of career opportunities in the health care field by providing the management skills necessary for success. By designing a degree plan using electives in such areas as computer science, geographic information systems, mathematics, business administration, accounting, international business, and information systems, the student may pursue specific areas of interest. Students can also use electives to design a degree plan that will satisfy entrance requirements for admission to professional schools such as medicine, dentistry, physical therapy, public health, law, and business.

Student Learning Outcomes
Students will:

• Demonstrate a thorough understanding of the theoretical and practical aspects of the health care delivery system from a historical, comparative, economic, cultural, and ethical perspective.
• Employ a variety of business and management skills and techniques including marketing, financial management, law, and information management to effectively and efficiently advance the goals of the organization.
• Demonstrate creativity in defining, negotiating, and solving problems.
• Communicate and educate, using the most current information and communication technology.

Program Requirements
All of the following requirements must be completed and turned into the appropriate personnel before the practicum is begun. Students who do not have the following completed will not be able to participate in HLSC 4680 Practicum (6 sch):

• City Wide Orientation Completion Date and/or Hospital Orientation Date
• Immunization Record
• Background Investigation

Health Science Support Courses/Minor
37-40 hours of health science support courses/minor 37-40

Specialization Area

Students may complete a designated minor in the following areas (18-22 sem. hrs.):

- Geographic Information Systems (22 sem. hrs.)
- Computer Science (22 sem. hrs.)
- Mathematics (18 sem. hrs.)
- Business Administration (18 sem. hrs.)
- Accounting (18 sem. hrs.)
- Economics (18 sem. hrs.)
- International Business (18 sem. hrs.)
Management Information Systems (18 sem. hrs.)

Electives
Electives (if needed to reach 120 hrs) 5

Total Hours 120-125

With approval, students can design a degree plan with an interdisciplinary area of specialization (22 hrs) or use electives to satisfy pre-professional school requirements.

Courses

HLSC 3300 The Health Care System
3 Semester Credit Hours (3 Lecture Hours)
Addresses how the U.S. Health Services System is organized, how health services are delivered, and the mechanisms by which health services are financed in the United States. Provides an undergraduate level overview of the U.S. health services system and its key components, including health system resources, health system foundations, health system resources, health system processes, and health system outcomes. Should be taken during first semester of Health Sciences courses. Cross listed with HCAD 3300.

HLSC 3310 Epidemiology
3 Semester Credit Hours (3 Lecture Hours)
Application of epidemiologic methods and procedures to the study of the distribution and determinants of health and diseases, morbidity, injuries, disability, and mortality in populations. Epidemiologic methods for the control of conditions such as infectious and chronic health hazards, and unintentional injuries are discussed. Other topics include quantitative aspects of epidemiology, for example, data sources, measures of morbidity and mortality, evaluation of association and causality, and study design. Cross listed with HCAD 3310.
HLSC 3320 Health Care Marketing
3 Semester Credit Hours (3 Lecture Hours)
An introductory study of the essentials of marketing within the dynamically evolving health care system. Cross listed with HCAD 3320.

HLSC 3330 Financial Management in Health Care
3 Semester Credit Hours (3 Lecture Hours)
Introduction to health care financial management including selected topics from financial accounting, management accounting, finance, internal audit and personal finance. Health care payment and classification systems will be studied and practical applications will be emphasized. Cross listed with HCAD 3330.

HLSC 3340 Health Program Planning and Evaluation
3 Semester Credit Hours (3 Lecture Hours)
Introduction to the skills and techniques required to research and develop culturally competent health programs. Students will gain a basic understanding of how to utilize existing data to assess community needs, implement community health programs, and evaluate program effectiveness, exploring the concepts, processes and techniques used in health program planning, implementation, and evaluation. The course will emphasize the importance of teams and partnerships in successful community health programs. Cross listed with HCAD 3340.
Prerequisite: MATH 1442, 1342 or 2342.

HLSC 3350 Information Systems and Technology in Health Care
3 Semester Credit Hours (3 Lecture Hours)
Provides an overview of the role technology plays in management of health care information. Emphasis is placed on system analysis, techniques, and skills used in information management. Cross listed with HCAD 3350.

HLSC 3360 Health Education and Promotion
3 Semester Credit Hours (3 Lecture Hours)
This course provides an introduction to the discipline and profession of health education and promotion. It examines the concepts of health and wellness, the national and global health status, theories of behavior change, and the implementation and assessment of health promotion interventions. Cross listed with HCAD 3360.

HLSC 3370 Complementary and Alternative Medicine
3 Semester Credit Hours (3 Lecture Hours)
Introduction to complementary and alternative medicine with an emphasis on related economic, political, legal, and social issues. Cross listed with HCAD 3370.

HLSC 4100 Assessment of Accumulated Knowledge
1 Semester Credit Hour (1 Lecture Hour)
This course provides an assessment of student knowledge garnered from Health Science program course work. It also prepares students for the capstone Practicum course. Cross listed with HCAD 4100.

HLSC 4300 Management and Organization Behavior in Health Care
3 Semester Credit Hours (3 Lecture Hours)
Introduction to principles of management and organization behavior in healthcare with emphasis on human resource management topics and issues. Cross listed with HCAD 4300.

HLSC 4310 Health Law
3 Semester Credit Hours (3 Lecture Hours)
Introduction to law and the legal system with special emphasis on health related topics including quarantine and key health law issues. Cross listed with HCAD 4310.

HLSC 4320 Project Management in Healthcare
3 Semester Credit Hours (3 Lecture Hours)
This course introduces the fundamental project management concepts required to design, develop and deploy project plans successfully within the healthcare industry. The management of resources, schedules, risks, and scope of a project are examined for successful project implementation. Students are exposed to the role of healthcare project managers and the project management process as they provide structure and oversight to the constantly growing and changing healthcare industry. Cross listed with HCAD 4320.

HLSC 4330 Human Resource Management in Healthcare
3 Semester Credit Hours (3 Lecture Hours)
This course presents the foundational concepts of healthcare human resource management. Students are introduced to fundamental human resource management techniques needed within health organizations including leadership, workforce planning, recruitment, employee selection, compensation, employee development, workload management, human resource law, and ethics. Future healthcare management and leadership professionals must understand these concepts to comply with human resource department policies and support the strategic plan. Cross listed with HCAD 4330.

HLSC 4340 Quality Management and Evaluation in Health Care
3 Semester Credit Hours (3 Lecture Hours)
Introduction to principles of quality assessment and outcome management in healthcare organizations. Cross listed with HCAD 4340.

HLSC 4390 Selected Topics in Health Science
1-3 Semester Credit Hours (1-3 Lecture Hours)
Selected topics for special study related to health science issues. May be repeated for credit when topics vary. Not required for the BSHS but may be used to fulfill elective requirement.

HLSC 4396 Directed Independent Study
1-3 Semester Credit Hours
Course not required for the BSHS but may be used to fulfill elective requirement.

HLSC 4680 Practicum
6 Semester Credit Hours (1 Lecture Hour, 15 Lab Hours)
The Health Science Practicum is an institution-based project course requiring the student to complete on-site practicum hours. It provides a structured and guided learning environment to help students make the most of their practicum experience. Course components facilitate students’ professional development, focusing on the transition from the role of a student to the role of a healthcare professional.

Healthcare Administration, BS Program Description
The Bachelor of Science in Healthcare Administration (BSHA) prepares graduates for a variety of career opportunities in the health care field by providing the management skills necessary for success. By designing a degree plan using electives in such areas as computer science, marketing, education, business administration, accounting, human resource management, and information systems, the student may pursue specific areas of interest. Students can also use electives to design a degree plan that will satisfy entrance requirements for admission to professional schools such as medicine, dentistry, physical therapy, public health, law, and business.
Student Learning Outcomes

Students will:

- Demonstrate a thorough understanding of the theoretical and practical aspects of the health care delivery system from a historical, comparative, economic, cultural, and ethical perspective.
- Employ a variety of business and management skills and techniques including marketing, financial management, law, and information management to effectively and efficiently advance the goals of the organization.
- Demonstrate creativity in defining, negotiating, and solving problems.
- Communicate and educate, using the most current information and communication technology.

Program Requirements for Healthcare Administration

Prior to designation as a BSHA major, students must meet with the advisor to create a degree completion and minor area of specialization plan.

Articulation

Del Mar College– Articulation agreement details: See advising for assistance.

Grading

1. A scholastic grade point average of 2.25 is a minimum requirement in the upper division courses designated for the Bachelor of Science in Healthcare Administration. A minimum grade of C is required in all courses in the BSHA major.
2. If a student earns a grade of D, F, or W in a healthcare administration course, that course must be repeated. A course in which a grade of less than C (i.e., D, F, or W, Withdrawal) was earned may be repeated only once.
3. A student who has earned a grade of less than C (i.e., D, F, or W, Withdrawal) in two courses or who has earned a grade of less than C (D, F, or W, Withdrawal) twice in the same course will be dismissed from the BSHA program.
4. Students receiving a grade of D, F, or W (Withdrawal) or I (Incomplete) in a course may not progress to courses for which that course is a prerequisite.

Specialization Area

Students must complete a designated minor in one of the following 18-22 areas:

- Geographic Information Systems (22 sem. hrs.)
- Computer Science (22 sem. hrs.)
- Business Administration (18 sem. hrs.)
- Accounting (18 sem. hrs.)
- International Business (18 sem. hrs.)
- Management Information Systems (18 sem. hrs.)
- Education (18 sem. hrs.)
- Marketing (18 sem. hrs.)
- Communication Studies (18 sem. hrs.)
- Public Relations (21 sem. hrs.)
- Social Work (18 sem. hrs.)
- Sociology (18 sem. hrs.)
- Human Resource Management (18 sem. hrs.)
- Psychology (18 sem. hrs.)
- Environmental Science (20-22 sem. hrs.)
Management (18 sem. hrs.)

With approval, students can design a degree plan with an interdisciplinary area of specialization (18-22 hrs) or use electives to satisfy pre-professional school requirements.

#### Courses

**HCAD 3300 The Health Care System**  
3 Semester Credit Hours (3 Lecture Hours)  
Addresses how the U.S. Health Services System is organized, how health services are delivered, and the mechanisms by which health services are financed in the United States. Provides an undergraduate level overview of the U.S. health services system and its key components, including health system resources, health system foundations, health system resources, health system processes, and health system outcomes. Should be taken during first semester of Health Sciences courses. Cross listed with HLSC 3300.

**HCAD 3310 Epidemiology**  
3 Semester Credit Hours (3 Lecture Hours)  
Applies epidemiologic methods and procedures to the study of the distribution and determinants of health and diseases, morbidity, injuries, disability, and mortality in populations. Epidemiologic methods for the control of conditions such as infectious and chronic health hazards, and unintentional injuries are discussed. Other topics include quantitative aspects of epidemiology, for example, data sources, measures of morbidity and mortality, evaluation of association and causality, and study design. Cross listed with HLSC 3310.  
**Prerequisite:** HCAD 3300* or HLSC 3300*.  
*May be taken concurrently.
HCAD 3320 Health Care Marketing
3 Semester Credit Hours (3 Lecture Hours)
Provides an introductory study of the essentials of marketing within the dynamically evolving health care system. The marketing framework is provided as a basis for decisions related to marketing mix variables. Content includes buyer behavior, marketing research, market segmentation, and marketing strategy. Cross listed with HLSC 3320.
Prerequisite: HCAD 3300*. *May be taken concurrently.

HCAD 3330 Financial Management in Health Care
3 Semester Credit Hours (3 Lecture Hours)
Provides an introduction to health care financial management including selected topics from financial accounting, management accounting, finance, internal audit and personal finance. Health care payment and classification systems are studied and practical applications are emphasized. Cross listed with HLSC 3330.
Prerequisite: HCAD 3300*. *May be taken concurrently.

HCAD 3340 Health Program Planning and Evaluation
3 Semester Credit Hours (3 Lecture Hours)
Introduces the skills and techniques required to research and develop culturally competent health programs. Students create new data and utilize existing data to assess community needs, implement community health programs, and evaluate program effectiveness, exploring the concepts, processes and techniques used in health program planning, implementation, and evaluation. The course emphasizes the importance of teams and partnerships in successful community health programs. This is an intensive writing course. Cross listed with HLSC 3340.
Prerequisite: (MATH 1442 or 1342) or (MATH 2342) and (HCAD 3300*). *May be taken concurrently.

HCAD 3350 Information Systems and Technology in Health Care
3 Semester Credit Hours (3 Lecture Hours)
Provides an overview of the role technology plays in management of health care information. Emphasis is placed on system analysis, techniques, and skills used in information management. Covers determining what information is needed by whom; designing information flows, procurement of computer/telecommunication resources, assuring information security, and continuing management of information systems supporting healthcare delivery. Satisfies university computer literacy requirement. Cross listed with HLSC 3350.
Prerequisite: HCAD 3300*. *May be taken concurrently.

HCAD 3360 Health Education and Promotion
3 Semester Credit Hours (3 Lecture Hours)
Provides an introduction to the discipline and profession of health education and promotion. It examines the concepts of health and wellness, national and global health status, theories of behavior change, and the implementation and assessment of health promotion interventions. It provides an introduction to medical terminology for health educators. This is a writing intense course. Cross listed with HLSC 3360.
Prerequisite: HCAD 3300* or HLSC 3300*. *May be taken concurrently.

HCAD 3370 Complementary and Alternative Medicine
3 Semester Credit Hours (3 Lecture Hours)
Provides an introduction to complementary and alternative medicine with an emphasis on related economic, political, legal, and social issues. The course identifies the processes, interventions, and funding agencies available for providing alternative care; reviews the various professions within alternative and complementary medicine; and addresses the holistic approach to health and well-being. Cross listed with HLSC 3370.

HCAD 4100 Assessment of Accumulated Knowledge
1 Semester Credit Hour (1 Lecture Hour)
Provides an assessment of student knowledge garnered from Health Science program course work. Allows creation of a business resume and mock interview experience. Prepares students for the capstone Practicum course. Cross listed with HLSC 4100.

HCAD 4300 Management and Organizational Behavior in Health Care
3 Semester Credit Hours (3 Lecture Hours)
Introduces students to principles of management and organization behavior in healthcare. Topics include management, planning, organizing, staffing, leading, controlling, decision making, communicating, and professionalism, as well as the connective processes of decision making, coordinating, and communicating in healthcare organizations. This is an intensive writing course. Cross listed with HLSC 4300.

HCAD 4310 Health Law, Policy and Ethics
3 Semester Credit Hours (3 Lecture Hours)
Introduces law and the legal system with special emphasis on health-related topics and policies, and key health law issues. Includes the study of the legal and regulatory environment of health care and the administration of health services with a review of the laws pertaining to healthcare institutions, physicians, and other healthcare workers who contribute to patient care. Tort and contract law are emphasized. The course addresses policy issues and ethics through topics like patient rights, reproduction, and end of life decisions. Cross listed with HLSC 4310.

HCAD 4320 Project Management in Health Care
3 Semester Credit Hours (3 Lecture Hours)
Introduces the fundamental project management concepts required to design, develop and deploy project plans successfully within the healthcare industry. The management of resources, schedules, risks, and scope of a project are examined for successful project implementation. Students are exposed to the role of healthcare project managers and the project management process as they provide structure and oversight to the constantly growing and changing healthcare industry. Cross listed with HLSC 4320.

HCAD 4330 Human Resource Management in Health Care
3 Semester Credit Hours (3 Lecture Hours)
Introduces law and the legal system with special emphasis on health-related topics and policies, and key health law issues. Includes the study of the legal and regulatory environment of health care and the administration of health services with a review of the laws pertaining to healthcare institutions, physicians, and other healthcare workers who contribute to patient care. Tort and contract law are emphasized. The course addresses policy issues and ethics through topics like patient rights, reproduction, and end of life decisions. Cross listed with HLSC 4310.
Students will:

Student Learning Outcomes

The Nursing Program provides a Bachelor of Science in Nursing degree completing 58 semester hours in the nursing courses. Total program hours include semester hours of prerequisite program coursework. In addition, they complete the practicum experience. Course components facilitate students’ professional development, focusing on the transition from the role of a student to the role of a healthcare professional. Cross listed with HLSC 4340.

HCAD 4340 Global Health/Health Disparities
3 Semester Credit Hours (3 Lecture Hours)
Provides students with an historical perspective on global health issues and leads to an understanding of current and future concerns. Emphasis is on the global burden of disease and determinants of health as well as health disparities. Provides students with an introduction to the study of health disparities in the United States, examining how health disparities are defined and measured and exploring issues such as how the structure of American society affects who gets sick and who gets care. Case studies expose students to a variety of real-life scenarios and explore a range of issues. This is an intensive writing course.

HCAD 4680 Practicum
6 Semester Credit Hours (1 Lecture Hour, 15 Lab Hours)
The Health Science Practicum is an institution-based project course requiring the student to complete on-site practicum hours. It provides a structured and guided learning environment to help students make the most of their practicum experience. Course components facilitate students’ professional development, focusing on the transition from the role of a student to the role of a healthcare professional. Cross listed with HLSC 4680.

Prerequisite: HCAD 4100.

Nursing, BSN

Program Description

The philosophical foundations of the Texas A&M University-Corpus Christi Baccalaureate Nursing Program are based on the belief that caring is the essence of nursing. Students are unique individuals with differing backgrounds, needs, and interests, and have the freedom and responsibility to make considered choices. Nursing faculty subscribe to the belief that professional nurses must have a solid foundation in the arts, sciences, and humanities that provides a reservoir of knowledge from which to draw when making critical clinical decisions in the roles of care provider or care coordinator (A.A.C.N., Essentials of Baccalaureate Nursing, 2008). To this purpose, baccalaureate students complete 62 semester hours of pre-requisite program coursework. In addition, they complete 58 semester hours in the nursing courses. Total program hours = 120.

The Nursing Program provides a Bachelor of Science in Nursing degree through three options:

1. Pre-licensure (Traditional/eLine/eLine military) nursing education for the individual who wishes to earn the BSN degree while preparing to become a Registered Nurse (RN).
2. RN-BSN Completion for the RN who wishes to build upon previous education and earn a baccalaureate degree.
3. Accelerated

Student Learning Outcomes

Students will:

- Incorporate the philosophy, “Caring is the Essence of Nursing” into nursing practice.
- Practice nursing utilizing the nursing process and other systematic approaches derived from the sciences and liberal arts to promote optimum health for individuals, families, and communities from diverse populations.
- Communicate and collaborate purposefully, using creative approaches that acknowledge interdependent roles and relationships.
- Demonstrate leadership through the application and utilization of theories for the improvement and enhancement of care and health status.
- Display critical thinking and independent decision-making that utilize theory and research in practice.
- Show awareness of political, ethical, and social issues; accountability for professional practice and commitment for continuing professional development.
- Accept nursing leadership roles that respond to a changing society and health care delivery system.

The baccalaureate degree program in nursing at Texas A&M University, Corpus Christi is accredited by the Commission on Collegiate Nursing Education (http://www.ccneaccreditation.org). The objectives of the program are published in the College of Nursing and Health Sciences Student Handbook, which may be found at http://conhs.tamucc.edu/.

The Texas Board of Nursing requires disclosure of criminal history or disciplinary action and an FBI background check before licensure is granted. In order to promote the safety of the clients in their care and to meet the requirements of the BON and affiliated clinical agencies, students will complete the background check and be deemed eligible to take the licensing exam by the Texas Board of Nursing before acceptance to the program is granted. See the TBON web site http://www.bne.state.tx.us for the statutes and rules regulating licensure.

Admission Requirements and Procedures

Pre-licensure Option

1. For those seeking entrance into the nursing major, the admission procedure is competitive. Admission to the program is two times per year – fall and spring. Three pre-licensure track options are available – traditional, eLine, and eLine Military. Texas A&M University-Corpus Christi sophomores and transfer students will be accepted based on their grade point average for the last 60 credit hours. No “D” or “F” grades will be accepted for credit. Science courses may not be older than 7 years. Those students seeking admission to the nursing program must contact the College of Nursing and Health Sciences to obtain materials to complete the application process. The application process is as follows:
   a. Students must complete an online application to the College of Nursing and Health Sciences using NursingCAS (see College of Nursing and Health Sciences web page for admission deadlines and application procedure http://conhs.tamucc.edu/). If the student is not already enrolled at Texas A&M University-Corpus Christi, the student must also apply to the University for admission. Admission to the University does not constitute admission to the nursing program.
   b. The HESI A2 with critical thinking scores must be uploaded to the NursingCAS application during the application period. (see college web page for information http://conhs.tamucc.edu)
   c. The admissions committee meets to review applications and to make recommendations.
d. Admission is dependent on a matrix including: last 60 hour GPA, science GPA, HESI A2 composite score, reading comprehension score and HESI critical thinking score. (see program web page [https://conhs.tamucc.edu/future-students/traditional.html] for IDEAL scores listed under "How to be a competitive nursing applicant.")

e. Notification of the results of the admission review is emailed to students. Admission to the program is conditional pending submission of the background check, proof of vaccination status, and possession of a current CPR card.

f. Pre-nursing courses may be continued in the spring and summer semester prior to the junior year.

2. Freshmen generally declare pre-nursing as their intended course of study. Prior to registration, students need to contact the nursing academic advisor to assist in degree planning.

3. All pre-nursing students must complete the Core Curriculum Program (42 semester hours) and required nursing support courses prior to admission to the nursing major. Please see "Core Curriculum Program (http://catalog.tamucc.edu/undergraduate/university-college/programs/core-curriculum-program/)" in this catalog for information on Core Curriculum Program requirements.

Students should consult their academic advisor and/or faculty mentor for additional information on Core Curriculum Program and support courses, including the sequence in which the courses should be taken. To lighten the academic load, it is suggested that some of these courses be taken in the summer sessions. Science courses may not be older than 7 years for Pre-licensure BSN students. ³

4. A personal interview with the applicant may be requested.

5. Transfer students from another nursing school who have completed nursing courses over 2 years ago must validate completed course work or repeat the course. Additionally, students should provide nursing course descriptions from the college catalog and the course syllabi (must have at least the course objectives, course outline, and a list of textbooks used) from the transferring college/school of nursing. Students should also submit a letter from the Dean or Director of the transferred nursing program indicating they are in good standing and eligible to return. Any student needing to validate courses must meet with the academic advisor who will forward materials to the Associate Dean.

6. Students may only apply for one track into the program. The students choice must be designated on the Nursing CAS application.

### Accelerated Baccalaureate Nursing Option

1. This program, 1) is an intensive, accelerated 4 semester program with students graduating with a BSN, 2) coursework consists of hybrid, on-campus and online courses, 3) includes 9 semester hours of graduate course work – dual credit to BSN students, 4) is committed to an integrated framework of health care delivery, 5) leverages technology to reduce carbon footprint, and 6) in collaboration with the TAMUCC Department of Art and Design, this nursing program is enriched through the integration of arts and culture.

a. Designed specifically for students with baccalaureate degrees in other fields (from a regionally accredited university/college) who seek to transition into nursing.

b. The program prepares students to sit for the NCLEX-RN licensing exam.

c. It is expected that students are not employed during enrollment in this intensive program.

2. The application process is as follows:

### Admission criteria:

a. All applicants are required to complete the online application through the NursingCAS website ([https://nursingcas.liaisoncas.com/applicant-ux/#/login](https://nursingcas.liaisoncas.com/applicant-ux/#/login)) (see College of Nursing and Health Sciences web page for admission deadlines & application procedure [http://conhs.tamucc.edu].)

i. Unverified applications will not be reviewed for consideration by the committee. Admission decisions will be made on a rolling basis.

ii. It is the responsibility of the applicant, without exception, to meet all application deadlines and maintain all updates to the applicant’s NursingCAS application.

3. Admission criteria:

a. All prerequisite coursework must be completed from a national/regional accredited institution.

b. Applicants must have satisfactory completion of all prerequisite coursework with grades of C or better.

c. The four prerequisite science courses listed below must be completed within seven years of the submission of the application for consideration. ¹ All science labs must be completed through on-campus instruction.

i. General Chemistry with lab

ii. Microbiology with lab

iii. Two semesters of Human Anatomy and Human Physiology with labs - taken as two separate courses or as a sequence

i. It is the responsibility of the applicant, without exception, to meet all application deadlines and maintain all updates to the applicant’s NursingCAS application.

¹ Students actively utilizing and applying content of science courses may request a waiver to the 7-year rule. Students should consult their academic advisor for more information.
1. Students who are currently enrolled in their last semester of a non-nursing baccalaureate may apply for conditional admission.
   a. Students must verify degree conferment prior to the first day of Accelerated BSN coursework.
   b. All in-progress and future coursework including outstanding prerequisite requirements must be documented in the Nursing CAS application and/or included on an official transcript verifying the intent to complete the requirement.
2. Paid or volunteer health care experience is encouraged.
4. Select candidates will be invited to meet with the admission committee for a face-to-face interview. For those invited for an interview, professional attire is required.
5. Students in the Accelerated Baccalaureate Nursing program are subject to the following policies as listed elsewhere in this section:
   a. Program Requirements for all Undergraduate Prelicensure Students
   b. Grading Policies, Progression1, Retention and Dismissal
   c. Advising
   d. Graduation Requirements

Please review Accelerated BSN Program Academic Progression Stipulation

RN-BSN Completion Option
1. This option is designed for RNs who have completed one of two types of Nursing Programs:
   • Completion of a nationally accredited associate degree nursing program.
   • Completion of a nationally accredited diploma school of nursing program.
   For students who are graduates of a non-accredited program, Texas A&M University-Corpus Christi College of Nursing and Health Sciences honors the Texas Nursing Articulation Model, the first voluntary statewide model for transitioning from one level of education to another without repetition in learning. The assumptions of the model that apply to graduates from nonaccredited programs are the following: 5. Articulation without testing is an educationally and professionally sound practice based upon the accepted competencies; 6. Texas nurses seeking educational mobility demonstrate minimal competence on the basis of an official transcript(s) and a valid Texas license(s). (The Texas Nursing Articulation Model 1997-2000)
2. A student receives 30 hours of credit from previous nursing courses, which is held in escrow until the student has successfully completed 12 hours of nursing courses.
3. The application process is as follows:
   a. Provide evidence of current unencumbered Texas registered nurse license.
   b. Attend a personal interview if requested.
   c. Transfer credit if grade is C or better.
   d. Have a grade point average of 2.5 (4.0 scale) or better in the last 60 hours of course work.

Students who are currently enrolled in their last semester of an associate nursing degree program may apply for admission. These students must take and pass the state board examination on the first date they are eligible.

Associate degree students receiving conditional admission status may take up to 5 semester hours of selected nursing courses prior to full status admission. These courses include:

* Online offering

Program Requirements for All Undergraduate Students
Students will be considered out of compliance if a designated immunization or other item required to be submitted to the CONHS Castle branch database manager or other agency is not updated by the designated deadline throughout their clinical courses. Additionally, there may be further requirements from a clinical facility that students will be required to meet. Any student who is out of compliance may be disenrolled from his/her classes.

1. The Texas Department of State Health Services has specific immunization requirements for students involved with direct patient contact. These requirements, as stated in the Texas Administrative Code, Title 25, Part 1, Chapter 97, Subchapter B, Rule 97.64, include the following:
   a. “Students cannot be provisionally enrolled without at least one dose of measles, mumps, and rubella vaccine if direct patient contact will occur during the provisional enrollment period.”
   b. “Polio vaccine is not required. Students enrolled in health-related courses are encouraged to ascertain that they are immune to poliomyelitis”
   c. “One dose of tetanus-diphtheria toxoid (Td) is required within the last ten years.”
   d. “Students who were born on or after January 1, 1957, must show, prior to patient contact, acceptable evidence of vaccination of two doses of measles containing vaccine
   e. “Students must show, prior to patient contact acceptable evidence of vaccination of one dose of rubella vaccine.”
   f. “Students born on or after January 1, 1957, must show, prior to patient contact, acceptable evidence of vaccination of one dose of mumps vaccine.”
   g. “Students shall receive a complete series of hepatitis B vaccine prior to the start of direct patient care or show serologic confirmation of immunity to hepatitis B virus.”
   h. “Students shall receive two doses of varicella vaccine unless the first dose was received prior to thirteen years of age.”
For additional information, please see the Texas Administrative Code, Title 25, Part 1, Chapter 97, Subchapter B, which is accessible at http://www.sos.state.tx.us/tac/index.shtm (http://www.sos.state.tx.us/tac/index.shtm/). Please note that some hospitals have stricter requirements than the state minimum standards.

Rule 97.65 lists the following exceptions to the immunization requirements:

i. "Sero logical confir mations of immunity to measles, rubella, mumps, hepatitis A, hepatitis B, or varicella, are acceptable. Evidence of measles, rubella, mumps, hepatitis A, or hepatitis B, or varicella illness must consist of a laboratory report that indicates either confirmation of immunity or infection."

ii. "A parent or physician validated history of varicella disease (chickenpox) or varicella immunity is acceptable in lieu of vaccine. A written statement from a physician, or the student’s parent or guardian, or school nurse, must support histories of varicella disease.”

(Immunizations are available for a nominal fee at Coastal Bend Wellness Center, the City of Corpus Christi Health District or Amistad Health Center.)

2. Results of tuberculosis PPD screening are required annually.

3. To meet CPR requirements, students will complete their HeartCode® BLS Course during the Fundamentals course lab days. Semester one students will be given more information once classes begin.

4. All Students are required to complete a criminal background check through the Texas Board of Nursing before acceptance into the program.

5. Students are required to purchase professional liability coverage through the University. Fees for this coverage are included in the fees paid at the time of registration at the beginning of each academic year. (See College of Nursing & Health Sciences Student Handbook http://conhs.tamucc.edu/shb/. (http://conhs.tamucc.edu/shb/).

6. Medical insurance coverage is strongly recommended. The University and affiliating clinical agencies accept no responsibility for medical care sought as a result of accidents/incidents occurring during the course of nursing instruction or clinical assignments (See College of Nursing & Health Sciences Student Handbook: http://conhs.tamucc.edu/shb/).

7. Students forced to interrupt their regular rotation for personal or academic reasons may apply for reinstatement. Students must complete and submit the application for reinstatement. The academic advisor is available for assistance with this process. The Admissions, Progression & Academic Standards committee may admit a student conditionally if there is evidence of extenuating circumstances.

Grading Policies: Progression, Retention and Dismissal

The following requirements refer to grading policies.

1. A scholastic grade point average of 2.25 is a minimum requirement in the upper division nursing courses designated for the Bachelor of Science in Nursing. A minimum grade of C is required in all courses in the nursing major.

2. If a student earns a grade of D, F, or W in a nursing course, that course must be repeated. A course in which a grade of less than C (i.e., D, F, or W, Withdrawal) was earned may be repeated only once.

3. A student who has earned a grade of less than C (i.e., D, F, or W, Withdrawal) in two nursing courses or who has earned a grade of less than C (D, F, or W, Withdrawal) twice in the same nursing course will be dismissed from the nursing program.

4. Students receiving a grade of D, F, or W (Withdrawal) or I (Incomplete) in a nursing course may not progress to courses for which that course is a prerequisite.

5. Administration and faculty reserve the right to dismiss students without previous warning for unsafe and/or unprofessional behavior. The conduct of nursing students should meet ethical standards as defined by American Nurses Association (ANA) in the Code of Ethics for Nurses. Personal integrity is reflected in professional judgments. Consequently, the College of Nursing and Health Sciences reserves the right to dismiss students from the program for unprofessional or unsafe behavior. (See College of Nursing and Health Sciences Student Handbook for further examples and to review the Academic Honesty and Professional Integrity Policy http://conhs.tamucc.edu/current-students/assets/student-handbook-2017.pdf.)

6. Following dismissal, students may apply for reinstatement to the nursing program. Reinstatement is competitive and based upon space availability.

7. Students must meet the standards for minimal performance and progression established by Texas A&M University-Corpus Christi (see the catalog section on Academic Policies and Regulations).

8. In order for students to progress through the program, they must be in compliance with immunizations/CPR and Hospital Orientation regulations. (See College of Nursing and Health Sciences Student Handbook for consequences for noncompliance to these policies.)

9. Students must complete the Core Curriculum Program. (See “Core Curriculum Program (http://catalog.tamucc.edu/undergraduate/university-college/programs/core-curriculum-program/)” in this catalog). See “General Education Requirement” in the “Undergraduate Programs” section of this catalog for information on ways in which transfer students can fulfill requirements. In addition to the core curriculum requirements, students must also take the required support courses, which are listed earlier in the nursing section of this catalog.

Advising

Every effort has been made to assure the accuracy of the information in this catalog. However, information is subject to change without notice. Therefore, students must consult with their Nursing Program advisors each semester prior to registration. Transfer students must meet with their advisors.

Students in the nursing majors are assigned a faculty mentor. If for any reason the faculty mentor-student assignment is not effective, the student or the faculty member can request a change in assignment. Freshmen and sophomore students pursuing the pre-nursing curriculum are also assigned a nursing faculty mentor. The academic advisor for the College of Nursing and Health Sciences is available for advisement. Students must make appointments for advisement.

RN-MSN Option

See the Nursing section of the Graduate catalog.

Accelerated Baccalaureate Nursing Option

**Online offering**

CHEM 1406 is a transfer course.

* Support Courses. There is a nursing elective area of the degree plan which may be utilized to ensure student meets the minimum 120 Sem Hrs requirement. Students should seek advisement to confirm which courses can be utilized to meet the nursing elective block, if needed. The nursing elective block may not be utilized if student meets the minimum 120 Sem Hrs requirement.

- MATH 1342 or MATH 2342 are acceptable from other institutions
- The numbers of weekly lecture and laboratory hours associated with each course are designated by (lecture:lab) following the semester hours (1 lab hour = 3 contact hours). Additional laboratory work may be required to complete the assignments. All courses involving labs will require appropriate fees.
- CHEM 1406 is a transfer course.

- CHEM 1406 is a transfer course.

Graduate courses will only count for TAMU-CC MS in Nursing degree programs. For all 3 courses to count, a student should pursue the MSN in Leadership in Nursing Systems degree. Alternatively, a student may count 2 of the 3 courses in one of the other TAMU-CC MSN programs - either the Family Nurse Practitioner or Nurse Educator degree. Graduate courses and/or credits may or may not transfer to other Universities.

2 Overlap may occur between the Core Curriculum Program and Nursing Support Courses. There is a nursing elective area of the degree plan which may be utilized to ensure student meets the minimum 120 Sem Hrs requirement. Students should seek advisement to confirm which courses can be utilized to meet the nursing elective block, if needed. The nursing elective block may not be utilized if student meets the minimum 120 Sem Hrs requirement.

3 General Chemistry I may be waived. CHEM 1406 is a transfer course.

4 MATH 1342 or MATH 2342 are acceptable from other institutions

Online offering

Blended offering

Note:

Students must have all core curriculum and supporting courses completed before admittance into the program.

Total Hours 12

Note: All University Core Curriculum and Nursing Pre-requisites courses are taken before starting program.

Courses
NURS 0015 Nursing Lab Safety Seminar
0 Semester Credit Hours
Co-requisite: NURS 3435.

NURS 3150 Professional Nursing Issues I
1 Semester Credit Hour (1 Lecture Hour)
Concentrates on legal and ethical issues affecting the nurse as an individual and a professional, and health care delivery to clients, groups and aggregates. Consideration is given to self-discovery, personal assertiveness, role conflict, negotiation and collective bargaining. Students are encouraged to apply critical thinking strategies during classroom discussions and presentations.
Prerequisite: NURS 3318, 3342, 3435 and 3614.

NURS 3318 Nurse as therapeutic Communicator
3 Semester Credit Hours (3 Lecture Hours)
Emphasis is on caring communication as an essential dimension of professional nursing. Theories are presented to explain the dynamic relationship between human behavior, health, and illness, and the impact of interpersonal relationship skills to effect positive changes in individuals and their families. Nurse communication in the role of educator will be introduced as part of the teaching/learning course content.

NURS 3342 Use of Pharmacology Principles
3 Semester Credit Hours (3 Lecture Hours)
Focuses on the basic drug classifications, concepts and principles of pharmacology, with special consideration for the nursing role in developing a comprehensive approach to the clinical application of drug therapy through the use of the nursing process. Nursing implications relative to the utilization of drug therapy are examined. Dosage calculations are evaluated for competency. (Is a pre-requisite for admission into the nursing program.)
Prerequisite: BIOL 2401 and 2402.

NURS 3435 Health Assessment
4 Semester Credit Hours (3 Lecture Hours, 4 Lab Hours)
Focuses on health assessment skills and application of the nursing process in selected pathophysiological disorders through analysis and synthesis of information obtained from subjective and objective data collection methodologies. Specified frameworks are utilized for data categorization and processing. The data are used to make judgments about health status or determine care needs for a given individual. Students are assigned to a weekly two-hour lab to practice under supervision and demonstrate health assessment skills.
Co-requisite: NURS 0015.

NURS 3548 Nursing Care of Children and their Families
5 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Applying a family-centered approach, this course focuses on health promotion, acute and chronic health conditions, and rehabilitative needs of children. Emphasis is placed on developmental, physiological, psychosocial, cultural, and spiritual care of the child within the family unit. Using the nursing process, strategies are formulated for promoting and maintaining optimal functioning of the child-family unit and for enhancing the strengths of the family unit. Clinical activities emphasize the application of theory to practice in a variety of acute care settings.
Prerequisite: NURS 3318, 3342, 3435 and 3614.

NURS 3550 Nursing Care of Parents/newborns
5 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
A study of the theoretical and empirical basis for nursing care of childbearing families using both nursing and developmental theories. Biopsychosocial factors such as legal/ethical and cultural considerations related to pregnancy, birth and newborn periods are included. A historical overview of obstetrical advances and parent-child nursing will be presented. Practice in providing nursing care to families during each phase of the childbearing cycle will occur in selected local hospitals and clinics. The nursing process is used with emphasis on the theoretical and empirical basis of practice.
Prerequisite: NURS 3318, 3614, 3342 and 3435.

NURS 3614 Fundamentals of Nursing Care
6 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
is developed for the incoming nursing student and introduces them to nursing practice and philosophies that underpin clinical practice. Fundamental nursing skills are an integral part of the nursing experience and include, but are not limited to, patient safety, with a focus on techniques related to environmental concerns, positioning and transporting, asepsis and sterile technique, medication administration, and selected invasive therapies. The critical thinking process, art of caring, and nursing theories upon which clinical practice is based will be integrated throughout the course to provide and manage safe, holistic care practices. The campus laboratory and clinical settings will afford practical experiences that include simulation and direct patient care interventions. These experiences facilitate learner application and integration of the principles and skills taught in the theory portion of this class. Students are expected to demonstrate beginning competency in application of the nursing process.
Prerequisite: NURS 4322.
Co-requisite: NURS 0015, NURS 3318, NURS 3435.
NURS 3628  Nursing Care of Adults I  
6 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours) 
Introduces the student to the use of the nursing process in the care of adults with chronic or non-complex illness. Uses a systems approach to discuss the effects of illness on individual and family, and to examine the disruption of growth and development patterns across the lifespan from young adult to senior years. The course includes clinical laboratory to allow the student the opportunity to apply theoretical concepts to clinical practice in diverse adult populations.  
Prerequisite: NURS 3318, 3435, 3614 and 3342.

NURS 4150  Professional Nursing Issues II  
1 Semester Credit Hour (1 Lab Hour)  
Concentrates on economic and political issues affecting the nurse as an individual and a professional, and health care delivery to clients, groups and aggregates. Consideration is given to self-discovery, personal assertiveness, role conflict, negotiation and collective bargaining. Students are encouraged to apply critical thinking strategies during classroom discussions and presentations.  
Prerequisite: NURS 3628, 4564, 3548 and 3550.

NURS 4155  Professional Nursing Planning and Licensure Preparation  
1 Semester Credit Hour (1 Lecture Hour)  
The course emphasizes reflection, integration, and synthesis of curricular concepts. Students engage in comprehensive review of major nursing content for licensure, preparation for entry into practice, and plans for lifelong learning.

NURS 4172  Biobehavioral Nursing Interventions II: Population Health and Chronic Health Issues Across the Life  
1 Semester Credit Hour  
Through psychomotor skill development and simulation this course advances health assessment, psychosocial, psychomotor, critical thinking, and therapeutic communication skills essential to promote, protect, maintain and restore the health of populations and provide holistic, evidence-based nursing care to individuals with chronic conditions across the lifespan and across health care settings with an emphasis on primary care.

NURS 4173  Biobehavioral Nursing Interventions III: Family and Child Health and Complex Health Issues Across the Life  
1 Semester Credit Hour  
Through psychomotor skill development and simulation this course advances health assessment, psychosocial, psychomotor, critical thinking, and therapeutic communication skills essential to caring for the childbearing family as well as infants, children, and adolescents with chronic/unique conditions across health care settings with an emphasis on primary care.

NURS 4174  Biobehavioral Nursing Interventions IV: Synthesis of Nursing Knowledge, Evidence, and Practice  
1 Semester Credit Hour (1 Lab Hour)  
Through psychomotor skill development and simulation this course advances health assessment, psychosocial, psychomotor, critical thinking, and therapeutic communication skills essential to caring for individuals, families, and populations with acute and chronic conditions across health care settings with an emphasis on primary care.

NURS 4231  Pathophysiology/Pharmacology I  
2 Semester Credit Hours  
The course integrates anatomy, chemistry, microbiology, genetics/genomics, and psychoneuroimmunoendocrinology to explore physiologic and neurobehavioral alterations that occur in response to internal and external changes across the lifespan. Pharmacological concepts and interventions are explored as one strategy to promote health. Course content aligns with Biobehavioral Nursing Concepts II & III.

NURS 4232  Pathophysiology/Pharmacology II  
2 Semester Credit Hours  
The course integrates anatomy, chemistry, microbiology, genetics/genomics, and psychoneuroimmunoendocrinology to explore physiologic and neurobehavioral alterations that occur in response to internal and external changes across the lifespan. Pharmacological concepts and interventions are explored as one strategy to promote health. Course content aligns with Biobehavioral Nursing Concepts II & III.

NURS 4233  Pathophysiology/Pharmacology III  
2 Semester Credit Hours  
The course integrates anatomy, chemistry, microbiology, genetics/genomics, and psychoneuroimmunoendocrinology to explore physiologic and neurobehavioral alterations that occur in response to internal and external changes across the lifespan. Pharmacological concepts and interventions are explored as one strategy to promote health. Course content aligns with Biobehavioral Nursing Concepts III & IV.

NURS 4234  Pathophysiology/Pharmacology IV  
2 Semester Credit Hours  
The course integrates anatomy, chemistry, microbiology, genetics/genomics, and psychoneuroimmunoendocrinology to explore physiologic and neurobehavioral alterations that occur in response to internal and external changes across the lifespan. Pharmacological concepts and interventions are explored as one strategy to promote health. Course content aligns with Biobehavioral Nursing Concepts III & IV.

NURS 4250  Professional Nursing Issues  
2 Semester Credit Hours (2 Lecture Hours)  
Concentrates on legal, ethical, economic and political issues affecting the nurse as an individual and a professional, and health care delivery to clients, groups and aggregates. Consideration is given to self-discovery, personal assertiveness, role conflict, negotiation and collective bargaining. Students are encouraged to apply critical thinking strategies during classroom discussions and presentations.

NURS 4251  Professional Nursing Issues I  
2 Semester Credit Hours  
The first of four courses co-taught with an Art Professor, introduces and enhances student aesthetic knowing and expression. Students consider aspects of personal, ethical, empirical and aesthetic knowing as foundational to providing optimal healthcare across the lifespan. Foci include skills supporting expressions of aesthetics that highlight contemporary nursing issues such as ethical care, national health priorities, professional practice, and models of care.

NURS 4252  Professional Nursing Issues II  
2 Semester Credit Hours  
The second of four courses co-taught with an Art Professor, explores the integration of aesthetic knowing and expression within contemporary professional nursing. Students examine advocacy for patients, families and populations within 21st century healthcare while reflecting on topics such as self-care, work-life balance, healthy work environments, allostasis, and effective communication.
NURS 4254 Professional Nursing Issues IV
2 Semester Credit Hours
The final aesthetic knowing and expression course co-taught with an Art Professor considers allostasis in the creation of healing environments in dynamic sociopolitical, cultural, economic and technologic arenas. Students will be challenged to think about effective, efficient and entrepreneurial care consistent with the "Quadruple Aim".

NURS 4260 Wellness and Health Promotion Across the Lifespan
2 Semester Credit Hours
Introduction of core knowledge, concepts, and values fundamental to health promotion and nursing across the lifespan with diverse populations. Students explore the social determinants of health, levels of prevention, cultural competence, care management, identity formation, health outcomes and leadership using an integrated framework of health care delivery.

NURS 4281 Biobehavioral Care of Chronic Conditions Clinical
2 Semester Credit Hours (90 Lab Hours)
Students design and provide holistic, evidence-based nursing care to individuals with chronic conditions across the lifespan and health care settings using an integrated framework of health care delivery with an emphasis on primary care settings. Students collaborate with members of the health care team to plan, implement and evaluate care provided to individuals and populations with chronic conditions.

NURS 4282 Biobehavioral Health of Complex Conditions Clinical
2 Semester Credit Hours (90 Lab Hours)
Students design and provide comprehensive holistic, evidence-based nursing care to individuals with complex health problems across the lifespan and health care settings using an integrated framework of health care delivery with an emphasis on primary care. Students collaborate with members of the health care team to plan, implement and evaluate care provided to individuals with complex health problems.

NURS 4283 Biobehavioral Health of the Family and Child Clinical
2 Semester Credit Hours (90 Lab Hours)
Students design and provide holistic, evidence-based nursing care to the childbearing family as well as infants, children, and adolescents with chronic/unique conditions across health care settings using an integrated framework of health care delivery with an emphasis on primary care. Normal and deviations from normal pregnancy are explored in relation to labor, delivery, and post-partum care, care of the neonate, and assisting families with transitions to parenthood. Students collaborate with members of the health care team to plan, implement and evaluate care provided to the childbearing family, infants, children, and adolescents.

NURS 4284 Biobehavioral Population Health Clinical
2 Semester Credit Hours (90 Lab Hours)
Students design and provide holistic, evidence-based health promotion, risk reduction, and disease management in selected community settings using an integrated framework of health care delivery. Students collaborate with members of the health care team to plan, implement and evaluate care to promote health, reduce risk and manage care.

NURS 4318 Nurse as Research Consumer
3 Semester Credit Hours (3 Lecture Hours)
Study of theory and research as a base for nursing practice. Critically analyzes published research studies with regard to implications for clinical practice. The course is planned for collaborative peer examination of the research process through critique of nursing studies. 
Prerequisite: MATH 1442, 1342 or 2342.

NURS 4320 Principles and Concepts of Patient Education - RN/BSN
3 Semester Credit Hours (3 Lecture Hours)
Provides opportunities for students to apply principles of teaching and learning with clients, families and identified groups. Special emphasis is placed on patient teaching within a rapidly changing health care environment. Students will examine learning readiness and intervene with groups and families from diverse backgrounds and educational preparation.

NURS 4322 Health Alterations
3 Semester Credit Hours (3 Lecture Hours)
Relates manifestations of disease, risk factors for disease, and the principles of pathology underlying illness and injury to therapeutic nursing interventions and outcomes. (Is a prerequisite for admission into the nursing program.) 
Prerequisite: BIOL 2401 and 2402.

NURS 4324 Nurse as Caregiver - RN/BSN
3 Semester Credit Hours (3 Lecture Hours)
Emphasis is on socialization into professional nursing. Theories are presented to explain the relationship between human behavior, health and illness and the impact of interpersonal relationship skills to effect positive changes in individuals. Application of caring theories as a basis for decision-making in nursing practice with clients and families is the focus of clinical activities.

NURS 4353 Professional Nursing Issues III
3 Semester Credit Hours
In the third of four aesthetic enriched courses, co-taught with an Art Professor, students gain aesthetic expression and knowledge related to interdisciplinary teamwork, team science collaboration, and innovative partnerships to advance solutions that address global, national, regional and local health challenges.

NURS 4361 Biobehavioral Nursing Concepts I: Health Assessment and Foundations of Nursing Across the Lifespan
3 Semester Credit Hours
Health Assessment and Foundations of Nursing Across the Lifespan (3 SCH): This course introduces students to concepts, behaviors, principles, and theories that provide the foundation for nursing practice. Student recognition of normal and abnormal health patterns using an integrated framework of health care delivery is emphasized.

NURS 4362 Biobehavioral Nursing Concepts II: Population Health and Chronic Health Issues Across the Lifespan
3 Semester Credit Hours
Population Health and Chronic Health Issues Across the Lifespan (3 SCH): Students integrate nursing and public health science to promote, protect, maintain and restore the health of populations using an integrated framework of health care delivery. Evidence-based interventions which are implemented with individuals/families, communities, and systems are explored, as are the unique health needs of vulnerable populations and measures to eliminate health disparities in a multicultural and global environment.

NURS 4363 Biobehavioral Nursing Concepts III: Family and Child Health
3 Semester Credit Hours
Students learn about nursing care for the childbearing family and the importance of developmentally-appropriate family-centered nursing care for infants, children, and adolescents with acute and chronic health issues using an integrated framework of health care delivery.
NURS 4364  Synthesis of Nursing Knowledge, Evidence and Practice  
3 Semester Credit Hours (3 Lecture Hours)  
In this course, students focus on implementing and evaluating an evidence-based practice project in conjunction with a clinical partner within primary care using an integrated framework of health care delivery. Students collaborate with leaders in practice settings to address a challenge using quality improvement initiatives.

NURS 4365  Care of the Individual within a Family - RN/BSN  
3 Semester Credit Hours (2 Lecture Hours, 3 Lab Hours)  
Utilizes a health patterns framework with systematic nursing inquiry to examine the impact of illness on families. In addition, primary, secondary, and tertiary prevention activities are emphasized as they relate to individuals, families, and aggregates. Data from individual and family assessment is used to judge and design interventions and evaluate client(s) outcomes.

NURS 4370  Nurse Coordinating Care  
3 Semester Credit Hours (2 Lecture Hours, 1 Lab Hour)  
This class provides a theoretical and experiential approach to identifying the coordinating role of the professional nurse within health care and its delivery. Current theories of management, leadership, and change are examined and related to nursing practice. Critical thinking is required in case analysis and student assessments of their own thinking, ideas and use of intellect.

NURS 4371  Biobehavioral Nursing Interventions I: Health Assessment and Foundations of Nursing Across the Life  
3 Semester Credit Hours  
Health Assessment and Foundations of Nursing Across the Lifespan (3 SCH): This course focuses on developing health assessment, psychosocial, psychomotor, critical thinking, and therapeutic communication skills that are essential for nursing practice across the lifespan as well as the health and illness continuum.

NURS 4380  Nursing Honors  
3 Semester Credit Hours  
Provides superior nursing students who have demonstrated ability to function independently an opportunity to design and implement a creative learning experience in an area of interest.

NURS 4390  Dimensions in Nursing  
3 Semester Credit Hours (3 Lecture Hours)  
Focuses on literature study and in-depth knowledge of selected topics relevant to the nurse as a professional provider of care or coordinator of care. Variable content is directed by faculty specialties.

NURS 4470  Professional Transitions  
4 Semester Credit Hours (2 Lecture Hours, 2 Lab Hours)  
This capstone course focuses on the role of the developing professional nurse’s ability to use evidence-based practice and quality standards to deliver safe holistic care to culturally diverse and complex clients and families. Emphasis is on the transition of the student nurse into a professional role which includes the ability to apply concepts related to leadership, interprofessional teamwork, informatics, and patient-centered care. Strategies for successful completion of the graduate licensure exam will be included.

NURS 4471  Leadership/management - RN/BSN  
4 Semester Credit Hours (4 Lecture Hours)  
Uses a systems framework and critical thinking strategies to study the coordinating role of the professional nurse within health care delivery. Current theories of management, leadership and change are examined and related to nursing practice. Focuses on synthesis of this knowledge to develop innovative and creative approaches to nursing practice. Applies theoretical and empirical concepts through experiences gained in local health care institutions.  
Prerequisite: NURS 4318 and 4324.

NURS 4560  Nursing Care of Community - RN/BSN  
5 Semester Credit Hours (3 Lecture Hours, 6 Lab Hours)  
Explores community health nursing, focusing on historical development, philosophy, health care systems, epidemiology, and individuals, families, and specific aggregate groups. Applies theoretical and empirical knowledge in using the nursing process in community settings to promote, maintain and restore health. Focuses on transcultural nursing concepts, rural and home health care delivery. Progressively more independent behaviors are expected of students in community health practice. Diverse roles of the community and public health nurse are examined and a community assessment is completed using research and data processing skills.  
Prerequisite: NURS 4318 and 4324.

NURS 4564  Nursing Care of Psychiatric Clients  
5 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)  
Focus is on the nurse as a provider of care to individuals, families and groups experiencing psychiatric-mental health problems. Theoretical foundations for the practice of psychiatric-mental health nursing will be studied. Application of nursing process to promote, maintain or restore mental health of individuals, families and groups. During the clinical experience, students will demonstrate theory-based practice and collaboration with interdisciplinary team participants.  
Prerequisite: NURS 3550 and 3628.

NURS 4566  Interprofessional Collaborative Practice Clinical  
5 Semester Credit Hours (5 Lecture Hours)  
Students design and provide comprehensive holistic, evidence-based nursing care to individuals, families, and populations with acute, chronic, complex conditions across the lifespan and health care settings with an emphasis on the role of the registered nurse in primary care settings using an integrated framework of health care delivery.

NURS 4628  Nursing Care of Adults II  
6 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)  
Presents to the senior student critical thinking and problem-solving strategies for care of adults with acute or complex illness and/or injury. The effects of acute illness are examined in relation to the individual’s developmental stage, culture, and gender. Building on Nursing Care of Adults I, a systems approach is used to analyze and intervene in alterations to the health of the individual and family. The course includes clinical laboratory to allow the student the opportunity to integrate theoretical concepts and clinical practice in diverse populations.  
Prerequisite: NURS 3550, 3548 and 3628.
**Program Requirements**

**Post-Baccalaureate Certificates**

- Clinical Laboratory Science, Post-Baccalaureate Certificate (p. 489)

**Clinical Laboratory Science, Post-Baccalaureate Certificate**

**Program Description**

**The Clinical Laboratory Science Certification and Post-Baccalaureate CLS Courses**

The clinical laboratory scientist holds a key position in life-and-death matters involving the diagnosis and treatment of patients. Therefore, the practice of clinical laboratory science requires professional certification that is regulated both from within the profession and, in some states, by law. Clinical Laboratory Science at Texas A&M University-Corpus Christi is approved through the National Accrediting Agency for Clinical Laboratory Science. In addition to the coursework for the baccalaureate degree, professional certification as a clinical laboratory scientist requires the completion of post-baccalaureate courses. A student who has a baccalaureate degree in Biology, Biomedical Sciences, Chemistry, or Microbiology, or who is completing the requirements for such a degree, may obtain one of three post-baccalaureate certifications in clinical laboratory science: generalist, clinical chemist, or medical microbiologist. To apply for certification in any area, a student must complete those Pre-Clinical Laboratory Science Option courses required for certification in that area. Complete information may be obtained from the clinical laboratory science program director.

To apply for clinical laboratory science certification examinations, a student must earn a “C” or better in all CLSC courses. Application for certification programs should be made directly to the clinical laboratory science program director.

Contact a clinical laboratory science faculty mentor for additional information.

Students seeking the CLS certificate must have completed a BS degree and have taken Genetics, Biochemistry, and Immunology.
Courses

CLSC 3102 Essentials Laboratory for Clinical Laboratory Science
1 Semester Credit Hour (1 Lab Hour)
Application of essential practices for clinical laboratory science. Offered fall semester every year.
Co-requisite: SMTE 0092.

CLSC 3200 Essentials for Applied Laboratory Sciences
2 Semester Credit Hours (1 Lecture Hour)
Introduction to general laboratory procedures, laboratory safety and regulations, quality assurance, professional ethics, specimen acquisition, sample maintenance and microscopy. Includes an introduction to the health care, public health and criminal investigation system. Offered fall, spring and summer semesters every year.
Prerequisite: BIOL 1407 and CHEM 1412.

CLSC 4120 Hemostasis
1 Semester Credit Hour (1 Lecture Hour)
Studies of blood coagulation with an emphasis on the interaction of blood vessels, platelets, and certain plasma proteins. Disorders of hemostasis will be discussed along with diagnostic testing.

CLSC 4182 Seminar – Clinical Correlations
1 Semester Credit Hour (1 Lecture Hour)
Informal lectures covering the newest developments in laboratory medicine. Includes discussion of the patient's clinical laboratory results, selection and interpretation of laboratory tests, and presentation of research. Requires permission of instructor and application. Offered summer semester (summer II only) every year.

CLSC 4200 Professional Skills for Clinical Laboratory Scientists
2 Semester Credit Hours (2 Lecture Hours)
Study of the role of the medical laboratory professional in the health care system. Includes professional ethics, legal responsibility, medical laboratory management, instructional methods, evaluation of clinical laboratory methods, medical laboratory instrument selection, clinical research and current professional topics. Requires permission of instructor and application. Offered summer semester (summer I only) every year.

CLSC 4280 Introduction to the Clinical Laboratory Profession
2 Semester Credit Hours (2 Lecture Hours)
Studies of the latest instrumentation, instrument selection, basic research, quality assurance and statistics used in the clinical laboratory.
Prerequisite: (CLSC 3200, CHEM 4401 and MATH 1442).

CLSC 4297 Professional Practicum I
2 Semester Credit Hours (2 Lecture Hours)
Supervised learning experience in selected departments of the clinical laboratories.

CLSC 4325 Clinical Chemistry I
3 Semester Credit Hours (3 Lecture Hours)
Principles and practice of procedures found in general clinical chemistry. Includes the methodology of diagnostic tests and normal and abnormal human physiology as applied to diagnosis of pathological conditions.
Prerequisite: CHEM 4401.
Co-requisite: SMTE 0092.

CLSC 4326 Clinical Chemistry II
3 Semester Credit Hours (3 Lecture Hours)
Continuation of CLSC 4325 - Clinical Chemistry I. Emphasis on advanced clinical chemistry topics and procedures.
Prerequisite: CLSC 4325.

CLSC 4370 Clinical Microbiology I
3 Semester Credit Hours (3 Lecture Hours)
Lecture and laboratory studies of common pathogenic bacteria. Emphasis is on staining, cultural, and differential biochemical characteristics, methods of isolation from body fluids and susceptibility to therapeutic agents.
Prerequisite: BIOL 2421.

CLSC 4371 Clinical Microbiology II
3 Semester Credit Hours (2 Lecture Hours, 3 Lab Hours)
Lecture and laboratory studies of parasitic, viral, mycological and unusual bacterial human pathogens. Emphasis on methods of isolation from body fluids, identification methods and correlation with pathology.
Prerequisite: CLSC 4370.

CLSC 4382 Advanced Medical Laboratory Procedures
3 Semester Credit Hours (3 Lecture Hours)
Lecture and laboratory studies of the newest development in laboratory diagnostic medicine. Includes advanced clinical chemistry, immunology and molecular diagnostic procedures.
Prerequisite: CLSC 4325 and BIMS 4406 or BIOL 4406 and CHEM 4401.

CLSC 4420 Hematology
4 Semester Credit Hours (4 Lecture Hours)
Studies of the formation, function and identifying characteristics of the cellular elements of human blood and other body fluids in health and diseased states and laboratory studies on blood coagulation. Lecture and laboratory emphasize the enumeration, morphology and staining characteristics of normal and abnormal cells and hemostasis.
Prerequisite: BIOL 2416 and CHEM 4401.
Co-requisite: SMTE 0092.

CLSC 4430 Clinical Immunology
4 Semester Credit Hours (4 Lecture Hours)
Theoretical aspects of the immune response and its relationship to the diagnosis of disease and clinical immunohematology. Lecture and laboratory stress the detection, identification and characterization of antibodies, blood grouping and typing, compatibility testing, blood component therapy, HLA testing and diagnosis of pathological conditions.
Prerequisite: BIMS 4406 or BIOL 4406.
Co-requisite: SMTE 0092.

CLSC 4598 Professional Practicum II
5 Semester Credit Hours (5 Lecture Hours)
Continuation of CLSC 4297 - Professional Practicum I. Supervised learning experience in selected departments of the clinical laboratories.
Prerequisite: CLSC 4297.

CLSC 4599 Professional Practicum III
5 Semester Credit Hours (5 Lecture Hours)
Continuation of CLSC 4598 - Professional Practicum II. Supervised learning experience in selected departments of the clinical laboratories.
Prerequisite: CLSC 4598.

Minors

• Health Sciences, Minor (p. 491)
• Healthcare Administration, Minor (p. 492)
Health Sciences, Minor

Program Description
Program Closure Date: 14 August 2023. Last term students can complete the Health Science Minor: Summer 2023.

Effective start date of Healthcare Administration Minor: Fall 2020.

Students may remain in the HLSC degree program or transfer to the Bachelor of Science in Healthcare Administration Program (BSHA) which begins Fall 2020. Intent to transfer must be made to advising by 1 March 2020.

^ Blended offering

Courses

**HLSC 3300 The Health Care System**
3 Semester Credit Hours (3 Lecture Hours)
Addresses how the U.S. Health Services System is organized, how health services are delivered, and the mechanisms by which health services are financed in the United States. Provides an undergraduate level overview of the U.S. health services system and its key components, including health system resources, health system foundations, health system resources, health system processes, and health system outcomes. Should be taken during first semester of Health Sciences courses. Cross listed with HCAD 3300.

**HLSC 3310 Epidemiology**
3 Semester Credit Hours (3 Lecture Hours)
Application of epidemiologic methods and procedures to the study of the distribution and determinants of health and diseases, morbidity, injuries, disability, and mortality in populations. Epidemiologic methods for the control of conditions such as infectious and chronic health hazards, and unintentional injuries are discussed. Other topics include quantitative aspects of epidemiology, for example, data sources, measures of morbidity and mortality, evaluation of association and causality, and study design. Cross listed with HCAD 3310.

**HLSC 3320 Health Care Marketing**
3 Semester Credit Hours (3 Lecture Hours)
An introductory study of the essentials of marketing within the dynamically evolving health care system Cross listed with HCAD 3320.

**HLSC 3330 Financial Management in Health Care**
3 Semester Credit Hours (3 Lecture Hours)
Introduction to health care financial management including selected topics from financial accounting, management accounting, finance, internal audit and personal finance. Health care payment and classification systems will be studied and practical applications will be emphasized. Cross listed with HCAD 3330.

**HLSC 3340 Health Program Planning and Evaluation**
3 Semester Credit Hours (3 Lecture Hours)
Introduction to the skills and techniques required to research and develop culturally competent health programs. Students will gain a basic understanding of how to utilize existing data to assess community needs, implement community health programs, and evaluate program effectiveness, exploring the concepts, processes and techniques used in health program planning, implementation, and evaluation. The course will emphasize the importance of teams and partnerships in successful community health programs. Cross listed with HCAD 3340.

Prerequisite: MATH 1442, 1342 or 2342.

**HLSC 3350 Information Systems and Technology in Health Care**
3 Semester Credit Hours (3 Lecture Hours)
Provides an overview of the role technology plays in management of health care information. Emphasis is placed on system analysis, techniques, and skills used in information management. Cross listed with HCAD 3350.

**HLSC 3360 Health Education and Promotion**
3 Semester Credit Hours (3 Lecture Hours)
This course provides an introduction to the discipline and profession of health education and promotion. It examines the concepts of health and wellness, the national and global health status, theories of behavior change, and the implementation and assessment of health promotion interventions. Cross listed with HCAD 3360.

**HLSC 3370 Complementary and Alternative Medicine**
3 Semester Credit Hours (3 Lecture Hours)
Introduction to complementary and alternative medicine with an emphasis on related economic, political, legal, and social issues. Cross listed with HCAD 3370.

**HLSC 4100 Assessment of Accumulated Knowledge**
1 Semester Credit Hour (1 Lecture Hour)
This course provides an assessment of student knowledge garnered from Health Science program course work. It also prepares students for the capstone Practicum course. Cross listed with HCAD 4100.

**HLSC 4300 Management and Organization Behavior in Health Care**
3 Semester Credit Hours (3 Lecture Hours)
Introduction to principles of management and organization behavior in healthcare with emphasis on human resource management topics and issues. Cross listed with HCAD 4300.

**HLSC 4310 Health Law**
3 Semester Credit Hours (3 Lecture Hours)
Introduction to law and the legal system with special emphasis on health related topics including quarantine and key health law issues. Cross listed with HCAD 4310.

Courses

HCAD 3300  The Health Care System
3 Semester Credit Hours (3 Lecture Hours)
Addresses how the U.S. Health Services System is organized, how health services are delivered, and the mechanisms by which health services are financed in the United States. Provides an undergraduate level overview of the U.S. health services system and its key components, including health system resources, health system foundations, health system outcomes, health system processes, and health system outcomes. Should be taken during first semester of Health Sciences courses. Cross listed with HLSC 3300.

HCAD 3310  Epidemiology
3 Semester Credit Hours (3 Lecture Hours)
Applies epidemiologic methods and procedures to the study of the distribution and determinants of health and diseases, morbidity, injuries, disability, and mortality in populations. Epidemiologic methods for the control of conditions such as infectious and chronic health hazards, and unintentional injuries are discussed. Other topics include quantitative aspects of epidemiology, for example, data sources, measures of morbidity and mortality, evaluation of association and causality, and study design. Cross listed with HLSC 3310.
Prerequisite: HCAD 3300 or HLSC 3300.
* May be taken concurrently.

HCAD 3320  Health Care Marketing
3 Semester Credit Hours (3 Lecture Hours)
Provides an introductory study of the essentials of marketing within the dynamically evolving health care system. The marketing framework is provided as a basis for decisions related to marketing mix variables. Content includes buyer behavior, marketing research, market segmentation, and marketing strategy. Cross listed with HLSC 3320.
Prerequisite: HCAD 3300.
* May be taken concurrently.

HCAD 3330  Financial Management in Health Care
3 Semester Credit Hours (3 Lecture Hours)
Provides an introduction to health care financial management including selected topics from financial accounting, management accounting, finance, internal audit and personal finance. Health care payment and classification systems are studied and practical applications are emphasized. Cross listed with HLSC 3330.
Prerequisite: HCAD 3300.
* May be taken concurrently.

Healthcare Administration, Minor

Program Description

Undergraduate students majoring in other disciplines can earn a Minor in Healthcare Administration. The minor provides foundational learning that augment the knowledge, skills and values necessary for successful careers in healthcare and related disciplines. The minor program assists students to manage, lead and improve the changing health care needs in South Texas, and to emphasize culturally appropriate patient-centered service delivery systems.
HCAD 3340 Health Program Planning and Evaluation
3 Semester Credit Hours (3 Lecture Hours)
Introduces the skills and techniques required to research and develop culturally competent health programs. Students create new data and utilize existing data to assess community needs, implement community health programs, and evaluate program effectiveness, exploring the concepts, processes and techniques used in health program planning, implementation, and evaluation. The course emphasizes the importance of teams and partnerships in successful community health programs. This is an intensive writing course. Cross listed with HLSC 3340.
Prerequisite: (MATH 1442 or 1342) or (MATH 2342) and (HCAD 3300*).
* May be taken concurrently.

HCAD 3350 Information Systems and Technology in Health Care
3 Semester Credit Hours (3 Lecture Hours)
Provides an overview of the role technology plays in management of health care information. Emphasis is placed on system analysis, techniques, and skills used in information management. Covers determining what information is needed by whom; designing information flows, procurement of computer/telecommunication resources, assuring information security, and continuing management of information systems supporting healthcare delivery. Satisfies university computer literacy requirement. Cross listed with HLSC 3350.
Prerequisite: HCAD 3300*.
* May be taken concurrently.

HCAD 3360 Health Education and Promotion
3 Semester Credit Hours (3 Lecture Hours)
Provides an introduction to the discipline and profession of health education and promotion. It examines the concepts of health and wellness, national and global health status, theories of behavior change, and the implementation and assessment of health promotion interventions. It provides an introduction to medical terminology for health educators. This is a writing intensive course. Cross listed with HLSC 3360.
Prerequisite: HCAD 3300* or HLSC 3300*.
* May be taken concurrently.

HCAD 3370 Complementary and Alternative Medicine
3 Semester Credit Hours (3 Lecture Hours)
Provides an introduction to complementary and alternative medicine with an emphasis on related economic, political, legal, and social issues. The course identifies the processes, interventions, and funding agencies available for providing alternative care; reviews the various professions within alternative and complementary medicine; and addresses the holistic approach to health and well-being. Cross listed with HLSC 3370.

HCAD 4100 Assessment of Accumulated Knowledge
1 Semester Credit Hour (1 Lecture Hour)
Provides an assessment of student knowledge garnered from Health Science program course work. Allows creation of a business resume and mock interview experience. Prepares students for the capstone Practicum course. Cross listed with HLSC 4100.

HCAD 4300 Management and Organizational Behavior in Health Care
3 Semester Credit Hours (3 Lecture Hours)
Introduces students to principles of management and organization behavior in healthcare. Topics include management, planning, organizing, staffing, leading, controlling, decision making, communicating, and professionalism, as well as the connective processes of decision making, coordinating, and communicating in healthcare organizations. This is an intensive writing course. Cross listed with HLSC 4300.

HCAD 4310 Health Law, Policy and Ethics
3 Semester Credit Hours (3 Lecture Hours)
Introduces law and the legal system with special emphasis on health-related topics and policies, and key health law issues. Includes the study of the legal and regulatory environment of health care and the administration of health services with a review of the laws pertaining to healthcare institutions, physicians, and other healthcare workers who contribute to patient care. Tort and contract law are emphasized. The course addresses policy issues and ethics through topics like patient rights, reproduction, and end of life decisions. Cross listed with HLSC 4310.

HCAD 4320 Project Management in Health Care
3 Semester Credit Hours (3 Lecture Hours)
Introduces the fundamental project management concepts required to design, develop and deploy project plans successfully within the healthcare industry. The management of resources, schedules, risks, and scope of a project are examined for successful project implementation. Students are exposed to the role of healthcare project managers and the project management process as they provide structure and oversight to the constantly growing and changing healthcare industry. Cross listed with HLSC 4320.

HCAD 4330 Human Resource Management in Health Care
3 Semester Credit Hours (3 Lecture Hours)
Presents the foundational concepts of healthcare human resource management. Students are introduced to fundamental human resource management techniques needed within health organizations including leadership, workforce planning, recruitment, employee selection, compensation, employee development, workload management, human resource law, and ethics. Future healthcare management and leadership professionals must understand these concepts to comply with human resource department policies and support the strategic plan. Cross listed with HLSC 4330.

HCAD 4340 Quality Management and Evaluation in Health Care
3 Semester Credit Hours (3 Lecture Hours)
Introduces the principles of quality assessment and outcome management in healthcare organizations. This course is an introduction of integrated delivery systems and their operations. It includes an examination of patient care management and the patient experience. A framework for understanding healthcare quality efforts is also an integral part of the course. Cross listed with HLSC 4340.

HCAD 4350 Global Health/Health Disparities
3 Semester Credit Hours (3 Lecture Hours)
Provides students with an historical perspective on global health issues and leads to an understanding of current and future concerns. Emphasis is on the global burden of disease and determinants of health as well as health disparities. Provides students with an introduction to the study of health disparities in the United States, examining how health disparities are defined and measured and exploring issues such as how the structure of American society affects who gets sick and who gets care. Case studies expose students to a variety of real-life scenarios and explore a range of issues. This is an intensive writing course.
HCAD 4680 Practicum
6 Semester Credit Hours (1 Lecture Hour, 15 Lab Hours)
The Health Science Practicum is an institution-based project course requiring the student to complete on-site practicum hours. It provides a structured and guided learning environment to help students make the most of their practicum experience. Course components facilitate students' professional development, focusing on the transition from the role of a student to the role of a healthcare professional. Cross listed with HLSC 4680.
Prerequisite: HCAD 4100.

College of Science
The College of Science offers undergraduate and graduate degrees in basic and applied sciences to support the technical requirements of our post-industrial society. In addition, the College provides many courses supporting the science literacy requirements of non-majors. Specialized course offerings and degree sequences support Education majors seeking science and mathematics teaching certifications. The office of the Dean is located in Center for Instruction, Suite 350.

Purpose Statement
The College of Science is committed to maintaining an academic environment in which students may develop as productive citizens who will contribute to society. In this regard, the faculty recognizes the need to prepare individuals who have an understanding of the foundations and principles of their respective fields and professions. The administration of the College encourages and supports the faculty in meeting their responsibility to continue their professional development and to contribute to the University, the community, and their chosen fields.

In order to accomplish this purpose, the administration and faculty of the College share the following objectives:

1. To provide the opportunity for each student to assimilate and apply the body of knowledge required by a chosen discipline through a clearly defined sequence of courses.
2. To develop each student's ability to think critically and to communicate effectively through creative and challenging educational experiences.
3. To encourage each student to become a well-rounded, educated person through exposure to other disciplines within the University.
4. To contribute to the greater body of knowledge in specialized disciplines through research, scholarship, and professional endeavor.
5. To serve as a professional and educational resource to the local area and larger community by providing consultation and special services.

Centers for Research and Continuing Education
The College of Science is the academic home to several major research units, which are physically housed in the Natural Resources Center on the west end of campus.

The National Spill Control School, established in 1977, promotes education on environmental issues. The primary focus of its programs is in presenting continuing education short courses on-campus or on-site for personnel involved in spill prevention and the control of oil, hazardous materials, and hazardous waste. Other areas of interest include allied safety concerns and improving knowledge in these fields through research and targeted education programs.

The Center for Coastal Studies, established in 1984, is an interdisciplinary research unit of the College of Science and Engineering at Texas A&M University-Corpus Christi. The main purpose of the Center is to perform coastal ecosystem research and contract studies on the Padre/Mustang barrier island chain, the Laguna Madre, and the Nueces/Corpus Christi Bay Complex. Currently, cooperative agreements with several branches of the U.S. Fish and Wildlife Service and the Texas Parks and Wildlife Department provide research and practical training experience for Texas A&M University-Corpus Christi science students.

The Conrad Blucher Institute for Surveying and Science, dedicated in 1987, encourages scientific research and education, with a special emphasis on surveying. To provide for the unique needs of Texas surveyors, the Institute is developing strong continuing education and research programs in surveying. As funds and resources permit, the Institute will also promote research and education in all of the supporting sciences. Science education is a vital base for surveyors and scientists. The Institute supports activities to improve these areas and help create professional and student interest in surveying and science.

The Center for Water Supply Studies was established in 1991. The Center provides science students with the opportunity to pursue research in the broad areas of water resources. The Center also provides regional governmental entities with an academic organization through which studies of issues relating to water supply may be carried out.

The Center for Information Assurance, Statistics, and Quality Control (CIASQC) leverages the skills of university experts working together with community leaders to meet the increasing demands for secured information environments and improved quality of education, government, health care and business. The mission of CIASQC is to become the primary South Texas and Gulf of Mexico resource of information assurance, modeling, statistical and quality improvement services, and software engineering for the education, government, health care, and private sectors.

In 2000, Texas A&M University-Corpus Christi received a $46 million pledge from publisher Ed Harte to create the Harte Research Institute for Gulf of Mexico Studies. The Institute supports the Ph.D. programs in Coastal and Marine System Science and Marine Biology offered through the College of Science.

Science Degree Programs
The College of Science offers course work leading to the following Bachelor of Science, Master of Science, and Doctor of Philosophy degrees:

- Atmospheric Sciences ATSC, BS
- Biology BIOL, BS, MS
- Biomedical Science BIMS, BS
- Chemistry CHEM, BS, MS
- Coastal and Marine System Science CMSS, PhD
- Environmental Science ESCI, BS, MS
- Fisheries and Mariculture FAMA, MS
- Geology GEOL, BS
- Marine Biology MARB, MS, PhD
degree area in the College of Science, upon satisfying the requirements of the catalog under which credit was first earned in this university, or upon satisfying the requirements of the catalog governing any subsequent year in which credit was earned as a student in the university. In the case of courses which are no longer offered, the faculty will prescribe substitutions. Students who do not complete the degree to which they have been admitted within 6 years will be subject to review and may, if necessary, be required to update knowledge and meet catalog requirements currently in effect.

**Teacher Certification Programs**

Students seeking state certification to teach science and mathematics in Texas schools must major in an approved teaching field and complete all major study and related requirements for a baccalaureate degree in that field. They must also comply with teacher certification requirements. Prospective candidates for teacher certification are strongly urged to obtain current certification information from the College of Education and Human Development prior to formulating a degree plan or pursuing degree-specific course work.

Study programs at this university leading to teacher certification in science and mathematics are:

- 4-8 level Science
- 7-12 level Life Science
- 7-12 level Physical Science
- 4-8 level Mathematics (College of Education and Human Development)
- 7-12 level Mathematics

Major study and course requirements in teaching fields are detailed in the Science, Mathematics and Technology Education (SMTE) section of this catalog and the College of Education and Human Development section for the baccalaureate degree leading to 4-8 level Mathematics certification. For a complete listing of the available certification plans and details of the requirements for obtaining a teaching certificate, please consult the College of Education and Human Development section of this catalog.

Teacher preparation is considered to be an integral role of the College; therefore, all certification requirements are integrated into the degree requirements for those who desire teacher certification.

In addition to the academic specialization discussed above, teacher certification programs require the completion of general education courses, including the core curriculum, and professional development courses. A student who seeks a teaching certificate should contact a Certification Officer in the College of Education and Human Development prior to formulating a degree plan or pursuing academic careers for specific details on these courses.

**Grade Point Average for Students Seeking Middle School (Grades 4-8) and/or High School (Grades 7-12) Certification**

A minimum grade point average of 2.50 (4.0 = A) in all work attempted, a minimum grade point average of 2.75 in all science, math, or specialization areas, and no grade below “C” in any science or math course on a student’s degree plan and/or education courses within the
professional education block of courses are required. (See Requirements for Programs Leading to Teacher Certification)

**Alteration of a Certification Plan**

Any amendment to a degree plan originally filed must be approved by the student’s academic advisor, the Department Chair, the Dean of the College of Science, and the Certification Officer of the College of Education and Human Development for the degree to be granted.

**Minors**

Course requirements for a minor are determined by the faculty in each corresponding academic discipline, and variations in the minor requirements are subject to the approval of the faculty in that area. Therefore, the student should consult the description of the minor in the section of the catalog dedicated to that discipline. Questions about the minor course work should be directed to the appropriate advisor within the minor discipline.

**Contact Information**

College of Science, Texas A&M University-Corpus Christi, Corpus Christi, TX 78412-5806. Phone: (361) 825-5777. Web: http://www.sci.tamucc.edu/

**Atmospheric Sciences, BS**

**Program Description**

The Bachelor of Science program in Atmospheric Sciences addresses the needs of students interested in studying meteorology or climate science. The program provides students with an in-depth knowledge of the physical characteristics, motions and processes of air; as well as the interactions of this protective layer with the underlying oceans and continents. The undergraduate program emphasizes a systems approach, combining traditional atmospheric sciences with emerging fields. In particular, the program focuses on the fields of tropical meteorology and oceanography that are directly linked to the Gulf of Mexico and surrounding coastal regions where the university is strategically located.

**Student Learning Outcomes**

Students will:

- Possess a broad understanding of the field of atmospheric sciences in preparation for successful careers in related disciplines;
- Gain experience and professional competence in the use of scientific method to develop and conduct atmospheric sciences related work;
- Acquire the necessary skills to effectively communicate the meteorology and climate sciences information to a range of audiences and participate in community and/or professional service through various organizations.

**General Requirements**

The Bachelor of Science in Atmospheric Sciences degree requires a minimum of 120 semester credit hours: 42 are from designated University Core Curriculum Program courses, 57 are from atmospheric sciences core courses and 21 are from career track courses. The atmospheric sciences core provides students with a broad background in meteorology and climate sciences, and satisfy the requirements for federal employment as a National Weather Service meteorologist (also referred to as NOAA GS1340 positions). The students can choose a career track in either general atmospheric sciences or the broadcast meteorology. Students should select a career track as soon as possible.
after they complete their freshman year and well before they begin their junior year.

Total Hours 21

Broadcast Meteorology Track

Those students interested in becoming broadcast meteorologists should follow the Broadcast Meteorology Track. Students in this track take COMM 1311 Foundation of Communication (3 sch), ATSC 2101 Weathercasting (1 sch) and an additional 9 hours from the other electives listed below plus another 8 hours from the Atmospheric Sciences Track electives.
Students interested in English-only broadcasting need to take all 9 hours from the communication (COMM or MEDA) courses. Students interested in bilingual English-Spanish broadcasting must choose 3 hours from the communication (COMM or MEDA) courses, and 6 hours from the Spanish (SPAN) courses. An internship experience through ATSC 4498 Internship in Atmospheric Science (1-4 sch) is highly recommended for all broadcast meteorology students, preferably during their junior or senior years.

Select 8 hours of additional electives of the general Atmospheric Sciences Track

Total Hours 21

Additional 8 semester hours of the electives from the general Atmospheric Sciences Track will be needed to satisfy the 18 semester hours of electives requirement. Other MEDA/COMM courses may be substituted with faculty mentor approval.

Courses

ATSC 2101 Weathercasting
1 Semester Credit Hour (1 Lecture Hour)
This course is to practice in preparing and presenting weathercasts for radio and television. The instructors of this course will provide the students with: (1) information in the form of lectures and supplemental readings; (2) opportunities to practice weathercasting on video, and (3) advice, supervision, and guidance. In lecture, students will spend most of the course learning about geography and weathercasting rules. A large portion of the course is to practice the weathercasting and report. 
Prerequisite: ATSC 2403.

ATSC 2301 Weather Observations
3 Semester Credit Hours (3 Lecture Hours)
This course is an introduction of the basic concept of meteorology. The focus is on the measurements of the atmosphere and weather related phenomenon. The principle of the instruments used to measure temperature, pressure, moisture, radiation, precipitation and other weather related properties of the atmosphere will be introduced. The differences among the observations from in-situ, balloon borne, airborne, and satellite borne instruments will be examined and discussed.
Prerequisite: ATSC 2403.

ATSC 2302 Introduction of Data Analysis in Atmospheric Sciences
3 Semester Credit Hours (3 Lecture Hours)
This course will cover the fundamentals of atmospheric physics including the atmospheric composition, evolution, structure, and dynamics. Lab exercises cover basic measurement techniques, weather maps, and forecasting. The principle of the instruments used to measure temperature, pressure, moisture, radiation, precipitation and other weather related properties of the atmosphere will be introduced. The differences among the observations from in-situ, balloon borne, airborne, and satellite borne instruments will be examined and discussed.
Prerequisite: ATSC 2403.

ATSC 2403 Introduction to Meteorology
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
This course is an introduction to meteorology and the dynamics of planetary atmospheres. Emphasis on atmospheric accretion, composition, evolution, structure, and dynamics. Lab exercises cover basic measurement techniques, weather maps, and forecasting.
Co-requisite: SMTE 0096.

ATSC 3305 Physical Meteorology
3 Semester Credit Hours (3 Lecture Hours)
This course will enhance student skills for analyzing atmospheric science-related datasets under various scientific programming environments. The focus is on developing a data analysis and problem-solving skillsets using mostly Python. The course includes: basic concepts of operating systems and high-level programming languages; basics of programming in Python; general data analysis methods and tools; scientific data formats used in remote sensing data and numerical model output; publication-quality scientific graphics; and critical steps of building a large programming project. Examples with IDL and FORTRAN are also included.

ATSC 3306 Atmospheric Thermodynamics
3 Semester Credit Hours (3 Lecture Hours)
This course will enhance student skills for analyzing atmospheric science-related datasets under various scientific programming environments. The focus is on developing a data analysis and problem-solving skillsets using mostly Python. The course includes: basic concepts of operating systems and high-level programming languages; basics of programming in Python; general data analysis methods and tools; scientific data formats used in remote sensing data and numerical model output; publication-quality scientific graphics; and critical steps of building a large programming project. Examples with IDL and FORTRAN are also included.

ATSC 3401 Synoptic Meteorology
4 Semester Credit Hours (3 Lecture Hours)
This course will enhance student skills for analyzing atmospheric science-related datasets under various scientific programming environments. The focus is on developing a data analysis and problem-solving skillsets using mostly Python. The course includes: basic concepts of operating systems and high-level programming languages; basics of programming in Python; general data analysis methods and tools; scientific data formats used in remote sensing data and numerical model output; publication-quality scientific graphics; and critical steps of building a large programming project. Examples with IDL and FORTRAN are also included.

ATSC 3403 Statistical Modeling and Data Analysis
3 Semester Credit Hours (3 Lecture Hours)
This course will enhance student skills for analyzing atmospheric science-related datasets under various scientific programming environments. The focus is on developing a data analysis and problem-solving skillsets using mostly Python. The course includes: basic concepts of operating systems and high-level programming languages; basics of programming in Python; general data analysis methods and tools; scientific data formats used in remote sensing data and numerical model output; publication-quality scientific graphics; and critical steps of building a large programming project. Examples with IDL and FORTRAN are also included.

ATSC 3405 Remote Sensing
3 Semester Credit Hours (3 Lecture Hours)
This course will enhance student skills for analyzing atmospheric science-related datasets under various scientific programming environments. The focus is on developing a data analysis and problem-solving skillsets using mostly Python. The course includes: basic concepts of operating systems and high-level programming languages; basics of programming in Python; general data analysis methods and tools; scientific data formats used in remote sensing data and numerical model output; publication-quality scientific graphics; and critical steps of building a large programming project. Examples with IDL and FORTRAN are also included.

ATSC 3406 Physical Oceanography
3 Semester Credit Hours (3 Lecture Hours)
This course will enhance student skills for analyzing atmospheric science-related datasets under various scientific programming environments. The focus is on developing a data analysis and problem-solving skillsets using mostly Python. The course includes: basic concepts of operating systems and high-level programming languages; basics of programming in Python; general data analysis methods and tools; scientific data formats used in remote sensing data and numerical model output; publication-quality scientific graphics; and critical steps of building a large programming project. Examples with IDL and FORTRAN are also included.

ATSC 3408 Internship in Atmospheric Science
3 Semester Credit Hours (3 Lecture Hours)
This course will enhance student skills for analyzing atmospheric science-related datasets under various scientific programming environments. The focus is on developing a data analysis and problem-solving skillsets using mostly Python. The course includes: basic concepts of operating systems and high-level programming languages; basics of programming in Python; general data analysis methods and tools; scientific data formats used in remote sensing data and numerical model output; publication-quality scientific graphics; and critical steps of building a large programming project. Examples with IDL and FORTRAN are also included.

ATSC 3409 Climate and Climate Variability
3 Semester Credit Hours (3 Lecture Hours)
This course will enhance student skills for analyzing atmospheric science-related datasets under various scientific programming environments. The focus is on developing a data analysis and problem-solving skillsets using mostly Python. The course includes: basic concepts of operating systems and high-level programming languages; basics of programming in Python; general data analysis methods and tools; scientific data formats used in remote sensing data and numerical model output; publication-quality scientific graphics; and critical steps of building a large programming project. Examples with IDL and FORTRAN are also included.

ATSC 3410 Differential Equations
3 Semester Credit Hours (3 Lecture Hours)
This course will enhance student skills for analyzing atmospheric science-related datasets under various scientific programming environments. The focus is on developing a data analysis and problem-solving skillsets using mostly Python. The course includes: basic concepts of operating systems and high-level programming languages; basics of programming in Python; general data analysis methods and tools; scientific data formats used in remote sensing data and numerical model output; publication-quality scientific graphics; and critical steps of building a large programming project. Examples with IDL and FORTRAN are also included.

ATSC 3411 Introduction of Data Analysis in Atmospheric Sciences
3 Semester Credit Hours (3 Lecture Hours)
This course will enhance student skills for analyzing atmospheric science-related datasets under various scientific programming environments. The focus is on developing a data analysis and problem-solving skillsets using mostly Python. The course includes: basic concepts of operating systems and high-level programming languages; basics of programming in Python; general data analysis methods and tools; scientific data formats used in remote sensing data and numerical model output; publication-quality scientific graphics; and critical steps of building a large programming project. Examples with IDL and FORTRAN are also included.

ATSC 3412 Linear Algebra
3 Semester Credit Hours (3 Lecture Hours)
This course will enhance student skills for analyzing atmospheric science-related datasets under various scientific programming environments. The focus is on developing a data analysis and problem-solving skillsets using mostly Python. The course includes: basic concepts of operating systems and high-level programming languages; basics of programming in Python; general data analysis methods and tools; scientific data formats used in remote sensing data and numerical model output; publication-quality scientific graphics; and critical steps of building a large programming project. Examples with IDL and FORTRAN are also included.

ATSC 3413 University Physics II
3 Semester Credit Hours (3 Lecture Hours)
This course will enhance student skills for analyzing atmospheric science-related datasets under various scientific programming environments. The focus is on developing a data analysis and problem-solving skillsets using mostly Python. The course includes: basic concepts of operating systems and high-level programming languages; basics of programming in Python; general data analysis methods and tools; scientific data formats used in remote sensing data and numerical model output; publication-quality scientific graphics; and critical steps of building a large programming project. Examples with IDL and FORTRAN are also included.

ATSC 3414 Calculus II
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
This course will enhance student skills for analyzing atmospheric science-related datasets under various scientific programming environments. The focus is on developing a data analysis and problem-solving skillsets using mostly Python. The course includes: basic concepts of operating systems and high-level programming languages; basics of programming in Python; general data analysis methods and tools; scientific data formats used in remote sensing data and numerical model output; publication-quality scientific graphics; and critical steps of building a large programming project. Examples with IDL and FORTRAN are also included.
ATSC 4301 Dynamic Meteorology I
3 Semester Credit Hours (3 Lecture Hours)
This course focuses on introductory-level atmospheric dynamics. Basic concepts of geophysical fluid dynamics and its application to a variety of atmospheric phenomena are introduced. Specific topics include the equations of motion on rotating earth, vorticity, potential vorticity, divergence, circulation theorem, and planetary wave.
Prerequisite: ATSC 3306 and MATH 2414.

ATSC 4302 Dynamic Meteorology II
3 Semester Credit Hours (3 Lecture Hours)
This course is a continuation of ATSC 4301 (Dynamic Meteorology I), which covers the introductory-level atmospheric dynamics. The course introduces more advance materials including equatorial waves, baroclinic and barotropic instability, two-dimensional turbulence, atmospheric teleconnection, El Nino/Southern Oscillation, Madden-Julian Oscillation, global warming, and numerical modeling of atmospheric circulations.
Prerequisite: ATSC 4301.

ATSC 4305 Remote Sensing
3 Semester Credit Hours (3 Lecture Hours)
This course aims to introduce the fundamentals of satellite/airborne remote sensing techniques and demonstrates its application to various aspects of Earth Sciences. Topics include physical principles of remote sensing from ultraviolet to the microwave, radiometry, sensors and sensor technology, calibration, and environmental applications for land, ocean and atmosphere research.
Prerequisite: PHYS 2426.

ATSC 4335 Climate and Climate Variability
3 Semester Credit Hours (3 Lecture Hours)
This course intended to guide environmental science undergraduate students in developing a conceptual understanding of Earth’s global climate and its variability. Review past climates, present mean state of the climate system, climate variability from seasonal to multi-decadal time scales, and climate change. Special attention will be given to climates of the Gulf of Mexico, Caribbean Sea and surrounding land regions. Plausible climate-change scenarios, as well as mitigation and adaptation strategies will also be discussed. Cross listed with ESCI 4335.
Prerequisite: (ATSC 2403 or ESCI 3351).

ATSC 4346 Directed Independent Study
1-4 Semester Credit Hours (1-4 Lecture Hours, 4 Lab Hours)
Requires a formal proposal of study to be completed in advance of registration and to be approved by the supervising faculty, the Chairperson, and the Dean of the College.

ATSC 4498 Internship in Atmospheric Science
1-4 Semester Credit Hours
ATSC 4498 (Internship in Atmospheric Science) gives ATSC undergraduates an opportunity to obtain valuable paid or unpaid work experience related to atmospheric science, to better position them for employment after graduation. Students contract to work a specified number of hours weekly over a full semester with a state or federal agency or private industry related to atmospheric science, in return for college credit as follows: 3-6 hrs./week=1 sem. hr., 6-9 hrs./week=2 sem. hrs., 9-12 hrs./week=3 sem. hrs., 12-15 hrs./week=4 sem. hrs. Students may contract for 1-2 sem. hrs. in a single summer session (5.5 weeks) but may contract for up to 4 sem. hrs. if carrying out internship over a regular long semester or two summer sessions (11 weeks). If interning for the summer, students should increase the number of hours interned weekly to account for the shortened period worked, so total hours interned will be equivalent to those in a regular long semester. A student may intern only twice with a single office or agency. The internships will not apply towards graduate credit.

ATSC 4590 Selected Topics
1-5 Semester Credit Hours (1-5 Lecture Hours, 5 Lab Hours)
This course includes special topics with variable content. May be repeated for credit. Offered on sufficient demand.

Biology, BS

Program Description

Purpose of Biology Program
The biology program provides diverse training for careers in the biological sciences. The biology curriculum includes content courses required for

1. teacher certification in life science,
2. acceptance to post-graduate studies, and
3. pre-professional studies in preparation for admission to professional schools.

Students will acquire content and skills to enter a variety of biology-related careers such as research, marine biology, wildlife and coastal management, environmental protection, laboratory technician, biotechnology industry, medical or environmental microbiology, technical writing, pharmaceutical sales, careers in the medical, dental, and allied health fields, and science education.

Field and laboratory courses emphasize the development of practical skills in using special materials and equipment. Focus is on enhancement of critical thinking skills, which will prepare the student for careers in the biological sciences as well as in other general areas of employment.

Student Learning Outcomes
Students will:

• Possess a broad understanding of biology.
• Understand the scientific method and use it to develop and conduct biological experiments.
• Have the skills necessary to successfully communicate biological information to a range of audiences.

**The Honors Program**

The Honors Program (admission by application only) offers highly motivated students from any academic discipline an enriched program of study in which to develop global perspectives. Appropriate courses approved by both a student’s Biology faculty mentor and Honors advisor may count toward the Biology degree. Thus, a Biology student in the Honors track can usually graduate with no additional course. For more information, consult the section entitled "Honors Program (http://catalog.tamucc.edu/undergraduate/university-college/programs/honors-program)/”.

**Fast Track from Bachelor’s to Master’s Degree**

The university allows the opportunity for high-achieving students to count a select number of graduate credits toward their undergraduate degree and thereby obtain a graduate degree at an accelerated pace. For more information, see Fast Track Biology, BS to Biology, MS (p. 589).

**General Requirements**

The Bachelor of Science in Biology degree requires a minimum of 120 semester credit hours: 42 are designated University Core Curriculum Program courses, 46 are from biology core courses and 32 are from biology career track courses. The biology core provides students with a broad biological background and includes coursework in four key areas: mathematics, the chemistry of life/cell biology, form and function, and organismal biology. In each of these areas students select one course from a list of appropriate courses, depending on their interests and choice of biology career track. The biology career track areas are: (A) Ecology, (B) Marine Biology, (C) Cell/Molecular Biology, (D) Microbiology, (E) Organismal Biology and (F) Integrative Biology. Students should select a biology career track as soon as possible after they complete their freshman year and well before they begin their junior year.

</table>

1. Full-time, first time in college students are required to take the first-year seminars. The First-Year Seminars will not count towards the 120 hour minimum requirements to graduate.
   - UNIV 1101 University Seminar I (1 sch)
   - UNIV 1102 University Seminar II (1 sch)

2. For 4 of the four-hour science and mathematics courses that are required for all Biology students, some or all of the hours may be counted as part of the University Core requirement. For BIOL 1406 Biology I (4 sch), BIOL 1407 Biology II (4 sch), and MATH 2413 Calculus I (4 sch), the 3 lecture hours of each will be counted in the Life and Physical Sciences or Mathematics Foundational Areas; and each one-hour laboratory component will be counted in the Component Area Option of the University Core Curriculum. For CHEM 1411 General Chemistry I (4 sch), the 3 lecture hours will be counted in the Component Area Option of the University Core Curriculum, but the 1 laboratory hour will be counted as part of the Biology Core.

| BIOL 3414 | Vertebrate Zoology                            |       |
Each biology career track is designed to provide specific background in a biological discipline. The integrative biology track provides a broad background in the biological sciences.

Any track will prepare a student for entry-level biological careers in a variety of academic, governmental, or private sector settings, but many careers will require training beyond the BS degree. A student should consult their faculty mentor to determine the track that is the best fit for their career goals.

Each track consists of 32 hours, including a core of required courses and electives. Students are strongly encouraged to consult their faculty mentor for guidance in choosing the electives.

**Ecology Track**

The Ecology Track focuses on interactions between organisms and the physical environment. Students choosing this track will be preparing for careers in fields such as agriculture, environmental protection, conservation, natural resource management, and public education.

A total of at least 120 hours is required to graduate with the B.S. degree.

**Microbiology Track**

This Microbiology track focuses on bacteria, viruses, fungi and protozoa. Many of these organisms are important to industry, agriculture, and health care. Students choosing this track will be preparing for careers in industrial, environmental, medical, public health, and agricultural laboratories, industrial quality control, health care professions, research, biotechnology, and microbiology-related sales.

A total of at least 120 hours is required to graduate with the B.S. degree.

**Organismal Biology Track**

The Organismal Biology track focuses on the natural history, ecology, structure, and function of plants and/or animals. Students can choose to emphasize plants or animals, or take courses that result in a broad understanding of both. Students choosing this track will be preparing for careers that include, but are not limited to, wildlife management, fisheries, natural resource management, parks and recreation, biodiversity and conservation, habitat restoration, and agriculture or horticulture. This track also prepares students for graduate studies in biology, wildlife and fisheries sciences, wildlife management, forestry, or taxonomy and systematics.

A total of at least 120 hours is required to graduate with the B.S. degree.

**Integrative Biology Track**

The Integrative Biology track emphasizes the integration of physical factors, cells, tissues, organs, and organ systems in producing functional organisms. Students choosing this track will be preparing for careers in health care, government or academic research, agriculture, or biology sales. This track is also a good choice for students planning to attend graduate school because it provides a great deal of flexibility depending on the student’s interests and career goals.
A total of at least 120 hours is required to graduate with the B.S. degree.

### Approved Electives

Biology 2472 Principles of Botany (4 sch), or any 3000- or 4000-level Biology course can be taken for elective credit. In addition to upper-division Biology (BIOL prefix) courses, students may select courses from the list below. Note that approval of a faculty mentor is required for certain courses (BIOL 4590 Selected Topics (5 sch) or BIOL 4396 Directed Independent Study (1-3 sch)). Up to 4 semester hours of science electives not on this list can be taken with mentor approval.

### List of Electives

Any upper division Biology course (BIOL 3XXX or 4XXX) may be taken as an elective. The upper division Biomedical (BIMS) courses that are listed below may be taken as electives for the BS Biology degree without seeking approval. The lower division courses listed may be taken as electives, but no more than 8 hours will be counted toward the degree, and students should be cognizant of the 45-hour minimum of upper division coursework that is required to graduate. Upper division coursework from other science disciplines (e.g., Environmental Science) may be taken with approval, but no more than 8 hours will be counted toward the degree.

## Integrative Biology Track

### First Year

#### Fall
- **CHEM 1411** General Chemistry I 4
- **UNIV 1101** University Seminar I 1
- **ENGL 1301** Writing and Rhetoric I 3
- **HIST 1301** U.S. History to 1865 3
  - or **HIST 1302** U.S. History Since 1865 3
  - or **HIST 2301** Texas History 3
- **BIOL 1406** Biology I 4

#### Spring
- **CHEM 1412** General Chemistry II 4
- **UNIV 1102** University Seminar II 1
- **ENGL 1302** Writing and Rhetoric II 3
- **HIST 1301** U.S. History to 1865 3
  - or **HIST 1302** U.S. History Since 1865 3
  - or **HIST 2301** Texas History 3
- **BIOL 1407** Biology II 4

### Hours
- 15

### Second Year

#### Fall
- **CHEM 3411** Organic Chemistry I 4
- **BIOL 2416** Genetics 3-4
  - or **BIOL 2421** Microbiology 3-4
  - or **BIOL 2371** Principles of Evolution 3-4
- **MATH 2413** Calculus I 4
- **POLS 2305** U.S. Government and Politics 3
- **ARTS 1301** Art and Society 3
  - or **ARTS 1303** Art History Survey I 3
  - or **MEDA 1305** Film and Culture 3
  - or **MUSI 1306** Understanding and Enjoying Music 3
  - or **MUSI 1307** Elements of Musical Style 3
  - or **THEA 1310** Theatre Appreciation 3

#### Spring
- **CHEM 3412** Organic Chemistry II 4
- **BIOL 2416** Genetics 3-4
  - or **BIOL 2421** Microbiology 3-4
  - or **BIOL 2371** Principles of Evolution 3-4
- **MATH 3342** Applied Probability and Statistics 3
  - or **BIOL 3325** Biostatistics 3
- **POLS 2306** State and Local Government 3

### Total Hours
- 123-126

### Third Year

#### Fall
- **BIOL 2416** Genetics 3-4
  - or **BIOL 2421** Microbiology 3-4
  - or **BIOL 2371** Principles of Evolution 3-4
- **PHYS 1401** General Physics I 4
  - or **PHYS 2425** University Physics I 4
- **BIOL 3000:4999** 3

### Hours
- 14-15

### Fourth Year

#### Fall
- **BIOL 3410** Cell Biology 4
- **BIOL 3430** Physiology 4
- **BIOL 3000:4999** 3

#### Hours
- 15

### Spring

#### Fall
- **BIOL 3000:4999** 4
- **BIOL 3000:4999** 4
- **BIOL 3000:4999** 3
- **BIOL 3000:4999** 3
- **BIOL 3000:4999** 3

### Total Hours
- 123-126
Courses

BIOL 1308 Science for Life I (Non-Majors Biology)
3 Semester Credit Hours (3 Lecture Hours)
A non-majors science course. Students will learn basic biological principles, identify the relevance of science in everyday life, and will understand the scientific method. This course does not substitute for BIOL 1406 - Biology I or BIOL 1407 - Biology II for science majors.
TCCNS: BIOL 1308

BIOL 1406 Biology I
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Presentation of basic biological concepts including scientific method, cytology, energetics, nucleic acids and genetics. This course is suitable for all majors.
Prerequisite: (MATH 1314, 1316, 2305, 2413, minimum score of 21 in 'ACT Math' or minimum score of 550 in 'SAT Math').
Co-requisite: SMTE 0091.
TCCNS: BIOL 1406

BIOL 1407 Biology II
4 Semester Credit Hours (4 Lecture Hours)
This course is an overview of the major concepts in biological diversity and plant and animal biology. Laboratory work will include individual/team activities as well as technology-related assignments.
Prerequisite: BIOL 1406.
Co-requisite: SMTE 0091.
TCCNS: BIOL 1407

BIOL 2300 Science Communication
3 Semester Credit Hours (3 Lecture Hours)
This course involves presentation and discussion of selected topics relating to the professional skills of practicing biological scientists, including basic software instruction, a review of library services pertinent to science, the application of scientific literature research skills, hypothesis generation and statistical tests, critical reviews of scientific articles, and an introduction to ethical issues in science.

BIOL 2371 Principles of Evolution
3 Semester Credit Hours (3 Lecture Hours)
An overview of the mechanisms by which heritable information changes, adaptations develop, and species diversify. Provides a foundation for molecular, cellular, and organismal studies in the biological sciences.
Prerequisite: BIOL 1407.

BIOL 2401 Anatomy and Physiology I
4 Semester Credit Hours (4 Lecture Hours)
Structure and function of the human body emphasizing biological chemistry, cell biology, tissues, and the integumentary, skeletal, muscular, and nervous systems. Not recommended for majors in the College of Science and Engineering. To count this course toward a major in the Department of Life Sciences, a student must demonstrate that is is required by professional schools in his or her career track and obtain approval for a substitution from his or her faculty mentor. Students may not receive credit for both this course and either BIOL 3425 - Functional Anatomy or BIOL 3430 - Physiology.
Prerequisite: BIOL 2401.
TCCNS: BIOL 2401

BIOL 2402 Anatomy and Physiology II
4 Semester Credit Hours (4 Lecture Hours)
Structure and function of the human body emphasizing blood, growth, development, genetics, and the endocrine, digestive, respiratory, cardiovascular, lymphatic, immune and urogenital systems. Not recommended for majors in the College of Science and Engineering. To count this course toward a major in the Department of Life Sciences, a student must demonstrate that is is required by professional schools in his or her career track and obtain approval for a substitution from his or her faculty mentor. Students may not receive credit for both this course and either BIOL 3425 - Functional Anatomy or BIOL 3430 - Physiology.
Prerequisite: BIOL 2401.
TCCNS: BIOL 2402

BIOL 2416 Genetics
4 Semester Credit Hours (3 Lecture Hours)
Principles of genetic transmissions and molecular basis of heredity and variation. Weekly recitation periods will involve team assignments, problem solving activities, and seminars.
Prerequisite: BIOL 1406 and 1407.
TCCNS: BIOL 2416

BIOL 2420 Principles of Microbiology
4 Semester Credit Hours (4 Lecture Hours)
Introduction to microorganisms with emphasis on those of importance in patient care. Principles of disinfection, sterilization, immunity. This class is intended for nursing majors; it cannot substitute for BIOL 2421 - Microbiology.
Prerequisite: BIOL 1406 and 1407.
TCCNS: BIOL 2420

BIOL 2421 Microbiology
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
An introduction to microorganisms including the bacteria, fungi, and viruses. Laboratory involves microbiological techniques and development of basic laboratory skills.
Prerequisite: BIOL 1406, 1407, CHEM 1411 and 1412.
Co-requisite: SMTE 0092.
TCCNS: BIOL 2421

BIOL 2427 Principles of Botany
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
Introduction to the structure, function, diversity and application of plants. Laboratory focus on anatomical features, physiological adaptations, classification, and life cycles.
Prerequisite: BIOL 1407 and CHEM 1411.
Co-requisite: SMTE 0091.

BIOL 3300 Animal Nutrition
3 Semester Credit Hours (3 Lecture Hours)
Examines the dietary requirements of both companion animals and livestock. Includes the anatomy, physiology and biochemistry of the gastrointestinal system, nutrient procurement and use, feed additives, growth stimulants, metabolic diseases, and diet therapy. Cross listed with BIMS 3300.
Prerequisite: BIOL 1407 and CHEM 3411 and (CHEM 3412 or 3412*).
* May be taken concurrently.
BIOL 3325 Biostatistics
3 Semester Credit Hours (3 Lecture Hours)
The application of statistical analyses to biological data. Students will gain an understanding of how to apply statistical analyses to biological data through study of the principles of experimental design including how to frame informative research questions. At a fundamental level, these concepts are linked to the philosophy of science and our understanding of the way the world works.

BIOL 3345 Cell Physiology
3 Semester Credit Hours (3 Lecture Hours)
Emphasis on cellular functions that underlie physiological processes, transport across membranes, membrane potential and excitability, the cell nucleus, and organelles and their relationship to energy, metabolism, and transport mechanisms within the cell. Offered during Spring semester of odd-numbered years.
Prerequisite: BIOL 2410 and BIOL 3410.

BIOL 3403 Molecular Biology
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
Principles of molecular biology including advanced concepts of gene structure, expression and regulation, chromatin structure, recombination, and current molecular biology techniques. Laboratory emphasis is on basic skills for nucleic acid analyses, including extraction, PCR amplification, quantification, restriction, and electrophoresis. DNA sequencing-based approaches are covered including bioinformatics for sequence comparisons, polymorphisms, and molecular identification. Cross listed with BIMS 3403.
Prerequisite: BIOL 2416 and 2421.
Co-requisite: SMTE 0092.

BIOL 3410 Cell Biology
4 Semester Credit Hours (4 Lecture Hours)
Study of cellular architecture and function. Topics include membranes, transport, organelles, cytoskeleton, and signaling mechanisms. Interrelationships of structure, function, energy and metabolism are explored. Laboratory will emphasize basic techniques of cell biology.
Prerequisite: BIOL 2416 and CHEM 3411.
Co-requisite: SMTE 0092.

BIOL 3413 Invertebrate Zoology
4 Semester Credit Hours (3 Lecture Hours, 1 Lab Hour)
Structure, life history, and evolution of the invertebrates with special emphasis on the phylogeny and ecological relationships of the major phyla. Laboratory will involve field trips and survey collections. Offered fall semester every year.
Prerequisite: BIOL 1407.
Co-requisite: SMTE 0091.

BIOL 3414 Vertebrate Zoology
4 Semester Credit Hours (4 Lecture Hours)
Structure, life history, and evolution of the vertebrates with special emphasis on the phylogeny and ecological relationships of the classes. Laboratory will involve field trips and survey collections. Offered only in Spring semester.
Prerequisite: BIOL 1407.
Co-requisite: SMTE 0091.

BIOL 3425 Functional Anatomy
4 Semester Credit Hours (4 Lecture Hours)
General trends in morphological development and adaptation as demonstrated by the anatomy and embryology of living and extinct chordates. Students may not receive credit for both this course and either BIOL 2401 - Anatomy and Physiology I or BIOL 2402 - Anatomy and Physiology II.
Prerequisite: BIOL 1407.
Co-requisite: SMTE 0091.

BIOL 3428 Principles of Ecology
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
Introduction to the interrelationships of organisms and their environment. Population structure, community classification and regulation, and energy flow in ecosystems will also be covered. Laboratory sections will focus on experimental design and field techniques in ecology.
Prerequisite: BIOL 1407 and (BIOL 2200, 2300, BIMS 2200 or UNIV 1101 and UNIV 1102) and CHEM 1411 and (MATH 2413 or 2413*).
* May be taken concurrently.
Co-requisite: SMTE 0091.

BIOL 3430 Physiology
4 Semester Credit Hours (4 Lecture Hours)
The study of physiological processes that are the product of complex interactions between tissues, organs and organ systems, with emphasis on the circulatory, respiratory, endocrine, muscular, digestive, and urogenital systems. Particular focus on homeostasis, and the role of the environment and evolution on organ systems. Students may not receive credit for both this course and either BIOL 2401 - Anatomy and Physiology I, or BIOL 2402 - Anatomy and Physiology II.
Prerequisite: BIOL 1407.
Co-requisite: SMTE 0091.

BIOL 3455 Plant form and Function
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
Anatomy of vegetative and reproductive organs of plants, unique cellular features, development and differentiation of cell and tissue types. Emphasis on physiological mechanisms of response and adaptation to the environment.
Prerequisite: BIOL 1407.
Co-requisite: SMTE 0091.

BIOL 3479 Plant Ecology
4 Semester Credit Hours (4 Lecture Hours)
Structure, physiology, life cycles, and economic impact of plants. Factors influencing diversity, succession and ecological distribution of plants.
Prerequisite: BIOL 1407.
Co-requisite: SMTE 0091.

BIOL 4100 Research Ethics and Professionalism
1 Semester Credit Hour (1 Lecture Hour)
A course designed to enhance the professionalism of undergraduate researchers. This course discusses the codified aspects of research ethics, including fabrication, falsification and plagiarism of data; assigning authorship, submitting manuscripts to more than one journal and management of lab teams. It also addresses careers in science, resume writing, producing the successful application and interviewing skills.

BIOL 4301 Embryology
3 Semester Credit Hours (3 Lecture Hours)
Studies the events that occur just prior to and during gestation. Includes gametogenesis, chromosomal and single gene aberrations, teratology, and the development of the body systems.
Prerequisite: BIOL 2416.
BIOL 4302 Coral Reef Conservation
3 Semester Credit Hours (3 Lecture Hours)
Survey of challenges and threats facing coral reef ecosystems in the 21st century and discussion of conservation and management strategies. Topics include biology and ecology of reef ecosystems, climate change impacts, coral bleaching, over-fishing and the effectiveness and design of marine protected areas.

BIOL 4304 Biology of Viruses
3 Semester Credit Hours (3 Lecture Hours)
Introduction to the study of viruses, including viral life cycles, replication schemes and Baltimore classification of representative bacteriophages, plant and animal viruses. Emphasis on analysis and review of primary literature on viruses.
Prerequisite: BIOL 2416, 2421 and CHEM 1411.

BIOL 4308 Biogeography
3 Semester Credit Hours (3 Lecture Hours)
This course offers an overview of the theories, methods, and current directions in modern biogeography, emphasizing marine and terrestrial plant and animal species and communities.

BIOL 4309 Biological Systematics and Phylogenetics
3 Semester Credit Hours (3 Lecture Hours)
Introduction to the theories of biological systematics and phylogenetics. Including species concepts, biological classification, nomenclature, and phylogenetic methods including ancestral state reconstruction and divergence time estimation. Offered in the spring semester of odd years.
Stacked with BIOL 5309
Prerequisite: BIOL 1407.

BIOL 4311 Biological Bases of Behavior
3 Semester Credit Hours (3 Lecture Hours)
This lecture-based course examines the processes by which neuronal circuits generate behaviors and the mechanisms by which experience modulates the activity of these circuits.
Prerequisite: BIMS 4323.

BIOL 4312 Mariculture Techniques
3 Semester Credit Hours (2 Lecture Hours, 2 Lab Hours)
The study and hands-on application of biological, mechanical, and other concepts required to develop the skills and techniques necessary for efficient operation and management of public and private aquaculture facilities. Offered in Fall of odd-numbered years.
Prerequisite: BIOL 4370.

BIOL 4315 Animal Behavior
3 Semester Credit Hours (3 Lecture Hours)
What mechanisms cause behavior? How does behavior develop? How does behavior affect survival and reproduction? How does behavior evolve? These questions will be explored in vertebrate and invertebrate species. Offered in the fall semester Stacked with BIOL 5315

BIOL 4319 Biology of Marine Mammals
3 Semester Credit Hours (3 Lecture Hours)
Introduction to marine mammals, with a focus on their interactions with their biotic and abiotic environment
Prerequisite: BIOL 1407.

BIOL 4323 Global Change Ecology
3 Semester Credit Hours (3 Lecture Hours)
An introduction to the effects of climatic and anthropogenic change on terrestrial and aquatic structure and function. Includes readings from the current literature and discussion of controversial articles.
Prerequisite: BIOL 3428.

BIOL 4328 Fisheries
3 Semester Credit Hours (3 Lecture Hours)
A study of theory and techniques in fisheries science, including practical fisheries sampling designs and techniques, behavior of fisheries populations and application to resource management with emphasis in tide-influenced waters. Includes readings in the current literature.
Prerequisite: BIOL 1407.

BIOL 4329 Fisheries Techniques
3 Semester Credit Hours (2 Lecture Hours)
This class is designed to provide practical experience in the theory and application of traditional and modern fisheries sampling and analytical techniques used in Fisheries Science and Management. This is a hands-on field- and laboratory-based course that will develop skills that are most commonly used by fisheries biologists and technicians. Offered in Fall of even-numbered years.
Prerequisite: BIOL 4328.

BIOL 4330 Conservation Biology
3 Semester Credit Hours (3 Lecture Hours)
Principles and theories relating to the conservation of biological diversity, including patterns and processes creating biological diversity, estimates of extinction rates, consequences of losses of biodiversity and causes of diversity loss.

BIOL 4334 Biology and Ecology of Coral Reefs
3 Semester Credit Hours (3 Lecture Hours)
This course will introduce the biology of corals, describe the abiotic and biotic interactions among coral reef ecosystem inhabitants, identify the threats of climate change, and discuss the conservation and management of reefs for the future. Offered every spring.
Prerequisite: BIOL 3428.

BIOL 4336 Marine Ecology
3 Semester Credit Hours (3 Lecture Hours)
Habitats and community structure in marine environments; biotic and abiotic factors governing the distribution of marine organisms. (Offered every Spring)
Prerequisite: BIOL 3428.

BIOL 4340 Genomics, Proteomics and Bioinformatics
3 Semester Credit Hours (3 Lecture Hours)
An introduction to integrative biological study using genome-wide approaches and bioinformatics. The "omics" technologies (Genomics, Proteomics, Metabolomics, etc.) will be surveyed for current and potential contributions to understanding biological function at molecular, cellular, organismal and ecosystem levels.
Prerequisite: BIOL 2416 and 3410 or CHEM 4401.

BIOL 4343 Oceans and Human Health
3 Semester Credit Hours (3 Lecture Hours)
Healthy oceans are essential to the habitability of our planet – for humans and all other forms of life. Students will explore links between oceans, pollution, human well-being, ecosystem services, resource management, and the science and legislation governing the enforcement of water quality standards.

BIOL 4350 Research and Design
1-3 Semester Credit Hours (1-3 Lecture Hours)
Course will include experimental design, literature review of a research topic and laboratory work on the research topic.
BIOL 4353  Down the River: Biology of Gulf Coast Fishes
3 Semester Credit Hours (3 Lecture Hours)
This course covers aspects of ecology and biogeography of riverine and estuarine fishes while exposing students to field sampling techniques and museum preparation of specimens. This will be a unique opportunity for students to gain an in-depth understanding of the biological complexity of Texas Gulf Coast river systems while gaining hands-on experience in field and museum ichthyological techniques that are employed by state, federal and academic researchers alike.
Co-requisite: SMTE 0091.

BIOL 4355  Public Aquarium and Animal Care Operations
3 Semester Credit Hours (3 Lecture Hours)
This course examines the unique requirements needed for public aquariums and zoos to balance animal care and health with public display for general education and conservation research.
Co-requisite: SMTE 0091.

BIOL 4360  Computation for 21st Century Biologists
3 Semester Credit Hours (3 Lecture Hours)
This course is designed to prepare and enable students to use computational tools for bioinformatic applications in advanced courses and independent research projects. Students will be introduced to powerful open-source computing tools used in biological research for creation, organization, manipulation, processing, analysis, and archiving of big data. While not a formal requirement, it is assumed that students have a firm command of basic algebra. Offered every Fall semester Stacked with BIOL 5360

BIOL 4370  Mariculture
3 Semester Credit Hours (3 Lecture Hours)
Survey of the physiological, behavioral, environmental, and economic parameters governing the culture of selected aquatic species. Included are techniques employed worldwide to produce aquatic products.
Prerequisite: BIOL 1407.

BIOL 4371  Population Genetics
3 Semester Credit Hours (3 Lecture Hours)
An introduction to evolutionary processes and their genetic basis, this course focuses on theoretical and experimental approaches to the study of population genetics, quantitative genetics, evolutionary ecology, and molecular evolution.
Prerequisite: BIOL 2416 and MATH 2413.

BIOL 4396  Directed Independent Study
1-3 Semester Credit Hours (1-3 Lecture Hours)
Research in areas of current interest. Written report required. May be repeated for a maximum of 6 semester hours.
Prerequisite: BIOL 1407 and CHEM 1412.

BIOL 4399  Directed Independent Research
3-6 Semester Credit Hours (3-6 Lecture Hours)
Independent laboratory- or field-based research project on topic of current interest. Project developed in conjunction with a faculty advisor. Written report required. May be repeated once for a total of 6 semester credit hours.

BIOL 4405  Limnology
4 Semester Credit Hours (4 Lecture Hours)
The study of the functional relationships and productivity of aquatic communities as they are affected by their physical, chemical, and biotic environment. The influence of man's activities on these systems will be the focus of the course.
Prerequisite: BIOL 3428.
Co-requisite: SMTE 0091.

BIOL 4406  Immunology
4 Semester Credit Hours (4 Lecture Hours)
An overview of immunology with emphasis on current knowledge of the immune system. Detailed examination of the specific cells, cytokines, antibodies, and molecules that comprise the immune system. Laboratory exercises demonstrate the basic principles and techniques used in immunologic studies. Cross listed with BIMS 4406.
Prerequisite: BIOL 2421.
Co-requisite: SMTE 0092.

BIOL 4407  BIOLOGY OF THE FUNGI
4 Semester Credit Hours (3 Lecture Hours, 1 Lab Hour)
Overview of the fungi, including their characteristics, diversity, and ecology. Interactions between fungi and other organisms are explored along with the role and importance of the fungi.
Prerequisite: BIOL 2421.
Co-requisite: SMTE 0092.

BIOL 4408  Microbial Diversity and Ecology
4 Semester Credit Hours (4 Lecture Hours)
Biodiversity and roles of microorganisms in natural environments. Interactions with other micro- and macro-organisms (humans, animals and plants) and with abiotic factors. Unique abilities of microorganisms such as nitrogen fixation and adaptation to extreme environments.
Prerequisite: (BIOL 2421 or 4328).
Co-requisite: SMTE 0092.

BIOL 4410  Mammalogy
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
Systematics and ecology of mammals. Offered in even Fall semesters.
Prerequisite: BIOL 1407.
Co-requisite: SMTE 0091.

BIOL 4413  Entomology
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
A broad overview of the natural history, classification, phylogeny, ecology, behavior, development and physiology of insects and their kin. The lab will involve field work, collection and curation. Offered in spring semester of even years. Stacked with BIOL 5413.
Prerequisite: BIOL 3413.
Co-requisite: SMTE 0091.

BIOL 4417  Field Biology
4 Semester Credit Hours (1 Lecture Hour, 6 Lab Hours)
is a hands-on course designed to teach students key concepts by immersing them in nature. Topics include adaptations of plants and animals in different habitats, food web interactions, and how biotic and abiotic forces interact to structure natural communities including spatial and temporal variation in communities.
Prerequisite: BIOL 3428.
Co-requisite: SMTE 0091.

BIOL 4422  Plant Taxonomy
4 Semester Credit Hours (4 Lecture Hours)
Principles and practice in the classification of flowering plants. Field trips are required.
Prerequisite: BIOL 1407.
Co-requisite: SMTE 0091.

BIOL 4425  Ornithology
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
Systematics, anatomy, physiology, ecology, behavior, and field identification of birds. Offered in odd Fall semester.
Prerequisite: BIOL 1407.
Co-requisite: SMTE 0091.
Biomedical Sciences, BS

Program Description

Purpose of the Biomedical Sciences Program

The Biomedical Sciences Program serves the Coastal Bend region, the state of Texas, and the nation by preparing students for biomedical career opportunities including health services, research, forensic science, genetic engineering, biotechnology, bioinformatics, product sales, and services dealing with analysis, assessment and inspection. A few biomedical careers are available to a student with a baccalaureate degree, but most will require the student to complete post-baccalaureate coursework or to earn a graduate degree. Core courses in biology and chemistry provide students with critical thinking skills in the pure sciences; specific courses allow students to further develop these skills and utilize them in solving problems. This unique combination provides students with a strong conceptual framework and also allows students to focus upon applied biomedical sciences. The two options in the Biomedical Sciences Program prepare students

- to enter post-baccalaureate or graduate programs in the health professions (e.g., medicine, dentistry, pharmacy, physician assistant, physical therapy, occupational therapy, etc.) or in related sciences.
- for careers and/or graduate training in forensic science and related areas.

Biological Microtechniques
4 Semester Credit Hours (4 Lecture Hours)
Theory and techniques of processing specimens for histochemistry and microscopic examination. Laboratory includes preparation of tissues and small specimens for analysis and display.
Prerequisite: BIOL 1407 and CHEM 3411.
Co-requisite: SMTE 0091.

Biological Botany
4 Semester Credit Hours (4 Lecture Hours)
The ecology of marine plants with emphasis on identification, life histories, and environmental factors of distribution.
Prerequisite: BIOL 1407.
Co-requisite: SMTE 0091.

Biological Plankton
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
In this class we will investigate the systematics, distribution, and ecology of major marine plankton groups and introduce major concepts in biological oceanography. Offered in Spring of odd-numbered years.

Biological Ichthyology
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
Systematics, evolution, biology, and ecology of fishes. Laboratory identification of marine and freshwater fishes collected during field excursions.
Prerequisite: BIOL 1407.
Co-requisite: SMTE 0091.

Parasitology
4 Semester Credit Hours (4 Lecture Hours)
An introduction to parasitology with emphasis on internal parasites and appropriate references to human endoparasites and parasites of veterinary importance.
Prerequisite: BIOL 2421.
Co-requisite: SMTE 0092.

Biological Microtechniques
4 Semester Credit Hours (4 Lecture Hours)
Theory and techniques of processing specimens for histochemistry and microscopic examination. Laboratory includes preparation of tissues and small specimens for analysis and display.
Prerequisite: BIOL 1407 and CHEM 3411.
Co-requisite: SMTE 0091.

Case Work Methods in Forensic Anthropology
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
This course combines the study of human bones (osteology) and skeletal anatomy with established and validated forensic anthropological methods to solve theoretical and actual forensic cases involving human remains. Offered during the spring semester. Stacked with BIOL 5439. Cross-listed with BIMS 4439.

Herpetology
4 Semester Credit Hours (4 Lecture Hours)
Systematics, ecology, and behavior of amphibians and reptiles.
Prerequisite: BIOL 1407.
Co-requisite: SMTE 0091.

Estuarine Organisms
4 Semester Credit Hours (4 Lecture Hours)
Systematics, distribution, and ecology of estuarine macrofauna and macroflora. Weekend field trips and individual study required.
Prerequisite: BIOL 3413.
Co-requisite: SMTE 0091.

Tropical Ecosystems & Conservation
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
Survey of the ecology and conservation issues of the major ecosystems in the tropics and field techniques used to study tropical forest ecology.
Prerequisite: BIOL 3428.
Co-requisite: SMTE 0091.
Student Learning Outcomes

Students will:

- Possess a broad understanding of science and its in-depth application to their specific option within the biomedical sciences major.
- Demonstrate critical thinking skills
- Practice the oral and written communication skills necessary to share biomedical information with a range of audiences and in a variety of venues.

The Honors Program

The Honors Program (admission by application only) offers highly motivated students from any academic discipline an enriched program of study in which to develop global perspectives. Appropriate courses approved by both a student's BIMS faculty mentor and Honors advisor may count toward the BIMS degree. BIMS students wishing to participate in the Honors track may require some additional course work. For more information, consult the section entitled "Honors Program (http://catalog.tamucc.edu/undergraduate/university-college/programs/honors-program)/".

Related Programs

Numerous undergraduate programs complement a major in Biomedical Sciences. In addition to the "traditional" partners (Biology, Chemistry, Physics), students should also examine courses in the Department of Computing Sciences, the Department of Mathematics and Statistics and the College of Nursing and Health Sciences. Students should also consider courses in the College of Liberal Arts (social sciences, languages, criminal justice), in the College of Business, and in the College of Education and Human Development (kinesiology). Details of these programs are available in their respective sections of this catalog.

Minor

Although Biomedical Sciences does not offer a minor, many upper-division BIMS courses may count toward the Biology Minor (see the Biology (p. 620) section of this catalog). Students majoring in Biomedical Sciences may not minor in Biology.

Fast Track from Bachelor's to Master's Degree

The university allows the opportunity for high-achieving students to waive a select number of undergraduate credits in order to obtain a graduate degree at an accelerated pace. For more information, see Fast Track Biomedical Sciences, BS to Biology, MS (p. 597).

General Requirements

The Bachelor of Science in Biomedical Sciences degree requires a minimum of 120 semester hours: 42 are from designated Core Curriculum Program courses, 17 are from biomedical sciences core courses, and 61 are from biomedical sciences options courses. Students select one of two biomedical sciences options: (A) Pre-Professional Option or (B) Forensic Science Option. A student should select an option after completion of a minimum of 35 semester hours of university course work, but before the completion of 50 semester hours. After their sophomore year (60 semester hours), students must have (and maintain) a cumulative GPA of 2.50 or above in their course work, with no course work older than 5 years. No "D" or "F" grades will be accepted as credit within the biomedical sciences core or option courses. Students may take a maximum of 9 SCH as BIMS 4590 courses.

Grade-Point Average

A minimum cumulative grade-point average of 2.0 ("C") on a 4 point scale (4.0 = A) in all work taken and a minimum grade-point average of 2.25 in all courses in the major field of study taken at this University are required. The courses in the major field of study are defined for each major, and can be found on the pages for that major. For teacher certification, grade point average requirements are higher. Refer to "Teacher Certification Programs" in the College of Science and Engineering.

</tbody>
</table>

1 Full-time, first time in college students are required to take the first-year seminars.
   • UNIV 1101 University Seminar I (1 sch)
   • UNIV 1102 University Seminar II (1 sch)

Students entering with some college credit may not be required to take one or both of the First-Year Seminar courses (see The First Year Learning Communities Program for rules and exceptions concerning these courses). Students in the Pre-Professional or Forensic Science options who are not required to take these First-Year Seminar courses must take BIMS 2200 Professional Skills (2 sch) Professional Skills (see below).

2 Three 4-hour science and mathematics courses are required for all Biomedical Sciences students: BIOL 1406 Biology I (4 sch), BIOL 1407 Biology II (4 sch), and MATH 1442 Statistics for Life (4 sch)). Only the 3 lecture hours of each will apply to the Core Curriculum Program. Each one-hour laboratory component will be counted in the Component Area Option of the University Core Curriculum. The 3 lecture hours of General Chemistry I (CHEM 1411 General Chemistry I (4 sch)) will also be counted in the Component Area Option of the University Core Curriculum, but the 1 laboratory hour will be counted as part of the Biomedical Science core.

**Biomedical Sciences Options**

Select one of the following Options: 59-61

- Pre-Professional Option (p. 516)
- Forensic Science Option (p. 517)

Total Hours: 120-122

1 Only the 3 lecture hours of each will apply to the Core Curriculum Program. Each one-hour laboratory component will be counted in the Component Area Option of the University Core Curriculum. The 3 lecture hours of General Chemistry I (CHEM 1411 General Chemistry I (4 sch)) will also be counted in the Component Area Option of the University Core Curriculum, but the 1 laboratory hour will be counted as part of the Biomedical Science core.

2 Unless student has credit for MATH 1442 Statistics for Life (4 sch)

+ Select at least one Forensic Science Option—Elective

**Biomedical Sciences Options**

Each multi-disciplinary option provides specific background in an area of biomedical sciences that corresponds to the student's career choice. For the baccalaureate degree, an option consists of requirements and electives totaling 59-61 semester hours of course work.

**Pre-Professional Option**

This option is designed for students who plan to continue their education in a professional school (e.g., medicine, dentistry, veterinary medicine, pharmacy, physical therapy, occupational therapy, physician assistant, etc.) or graduate school. Students in this option must choose either MATH 1442 Statistics for Life (4 sch) or MATH 2413 Calculus I (4 sch) to satisfy the University Core requirement in mathematics, and they must complete BIMS 4085 Major Field Test in Biology (0 sch) during their senior year, prior to graduation.

**Pre-Professional Option Required Courses**

<td>1</td>
</tr>
</tbody>
</table>

**Pre-Professional Option Electives**

Select 49 hours of the following: 49

- BIMS 2171 Medical Terminology
- BIMS 3300 Animal Nutrition
- BIMS 3301 Introduction to Animal Science
- BIMS 3401 Pathophysiology
- BIMS 3403 Molecular Biology
- BIMS 4170 Biomedical Seminar
- BIMS 4295 Biomedical Practicum
- BIMS 4296 Clinical Research
- BIMS 4299 Directed Independent Research
- BIMS 4311 Biology of Cancer
- BIMS 4323 Neurobiology
- BIMS 4327 Introduction to Toxicology
- BIMS 4330 Biological Basis of Aging
- BIMS 4341 Health Disparities
- BIMS 4333 Medical Entomology
- BIMS 4334 Human Genetics
- BIMS 4335 Endocrinology
- BIMS 4374 Medical Microbiology
- BIMS 4375 Mechanisms of Microbial Pathogenesis
- BIMS 4396 Directed Independent Study
- BIMS 4406 Immunology
- BIMS 4410 Histology
- BIMS 4590 Selected Topics (with approval of faculty mentor)
- BIOL 3345 Cell Physiology
- BIOL 3410 Cell Biology
- BIOL 3425 Functional Anatomy
- BIOL 3430 Physiology
- BIOL 4301 Embryology
- BIOL 4304 Biology of Viruses
- BIOL 4340 Genomics, Proteomics and Bioinformatics
- BIOL 4350 Research and Design
- BIOL 4408 Microbial Diversity and Ecology
- BIOL 4433 Parasitology
- BIOL 4435 Biological Microtechniques
- CHEM 4320 Drugs, Toxins and Natural Products Chemistry
- CHEM 4401 Biochemistry I
- CHEM 4402 Biochemistry II
- MATH 2413 Calculus I (if not counted in the University Core)
- MATH 3342 Applied Probability and Statistics
- PHYS 1401 General Physics I
- PHYS 1402 General Physics II
- 12 hours of other approved electives

Total Hours: 54

1 The 3 lecture hours count as Math foundations in the University core. The 1 hour of lab counts in the Component Area Option

2 Unless student has credit for MATH 1442 Statistics for Life (4 sch)

3 May not apply elective credit for either BIOL 2401 & 2402 if they take either BIOL 3430 or BIOL 3425.
Additional Information

This option has flexible degree requirements with many electives to accommodate the different professional schools’ diverse entrance requirements. In the list of electives above, however, not every course is appropriate for every student and some courses are best taken at a particular time. For example:

Students should take basic science courses such as BIMS 3403 Molecular Biology (4 sch), BIMS 4406 Immunology (4 sch), BIOL 3425 Functional Anatomy (4 sch), BIOL 3430 Physiology (4 sch), CHEM 4401 Biochemistry I (4 sch), CHEM 4402 Biochemistry II (4 sch), PHYS 1401 General Physics I (4 sch), PHYS 1402 General Physics II (4 sch) before they attempt standardized admissions tests (usually at the end of their junior year). Most professional schools encourage applicants to have a broad background in the basic sciences, and these courses are helpful even if they are not specifically required for admission to a particular career area.

To decide which electives to choose, students should:

- consult their faculty mentor and academic advisor who can also provide information about the “other mentor approved electives” which may include nonlisted courses in natural sciences (biology, biomedical sciences, chemistry, physics), social sciences (psychology, sociology), computer science, health sciences, criminal justice, kinesiology, or business.
- contact the appropriate school(s) to determine their specific entrance requirements.
- obtain a sample degree plan for a particular career field. These are available on the BIMS web site, from the student’s faculty mentor or academic advisor, or through the Pre-professional website (http://prepro.tamucc.edu).

Forensic Science Option

This interdisciplinary option allows students to prepare for careers in forensic science (including entrance into graduate programs in forensic science and related areas). Prospective students should be aware that employers in forensic science typically require employees to meet personal suitability requirements (e.g., honesty, integrity, and scientific objectivity). Background checks and drug tests similar to those required for law enforcement officers are likely to be a condition of employment. Students in this option must choose MATH 2413 Calculus I (4 sch) to satisfy the University Core requirement in mathematics. Elective courses allow the student to begin to specialize in an emphasis area such as forensic biology (mainly biology and biomedical sciences courses), forensic chemistry (mainly chemistry courses), or general forensic science. A student’s degree plan may include a maximum of six hours of internship, research, or independent study (e.g., BIMS 4295 Biomedical Practicum (2 sch), BIMS 4299 Directed Independent Research (1-2 sch), BIMS 4396 Directed Independent Study (1-3 sch), or BIOL 4350 Research and Design (1-3 sch)). Students in this option must take a standardized assessment test during their senior year, prior to graduation.

BIOL 2401 Anatomy and Physiology I
4 Semester Credit Hours (4 Lecture Hours)
Structure and function of the human body emphasizing biological chemistry, cell biology, tissues, and the integumentary, skeletal, muscular, and nervous systems. Not recommended for majors in the College of Science and Engineering. To count this course toward a major in the Department of Life Sciences, a student must demonstrate that it is required by professional schools in his or her career track and obtain approval for a substitution from his or her faculty mentor. Students may not receive credit for both this course and either BIOL 3425 - Functional Anatomy or BIOL 3430 - Physiology.
Co-requisite: SMTE 0091.
TCCNS: BIOL 2401

BIOL 2402 Anatomy and Physiology II
4 Semester Credit Hours (4 Lecture Hours)
Structure and function of the human body emphasizing blood, growth, development, genetics, and the endocrine, digestive, respiratory, cardiovascular, lymphatic, immune and urogenital systems. Not recommended for majors in the College of Science and Engineering. To count this course toward a major in the Department of Life Sciences, a student must demonstrate that is is required by professional schools in his or her career track and obtain approval for a substitution from his or her faculty mentor. Students may not receive credit for both this course and either BIOL 3425 - Functional Anatomy or BIOL 3430 - Physiology.
Prerequisite: BIOL 2401.
Co-requisite: SMTE 0091.
TCCNS: BIOL 2402

BIOL 2416 Genetics
4 Semester Credit Hours (3 Lecture Hours)
Principles of genetic transmissions and molecular basis of heredity and variation. Weekly recitation periods will involve team assignments, problem solving activities, and seminars.
Prerequisite: BIOL 1406 and 1407.
TCCNS: BIOL 2416

BIOL 2420 Principles of Microbiology
4 Semester Credit Hours (4 Lecture Hours)
Introduction to microorganisms with emphasis on those of importance in patient care. Principles of disinfection, sterilization, immunity. This class is intended for nursing majors; it cannot substitute for BIOL 2421 - Microbiology.
Co-requisite: SMTE 0092.
TCCNS: BIOL 2420

BIOL 2421 Microbiology
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
An introduction to microorganisms including the bacteria, fungi, and viruses. Laboratory involves microbiological techniques and development of basic laboratory skills.
Prerequisite: BIOL 1406, 1407, CHEM 1411 and 1412.
Co-requisite: SMTE 0092.
TCCNS: BIOL 2421

BIOL 2472 Principles of Botany
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
Introduction to the structure, function, diversity and application of plants. Laboratory focus on anatomical features, physiological adaptations, classification, and life cycles.
Prerequisite: BIOL 1407 and CHEM 1411.
Co-requisite: SMTE 0091.

BIOL 3300 Animal Nutrition
3 Semester Credit Hours (3 Lecture Hours)
Examines the dietary requirements of both companion animals and livestock. Includes the anatomy, physiology and biochemistry of the gastrointestinal system, nutrient procurement and use, feed additives, growth stimulants, metabolic diseases, and diet therapy. Cross listed with BIMS 3300.
Prerequisite: BIOL 1407 and CHEM 3411 and (CHEM 3412 or 3412').
*May be taken concurrently.

BIOL 3325 Biostatistics
3 Semester Credit Hours (3 Lecture Hours)
The application of statistical analyses to biological data. Students will gain an understanding of how to apply statistical analyses to biological data through study of the principles of experimental design including how to frame informative research questions. At a fundamental level, these concepts are linked to the philosophy of science and our understanding of the way the world works.

BIOL 3345 Cell Physiology
3 Semester Credit Hours (3 Lecture Hours)
Emphasis on cellular functions that underlie physiological processes, transport across membranes, membrane potential and excitability, the cell nucleus, and organelles and their relationship to energy, metabolism, and transport mechanisms within the cell. Offered during Spring semester of odd-numbered years
Prerequisite: BIMS 2200 and BIOL 3410.

BIOL 3303 Molecular Biology
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
Principles of molecular biology including advanced concepts of gene structure, expression and regulation, chromatin structure, recombination, and current molecular biology techniques. Laboratory emphasis is on basic skills for nucleic acid analyses, including extraction, PCR amplification, quantification, restriction, and electrophoresis. DNA sequencing-based approaches are covered including bioinformatics for sequence comparisons, polymorphisms, and molecular identification. Cross listed with BIMS 3403.
Prerequisite: BIOL 2416 and 2421.
Co-requisite: SMTE 0092.

BIOL 3410 Cell Biology
4 Semester Credit Hours (4 Lecture Hours)
Study of cellular architecture and function. Topics include membranes, transport, organelles, cytoskeleton, and signaling mechanisms. Interrelationships of structure, function, energy and metabolism are explored. Laboratory will emphasize basic techniques of cell biology.
Prerequisite: BIOL 2416 and CHEM 3411.
Co-requisite: SMTE 0092.

BIOL 3413 Invertebrate Zoology
4 Semester Credit Hours (3 Lecture Hours, 1 Lab Hour)
Structure, life history, and evolution of the invertebrates with special emphasis on the phylogeny and ecological relationships of the major phyla. Laboratory will involve field trips and survey collections. Offered fall semester every year.
Prerequisite: BIOL 1407.
Co-requisite: SMTE 0091.
BIOL 3414  Vertebrate Zoology
4 Semester Credit Hours (4 Lecture Hours)
Structure, life history, and evolution of the vertebrates with special emphasis on the phylogeny and ecological relationships of the classes. Laboratory will involve field trips and survey collections. Offered only in Spring semester.
Prerequisite: BIOL 1407.
Co-requisite: SMTE 0091.

BIOL 3425  Functional Anatomy
4 Semester Credit Hours (4 Lecture Hours)
General trends in morphological development and adaptation as demonstrated by the anatomy and embryology of living and extinct chordates. Students may not receive credit for both this course and either BIOL 2401 - Anatomy and Physiology I or BIOL 2402 - Anatomy and Physiology II.
Prerequisite: BIOL 1407.
Co-requisite: SMTE 0091.

BIOL 3428  Principles of Ecology
4 Semester Credit Hours (4 Lecture Hours)
Introduction to the interrelationships of organisms and their environment. Population structure, community classification and regulation, and energy flow in ecosystems will also be covered. Laboratory sections will focus on experimental design and field techniques in ecology.
Prerequisite: BIOL 1407 and (BIOL 2200, 2300, BIMS 2200 or UNIV 1101 and UNIV 1102) and CHEM 1411 and (MATH 2413 or 2413†).* May be taken concurrently.
Co-requisite: SMTE 0091.

BIOL 3430  Physiology
4 Semester Credit Hours (4 Lecture Hours)
The study of physiological processes that are the product of complex interactions between tissues, organs and organ systems, with emphasis on the circulatory, respiratory, endocrine, muscular, digestive, and urogenital systems. Particular focus on homeostasis, and the role of the environment and evolution on organ systems. Students may not receive credit for both this course and either BIOL 2401 - Anatomy and Physiology I, or BIOL 2402 - Anatomy and Physiology II.
Prerequisite: BIOL 1407.
Co-requisite: SMTE 0091.

BIOL 3455  Plant form and Function
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
Anatomy of vegetative and reproductive organs of plants, unique cellular features, development and differentiation of cell and tissue types. Emphasis on physiological mechanisms of response and adaptation to the environment.
Prerequisite: BIOL 1407.
Co-requisite: SMTE 0091.

BIOL 3479  Plant Ecology
4 Semester Credit Hours (4 Lecture Hours)
Structure, physiology, life cycles, and economic impact of plants. Factors influencing diversity, succession and ecological distribution of plants.
Prerequisite: BIOL 1407.
Co-requisite: SMTE 0091.

BIOL 4100  Research Ethics and Professionalism
1 Semester Credit Hour (1 Lecture Hour)
A course designed to enhance the professionalism of undergraduate researchers. This course discusses the codified aspects of research ethics, including fabrication, falsification and plagiarism of data; assigning authorship, submitting manuscripts to more than one journal and management of lab teams. It also addresses careers in science, resume writing, producing the successful application and interviewing skills.

BIOL 4301  Embryology
3 Semester Credit Hours (3 Lecture Hours)
Studies the events that occur just prior to and during gestation. Includes gametogenesis, chromosomal and single gene aberrations, teratology, and the development of the body systems.
Prerequisite: BIOL 2416.

BIOL 4302  Coral Reef Conservation
3 Semester Credit Hours (3 Lecture Hours)
Survey of challenges and threats facing coral reef ecosystems in the 21st century and discussion of conservation and management strategies. Topics include biology and ecology of reef ecosystems, climate change impacts, coral bleaching, over-fishing and the effectiveness and design of marine protected areas.

BIOL 4304  Biology of Viruses
3 Semester Credit Hours (3 Lecture Hours)
Introduction to the study of viruses, including viral life cycles, replication schemes and Baltimore classification of representative bacteriophages, plant and animal viruses. Emphasis on analysis and review of primary literature on viruses.
Prerequisite: BIOL 2416, 2421 and CHEM 1411.

BIOL 4308  Biogeography
3 Semester Credit Hours (3 Lecture Hours)
This course offers an overview of the theories, methods, and current directions in modern biogeography, emphasizing marine and terrestrial plant and animal species and communities.

BIOL 4309  Biological Systematics and Phylogenetics
3 Semester Credit Hours (3 Lecture Hours)
Introduction to the theories of biological systematics and phylogenetics. Including species concepts, biological classification, nomenclature, and phylogenetic methods including ancestral state reconstruction and divergence time estimation. Offered in the spring semester of odd years. Stacked with BIOL 5309
Prerequisite: BIOL 1407.

BIOL 4311  Biological Bases of Behavior
3 Semester Credit Hours (3 Lecture Hours)
This lecture-based course examines the processes by which neuronal circuits generate behaviors and the mechanisms by which experience modulates the activity of these circuits.
Prerequisite: BIMS 4323.

BIOL 4312  Mariculture Techniques
3 Semester Credit Hours (2 Lecture Hours, 2 Lab Hours)
The study and hands-on application of biological, mechanical, and other concepts required to develop the skills and techniques necessary for efficient operation and management of public and private aquaculture facilities. Offered in Fall of odd-numbered years.
Prerequisite: BIOL 4370.
BIOL 4315 Animal Behavior
3 Semester Credit Hours (3 Lecture Hours)
What mechanisms cause behavior? How does behavior develop? How does behavior affect survival and reproduction? How does behavior evolve? These questions will be explored in vertebrate and invertebrate species. Offered in the fall semester Stacked with BIOL 5315.

BIOL 4319 Biology of Marine Mammals
3 Semester Credit Hours (3 Lecture Hours)
Introduction to marine mammals, with a focus on their interactions with their biotic and abiotic environment. Prequisite: BIOL 1407.

BIOL 4323 Global Change Ecology
3 Semester Credit Hours (3 Lecture Hours)
An introduction to the effects of climatic and anthropogenic change on terrestrial and aquatic structure and function. Includes readings from the current literature and discussion of controversial articles. Prerequisite: BIOL 3428.

BIOL 4328 Fisheries
3 Semester Credit Hours (3 Lecture Hours)
A study of theory and techniques in fisheries science, including practical fisheries sampling designs and techniques, behavior of fisheries populations and application to resource management with emphasis in tide-influenced waters. Includes readings in the current literature. Prerequisite: BIOL 1407.

BIOL 4329 Fisheries Techniques
3 Semester Credit Hours (2 Lecture Hours)
This class is designed to provide practical experience in the theory and application of traditional and modern fisheries sampling and analytical techniques used in Fisheries Science and Management. This is a hands-on field- and laboratory-based course that will develop skills that are most commonly used by fisheries biologists and technicians. Offered in Fall of even-numbered years. Prerequisite: BIOL 4328.

BIOL 4330 Conservation Biology
3 Semester Credit Hours (3 Lecture Hours)
Principles and theories relating to the conservation of biological diversity, including patterns and processes creating biological diversity, estimates of extinction rates, consequences of losses of biodiversity and causes of diversity loss.

BIOL 4334 Biology and Ecology of Coral Reefs
3 Semester Credit Hours (3 Lecture Hours)
This course will introduce the biology of corals, describe the abiotic and biotic interactions among coral reef ecosystem inhabitants, identify the threats of climate change, and discuss the conservation and management of reefs for the future. Offered every spring. Prerequisite: BIOL 3428.

BIOL 4336 Marine Ecology
3 Semester Credit Hours (3 Lecture Hours)
Habitats and community structure in marine environments; biotic and abiotic factors governing the distribution of marine organisms. (Offered every Spring) Prerequisite: BIOL 3428.

BIOL 4340 Genomics, Proteomics and Bioinformatics
3 Semester Credit Hours (3 Lecture Hours)
An introduction to integrative biological study using genome-wide approaches and bioinformatics. The -omics technologies (Genomics, Proteomics, Metabolomics, etc.) will be surveyed for current and potential contributions to understanding biological function at molecular, cellular, organismal and ecosystem levels. Prerequisite: BIOL 2416 and 3410 or CHEM 4401.

BIOL 4343 Oceans and Human Health
3 Semester Credit Hours (3 Lecture Hours)
Healthy oceans are essential to the habitability of our planet – for humans and all other forms of life. Students will explore links between oceans, pollution, human well-being, ecosystem services, resource management, and the science and legislation governing the enforcement of water quality standards.

BIOL 4350 Research and Design
1-3 Semester Credit Hours (1-3 Lecture Hours)
Course will include experimental design, literature review of a research topic and laboratory work on the research topic.

BIOL 4353 Down the River: Biology of Gulf Coast Fishes
3 Semester Credit Hours (3 Lecture Hours)
This course covers aspects of ecology and biogeography of riverine and estuarine fishes while exposing students to field sampling techniques and museum preparation of specimens. This will be a unique opportunity for students to gain an in-depth understanding of the biological complexity of Texas Gulf Coast river systems while gaining hands-on experience in field and museum ichthyological techniques that are employed by state, federal and academic researchers alike. Co-requisite: SMTE 0091.

BIOL 4355 Public Aquarium and Animal Care Operations
3 Semester Credit Hours (3 Lecture Hours)
This course examines the unique requirements needed for public aquariums and zoos to balance animal care and health with public display for general education and conservation research. Co-requisite: SMTE 0091.

BIOL 4360 Computation for 21st Century Biologists
3 Semester Credit Hours (3 Lecture Hours)
This course is designed to prepare and enable students to use computational tools for bioinformatic applications in advanced courses and independent research projects. Students will be introduced to powerful open-source computing tools used in biological research for creation, organization, manipulation, processing, analysis, and archiving of big data. While not a formal requirement, it is assumed that students have a firm command of basic algebra. Offered every Fall semester Stacked with BIOL 5360.

BIOL 4370 Mariculture
3 Semester Credit Hours (3 Lecture Hours)
Survey of the physiological, behavioral, environmental, and economic parameters governing the culture of selected aquatic species. Included are techniques employed worldwide to produce aquatic products. Prerequisite: BIOL 1407.

BIOL 4371 Population Genetics
3 Semester Credit Hours (3 Lecture Hours)
An introduction to evolutionary processes and their genetic basis, this course focuses on theoretical and experimental approaches to the study of population genetics, quantitative genetics, evolutionary ecology, and molecular evolution. Prerequisite: BIOL 2416 and MATH 2413.
BIOL 4396  Directed Independent Study
1-3 Semester Credit Hours (1-3 Lecture Hours)
Research in areas of current interest. Written report required. May be repeated for a maximum of 6 semester hours.
Prerequisite: BIOL 1407 and CHEM 1412.

BIOL 4399  Directed Independent Research
3-6 Semester Credit Hours (3-6 Lecture Hours)
Independent laboratory- or field-based research project on topic of current interest. Project developed in conjunction with a faculty advisor. Written report required. May be repeated once for a total of 6 semester credit hours

BIOL 4405  Limnology
4 Semester Credit Hours (4 Lecture Hours)
The study of the functional relationships and productivity of aquatic communities as they are affected by their physical, chemical, and biotic environment. The influence of man's activities on these systems will be the focus of the course.
Prerequisite: BIOL 3413.
Co-requisite: SMTE 0091.

BIOL 4406  Immunology
4 Semester Credit Hours (4 Lecture Hours)
An overview of immunology with emphasis on current knowledge of the immune system. Detailed examination of the specific cells, cytokines, antibodies, and molecules that comprise the immune system. Laboratory exercises demonstrate the basic principles and techniques used in immunologic studies. Cross listed with BIMS 4406.
Prerequisite: BIOL 2421.
Co-requisite: SMTE 0092.

BIOL 4407  BIOLOGY OF THE FUNGI
4 Semester Credit Hours (3 Lecture Hours, 1 Lab Hour)
Overview of the fungi, including their characteristics, diversity, and ecology. Interactions between fungi and other organisms are explored along with the role and importance of the fungi.
Prerequisite: BIOL 2421.
Co-requisite: SMTE 0092.

BIOL 4408  Microbial Diversity and Ecology
4 Semester Credit Hours (4 Lecture Hours)
Biodiversity and roles of microorganisms in natural environments. Interactions with other micro- and macro-organisms (humans, animals and plants) and with abiotic factors. Unique abilities of microorganisms such as nitrogen fixation and adaptation to extreme environments.
Prerequisite: (BIOL 2421 or 4328).
Co-requisite: SMTE 0092.

BIOL 4410  Mammalogy
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
Systematics and ecology of mammals. Offered in even Fall semesters.
Prerequisite: BIOL 1407.
Co-requisite: SMTE 0091.

BIOL 4413  Entomology
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
A broad overview of the natural history, classification, phylogeny, ecology, behavior, development and physiology of insects and their kin. The lab will involve field work, collection and curation. Offered in spring semester of even years. Stacked with BIOL 5413.
Prerequisite: BIOL 3413.
Co-requisite: SMTE 0091.

BIOL 4417  Field Biology
4 Semester Credit Hours (1 Lecture Hour, 6 Lab Hours)
is a hands-on course designed to teach students key concepts by immersing them in nature. Topics include adaptations of plants and animals in different habitats, food web interactions, and how biotic and abiotic forces interact to structure natural communities including spatial and temporal variation in communities.
Prerequisite: BIOL 3428.
Co-requisite: SMTE 0091.

BIOL 4422  Plant Taxonomy
4 Semester Credit Hours (4 Lecture Hours)
Principles and practice in the classification of flowering plants. Field trips are required.
Prerequisite: BIOL 1407.
Co-requisite: SMTE 0091.

BIOL 4425  Ornithology
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
Systematics, anatomy, physiology, ecology, behavior, and field identification of birds. Offered in odd Fall semester.
Prerequisite: BIOL 1407.
Co-requisite: SMTE 0091.

BIOL 4429  Marine Botany
4 Semester Credit Hours (4 Lecture Hours)
The ecology of marine plants with emphasis on identification, life histories, and environmental factors of distribution.
Prerequisite: BIOL 1407.
Co-requisite: SMTE 0091.

BIOL 4430  Marine Plankton
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
In this class we will investigate the systematics, distribution, and ecology of major marine plankton groups and introduce major concepts in biological oceanography. Offered in Spring of odd-numbered years.

BIOL 4432  Ichthyology
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
Systematics, evolution, biology, and ecology of fishes. Laboratory identification of marine and freshwater fishes collected during field excursions.
Prerequisite: BIOL 1407.
Co-requisite: SMTE 0091.

BIOL 4433  Parasitology
4 Semester Credit Hours (4 Lecture Hours)
An introduction to parasitology with emphasis on internal parasites and appropriate references to human endoparasites and parasites of veterinary importance.
Prerequisite: BIOL 2421.
Co-requisite: SMTE 0092.

BIOL 4435  Biological Microtechniques
4 Semester Credit Hours (4 Lecture Hours)
Theory and techniques of processing specimens for histochemistry and microscopic examination. Laboratory includes preparation of tissues and small specimens for analysis and display.
Prerequisite: BIOL 1407 and CHEM 3411.
Co-requisite: SMTE 0092.
**BIOL 4439** Case Work Methods in Forensic Anthropology  
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)  
This course combines the study of human bones (osteology) and skeletal anatomy with established and validated forensic anthropological methods to solve theoretical and actual forensic cases involving human remains. Offered during the spring semester. Stacked with BIOL 5439. Cross-listed with BIMS 4439.  
Prerequisite: BIOL 2401.  
**BIOL 4442** Herpetology  
4 Semester Credit Hours (4 Lecture Hours)  
Systematics, ecology, and behavior of amphibians and reptiles.  
Prerequisite: BIOL 1407.  
Co-requisite: SMTE 0091.  
**BIOL 4444** Estuarine Organisms  
4 Semester Credit Hours (4 Lecture Hours)  
Systematics, distribution, and ecology of estuarine macrofauna and macroflora. Weekend field trips and individual study required.  
Prerequisite: BIOL 3413.  
Co-requisite: SMTE 0091.  
**BIOL 4446** Tropical Ecosystems & Conservation  
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)  
Survey of the ecology and conservation issues of the major ecosystems in the tropics and field techniques used to study tropical forest ecology.  
Prerequisite: BIOL 3428.  
Co-requisite: SMTE 0091.  
**BIOL 4452** Ecology and Evolution of Fishes  
4 Semester Credit Hours (3 Lecture Hours, 4 Lab Hours)  
This course covers aspects of fish ecology from individual, population, community, and ecosystem levels. We discuss the role of the environment on fish physiology and behavior, food-web dynamics, community assembly and diversity, ecosystem interactions, and anthropogenic impacts on fishes with a focus on conservation.  
Prerequisite: BIOL 4432.  
Co-requisite: SMTE 0091.  
**BIOL 4547** Marine Science Field Camp  
5 Semester Credit Hours (3 Lecture Hours, 6 Lab Hours)  
Students learn techniques required to properly conduct marine science field research. Practical, hands-on experience is gained in a variety of topics including biotic and abiotic sample collection and processing, quantitative analysis of field data, evaluation of environmental factors, survival and distribution of living organisms, and the structure of biotic communities.  
**BIOL 4590** Selected Topics  
5 Semester Credit Hours (5 Lecture Hours)  
Variable content. May be repeated for credit.  
**BIOL 4598** Biology Internship  
2-6 Semester Credit Hours  
Two to six semester credit hours may be earned by working in an internship position in a governmental agency, private industry, or other appropriate venue.  
**BIOL 4609** Field and Sampling Techniques  
6 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)  
The study of techniques required for proper field work in the biological sciences. The course includes ecological sampling methods, safety, logistics, equipment operation and maintenance and travel concerns.  
Co-requisite: SMTE 0091.
BIMS 3320 Survey of Forensic Science
3 Semester Credit Hours (3 Lecture Hours)
A survey of the methods and materials used to gather and process evidence at potential crime scenes. Students are introduced to the legal rules of evidence and their practical ramifications during scientific criminal investigations. In laboratory, students use commonly available processing items and tools to investigate a simulated crime scene. Offered fall semester every year.
Co-requisite: SMTE 0092.

BIMS 3325 Professional Practice in Forensic Science
3 Semester Credit Hours (3 Lecture Hours)
An introduction to industry standards and ethics for professional forensic scientists. This course analyzes cognitive processes, scientific methods and quality control/quality assurance issues in forensic investigations. It also stresses maintaining credibility in an adversarial legal system through the development of technical/scientific speaking and writing skills. Offered spring semester every year.
Prerequisite: BIMS 3320.

BIMS 3401 Pathophysiology
4 Semester Credit Hours (4 Lecture Hours)
This course is a study of the biological basis of human disease. It includes an investigation of inflammation, immunity, and neoplasia, as well as the more common presenting dysfunctions of body systems. Offered every fall. Offered fall semester every year.
Prerequisite: CHEM 1411 and BIOL 1407 or BIOL 2401.

BIMS 3402 Introduction to Forensic Anthropology
4 Semester Credit Hours (3 Lecture Hours)
This course introduces the student to the osteological examination of the human skeletal system as practiced by professional forensic anthropologists. It is designed to equip the student with introductory understanding of the anatomy and normal appearance of the human skeleton as well as some of its variations, including pathological conditions, traumatic injury, and postmortem damage.

BIMS 3403 Molecular Biology
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
Principles of molecular biology including advanced concepts of gene structure, expression and regulation, chromatin structure, recombination, and current molecular biology techniques. Laboratory emphasis is on basic skills for nucleic acid analyses, including extraction, PCR amplification, quantification, restriction, and electrophoresis. DNA sequencing-based approaches are covered including bioinformatics for sequence comparisons, polymorphisms, and molecular identification. Cross listed with BIOL 3403. Offered spring semester every year.
Prerequisite: BIOL 2416, 2421 and SMTE 0092*.
* May be taken concurrently.
Co-requisite: SMTE 0092.

BIMS 4085 Major Field Test in Biology
0 Semester Credit Hours
The Major Field Test (MFT) in Biology is a national examination given in the Fall and Spring semesters only. It is a graduation requirement for all Biology and some Biomedical Sciences students. Students enroll in this course during the semester that they plan to take the MFT. There is no cost to the student for either this course or for the MFT. Admission is limited to students who have completed 90 or more semester credit hours.

BIMS 4111 Contemporary Scientific Readings
1 Semester Credit Hour (1 Lecture Hour)
Students read one non-fiction book per month addressing some aspect of medicine, science or history (four books per semester), then meet once per month to discuss, analyze and defend their perceptions about the book. Only open to students accepted into the Partnership for Primary Care and the Joint Admissions Medical Program (JAMP), those who are seeking admission into JAMP by participating in the pre-JAMP and students in other sponsored programs. This course may be repeated once for full credit in subsequent semesters.

BIMS 4170 Biomedical Seminar
1 Semester Credit Hour (1 Lecture Hour)
A series of seminars on current topics of biomedical research. This course may be repeated once for full credit in subsequent semesters.
Prerequisite: BIOL 1407.

BIMS 4295 Biomedical Practicum
2 Semester Credit Hours
Supervised learning experience with a community professional in health care (e.g., physician, dentist, veterinarian, chiropractor, pharmacist, physician assistant or physical therapist). On-campus meetings, oral and written reports are required. (Cannot be taken by Clinical Laboratory Science students in lieu of CLSC 4297 - Professional Practicum I.) This course may be repeated once for full credit in subsequent semesters. Requires permission of instructor. Offered fall and spring semesters every year.
Prerequisite: BIOL 1407.
Co-requisite: SMTE 0092.

BIMS 4296 Clinical Research
2 Semester Credit Hours
Students will actively perform clinical research and learn from and interact with health care professionals such as physicians, nurses, physical therapists, pharmacists, etc. The student will be a functioning member of a research team with specific, measurable responsibilities in clinical studies.
Prerequisite: BIOL 1407.

BIMS 4297 Directed Independent Research
2 Semester Credit Hours
Supervised learning experience with a community professional in health care (e.g., physician, dentist, veterinarian, chiropractor, pharmacist, physician assistant or physical therapist). On-campus meetings, oral and written reports are required. (Cannot be taken by Clinical Laboratory Science students in lieu of CLSC 4297 - Professional Practicum I.) This course may be repeated once for full credit in subsequent semesters. Requires permission of instructor and application.

BIMS 4299 Professional Practicum I
2 Semester Credit Hours (2 Lecture Hours)
PROFESSIONAL PRACTICUM I Supervised learning experience in selected departments of the clinical laboratories. Clinical Laboratory Science students only. Requires permission of instructor and application.

BIMS 4311 Biology of Cancer
3 Semester Credit Hours (3 Lecture Hours)
This course is a study of the profile of a cancer cell, and the various causes of human cancer. Contribution of heredity, environmental factors, and infectious agents to oncogenesis will be studied. Cancer screening, diagnosis, and treatment will be discussed. Various types of cancer will be presented. Offered fall semester of even-numbered years.
Prerequisite: BIOL 2416.
BIMS 4323 Neurobiology
3 Semester Credit Hours (3 Lecture Hours)
Studies the anatomy and physiology of the nervous system. Includes an examination of evolutionary trends in nervous system development, neural function, nerve impulse transmission, sensory and motor systems, behavior, emotional states, learning and memory. Particular emphasis is placed on human functioning. Offered spring semester every year.
Prerequisite: BIOL 2416.

BIMS 4327 Introduction to Toxicology
3 Semester Credit Hours (3 Lecture Hours)
Principles of toxicology including absorption and excretion, biotransformation, chemical carcinogenesis, developmental toxicology and toxic agents.
Prerequisite: BIOL 1407 and CHEM 3411.

BIMS 4330 Biological Basis of Aging
3 Semester Credit Hours (3 Lecture Hours)
Molecular aspects of aging and disease, including biological mechanisms and theories involving cells, tissues, and organ systems.
Prerequisite: BIOL 1407 and CHEM 3411.

BIMS 4333 Medical Entomology
3 Semester Credit Hours (3 Lecture Hours)
An introduction to arthropods of medical and veterinary importance with particular emphasis on the critical roles that they play in their host group's health and well-being.
Prerequisite: BIOL 1407.

BIMS 4334 Human Genetics
3 Semester Credit Hours (3 Lecture Hours)
Introduction to the genetic aspects of health and disease. Classic Mendelian and chromosomal disorders are examined as well as the relationship of genetic predisposition to the healthy state and to diseases/conditions.
Prerequisite: BIOL 2416 and CHEM 3412.

BIMS 4335 Endocrinology
3 Semester Credit Hours (3 Lecture Hours)
Basic biochemical and molecular aspects of hormone physiology, basic endocrine function and hormone action, immune-endocrine interactions, and clinical examples of the outcomes of abnormal function in human disease.
Prerequisite: BIMS 2200, BIOL 2416 and CHEM 3412.

BIMS 4340 Forensic Science in Criminal Law
3 Semester Credit Hours (3 Lecture Hours)
Students will learn legal procedures, rules of evidence, and applications of forensic science in the area of criminal law. Students will also develop skills in report writing and testifying in court.
Prerequisite: BIMS 3320.

BIMS 4341 Health Disparities
3 Semester Credit Hours (3 Lecture Hours)
This course will examine the social/societal, physical/environmental, biological, and genetic/epigenetic factors that are fundamental in creating disparities in health in America. This course will also focus on the formulation and implementation of public policy objectives to reduce and ultimately eliminate health disparities. Students may not take both this course and BIMS 4350 Global Health Disparities for credit. Offered fall semester every year.
Prerequisite: BIOL 1407.

BIMS 4350 Global Health Disparities
3 Semester Credit Hours (3 Lecture Hours)
Provides students with an historical perspective on global health issues and leads to an understanding of current and future concerns. Emphasis is on the global burden of disease and determinants of health as well as health disparities. Provides students with an introduction to the study of health disparities in the United States, examining how health disparities are defined and measured and exploring issues such as how the structure of American society affects who gets sick and who gets care. Case studies expose students to a variety of real-life scenarios and explore a range of issues. This is an intensive writing course. This course is cross-listed with HCAD 4350. Students cannot take this course and BIMS 4331 Health Disparities in the US for credit.

BIMS 4374 Medical Microbiology
3 Semester Credit Hours (3 Lecture Hours)
Study of common human pathogenic organisms. Includes bacterial, parasitic, viral and fungal infections with emphasis on pathogenesis and treatment.
Prerequisite: BIOL 2421.

BIMS 4375 Mechanisms of Microbial Pathogenesis
3 Semester Credit Hours (3 Lecture Hours)
Studies of how microorganisms invade the host and produce pathological symptoms associated with diseases. Emphasis is on the interaction between various host cells and pathogens, especially molecular mechanisms of pathogenesis and host immune responses.
Prerequisite: BIOL 2421.

BIMS 4395 Forensic Science Internship
3 Semester Credit Hours (3 Lecture Hours, 5 Lab Hours)
This course is designed to bridge the gap between academic instructions and the forensic science industry by providing real world experience in forensic investigations. Students attend lectures on campus, plus spend five hours/week at a crime laboratory. Students will accompany crime scene investigators to actual crime scenes and participate in several hands on forensic exercises involving mock as well as real investigations. Some activities may result in students spending more that five hours of laboratory or practicum time.
Prerequisite: BIMS 3320.
Co-requisite: SMTE 0092.

BIMS 4396 Directed Independent Study
1-3 Semester Credit Hours (1-3 Lecture Hours)
Research in areas of current interest. Written report required.
Prerequisite: BIOL 1407 and CHEM 1412.
Co-requisite: SMTE 0092.

BIMS 4406 Immunology
4 Semester Credit Hours (4 Lecture Hours)
An overview of immunology with emphasis on current knowledge of the immune system. Detailed examination of the specific cells, cytokines, antibodies, and molecules that comprise the immune system. Laboratory exercises demonstrate the basic principles and techniques used in immunologic studies. Cross listed with BIOL 4406.
Prerequisite: BIOL 2421.
Co-requisite: SMTE 0092.

BIMS 4410 Histology
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
The study of cells and tissues, especially the manner in which they are organized to form organs and systems. Laboratories involve intensive use of the microscope to identify cells, tissues and organs.
Prerequisite: BIOL 2402 or 3425.
Co-requisite: SMTE 0092.
BIMS 4428 Medicolegal Death Investigations
4 Semester Credit Hours (3 Lecture Hours, 1 Lab Hour)
This course is designed to provide an introduction to the essential procedures of forensic death investigation. Students are instructed in the process of investigating all aspects of a death case falling under the jurisdiction of medical examiners in Texas. The importance of scene management and documentation, case file management, review of physical and psychological evidence, autopsy procedures, and consultation with other forensic science experts leading to the correct classification of cause and manner of death are emphasized. Course may be repeated only once with permission of instructor.

BIMS 4439 Case Work Methods in Forensic Anthropology
4 Semester Credit Hours (3 Lecture Hours, 1 Lab Hour)
This course combines the study of human bones (osteology) and skeletal anatomy with established and validated forensic anthropological methods to solve theoretical and actual forensic cases involving human remains. Cross listed with BIMS 5439, BIOL 4439, and BIOL 5439.
Prerequisite: BIOL 2401.
Co-requisite: SMTE 0092.

BIMS 4590 Selected Topics
1-5 Semester Credit Hours (1-5 Lecture Hours)
Variable content. May be repeated for credit.

Chemistry Courses

CHEM 1305 Introductory Chemistry
3 Semester Credit Hours (3 Lecture Hours)
A one-semester principles course for students in non-science related majors covering the major concepts of chemistry (atomic structure, bonding, stoichiometry, elementary thermodynamics) and the role of chemistry in contemporary society (polymers, energy, pollution, etc.). Will not substitute for CHEM 1411.
TCCNS: CHEM 1305

CHEM 1411 General Chemistry I
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
The foundation course in chemistry. Stoichiometry, chemical equilibria, atomic structure, chemical bonding, periodic properties, thermodynamics, chemical kinetics, and descriptive chemistry of the elements. Laboratory involves development of basic skills. This course counts toward the natural science component of the University Core Curriculum. Either CHEM 1305 - Introductory Chemistry or CHEM 1411, but not both, may be applied toward the core requirement. This course is offered in Fall, Spring and typically during both Summer sessions.
Co-requisite: SMTE 0093.
TCCNS: CHEM 1411

CHEM 1412 General Chemistry II
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
The continuation of CHEM 1411 - General Chemistry I*. The course concludes with a survey of the structures of biomolecules. Laboratory involves spectroscopy and qualitative analysis techniques. This course is offered in Fall, Spring and typically during the Summer II session.
Prerequisite: CHEM 1411.
Co-requisite: SMTE 0093.

CHEM 3411 Organic Chemistry I
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
The structure, nomenclature, synthesis, reactions, and reaction mechanisms of the principal classes of organic compounds. Stereochemistry and spectroscopy of organic compounds. Laboratory involves separation and synthetic techniques and development of basic skills. This course is offered in Fall, Spring and typically during the Summer I session.
Prerequisite: CHEM 1411.
Co-requisite: SMTE 0093.

CHEM 3412 Organic Chemistry II
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
A continuation of CHEM 3411. The course concludes with a survey of the structures of biomolecules. Laboratory involves spectroscopy and qualitative analysis techniques. This course is offered in Fall, Spring and typically during the Summer II session.
Prerequisite: CHEM 3411.
Co-requisite: SMTE 0093.

CHEM 3417 Quantitative Analysis
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
A course in quantitative analysis, which includes chemical statistics and the use of acid-base, complexation, precipitation, and redox reactions to perform analyses and separations. Laboratory includes standard volumetric and gravimetric methods and development of basic quantitative techniques. This course is typically offered in Spring.
Prerequisite: CHEM 1412.
Co-requisite: SMTE 0093.

CHEM 3418 Instrumental Analysis
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
An introduction to instrumental methods of analysis: spectroscopy, chromatography, and electrochemical methods. Laboratory involves use of instrumentation in chemical analysis. This course is typically offered in Fall and Spring.
Prerequisite: CHEM 1412.
Co-requisite: SMTE 0093.

CHEM 4085 Major Field Test in Chemistry
0 Semester Credit Hours
The Major Field Test (MFT) in Chemistry is a national examination given in the Fall and Spring semesters only. It is a graduation requirement for all Chemistry students. Students enroll in this course during the semester that they plan to take the MFT. There is no cost to the student for either this course or for the MFT.

CHEM 4292 Senior Chemistry Seminar
2 Semester Credit Hours (2 Lecture Hours)
Presentation and discussion of selected topics in chemistry. Includes literature searches and reviews, paper presentations, survey of professional opportunities and requirements, career guidance and job searching skills.

CHEM 4309 Advanced Instrumental Analysis
3 Semester Credit Hours (3 Lecture Hours)
An advanced course in analytical chemistry covering the underlying theories of instrumental methods. This course is typically offered on an irregular basis.
Prerequisite: (CHEM 3411, 3412 and 3418).
CHEM 4320  Drugs, Toxins and Natural Products Chemistry
3 Semester Credit Hours (3 Lecture Hours)
The chemistry and biological activity of pharmaceuticals, toxins and selected natural products. Examines how chemical structure relates to biological activity. Also examines action of antibiotics, chemotherapy agents, analgesics, steroids, and compounds targeting the central and peripheral nervous system. This course is typically offered in Fall and Spring.
Prerequisite: CHEM 4401.

CHEM 4341  Advanced Organic Chemistry
3 Semester Credit Hours (3 Lecture Hours)
This three-credit hour course will entail detailed description of structure, synthesis, and reactions and mechanisms in organic chemistry including important named reactions. This course will also introduce them to the art of writing reaction mechanisms and retrosynthetic analysis. Moreover, they will be learning about separation, purification and characterization of organic compounds followed by scientific abstract writing. Designed only for science major. There is NO laboratory associated with the course.
Prerequisite: CHEM 3412.

CHEM 4344  Chemical Oceanography
3 Semester Credit Hours (3 Lecture Hours)
The study of the oceans and seas as a chemical system, including interactions with both the biota and the solid earth. This course is typically offered in Spring.
Prerequisite: CHEM 1412.

CHEM 4350  Polymer Chemistry
3 Semester Credit Hours (3 Lecture Hours)
An advanced lecture course in organic chemistry. Characterization of polymers. Polymerization mechanisms. Current research directions such as biomedical applications and electroactive polymers. This course is offered on an irregular basis.
Prerequisite: CHEM 3412.

CHEM 4360  Molecular Spectroscopy
3 Semester Credit Hours (3 Lecture Hours)
Spectroscopy and Structure of Organic Compounds is a three-credit that introduce you to concepts used in the identification of organic compounds with methods based on NMR, mass spectrometry, UV and IR.
Prerequisite: CHEM 3412.

CHEM 4401  Biochemistry I
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
The structure and function of carbohydrates, lipids, proteins, and nucleic acids. An introduction to enzyme kinetics, cell membrane structure and biochemical signaling. Laboratory exercises demonstrate the basic principles and techniques used in Biochemistry. This course is typically offered in Fall, Spring and Summer.
Prerequisite: CHEM 3412 and (BIOL 1406 and 1407).
Co-requisite: SMTE 0093.

CHEM 4402  Biochemistry II
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
A continuation of CHEM 4401. Biochemical energetics, including glycolysis, fatty acid oxidation, amino acid oxidation, citric acid cycle, oxidative phosphorylation, photophosphorylation and photosynthesis. Carbohydrate, fatty acid and amino acid biosynthesis. Laboratory is a continuation of biochemical techniques. This course is typically offered in Fall and Spring.
Prerequisite: CHEM 4401.
Co-requisite: SMTE 0093.

CHEM 4407  Advanced Inorganic Chemistry
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
A survey of inorganic chemistry. Theories of atomic structure, covalent bonding, ionic solids, metallic solids, and coordination compounds. Modern acid?base concepts. Laboratory involves the synthesis of inorganic compounds.
Prerequisite: CHEM 3412.
Co-requisite: SMTE 0093.

CHEM 4420  Physical Biochemistry
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
A fundamental approach to the study of physical and chemical phenomena, including the study of thermodynamics, gases and phase equilibria. This course is typically offered on an irregular basis.
Prerequisite: CHEM 1412 and (PHYS 1402 or 2426) and MATH 2414.
Co-requisite: SMTE 0093.

CHEM 4423  Physical Chemistry I
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
A fundamental approach to the study of physical and chemical phenomena, including the study of thermodynamics, gases and phase equilibria. This course is typically offered in Fall.
Prerequisite: CHEM 1412 and (PHYS 1402 or 2426) and MATH 2414.
Co-requisite: SMTE 0093.

CHEM 4424  Physical Chemistry II
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
A continuation of CHEM 4423, including the study of chemical kinetics, electrochemistry, molecular structure, and quantum mechanics. This course is typically offered in Spring.
Prerequisite: CHEM 4423.
Co-requisite: SMTE 0093.

CHEM 4443  Environmental Chemistry
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
A study of the impact of chemistry on the environment, including topics of air pollution, water pollution, and beneficial chemical modifications of the environment. Laboratory devoted to field techniques of sampling, sample preservation, and analytical techniques applied to the environment. This course is typically offered in Spring.
Prerequisite: CHEM 1412 and 3411.
Co-requisite: SMTE 0093.

CHEM 4490  Special Topics
4 Semester Credit Hours (1 Lecture Hour, 1 Lab Hour)
May be repeated for credit. Subject materials variable.

CHEM 4696  Directed Independent Study
1-6 Semester Credit Hours
Requires a formal proposal of study to be completed in advance of registration, to be approved by the supervising faculty, the chairperson and the dean of the College.

Chemistry, BS

Program Description
The chemistry faculty seeks to provide a high quality educational experience for students majoring in chemistry in preparation for industrial or government positions, for graduate study, and for entry to medical or dental schools. The program is also designed for those planning to teach chemistry or physics at the 7-12 level, or who need chemical knowledge and skills relevant to future studies in the sciences.
Student Learning Outcomes

Students will:

• Demonstrate a broad understanding of chemical concepts
• Analyze and interpret a variety of chemical data
• Communicate chemical information effectively at the undergraduate level, in oral and written form, with appropriate use of technology

The student who wishes to obtain a Bachelor of Science Degree in Chemistry may do so by following one of the four curriculum plans referred to as Concentrations. The options include general, environmental, biochemistry, and physical science education concentrations. Students who are pre-medical, pre-dental, pre-optometry, pre-pharmacy, or pre-veterinary medicine may follow the biochemistry concentration. In addition, the biochemistry concentration offers an option which would allow students to pursue certification in clinical chemistry while obtaining their Bachelors in Chemistry.

A prospective 7-12 physical science (chemistry or physics) teacher could obtain a BS in Chemistry while following the physical science education concentration. Details on the requirements for the physical science education concentration and for obtaining a teaching certificate are in the College of Science and Engineering: Science, Mathematics and Technology Education section of this catalog.

The BS in Chemistry requires at least 120 semester hours with a university required minimum number of 45 upper-division hours. Students may have to take additional hours to meet university general education requirements such as First-Year Seminar courses. The major consists of at least 52 semester hours (24 upper-division), some of which may be designated courses outside of chemistry. Every candidate for the BS in Chemistry following the general, environmental, or biochemistry concentration must complete the CHEM 4085 Major Field Test in Chemistry (0 sch) during their senior year, prior to graduation. The details of the general, environmental, and biochemistry concentrations follow.

Courses

CHEM 1305 Introductory Chemistry
3 Semester Credit Hours (3 Lecture Hours)
A one-semester principles course for students in non-science related majors covering the major concepts of chemistry (atomic structure, bonding, stoichiometry, elementary thermodynamics) and the role of chemistry in contemporary society (polymers, energy, pollution, etc.). Will not substitute for CHEM 1411.
TCCNS: CHEM 1305

CHEM 1411 General Chemistry I
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
The foundation course in chemistry. Stoichiometry, chemical equilibria, atomic structure, chemical bonding, periodic properties, thermodynamics, chemical kinetics, and descriptive chemistry of the elements. Laboratory involves development of basic skills. This course counts toward the natural science component of the University Core Curriculum. Either CHEM 1305 - Introductory Chemistry or CHEM 1411, but not both, may be applied towards the core requirement. This course is offered in Fall, Spring and typically during both Summer sessions.
Prerequisite: CHEM 1411.
TCCNS: CHEM 1305

CHEM 1412 General Chemistry II
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
The continuation of CHEM 1411 - General Chemistry I, the foundation course in chemistry with emphasis on quantitative aspects. Laboratory involves development of basic skills. This course counts toward the natural science component of the University Core Curriculum.
Prerequisite: CHEM 1411 and MATH 1314.
Co-requisite: SMTE 0093.
TCCNS: CHEM 1412

CHEM 2490 Special Topics
4 Semester Credit Hours (1-4 Lecture Hours, 3 Lab Hours)
May be repeated for credit. Subject materials variable. Offered on sufficient demand.

CHEM 3411 Organic Chemistry I
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
The structure, nomenclature, synthesis, reactions, and reaction mechanisms of the principal classes of organic compounds. Stereochemistry and spectroscopy of organic compounds. Laboratory involves separation and synthetic techniques and development of basic skills. This course is offered in Fall, Spring and typically during the Summer I session.
Prerequisite: CHEM 1411.
Co-requisite: SMTE 0093.

CHEM 3412 Organic Chemistry II
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
A continuation of CHEM 3411. The course concludes with a survey of the structures of biomolecules. Laboratory involves spectroscopy and qualitative analysis techniques. This course is offered in Fall, Spring and typically during the Summer II session.
Prerequisite: CHEM 3411.
Co-requisite: SMTE 0093.

CHEM 3417 Quantitative Analysis
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
A course in quantitative analysis, which includes chemical statistics and the use of acid-base, complexation, precipitation, and redox reactions to perform analyses and separations. Laboratory includes standard volumetric and gravimetric methods and development of basic quantitative techniques. This course is typically offered in Spring.
Prerequisite: CHEM 1412.
Co-requisite: SMTE 0093.

CHEM 3418 Instrumental Analysis
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
An introduction to instrumental methods of analysis: spectroscopy, chromatography, and electrochemical methods. Laboratory involves use of instrumentation in chemical analysis. This course is typically offered in Fall and Spring.
Prerequisite: CHEM 1412.
Co-requisite: SMTE 0093.

CHEM 4085 Major Field Test in Chemistry
0 Semester Credit Hours
The Major Field Test (MFT) in Chemistry is a national examination given in the Fall and Spring semesters only. It is a graduation requirement for all Chemistry students. Students enroll in this course during the semester that they plan to take the MFT. There is no cost to the student for either this course or for the MFT.

CHEM 4292 Senior Chemistry Seminar
2 Semester Credit Hours (2 Lecture Hours)
Presentation and discussion of selected topics in chemistry. Includes literature searches and reviews, paper presentations, survey of professional opportunities and requirements, career guidance and job searching skills.

CHEM 4309 Advanced Instrumental Analysis
3 Semester Credit Hours (3 Lecture Hours)
An advanced course in analytical chemistry covering the underlying theories of instrumental methods. This course is typically offered on an irregular basis.
Prerequisite: (CHEM 3411, 3412 and 3418).

CHEM 4320 Drugs, Toxins and Natural Products Chemistry
3 Semester Credit Hours (3 Lecture Hours)
The chemistry and biological activity of pharmaceuticals, toxins and selected natural products. Examines how chemical structure relates to biological activity. Also examines action of antibiotics, chemotherapy agents, analgesics, steroids, and compounds targeting the central and peripheral nervous system. This course is typically offered in Fall and Spring.
Prerequisite: CHEM 4401.

CHEM 4341 Advanced Organic Chemistry
3 Semester Credit Hours (3 Lecture Hours)
This three-credit hour course will entail detailed description of structure, synthesis, and reactions and mechanisms in organic chemistry including important named reactions. This course will also introduce them to the art of writing reaction mechanisms and retrosynthetic analysis. Moreover, they will be learning about separation, purification and characterization of organic compounds followed by scientific abstract writing. Designed only for science major. There is NO laboratory associated with the course.
Prerequisite: CHEM 3412.
CHEM 4344 Chemical Oceanography
3 Semester Credit Hours (3 Lecture Hours)
The study of the oceans and seas as a chemical system, including interactions with both the biota and the solid earth. This course is typically offered in Spring.
Prerequisite: CHEM 1412.

CHEM 4350 Polymer Chemistry
3 Semester Credit Hours (3 Lecture Hours)
An advanced lecture course in organic chemistry. Characterization of polymers. Polymerization mechanisms. Current research directions such as biomedical applications and electroactive polymers. This course is offered on an irregular basis.
Prerequisite: CHEM 3412.

CHEM 4360 Molecular Spectroscopy
3 Semester Credit Hours (3 Lecture Hours)
Spectroscopy and Structure of Organic Compounds is a three-credit that introduce you to concepts used in the identification of organic compounds with methods based on NMR, mass spectrometry, UV and IR.
Prerequisite: CHEM 3412.

CHEM 4401 Biochemistry I
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
The structure and function of carbohydrates, lipids, proteins, and nucleic acids. An introduction to enzyme kinetics, cell membrane structure and biochemical signaling. Laboratory exercises demonstrate the basic principles and techniques used in Biochemistry. This course is typically offered in Fall, Spring and Summer.
Prerequisite: CHEM 3412 and (BIOL 1406 and 1407).
Co-requisite: SMTE 0093.

CHEM 4402 Biochemistry II
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
A continuation of CHEM 4401. Biochemical energetics, including glycolysis, fatty acid oxidation, amino acid oxidation, citric acid cycle, oxidative phosphorylation, photophosphorylation and photosynthesis. Carbohydrate, fatty acid and amino acid biosynthesis. Laboratory is a continuation of biochemical techniques. This course is typically offered in Fall and Spring.
Prerequisite: CHEM 4401.
Co-requisite: SMTE 0093.

CHEM 4407 Advanced Inorganic Chemistry
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
A survey of inorganic chemistry. Theories of atomic structure, covalent bonding, ionic solids, metallic solids, and coordination compounds. Modern acid?base concepts. Laboratory involves the synthesis of inorganic compounds.
Prerequisite: CHEM 3412.
Co-requisite: SMTE 0093.

CHEM 4420 Physical Biochemistry
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
A fundamental approach to the study of physical and chemical phenomena, including the study of thermodynamics, gases and phase equilibria. This course is typically offered on an irregular basis.
Prerequisite: CHEM 1412 and (PHYS 1402 or 2426) and MATH 2414.
Co-requisite: SMTE 0093.

CHEM 4423 Physical Chemistry I
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
A fundamental approach to the study of physical and chemical phenomena, including the study of thermodynamics, gases and phase equilibria. This course is typically offered in Fall.
Prerequisite: CHEM 1412 and (PHYS 1402 or 2426) and MATH 2414.
Co-requisite: SMTE 0093.

CHEM 4424 Physical Chemistry II
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
A continuation of CHEM 4423, including the study of chemical kinetics, electrochemistry, molecular structure, and quantum mechanics. This course is typically offered in Spring.
Prerequisite: CHEM 4423.
Co-requisite: SMTE 0093.

CHEM 4443 Environmental Chemistry
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
A study of the impact of chemistry on the environment, including topics of air pollution, water pollution, and beneficial chemical modifications of the environment. Laboratory devoted to field techniques of sampling, sample preservation, and analytical techniques applied to the environment. This course is typically offered in Spring.
Prerequisite: CHEM 1412 and 3411.
Co-requisite: SMTE 0093.

CHEM 4490 Special Topics
4 Semester Credit Hours (1 Lecture Hour, 1 Lab Hour)
May be repeated for credit. Subject materials variable.

CHEM 4696 Directed Independent Study
1-6 Semester Credit Hours
Requires a formal proposal of study to be completed in advance of registration, to be approved by the supervising faculty, the chairperson and the dean of the College.

Environmental Science, BS

Program Description

Introduction
The mission of the Bachelor of Science program in Environmental Science is to educate students to succeed in their chosen careers, to transfer environmental knowledge to the community and to peers, and to provide an environmentally literate workforce and citizenry. The program is intended to provide the environmental science major with a broad foundation in the sciences and mathematics, as well as specialized knowledge in Marine and Coastal Resources, Earth System Science, Environmental Health and Monitoring, Policy and Regulations, and Science Education concentration areas. The environmental science curriculum prepares students for career positions in environmental science or science education, or for further professional development.

Student Learning Outcomes

Students will:

• Demonstrate a command of environmental science concepts and principles at the undergraduate level.
• Analyze and interpret a variety of environmental science data, and
• Communicate environmental science information effectively at the undergraduate level, in oral and written form, with appropriate use of technology.
Fast Track from Bachelor's to Master's Degree

The university allows the opportunity for high-achieving students to count a select number of graduate credits toward their undergraduate degree and thereby obtain a graduate degree at an accelerated pace. For more information, see Fast Track Environmental Science, BS and Environmental Science, MS (p. 599).

General Requirements

Students who wish to obtain a Bachelor of Science degree in Environmental Science may do so by following one of five curriculum plans referred to as concentrations. The concentration options include Earth Systems Science, Marine and Coastal Resources, Environmental Health and Monitoring, Policy and Regulations, and Science Education. A prospective 4-8 level science teacher could obtain a BS in Environmental Science while following the science education concentration. Information on the BS in Environmental Science - Science Education Concentration is found in the College of Science and Engineering Science, Mathematics and Technology Education section of the catalog. Details of the requirements for obtaining a teaching certificate are provided in the College of Education and Human Development section of this catalog.

The minimum requirement for a Bachelor of Science Degree in Environmental Science with a concentration in Earth Systems Science, Marine and Coastal Resources, Environmental Health and Monitoring, or Policy and Regulations is a total of 120 hours.

Concentration Area

Select one of the following Concentrations: 27-31

- Earth System Science Concentration (p. 536)
- Marine and Coastal Resources Concentration (p. 536)
- Environmental Health and Monitoring Concentration (p. 536)
- Policy and Regulations Concentration (p. 537)
- Science Education Concentration (p. 537)

Electives

Select 11 hours of electives as needed 11

Total Hours 120-126

1 See Core Curriculum Program. It is recommended that the Science component area courses be ESCI 1401 Environmental Science I: Intro to Environmental Science (4 sch) and BIOL 1406 Biology I (4 sch) and the component area course be GEOL 1403 Physical Geology (4 sch). It is recommended that the mathematics course be MATH 1442 Statistics for Life (4 sch) or MATH 241 Calculus I (4 sch), depending on concentration area. Please consult your faculty mentor or academic advisor for specific details.

2 If these courses are not taken in the University Core, they will still need to be completed.

The program requires a minimum of 2 hours of ESCI 4498 Internship in Environmental Science (1-4 sch) to satisfy the Major Requirements; however additional hours of credit may be applied towards the Designated Electives in a Concentration Area, with approval of the student's faculty mentor.
Environmental Science, BS

* Online offering
^ Blended offering

Concentration Area

Students must take a total of 27-31 semester hours in prescribed courses and electives to complete a concentration in Earth Systems Science, Marine and Coastal Resources, Environmental Health and Monitoring, or Policy and Regulations. Designated electives must be approved in writing by the student's faculty mentor. Students are strongly encouraged to consult their faculty mentor regularly.

Earth System Science Concentration

This concentration is appropriate for students preparing for careers in earth system science, meteorology, or other fields. Students preparing for graduate school are strongly encouraged to take additional hours in consultation with their faculty mentor. Additional courses in Mathematics are strongly recommended.

In addition to the courses listed below, it is recommended that students choosing this concentration take Calculus I (MATH 2413) as part of the University Core requirements and University Physics I (PHYS 2425) as part of the Foundations requirements.

<table>
<thead>
<tr>

Marine and Coastal Resources Concentration

This concentration is appropriate for students planning careers in marine and coastal resources research or management. Students preparing for graduate school are strongly encouraged to take additional hours in consultation with their faculty mentor.

In addition to the courses listed below, it is recommended that students choosing this concentration take either MATH 1442 Statistics for Life (4 sch) or MATH 2413 Calculus I (4 sch) as part of the University Core requirements and take either PHYS 1401 General Physics I (4 sch) or PHYS 2425 University Physics I (4 sch) as part of the Foundations requirements. MATH 2413 Calculus I (4 sch) is strongly recommended for students anticipating graduate school or research careers; also, it is a prerequisite to some of the optional courses listed below under the concentration. If MATH 1442 Statistics for Life (4 sch) is not taken, then MATH 3342 Applied Probability and Statistics (3 sch) is required from the designated elective hours.

Environmental Health and Monitoring Concentration

This concentration is appropriate for students planning careers in environmental health, environmental assessment and remediation, and environmental management. Students preparing for graduate school are
strongly encouraged to take additional hours in consultation with their faculty mentor.

In addition to the courses listed below, it is recommended that students choosing this concentration take either MATH 1442 Statistics for Life (4 sch) or MATH 2413 Calculus I (4 sch) as part of the University Core requirements and take either PHYS 1401 General Physics I (4 sch) or PHYS 2425 University Physics I (4 sch) as part of the Foundations requirements. MATH 2413 Calculus I (4 sch) is strongly recommended for students anticipating graduate school or research careers; also, it is a prerequisite to some of the optional courses listed below under the concentration. If MATH 1442 Statistics for Life (4 sch) is not taken, then MATH 3342 Applied Probability and Statistics (3 sch) is required from the designated-elective hours.

Courses

ESCI 1401 Environmental Science I: Intro to Environmental Science
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Principles of the scientific method and critical thinking provide a foundation for subsequent consideration of environmental issues through a multidisciplinary approach. Laboratory exercises and local field experiences reinforce concepts introduced in the lectures. Fall, Spring.

ESCI 1490 Selected Topics
1-4 Semester Credit Hours (1-4 Lecture Hours)
Subject materials variable. May be repeated for credit when topics are significantly different. Faculty approval required. Offered on sufficient demand.

ESCI 3202 Professional Skills
2 Semester Credit Hours (2 Lecture Hours)
Presentation and discussion of selected topics relating to the professional skills of practicing environmental scientists including literature searches, reviews, paper presentation, professional and career opportunities, professional ethics. Fall, Spring.

ESCI 3351 Oceanography
3 Semester Credit Hours (3 Lecture Hours)
Methods and principles of oceanography. A survey of oceanography with emphasis placed on the physical processes affecting water and water masses of the world oceans. Fall (on sufficient demand), Spring.

ESCI 3403 Introduction to Meteorology
2 Semester Credit Hours (2 Lecture Hours)
This course is an introduction to meteorology and the dynamics of planetary atmospheres. Emphasis on atmospheric accretion, composition, evolution, structure, and dynamics. Lab exercises cover basic measurement techniques, weather maps, and forecasting. Fall, Spring (on sufficient demand).

ESCI 4130 Oil Spill Prevention and Response Lab
1 Semester Credit Hour (2 Lab Hours)
Practical techniques for control, containment, countermeasures, removal, and disposal of oil spills in an environmentally safe manner. Field exercises will include use of boats, booms and skimmers. Fall, Spring, Summer (on sufficient demand).

ESCI 4201 Scientific Diving Techniques
2 Semester Credit Hours (2 Lecture Hours)
Theory, science, and art of underwater diving technology and its application to scientific objectives. Course helps fulfill some training requirements of the Texas A&M University-Corpus Christi Guidelines for scientific diving.

ESCI 4202 Issues in Environmental Science
2 Semester Credit Hours (2 Lecture Hours)
Exploration of major issues in environmental science posing past, present and future challenges. Selected readings, student presentations and papers.

ESCI 4230 Oil Spill Prevention and Response Theory
2 Semester Credit Hours (2 Lecture Hours)
Historical perspective of laws and regulations governing oil spill prevention and response. Current methods for control, containment, countermeasures, removal, and disposal of oil spills in an environmentally safe manner. Fall, Spring, Summer (on sufficient demand).
ESCI 4270 Hazardous Waste Operations and Emergency Response Theory
2 Semester Credit Hours (2 Lecture Hours)
Study of the laws and regulations of hazardous waste management from an historical perspective followed by current techniques for handling, reducing, and disposing of hazardous wastes in an environmentally safe manner. Fall, Spring, Summer (on sufficient demand).

ESCI 4301 Environmental Regulations
3 Semester Credit Hours (3 Lecture Hours)
A survey of state and federal environmental laws and regulations, and their impact on the environment. Case studies of environmental issues and legislated regulations.
Prerequisite: POLS 2305 and 2306.

ESCI 4320 Environmental Health
3 Semester Credit Hours (3 Lecture Hours)
Overview of the toxicology and epidemiology of pollutants in the air, water and soil. Associations of environmental exposure with adverse health effects such as cancer, cardiovascular disease, and reproductive outcomes; also chemical markers and symptoms of disease. Pollutants studied include lead, asbestos, radiation, radon, noise, metals, halogenated hydrocarbons, aromatic hydrocarbons, silica, indoor air quality, formaldehyde, and outdoor air pollutants. Offered on sufficient demand.

ESCI 4321 Introduction to Soil and Groundwater Restoration
3 Semester Credit Hours (3 Lecture Hours)
Introduction to methods for restoring contaminated soil and groundwater by examining the factors and processes influencing the efficacy of remediation systems. An emphasis will be placed on the scientific principles upon which soil and groundwater remediation is based. Cross listed with GEOL 4321.

ESCI 4322 Introduction to Industrial Hygiene
3 Semester Credit Hours (3 Lecture Hours)
Introduction to health protection practices in the industrial environment. Health basis for OSHA laws, regulations. Sampling and testing procedures.

ESCI 4324 Introduction to Industrial Toxicology
3 Semester Credit Hours (3 Lecture Hours)
Review of human physiology, general concepts of toxicology: dose-response relationship, interactions between the host and the agents, risk assessment, to provide an introductory understanding of toxicology related to the chemicals in the workplace.

ESCI 4332 Wetlands and Water Quality
3 Semester Credit Hours (3 Lecture Hours)
Introduction to wetland ecosystems (natural, constructed and restored) with an emphasis on the role of wetlands in water quality. Topics include wetland systems, their history and role in society, relationships between biology, geology, ecology, hydrology and chemistry in wetland environments. Offered on sufficient demand.
Prerequisite: CHEM 1412 and BIOL 1406.

ESCI 4335 Climate and Climate Variability
3 Semester Credit Hours (3 Lecture Hours)
Course intended to guide environmental science majors in developing a conceptual understanding of Earth's global climate and its variability. Review of past climates, present mean state of the climate system, climate variability from seasonal to multidecadal time scales, and climate change. Special attention given to climates of the Gulf of Mexico, Caribbean Sea and surrounding land regions. Plausible climate-change scenarios, as well as mitigation and adaptation strategies are also discussed. Cross listed with ATSC 4335. Spring.
Prerequisite: (ESCI 3351 or 3403) and (PHYS 1401 or 2425).

ESCI 4340 Severe Weather
3 Semester Credit Hours (3 Lecture Hours)
Introduction to mesoscale weather systems including thunderstorms, squall lines and hurricanes, as well as the mechanisms of tornado and lightning. Methods of observing, analyzing, and predicting these severe weather systems with the interpretation of satellite and radar images will also be introduced in this class.
Prerequisite: ESCI 3403.

ESCI 4344 Air Pollution and the Clean Air Act
3 Semester Credit Hours (3 Lecture Hours)
Introduction to the chemistry and physics of air pollution and regulations. Topics include photochemistry, acid rain, air pollution meteorology and dispersion, global change, and the Clean Air Act.

ESCI 4360 Physical Oceanography
3 Semester Credit Hours (3 Lecture Hours)
Physical description of the sea, physical properties of seawater and sea ice, methods and measurements, wind-driven ocean circulation, thermohaline ocean circulation, boundary processes, waves, tides and mixing. Seasonal and interannual variability such as El Niño/Southern Oscillation phenomena. Implications for marine biology, marine geology, human impacts, other topics. Fall.
Prerequisite: PHYS 1401 or 2425.

ESCI 4365 Occupational Safety and Accident Prevention
3 Semester Credit Hours (3 Lecture Hours)
This course provides students with fundamental knowledge of regulatory requirements on occupational safety and practical techniques on accident prevention in the work environment. Offered on sufficient demand.

ESCI 4408 Environmental Microbiology
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Relationships between microorganisms and their biotic and abiotic environment. Current topics such as air quality (i.e., molds), water quality and bioremediation will be discussed. Laboratory will include techniques for sampling from soil, air and water. Offered on sufficient demand.
Prerequisite: BIOL 2421.
Co-requisite: SMTE 0096.

ESCI 4480 Environmental Site Assessment
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Interdisciplinary application of environmental regulations, risk assessment to specific examples. Knowledge of United States environmental regulations assumed; ESCI 4301 Environmental Regulations recommended.

ESCI 4490 Selected Topics
4 Semester Credit Hours (4 Lecture Hours, 4 Lab Hours)
Subject materials variable. May be repeated for credit when topics are significantly different. Faculty approval required. Offered on sufficient demand.
ESCI 4496  Directed Independent Study
1-4 Semester Credit Hours
Requires a formal proposal of study to be completed in advance of registration and to be approved by the supervising faculty, the Chairperson, and the Dean of the College. Fall, Spring, Summer.

ESCI 4498  Internship in Environmental Science
1-4 Semester Credit Hours (4 Lecture Hours)
Two to four semester hours of credit may be earned by working in an internship position in a governmental agency or industry.

Geology, BS

Program Description
The mission of the Geology Program is to provide integrated and process-oriented curricula, based on fundamental scientific principles and processes that enable graduates to pursue challenging careers and maintain lifelong learning. The Geology Program is designed to serve students majoring in geology and environmental science as well as students in other fields who are interested in adding to their knowledge of the Earth. Members of the geoscience faculty provide majors with a broad overview of geologic processes while offering the opportunity to pursue specialized knowledge in selected areas of geoscience in preparation for graduate study and careers in government, industry, or academia.

Students can earn a Bachelor of Science degree in Geology by following the degree plan for geology majors as described below. Students considering certification for 4-8 level science teaching should consult the Science, Mathematics and Technology Education (SMTE) section of this catalog.

Student Learning Outcomes
Students will:

• show competence in scientific inquiry, writing, and oral presentation;
• demonstrate a broad understanding of major concepts central to the geological sciences;
• demonstrate competency and be able to apply field and laboratory methods, perform data analysis, and utilize computer applications relevant to the geological sciences;
• be employable in geology-related fields, or able to continue their education in graduate programs;
• be able to evaluate and critically discuss issues related to geology that impact society.

Fast Track from Bachelor’s to Master’s Degree
The university allows the opportunity for high-achieving students to count a select number of graduate credits toward their undergraduate degree and thereby obtain a graduate degree at an accelerated pace. For more information, see Fast Track Geology, BS and Environmental Science, MS (p. 603).

General Requirements
The minimum requirement for a Bachelor of Science Degree in Geology is a total of 120 hours, divided among the following areas:

<table>

GEOL 4416 Introduction to Geochemistry (if not taken in the Geology Core)

Approved Science Electives
Select 13 hours from Environmental Science, Chemistry, Geographic Information Science, Engineering, Physics, Biology, Mathematics or other appropriate area 2

Total Hours 28

1

In choosing electives, students must make sure they meet the University's 45 upper-division credit hour requirement.

2

See also the designated electives listed on the Geochemistry, Environmental Geology and Energy Resources Tracks.

Geochemistry Track
The Geochemistry track focuses on the relationships between aqueous solutions, equilibrium thermodynamics and kinetics, acid-base equilibria, redox reactions, carbon chemistry, organic compounds, biogeochemical cycles, microbial influences and geological processes. These relationships are applied to understand the complex interactions among the atmospheric, continental and marine environments.

Total Hours 32

1

4 credit hours for the GEOL 4416 Introduction to Geochemistry (4 sch) are included in the Geology core and are not included in the total for this selection.

2

In choosing electives, students must make sure they meet the University's 45 upper-division credit hour requirement.

3

Additional hours not listed may be approved by Faculty mentor.
CHEM 4490 Special Topics (4 sch) includes topics such as Organic Geochemistry, Aquatic Chemistry, Stable Isotope Biogeochemistry.

GEOL 4490 Selected Topics (4 sch) includes Groundwater Geochemistry.

Environmental Geology Track
The Environmental Geology track is designed to provide students with a broad training for careers in different aspects of the environmental geosciences including: water resources, water quality, and the hydrogeochemistry of natural waters.

Total Hours 32

1 Note that PHYS 2425 University Physics I (4 sch)/PHYS 2426 University Physics II (4 sch) and MATH 2414 Calculus II (4 sch) are required for some courses part of this track.

2 4 credit hours for the GEOL 4444 Hydrogeology (4 sch) are included in the Geology core and are not included in the total for this section.

3 In choosing electives, students must make sure they meet the University’s 45 upper-division credit hour requirement.

4 Additional hours not listed may be approved by Faculty Mentor.

Energy Resources Track
The Energy Resources track offers the engineering and geology background for exploration and production of hydrocarbons, gas hydrates and renewable resources such as geothermal energy.

Total Hours 28-29

1 Must take PHYS 2425 University Physics I (4 sch) and PHYS 2426 University Physics II (4 sch) in Supporting courses.

2 In choosing electives, students must make sure they meet the University’s 45 upper-division credit hour requirement.

3 Engineering pre-requisite courses and/or additional hours not listed may be approved by Faculty Mentor.

4 ENGR 2326 Dynamics (3 sch) has ENGR 2325 Statics (3 sch) as pre-requisite.

Optional Minor in Another Subject
Geology majors may choose to complete a minor in an approved subject. Course requirements for the minor involve at least 18 semester hours, and the content is specified by faculty in the minor field. Minors in
biology, chemistry, computer science, environmental science, geographic information science, and mathematics are generally appropriate for geology majors. Minors in other disciplines or combination minors may be arranged in consultation with the academic advisor.

**Hours**: 15

**Summer**
- **GEOL 4650** Field Geology 6

**Hours**: 6

**Total Hours**: 121

### Courses

**GEOL 1303 Essentials of Geology**
3 Semester Credit Hours (3 Lecture Hours)
One-semester introductory Earth science course for students majoring in a non-science subject area. Covers basic geologic material and concepts, such as minerals, rocks, the rock cycle, and plate tectonics theory. Origin, composition, and evolution of our planet, as well as the importance of geology in everyday life, including geologic resources, global change, earthquakes, and volcanism are examined. This course is not recommended for students majoring in Geology or Environmental Sciences. Course counts toward the natural science component of the Core Curriculum Program.  
**TCCNS**: GEOL 1303

**GEOL 1403 Physical Geology**
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Introduction to the origin, classification, and composition of Earth materials. Study of internal and surface processes which shape and modify Earth. Laboratory studies of minerals and rocks, as well as topographic maps, geologic maps and geologic cross-sections.  
**Co-requisite**: SMTE 0094.  
**TCCNS**: GEOL 1403

**GEOL 1404 Historical Geology**
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Introduction to the origin and evolution of Earth and other planets. Changes in the form and distribution of Earth’s continents and oceans, and succession of plants and animals through geologic time. Laboratory studies of fossils, geological maps, and the interpretation of ancient environments of rock formation.  
**Prerequisite**: GEOL 1403 or 1303.  
**Co-requisite**: SMTE 0094.  
**TCCNS**: GEOL 1404

**GEOL 2102 Undergraduate Seminar in Geology-Careers in the Geosciences**
1 Semester Credit Hour (1 Lecture Hour)
Introductory level seminar featuring diverse topics and speakers. Focus on careers in the geosciences as well as on how to successfully plan a college career. In-house as well as external speakers. May not be repeated for credit but attendance in subsequent semesters is encouraged.  

**GEOL 2103 Undergraduate Seminar in Geology-Research in the Geosciences**
1 Semester Credit Hour (1 Lecture Hour)
Introductory level seminar featuring diverse topics and speakers. Focus on current geologic research. In-house as well as external speakers. May not be repeated for credit but attendance in subsequent semesters is highly encouraged. Credit/no credit
GEOL 2222  Karst Geology and Paleoclimatology
2 Semester Credit Hours (1 Lecture Hour)
This course describes the different types of caves and karst rocks, the
water rock interactions in carbonate rock systems, and it explains cave
formation via hydrological and geochemical processes. It also deals with
how speleothem proxies such as oxygen and carbon stable isotope, trace
elements, carbonate petrography are used to decipher past changes in
climate.

GEOL 2490  Selected Topics
1-4 Semester Credit Hours (1-4 Lecture Hours, 6 Lab Hours)
May be repeated for credit if topics are significantly different. Subject
material variable. Faculty approval required.

GEOL 3326  Introduction to Geological Field Methods
3 Semester Credit Hours (2 Lecture Hours, 3 Lab Hours)
Introduction to the basic techniques of geological fieldwork. Note taking
in the field, proper use of geological field equipment, measurement and
description of rock sections by several methods and degrees of detail,
plus small area mapping of several types of terrain with topographic
maps. Reports, sections, and maps will be produced from the field notes.
Field trips required.
Prerequisite: GEOL 1403 and 1404 and (GEOL 3411 or 3411')
* May be taken concurrently.
Co-requisite: SMTE 0094.

GEOL 3329  Geology of National Parks
3 Semester Credit Hours (3 Lecture Hours)
Introduction to the regional geology of the United States using selected
U.S. National Parks representing a wide variety of geologic settings as
examples. Application of major geologic principles and basic geologic
concepts such as plate tectonics, rock cycle, stratigraphy, and geologic
time.
Prerequisite: GEOL 1303, 1403 or 1404.

GEOL 3411  Mineralogy
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Study of the physical and chemical properties of minerals. Introduction to
the crystallography of minerals, optical mineralogy, and the use of the
polarized light microscope. Laboratory study of mineral identification in
hand specimens and thin sections.
Prerequisite: GEOL 1403 and CHEM 1411 and (CHEM 1412 or 1412').
* May be taken concurrently.
Co-requisite: SMTE 0094.

GEOL 3414  Igneous and Metamorphic Petrology
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Genesis and occurrence of igneous and metamorphic rocks.
Mineralogical composition and thermodynamics of geologic systems.
Determination of rock types in hand specimens and thin sections.
Prerequisite: GEOL 1403, CHEM 1411, 1412 and GEOL 3411.
Co-requisite: SMTE 0094.

GEOL 3441  Invertebrate Paleontology
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Morphology, classification, and paleoecology of fossil invertebrates.
Applications to marine geology including paleoceanography, stratigraphy,
economic geology. Field trip to Texas invertebrate fossil beds.
Prerequisite: GEOL 1404.
Co-requisite: SMTE 0094.

GEOL 3442  Geomorphology
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Study of landscapes and landforms at the surface of the Earth, and the
processes and mechanisms by which they are developed.
Prerequisite: GEOL 1403.
Co-requisite: SMTE 0094.

GEOL 3443  Environmental Geology
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Study of the relationships of humans to Earth's physical environment.
Geologic aspects of waste disposal, resources, conservation, land
reclamation, geologic hazards, and land-use planning.
Prerequisite: GEOL 1403.
Co-requisite: SMTE 0094.

GEOL 3490  Selected Topics
1-4 Semester Credit Hours (1-4 Lecture Hours)
May be repeated for credit if topics are significantly different. Subject
materials variable.

GEOL 4050  Geology Field Safety Seminar
0 Semester Credit Hours
Restricted to geology majors attending field camp. Students required
to meet with geology program coordinator prior to registration for this
course.

GEOL 4311  Paleoclimatology
3 Semester Credit Hours (3 Lecture Hours)
Reconstruction of Earth's climate system through time using natural
archives and proxy evidence. Focus is mostly towards the Quaternary,
though longer time spans will be considered, too. Mixed format with
lectures, hand-on activities involving paleoclimatic data sets, and seminar-
style readings and discussions.
Prerequisite: GEOL 1404 and 3441.

GEOL 4316  Marine Geoscience
3 Semester Credit Hours (3 Lecture Hours)
Introduction to the geology of the marine environment. Review of plate
tectonic processes relevant to the evolution of continental margins and
plate boundaries; geophysics and ocean morphology; geology of
ocean crust; controls on the types, origin, and distribution of marine
sediments; marine geochemistry; nearshore geological processes
and the continental shelf; introduction to paleoceanography; global
paleoceanographic evolution; critical events in ocean history. Special
focus on the Gulf of Mexico.
Prerequisite: GEOL 1403, 1404, CHEM 1411 and 1412.

GEOL 4321  Introduction to Soil and Groundwater Restoration
3 Semester Credit Hours (3 Lecture Hours)
Introduction to methods for restoring contaminated soil and groundwater
by examining the factors and processes influencing the efficacy of
remediation systems. An emphasis will be placed on the scientific
principles upon which soil and groundwater remediation is based.
Prerequisite: (GEOL 1403, CHEM 1411, 1412 and GEOL 3443).

GEOL 4326  Field Seminar in Geology
3 Semester Credit Hours (4 Lecture Hours, 1 Lab Hour)
Designed to prepare students for summer field camp. Basic techniques of
geologic mapping in the field, data analysis and interpretation, and report
writing.
Prerequisite: GEOL 4411 and 4421.
Co-requisite: SMTE 0094.
GEOL 4411 Sedimentation and Stratigraphy
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Composition and origin of sediments and sedimentary rocks. Description
and classification of rocks in hand specimen. Principles of stratigraphy,
including stratigraphic units and correlation. Facies models for major
depositional systems. Field trips.
Prerequisite: (GEOL 1403) and (GEOL 1404) and (GEOL 3411*).
*May be taken concurrently.
Co-requisite: SMTE 0094.

GEOL 4415 Economic Geology
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Study of geologic and tectonic parameters of mineral and metals
formation. Ore geology and geochemistry. Mining, processing, fabrication,
and marketing of natural resources. Field trip to mining operations.
Prerequisite: GEOL 1403 and 3411.
Co-requisite: SMTE 0094.

GEOL 4416 Introduction to Geochemistry
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Introductory study of the Earth processes using principles of chemical
equilibrium, thermodynamics, isotopic geochronology and organic
geochemistry. Applications of low-temperature geochemistry to geologic
problems.
Prerequisite: CHEM 1411, 1412, MATH 2413 and GEOL 3411.
Co-requisite: SMTE 0094.

GEOL 4421 Structural Geology
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
PHYS 1401 Geometric and quantitative description of deformation of
the Earth's crust, mechanics of brittle and crystal-plastic deformation
processes of Earth materials, introduction to continuum mechanics
of geologic systems, crustal deformation from micro-scale to global
tectonics. Laboratory introduces principles of three-dimensional data
representation and analysis, geologic map interpretation, cross-section
techniques, and problems in stress and strain analysis.
Prerequisite: GEOL 3411 and MATH 2413 and (PHYS 1401 or 2425).
Co-requisite: SMTE 0094.

GEOL 4422 Geophysics
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Introduction to quantitative techniques to assess physical properties and
processes of the Earth. Topics include earthquake seismology, refraction
deep reflection seismology, gravimetry, magnetism, electrical methods,
and radioactivity of Earth materials. Application of geophysical methods
to the study of the Earth, in oil and gas exploration, and in economic
and environmental geology.
Prerequisite: (GEOL 4421, PHYS 1401 or 2425) and (PHYS 1402 or 2426)
and (MATH 2413).

GEOL 4423 Seismic Methods
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Introduction to the acquisition, processing, and interpretation of 2D
and 3D seismic data. Lectures and field exercises are covered. Topics
include conceptual and historical foundations of modern reflection
seismology; an overview of seismic wave phenomena in acoustic, elastic,
and porous media; acquisition principles for land and marine seismic
surveys; methods used to create 2D and 3D seismic images from field
data; concepts of dip moveout, prestack migration, and depth migration;
concepts and limitations of 3D seismic interpretation for structure,
stratigraphy, and rock property estimation; and the interpretation role of
attributes, impedance estimation, and AVO.
Prerequisite: GEOL 4422.
GEOL 4650  Field Geology  
6 Semester Credit Hours (12 Lab Hours)  
Field course involving practical application of geologic principles to field problems. Locations visited and material covered depends on hosting institution. Generally should include: mapping and outcrop data collection; measurement of stratigraphic sections; mapping and preparation of geologic cross-sections; preparation of geologic reports.  
Prerequisite: GEOL 3326, 3414, 3441, 4411 and 4421.  
Co-requisite: SMTE 0094.

Mathematics, BS  
Program Description  
The mission of the Mathematics Program at Texas A&M University-Corpus Christi is to increase the knowledge and use of mathematics by persons both at the University and in the surrounding area. We strive to educate students at the University so that they are prepared to use mathematics intelligently in their chosen fields of study and to understand mathematics as it affects their lives and participation in public affairs. In addition, the Mathematics Program provides its majors and graduate students with preparation for careers in education, science, and commerce, as well as providing a solid foundation for further study in mathematics. In support of the graduate program, the mathematics faculty pursues scholarship in mathematics, applications of mathematics, and instruction in mathematics. Finally, the Mathematics Program serves the community by providing its expertise to local schools, industry, and businesses.

Student Learning Outcomes  
Students will:  

- Demonstrate a command of principles of general mathematics at the undergraduate level.  
- Recognize mathematics outside the realm of the classroom, and apply undergraduate level mathematical content as a matter of professional practice.  
- Communicate mathematics effectively at the undergraduate level, in oral and written form, with appropriate use of technology.  

There are three tracks for the degree: Secondary Mathematics Teaching, leading to teacher certification; Applied/Industrial Mathematics, preparing students for employment; and General Mathematical Studies; preparing students for further studies in mathematics. All options share a common core that consists of 32 hours of mathematics, physics and programming.

Placement and Prerequisites  
Each new or transfer student entering Texas A&M University-Corpus Christi who plans to take a mathematics course will be evaluated by the University to determine the appropriate first mathematics course(s) for that student. For students who enter having successfully completed a college mathematics course, evaluation will normally be based on their college transcript. For a student who enters without having completed a college-level mathematics course, evaluation will normally be based on both that student’s high-school transcript, and his or her score on standardized tests. For details on use of transcripts and scores for placement see the placement link on the Department webpage, http://math.tamucc.edu. Students may not enroll for their first mathematics course without having been placed into that course.

Students may not enroll for their first mathematics course without having been placed into that course.

Teaching Certification in Mathematics  
Students who wish to teach mathematics in grades 4-12 should explore the following certification options:

- Elementary Education, BS — Grades 4-8 with Mathematics Certification (p. 572)  
- Mathematics, BS — Grades 7-12 Mathematics Education Concentration (p. 577)  
- Mathematics, Grades 7-12 Teacher Certification Without a Mathematics Major (p. 583)

Fast Track from Bachelor’s to Master’s Degree  
The university allows the opportunity for high-achieving students to count a select number of graduate credits toward their undergraduate degree and thereby obtain a graduate degree at an accelerated pace. For more information, see Fast Track Mathematics, BS and Mathematics, MS (p. 608).

General Requirements  
The requirements for a Bachelor of Science degree in Mathematics include at least 120 semester hours with a minimum of 45 upper-division hours.

1 After confirming with an advisor, others may take electives instead.

2 May be waived with suitable placement; see placement section below for more details. Upper-division classes may be required to increase total upper-division hours to the university minimum. See the degree requirements section of the catalog for details.

3 3 hours of MATH 2413 Calculus I (4 sch) apply to the University Core Curriculum. The 1 hour laboratory component applies to the Mathematics Core requirement.

4 May substitute COSC 1435 Introduction to Problem Solving with Computers I (4 sch) or COSC 1436 Introduction to Problem Solving with Computers II (4 sch)

Minor or Career Emphasis
Students complete a major in mathematics with electives as needed. Mathematics majors must consult with a mathematics faculty mentor in choosing the electives and are advised to choose among two options. The first option is a minor, designed to provide a secondary concentration in an area of particular interest to the student, or of particular importance to his or her career plans. The second option designed for those students seeking secondary teaching certification, is a sequence of courses in Education. Details of each of these options are:

A minor consists of 18-23 specified semester hours in an approved subject. The student should consult the section of the catalog pertaining to the academic area of the minor for a description of the requirements in that discipline. If no description is provided, the minor is subject to the approval of the department containing the minor.

Twenty-seven hours of courses as specified by the College of Education and Human Development to meet SBEC requirements for certification. An additional 4 hours to complete a "Support Field" will be required. Consult the "Professional Development and Reading Sequence" of the BS in Mathematics—Grades 7-12 section of the SMTE portion of the catalog for more details.

### Courses

**MATH 0099 Math Non-Course Based Development**
0 Semester Credit Hours
Preparation workshop to help students achieve College Readiness in mathematics under the Texas Success Initiative. Topics include five general areas: fundamental mathematics, algebra, geometry, statistics, and problem solving.

**MATH 0200 Brief Developmental Mathematics**
1-2 Semester Credit Hours (1-2 Lecture Hours)
Topics as in MATH 0300. For students who have completed most topics in MATH 0300. Requires permission of MATH department. (Not counted toward graduation) Fall, Spring, Maymester, Summer.

**MATH 0214 Brief Developmental Mathematics-Algebra**
2 Semester Credit Hours (2 Lecture Hours)
This course is co-requisite course supporting for MATH 1314. Support will focus on essential skills required for success in College Algebra (Math 1314). Supporting topics include review of intermediate algebra, polynomial equations, graphing techniques, and applications. Course provides the necessary academic support for TSI liable students concurrently enrolled in MATH 1314 as the co-requisite with MATH 0214. Students who register for MATH 0214 must co-register in MATH 1314. MATH 0214 is not counted toward graduation. Fall, Spring, Summer.

**MATH 0224 Brief Developmental Mathematics-Business Mathematics**
2 Semester Credit Hours (2 Lecture Hours)
This course is the co-requisite course supporting for MATH 1324. Support will focus on essential skills required for success in Business Math (Math 1324). Supporting topics include the use of calculators and technology. Topics focus on basic review of mathematical skills, elementary algebra, mathematical and logical reasoning, probability, and financial management, while providing the necessary academic support for TSI liable students concurrently enrolled in MATH 1324 as the co-requisite with MATH 0224. Students who register for MATH 0224 must co-register in MATH 1324. Math 0224 is not counted toward graduation. Fall, Spring, Summer.

**MATH 0232 Brief Developmental Mathematics-Contemporary Mathematics**
2 Semester Credit Hours (2 Lecture Hours)
This course is co-requisite course supporting for MATH 1332. Support will focus on essential skills required for success in Contemporary Mathematics (Math 1332). Supporting topics include a basic review of mathematical skills, elementary algebra, mathematical and logical reasoning, probability, and descriptive statistics, while providing the necessary academic support for TSI liable students concurrently enrolled in MATH 1332 as the co-requisite with MATH 0232. Students who register for MATH 0232 must co-register in MATH 1332. Math 0232 is not counted toward graduation. Fall, Spring, Summer.
MATH 0242  Brief Developmental Mathematics-Statistics
2 Semester Credit Hours (2 Lecture Hours)
This course is co-require course supporting for MATH 1442. Support will focus on essential skills required for success in Statistics for Life (Math 1442). Supporting topics include the use of calculators and technology. Topics focus on descriptive and inferential statistics, probabilities including notation, while providing the necessary academic support for TSI liable students concurrently enrolled in MATH 1442 as the co-require course. Students who register for MATH 0242 must co-register in MATH 1442. Math 0242 is not counted toward graduation. Fall, Spring, Summer.
Co-require: MATH 1442.

MATH 0300  Developmental Mathematics
3 Semester Credit Hours (3 Lecture Hours)
Topics include number concepts, computation, elementary algebra, geometry, and mathematical reasoning. Also, linear equations and inequalities, rational expressions, exponents and radicals, quadratics and word problems. May be repeated for credit as needed to complete mastery of all topics. (Not counted toward graduation.) Fall, Spring, Summer.

MATH 0310  Developmental Mathematics-Algebra
3 Semester Credit Hours (2 Lecture Hours, 2 Lab Hours)
3 sem. hrs. (2:2) Topics include number concepts, computation, elementary algebra, and geometry. Also, linear equations and inequalities, rational expressions, exponents and radicals, quadratics and word problems. May be repeated for credit as needed to complete mastery of all topics. (Not counted toward graduation.) Fall, Spring, Summer.

MATH 0398  Introduction to Algebra
3 Semester Credit Hours (3 Lecture Hours)
Number concepts, computation, elementary algebra, geometry, and mathematical reasoning.

MATH 0399  Intermediate Algebra
3 Semester Credit Hours (3 Lecture Hours)
Topics include linear equations and inequalities, rational expressions, exponents and radicals, quadratics and word problems.
Prerequisite: MATH 0398.

MATH 1314  College Algebra
3 Semester Credit Hours (3 Lecture Hours)
Quadratic equations, inequalities, graphs, logarithms and exponentials, theory of polynomial equations, systems of equations.
Prerequisite: MATH 0300, minimum score of 530 in 'SAT MATH SECTION', minimum score of 19 in 'ACT Math', MATH 0320, minimum score of 350 in 'TSI Math', minimum score of 910 in 'TSIA2 Math' or minimum score of 6 in 'TSIA2 Math Diagnostic'.
TCCNS: MATH 1314

MATH 1316  Trigonometry
3 Semester Credit Hours (3 Lecture Hours)
Trigonometric functions, identities, equations involving trigonometric functions, solutions of right and oblique triangles.
Prerequisite: (MATH 1314, minimum score of 550 in 'SAT MATH SECTION' or minimum score of 21 in 'ACT Math') or minimum score of 21 in 'ACT Math'.
TCCNS: MATH 1316

MATH 1324  Mathematics for Business and Social Sciences
3 Semester Credit Hours (3 Lecture Hours)
Students will learn how the properties and language of mathematics can be used in business and real-world problem solving and understand the techniques and applications of finance problems, basic matrix operation, basic counting principles, and probability analysis in modeling real-world scenarios. This course could be taught in 14-weeks 7-weeks semesters and in F2F or fully online formats
Prerequisite: minimum score of 550 in 'SAT MATH SECTION', minimum score of 21 in 'ACT Math' or minimum score of 21 in 'ACT Math'.
TCCNS: MATH 1324

MATH 1325  Calculus for Business & Social Sciences
3 Semester Credit Hours (3 Lecture Hours)
Students will develop and combine the concepts in and relationships between Mathematics and Business from the fundamentals of calculus and optimization in all Business fields. Students are expected to learn the materials algebraically with technology. Students will combine the concepts of limits, continuation, differentiation and integration techniques to solve problems in business, economics, and social sciences. This course could be taught in 14-weeks and 7-weeks semesters in F2F and fully online formats
Prerequisite: (MATH 1324 and 1314).
TCCNS: MATH 1325

MATH 1332  Contemporary Mathematics
3 Semester Credit Hours (3 Lecture Hours)
This course serves as a terminal course and supplies a brief overview of several topics in mathematics. Topics may include introductory treatments of sets, logic, number systems, number theory, relations, functions, probability and statistics. Appropriate applications are included. This course emphasizes using critical thinking to make decisions based on information.
TCCNS: MATH 1332

MATH 1390  Introduction to Mathematical Topics
1-3 Semester Credit Hours (1-3 Lab Hours)
A course to introduce students to mathematical topics in a formal setting. The course may support problem solving, or systematic investigations of topics outside the current mathematical catalog. May not be substituted for regularly scheduled offerings.

MATH 1442  Statistics for Life
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
An introduction to statistical concepts and methods used in all disciplines to enhance decision making based on data analysis, including: basic experimental design models, measurement and data collection through sampling; display and summary of information, and assessment of relationship through descriptive techniques; probability concepts leading to estimation and hypothesis testing of means, variance and proportions, regression analysis, one-factor ANOVA and chi-square test of independence; and applications through case studies. The laboratory component of the course offers applications of the theory presented during the classroom sessions.
Prerequisite: MATH 0300, minimum score of 530 in 'SAT MATH SECTION', minimum score of 19 in 'ACT Math', MATH 0310, 0320, minimum score of 350 in 'TSI Math' or minimum score of 19 in 'ACT Math'.
TCCNS: MATH 1442
MATH 2305 Discrete Mathematics I
3 Semester Credit Hours (3 Lecture Hours)
An introduction to topics in Discrete Mathematics with an emphasis on applications in Mathematics and Computer Science. Topics include formal logic, graphs, trees and related algorithms, and combinatorics and discrete probability.
Prerequisite: MATH 2413, minimum score of 620 in 'SAT Math', minimum score of 620 in 'SAT Mathematics', minimum score of 640 in 'SAT MATH SECTION', minimum score of 27 in 'ACT Math' or minimum score of 27 in 'ACT1 Math'.
TCCNS: MATH 2305

MATH 2312 Precalculus
3 Semester Credit Hours (3 Lecture Hours)
A more rapid treatment of the material in MATH 1314 and MATH 1316, this course is designed for students who wish a review of the above material, or who are very well prepared. Functions, graphs, trigonometry, and analytic geometry.
Prerequisite: MATH 1314, minimum score of 550 in 'SAT MATH SECTION', minimum score of 21 in 'ACT Math' or minimum score of 21 in 'ACT1 Math'.
TCCNS: MATH 2312

MATH 2413 Calculus I
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Limits, continuity, derivatives, applications of the derivative, and an introduction to integrals. Contains a laboratory component.
Prerequisite: MATH 1316, 2312, minimum score of 640 in 'SAT MATH SECTION' or minimum score of 27 in 'ACT1 Math'.
TCCNS: MATH 2413

MATH 2414 Calculus II
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Prerequisite: MATH 2413.
TCCNS: MATH 2414

MATH 2415 Calculus III
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Vectors and space curves, partial derivatives, multiple integrals, special coordinate systems, line and surface integrals, Green’s, Stokes’, and the Divergence Theorems. Contains a laboratory component. Vectors and space curves, partial derivatives, multiple integrals, special coordinate systems, line and surface integrals, Green’s, Stokes’, and the Divergence Theorems. Contains a laboratory component.
Prerequisite: MATH 2414.
TCCNS: MATH 2415

MATH 3301 Introduction to Complex Analysis
3 Semester Credit Hours (3 Lecture Hours)
This course introduces functions of a complex variable and their applications. Contents include differentiation and integration; zeros, poles and residues; conformal mappings.
Prerequisite: (MATH 2415) or (MATH 2414 and 3314).

MATH 3310 Mathematical Analysis for Mechanical Engineering
3 Semester Credit Hours (3 Lecture Hours)
Applications of fundamentals of linear algebra, vector analysis, numerical methods, computer programming and probability and statistics into mechanical engineering. May not count towards the MATH major. Students may not receive credit for both MATH 3310 and MEEN 3310.
Prerequisite: MATH 3315.

MATH 3311 Linear Algebra
3 Semester Credit Hours (3 Lecture Hours)
Fundamentals of linear algebra and matrix theory. Topics include vectors, matrix operations, linear transformations, fundamental properties of vector spaces, systems of linear equations, eigenvalues and eigenvectors. Applications.
Prerequisite: MATH 2413.

MATH 3312 College Geometry
3 Semester Credit Hours (2 Lecture Hours, 2 Lab Hours)
A careful study of the foundations of Euclidean geometry by synthetic methods with an introduction to non-Euclidean geometries. An introduction to transformational geometry.
Prerequisite: MATH 2413.

MATH 3313 Foundations of Number Theory
3 Semester Credit Hours (3 Lecture Hours)
This course assists a student's transition to advanced mathematics. Fundamentals of logic and proof are reviewed and applied to topics from elementary number theory.
Prerequisite: MATH 2414.

MATH 3314 Foundations of Real Numbers
3 Semester Credit Hours (3 Lecture Hours)
This course assists a student’s transition to advanced mathematics. Fundamentals of logic and proof are reviewed and applied to development of the real number line.
Prerequisite: MATH 2414.

MATH 3315 Differential Equations
3 Semester Credit Hours (3 Lecture Hours)
An introduction to both theoretical and applied aspects of ordinary differential equations. Topics include: first order equations, linear second order equations, elementary numerical methods, and the Laplace transform.
Prerequisite: MATH 2414.

MATH 3342 Applied Probability and Statistics
3 Semester Credit Hours (3 Lecture Hours)
A calculus based introduction to probability and statistics. Emphasis will be on development of statistical thinking and working with data. Topics include probability theory, descriptive statistics, common distributions, and statistical inference.
Prerequisite: MATH 2413.
MATH 3345 Statistical Modeling and Data Analysis
3 Semester Credit Hours (3 Lecture Hours)
An introduction to probability/statistical modeling and data analysis techniques to investigate data. Topics include: exploratory data analysis, probability models and simulation, sampling distributions, statistical inference. Applications to real world problems. Students will be expected to present and justify results orally and in writing. Note: MATH 3342 and MATH 3345 cannot both be counted for credit.
Prerequisite: MATH 2413 and (COSC 1330 or 1435).

MATH 3347 Introduction to Probability
3 Semester Credit Hours (3 Lecture Hours)
This is an introduction to probability. In the course, key fundamental concepts of probability, random variables and their distributions, expectations, and conditional probabilities will be covered. Topics include counting rules, combinatorial analysis, sample spaces, axioms of probability, conditional probability and independence, discrete and continuous random variables, joint distribution of random variables, characteristics of random variables, law of large numbers and central limit theorem, random processes, Markov chains, Markov chain-Monte Carlo, Poisson Process and Entropy.
Prerequisite: MATH 2415.

MATH 3385 Linear Optimization and Decisions
3 Semester Credit Hours (3 Lecture Hours)
This course introduces the linear programming and optimization problems arising in many applications. Contents include linear programming models with solutions, the simplex method, duality theory and its use for management decision making, dual simplex method and sensitivity analysis.
Prerequisite: MATH 3311 and 2413.

MATH 3390 Problem Solving in Mathematics
1-3 Semester Credit Hours (1-3 Lecture Hours)
A problem solving course for students who want to participate in math problem solving competitions, train for the actuarial or other professional examinations, work on research aimed at conference presentations, or perform research projects at the junior level that are not at the level of directed independent study material.
Prerequisite: MATH 2414.

MATH 4185 Senior Mathematics Seminar
1 Semester Credit Hour (1 Lecture Hour)
This course introduces a weekly mathematics seminar. Students will generate a viable project for the capstone course.

MATH 4285 Mathematics Major Capstone
2 Semester Credit Hours (2 Lecture Hours)
Development of projects as proposed in MATH 4185, as well as mathematics communication skills. Students will present their projects, and take a national level assessment.
Prerequisite: MATH 4185.

MATH 4301 Introduction to Analysis
3 Semester Credit Hours (3 Lecture Hours)
An advanced treatment of the foundations of calculus stressing rigorous proofs of theorems. Topics include: elements of propositional and predicate logic, topology of the real numbers, sequences, limits, the derivative, and the Riemann integral.
Prerequisite: MATH 2415 and 3314.

MATH 4306 Modern Algebra
3 Semester Credit Hours (3 Lecture Hours)
Fundamentals of set operations, maps and relations, groups, rings and field theory. Topics include permutation groups, cosets, homomorphisms and isomorphisms, direct product of groups and rings, integral domains field of quotients, fundamental properties of integers, the ring of integers modulo n, and rings of polynomials. Applications.
Prerequisite: MATH 3311 and 3313.

MATH 4312 Differential Geometry
3 Semester Credit Hours (3 Lecture Hours)
Differential forms on R1, R2, R3, and Rn; Integration and differentiation of differential forms; Stokes’ Theorem; manifolds; Gaussian curvature and the Gauss-Bonnet Theorem.
Prerequisite: MATH 2415.

MATH 4315 Partial Differential Equations
3 Semester Credit Hours (3 Lecture Hours)
An introduction to partial differential equations emphasizing the wave, diffusion and potential (Laplace) equations. A focus on understanding the physical meaning and mathematical properties of solutions of partial differential equations. Methods include fundamental solutions and transform methods for problems on the line, and separation of variables using orthogonal series for problems in regions with boundary. Additional topics include higher dimensional problems and special topics like Harmonic functions, the maximum principle, Green’s functions etc.
Prerequisite: MATH 3315 and 2415.

MATH 4321 Applied Regression Analysis
3 Semester Credit Hours (3 Lecture Hours)
Introduction to the formulation of linear models and the estimation of the parameters of such models, with primary emphasis on least squares. Application of multiple regression and curve fitting and the design of experiments for fitting regression models.
Prerequisite: MATH 1342, 2342 or 1470.

MATH 4328 Discrete Mathematics II
3 Semester Credit Hours (3 Lecture Hours)
A continued study of topics from Discrete Mathematics I with additional topics from discrete mathematics that have strong application to the field of computer science. Additional topics include: recurrence relations, formal languages, and finite-state machines.
Prerequisite: MATH 2305 and COSC 2437.

MATH 4342 Introduction to Mathematical Statistics
3 Semester Credit Hours (3 Lecture Hours)
This is a first course in mathematical statistics, topics include: moment-generating functions, functions of random variables, sampling distributions, methods of estimation including Bayesian estimation, characteristics of estimators, interval estimation, hypothesis testing, Neyman-Pearson Lemma, likelihood ratio test, tests involving means and variances, regression and correlation, multiple linear regression, introduction to ANOVA, non-parametric tests.
Prerequisite: MATH 2415.

MATH 4385 Applied Modeling
3 Semester Credit Hours (3 Lecture Hours)
Capstone course for mathematics majors. The construction of mathematical models from areas such as economics, refining, biology and mariculture, etc. Where possible, local phenomena will be modeled with the assistance of outside consultants.
Prerequisite: MATH 3315 and 3342 or MATH 3345.

MATH 4390 Selected Topics
3 Semester Credit Hours (3 Lecture Hours)
Offered on sufficient demand.
**MATH 4696 Directed Independent Study**  
1-6 Semester Credit Hours  
See college description.

## Physics, BS  

### Program Description

### Introduction
The Joint BS Physics degree is a Bachelor of Science degree with a Physics major, provided through the joint efforts of physics faculty both here at TAMUCC and at other schools in the Texas Physics Consortium (TPC) (https://www.tarleton.edu/tpc/). Interested students are encouraged to visit the TPC website at http://www.tarleton.edu/tpc/. Upper-level physics courses can originate at any of the TPC schools, and students at any of the other TPC schools can take them via distance education.

Physics courses are also offered in support of other major study areas in the sciences, mathematics, computer science, engineering and technology, and 7-12 level physical science teaching certification.

### Student Learning Outcomes
Students obtaining the Joint BS in Physics will:

- possess a broad understanding of physics.
- understand scientific methods and be able use them to develop and conduct studies of physical systems.
- communicate physical information effectively at the undergraduate level, whether the communication is in oral or written form, with or without the use of technology.

### General Requirements

#### Requirements

<table>

1. Full-time, first time in college students are required to take the first-year seminars.  
   - UNIV 1101 University Seminar I (1 sch)  
   - UNIV 1102 University Seminar II (1 sch)

Students must complete 45 semester hours of upper division courses (3000 level or above).

### Program Requirements

#### Code   Title   Hours

<table>
<thead>
<tr>
<th>Full-time, First-year Students</th>

</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Core Curriculum Program</th>
</tr>
</thead>
<tbody>
<tr>
<td>University Core Curriculum</td>
</tr>
</tbody>
</table>

Students majoring in Physics must take:

| Code   Title   Hours |
|---------|------------------|
| MATH 2413 Calculus I | 4 |
| MATH 2414 Calculus II | 4 |
| PHYS 2425 University Physics I | 4 |
| PHYS 2426 University Physics II | 4 |

**Required Non-TPC Courses**

| Code   Title   Hours |
|---------|------------------|
| MATH 2413 Calculus I (included in University Core) | 4 |
| MATH 2414 Calculus II (included in University Core) | 4 |
| PHYS 2425 University Physics I (included in University Core) | 4 |
| PHYS 2426 University Physics II (included in University Core, 1 hour laboratory component) | 4 |

| Code   Title   Hours |
|---------|------------------|
| MATH 2415 Calculus III | 4 |
| MATH 3315 Differential Equations | 4 |
| COSC 1435 Introduction to Problem Solving with Computers I | 4 |

**Required TPC Courses**

| Code   Title   Hours |
|---------|------------------|
| PHYS 3331 Mechanics I | 3 |
| PHYS 3334 Modern Physics I | 3 |
| PHYS 3332 Electromagnetism | 3 |
| PHYS 3333 Thermodynamics | 3 |
| PHYS 4330 Mathematical Methods for Physicists | 3 |
| PHYS 4335 Quantum Physics | 3 |
| PHYS 4337 Nuclear Physics | 3 |
| PHYS 4340 Advanced Physics Lab | 3 |
| PHYS 4161 Physics Research Project | 3 |
| PHYS 4162 Physics Research Seminar | 3 |
| PHYS 3490 Selected Topics (repeat to total 6 hours) | 6 |

**Electives**

Students must choose their electives to make sure that they have 45 semester hours of upper-division courses (3000-level and above), as required by the College of Science & Engineering.

**Support Field Electives**

Select 18 hours in consultation with physics faculty advisor. Courses that could be used could include (but are not limited to) the following:

| Code   Title   Hours |
|---------|------------------|
| MATH 3311 Linear Algebra | 3 |
| COSC 1436 Introduction to Problem Solving with Computers II | 3 |
| ENGR 3315 Fluid Mechanics | 3 |
| ESCI 3351 Oceanography | 3 |
| ESCI 4335 Climate and Climate Variability | 3 |
| ESCI 4360 Physical Oceanography | 3 |
| MEEN 3345 Heat Transfer | 3 |

**General Electives**

Select 16 hours of General Electives not categorized above

**Total Hours**

122

1. These TAMUCC courses are required as part of the Joint BS in Physics degree. They are local courses, not TPC courses. These courses may not be taken on a pass/no pass (P/NP) basis.
15 credits hours for these courses are included in the University Core Curriculum tally above, and are not included in the total in this section. They fulfill the 3 hours of mathematics, 6 hours of life and physical sciences, and the 6 hour Component Area Option. One remaining credit does count in this section. Any other Core Curriculum Program courses taken in those categories will count as electives.

These courses are offered from one of the members of the Texas Physics Consortium (https://www.tarleton.edu/tpc/) (possibly from TAMUCC). Any substitutions for these courses, including transfer credits, must be approved by the Administrative Council of the Texas Physics Consortium.

The Selected Topics course is used for the TPC Advanced Physics Elective courses, which change from year to year. Any cataloged Advanced Physics courses can also fill this role.

The Support Field enables students the flexibility to tailor their degree to meet various academic and career goals, including teaching certification and interdisciplinary studies. The courses must be chosen in consultation with their physics faculty advisor. For students transferring into the Physics Major, these courses may be selected from those already taken from the student’s former major.

The first-year seminar courses listed above count as general electives.

**Courses**

**PHYS 1303 Introduction to Astronomy: Stars and Galaxies**
3 Semester Credit Hours (2 Lecture Hours, 2 Lab Hours)
This is one of two courses in the introduction to astronomy sequence which emphasizes the nature of astronomical phenomena over the mathematical analysis of them. This course will focus mostly on the nature of light, the nature and evolution of stars, the material between the stars, the Milky Way Galaxy, external galaxies, and the structure and evolution of the universe as a whole.

**Co-requisite:** SMTE 0095.

**TCCNS:** PHYS 1303
PHYS 1304  Introduction to Astronomy: Solar System
3 Semester Credit Hours (2 Lecture Hours, 2 Lab Hours)
This is one of two courses in the introduction to astronomy sequence which emphasizes the nature of astronomical phenomena over the mathematical analysis of them. This course introduces astronomical phenomena related to the Solar System such as apparent motion of the Sun, phases of the Moon and apparent and true motion of the planets. Main focus will be on the objects comprising the Solar System: planets, their moons, asteroids, comets and trans-Neptunian bodies. A portion of the course will be dedicated to the formation and development of the Solar System and other, extrasolar planetary systems. The course also will touch the aspects of human exploration of the Solar System and the role of technology in our learning and understanding of the Solar System. This includes the history and the basics of robotic and manned spaceflights. Offered every Spring and Summer.
Co-requisite: SMTE 0095.
TCCNS: PHYS 1304

PHYS 1401  General Physics I
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
Introduction to Newtonian physics. Topics include Aristotelian physics and its overthrow, Newton's laws of motion and gravitation, and the motion of particles, rigid bodies and fluids. The idea of the universe as a law-governed system will be developed. Laboratory activities provide introduction to empirical methods in science.
Prerequisite: (MATH 1314, 1316, 1324, 1325, 2312, 2413, 2414, 2415, minimum score of 21 in 'ACT1 Math', minimum score of 500 in 'SAT Math', minimum score of 21 in 'ACT Math', minimum score of 500 in 'SAT1 Mathematics' or minimum score of 615 in 'Local Placement Test').
Co-requisite: SMTE 0095.
TCCNS: PHYS 1401

PHYS 1402  General Physics II
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
Introduction to oscillatory and wave phenomena, electricity and magnetism. The classical theory of fields will be used to study electric and magnetic phenomena, including light, and their role in modern technology. Laboratory activities provide introduction to empirical methods in science.
Prerequisite: (PHYS 1401 or 2425). <br> * May be taken concurrently.
Co-requisite: SMTE 0095.
TCCNS: PHYS 1402

PHYS 2425  University Physics I
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
A calculus based introduction to Newtonian physics. Topics include Aristotelian physics and its overthrow, Newton's laws of motion and gravitation, and the motion of particles, rigid bodies, and fluids. The idea of the universe as a law-governed system will be developed. Laboratory activities provide introduction to empirical methods in science.
Prerequisite: MATH 2413.
Co-requisite: SMTE 0095.
TCCNS: PHYS 2425

PHYS 2426  University Physics II
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
Calculus based introduction to oscillatory and wave phenomena, electricity and magnetism. The classical theory of fields will be used to study electric and magnetic phenomena, including light, and their role in modern technology.
Prerequisite: PHYS 2425 and MATH 2414.
Co-requisite: SMTE 0095.
TCCNS: PHYS 2426

PHYS 3331  Mechanics I
3 Semester Credit Hours (3 Lecture Hours)
Fundamentals of classical mechanics. Topics include particle dynamics in one, two and three dimensions: conservation laws; dynamics of a system of particles; motion of rigid bodies; central force problems; accelerating coordinate systems; Newton's theory of gravitation; Lagrange's and Hamilton's formulations of classical mechanics. This course is offered through the Texas Physics Consortium (TPC). See their website (http://www.tarleton.edu/tpc/) for details.
Prerequisite: PHYS 2426 and (MATH 3315 or 3315*). * May be taken concurrently.

PHYS 3332  Electromagnetism
3 Semester Credit Hours (3 Lecture Hours)
Electrostatics; Laplace's equation; the theory of dielectrics; magnetostatic fields; electromagnetic induction; magnetic fields of currents; Maxwell's equations. This course is offered through the Texas Physics Consortium (TPC). See their website (http://www.tarleton.edu/tpc/) for details.
Prerequisite: PHYS 2426 and (MATH 3315* or 2415*). * May be taken concurrently.

PHYS 3333  Thermodynamics
3 Semester Credit Hours (3 Lecture Hours)
Concept of temperature, equations of state; the first and the second law of thermodynamics; entropy; change of phase; the thermodynamics functions. This course is offered through the Texas Physics Consortium (TPC). See their website (http://www.tarleton.edu/tpc/) for details.
Prerequisite: PHYS 2426 and (MATH 2415* or 2415*). * May be taken concurrently.

PHYS 3334  Modern Physics I
3 Semester Credit Hours (3 Lecture Hours)
A course in special relativity and elementary quantum mechanics. Topics include relativistic description of space-time, relativistic energy and momentum, the uncertainty principle, Schrödinger's equation, observables and operators, bound states, potential barriers, and the quantum description of the hydrogen atom. This course is offered through the Texas Physics Consortium (TPC). See their website (http://www.tarleton.edu/tpc/) for details.
Prerequisite: PHYS 2426 and (MATH 3315 or 3315*). * May be taken concurrently.

PHYS 3490  Selected Topics
1-4 Semester Credit Hours (1-4 Lecture Hours)
Subject materials will be chosen from Electromagnetic Field Theory, Thermodynamics, Mathematical Methods of Physics, Waves and Optics, Advanced Modern Physics, Quantum Theory, Computational Physics, Geophysics, Environmental Physics and Medical Physics. May be repeated for credit if topics selected are different. This course will be used for upper-level physics electives offered from other Texas Physics Consortium (TPC) schools. See their website (http://www.tarleton.edu/tpc/) for details.

PHYS 4161  Physics Research Project
1 Semester Credit Hour (1 Lecture Hour)
The first half of a two semester sequence. The student will work with a faculty member to develop and conduct a senior research project including a search of the relevant literature and presentation of the proposed research idea. This course is offered through the Texas Physics Consortium (TPC). See their website (http://www.tarleton.edu/tpc/) for details.
Prerequisite: PHYS 3334.
Teaching Certificates

- Biology, BS - Grades 7-12 Life Science Education Concentration (p. 560)
- Chemistry, BS - Grades 7-12 Physical Science Education Concentration (p. 568)
- Elementary Education, BS - Grades 4-8 with Mathematics Certification (p. 572)
- Environmental Science, BS - Grades 4-8 Science Education Concentration (p. 573)
- Mathematics, BS - Grades 7-12 Mathematics Education Concentration (p. 577)
- Mathematics, Grades 7-12, Teacher Certification Without a Mathematics Major (p. 583)
- Science, Mathematics and Technology Education, Teacher Certificate (p. 588)

Biology, BS - Grades 7-12 Life Science Education Concentration

Program Description

Introduction

The College of Science and Engineering is committed to the support of students seeking to become science, mathematics and technology educators at all levels. The Science, Mathematics and Technology Education (SMTE) program offers content courses for students seeking K-12 science, mathematics and technology education. SMTE classes are also an integral part of the course work for degrees preparing students for Teacher Certifications. The SMTE program does not offer a degree; rather, degrees leading to Teacher Certification are offered by other Science and Engineering programs and by the College of Education and Human Development. Students seeking to teach in the elementary and secondary schools of Texas must meet degree requirements as well as certification requirements. The requirements and procedure to become a science, mathematics or technology teacher in Texas are outlined below. Undergraduate students who are graduating from the College of Science & Engineering or the College of Liberal Arts who are seeking initial teacher certification at the 4-8, 7-12 and EC-12 levels prior to graduation, automatically qualify for the Minor in Education.

How to Become a Science, Mathematics or Technology Teacher in Texas

In order to be recommended for teacher certification at this university, a candidate must fulfill three basic requirements:

1. have a bachelor's degree from an accredited college or university that includes an academic major and teacher training courses,
2. complete teacher training through an approved program, and
3. successfully complete the appropriate teacher certification tests for the subject and grade level that the candidate wishes to teach.

Additional information on the requirements to become a teacher in Texas can be obtained at the State Board of Educator Certification (SBEC) website: http://www.sbec.state.tx.us/SBECOnline/certinfo/becometeacher.asp. This website also provides information on the resources available to help students pay for a teacher training program.

SBEC has approved three levels of teacher certification for regular educators:

1. Early childhood to grade 6 which includes foundation subjects and enrichment areas such as art, PE, and music,
2. Grade 4-8 which includes the foundation areas only, and
3. Grade 7-12 certification.

Students can find information on the different certifications at the official Texas Examinations of Educator Standards (TExES) Web site: http://www.texas.ets.org. Texas A&M University-Corpus Christi offers several degrees leading to a number of these teacher certifications. The College of Education and Human Development offers several degrees leading to teacher certification. The College of Science and Engineering offers bachelor’s degrees leading to teacher certification in the sciences, mathematics and technology at the 4-8 and the 7-12 levels:

- Biology, BS - Grades 7-12 Life Science Education Concentration (120-122 sem. hrs.) Details immediately follow below.
- Chemistry, BS - Grades 7-12 Physical Science Education Concentration (p. 568) (126-128 sem. hrs.)
- Environmental Science, BS - Grades 4-8 Science Education Concentration (p. 573) (125-130 sem. hrs.)
- Elementary Education, BS - Grades 4-8 with Mathematics Certification (p. 572) (College of Education and Human Development)
- Mathematics, BS - Grades 7-12 Mathematics Education Concentration (p. 577) (120 sem. hrs.)

Mathematics 7-12 teacher certification is also possible with an undergraduate major other than mathematics. Details can be found in the Mathematics, Grades 7-12 Teacher Certification Without a Mathematics Major (p. 583) section.

The individual programs, Biology, Chemistry, Environmental Science, and Mathematics offer these degrees and courses.

Students seeking Teacher Certification are also strongly urged to contact the Certification Officer in the College of Education and Human Development about current requirements and procedures that must be met to obtain the certificate. In particular, students following a degree plan leading to teacher certification must be admitted to the Teacher Education Program at Texas A&M University-Corpus Christi prior to enrolling in any 4000 level EDCI or EDUC courses. Application forms for admission to the teacher education program may be obtained from the Undergraduate or Certification Officer, room FC 201. The students are referred to the College of Education and Human Development section of this catalog for more information on the Teacher Education Program.

**Grade Point Average for Admission to Teacher Education**
A minimum grade point average of 2.75 (4.0 = A) in all work attempted, a minimum grade point average of 2.75 in all science, math, or specialization areas, and no grade below "C" in any science or mathematics course on a student's degree plan and/or education courses within the professional block of courses are required. (See College of Education and Human Development, "Admission to Teacher Education" and "Admission to Clinical Teaching" for other requirements.)

**Alteration of a Certification Plan**
Any amendment to a degree plan originally filed must be approved by the student's academic advisor, the Department Chair, the Dean of the College of Science and Engineering, and the Certification Officer of the College of Education and Human Development for the degree to be granted.

**General Requirements**
The Life Science Education plan is designed for those students who desire a Bachelor of Science Degree in Biology and a secondary teaching certificate in life science. The requirements for a Bachelor of Science in Biology degree with grades 7-12 Life Science Education Concentration are a minimum of 120 semester hours. Forty-two are designated University core curriculum courses; 41 are biology teaching core courses, and 27 are professional development courses. Other requirements include a psychology course and upper division elective courses.

Students may have to take additional hours to meet university requirements such as First-Year Seminar courses or major requirements that include 4 hour math and science courses.

Students entering with some college credit may not be required to take one or both of the First-Year Seminar courses (see the "First-Year Seminar (http://catalog.tamucc.edu/undergraduate/university-college/programs/first-year-learning-communities-program)/" section of the Core Curriculum Program for rules and exceptions concerning these courses). The hours associated with the First-Year Seminars do not count toward the total number of semester credit hours needed to graduate.

2

Students who are not eligible to enroll in MATH 2413 Calculus I (4 sch) will need to take additional prerequisite courses (3-9 sem. hrs.) depending on their math placement level (i.e., MATH 0300 Developmental Mathematics (3 sch), MATH 1314 College Algebra (3 sch) and MATH 1316 Trigonometry (3 sch), or MATH 2312 Precalculus (3 sch)).

**Courses**

**BIOL 1308 Science for Life I (Non-Majors Biology)**

3 Semester Credit Hours (3 Lecture Hours)

A non-majors science course. Students will learn basic biological principles, identify the relevance of science in everyday life, and will understand the scientific method. This course does not substitute for BIOL 1406 - Biology I or BIOL 1407 - Biology II for science majors.

**TCCNS:** BIOL 1308

**BIOL 1406 Biology I**

4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)

Presentation of basic biological concepts including scientific method, cytology, energetics, nucleic acids and genetics. This course is suitable for all majors.

**Prerequisite:** (MATH 1314, 1316, 2305, 2413, minimum score of 21 in ‘ACT Math’ or minimum score of 550 in ‘SAT Math’).

**Co-requisite:** SMTE 0091.

**TCCNS:** BIOL 1406

**BIOL 1407 Biology II**

4 Semester Credit Hours (4 Lecture Hours)

This course is an overview of the major concepts in biological diversity and plant and animal biology. Laboratory work will include individual/team activities as well as technology-related assignments.

**Prerequisite:** BIOL 1406.

**Co-requisite:** SMTE 0091.

**TCCNS:** BIOL 1407

**BIOL 2300 Science Communication**

3 Semester Credit Hours (3 Lecture Hours)

This course involves presentation and discussion of selected topics relating to the professional skills of practicing biological scientists, including basic software instruction, a review of library services pertinent to science, the application of scientific literature research skills, hypothesis generation and statistical tests, critical reviews of scientific articles, and an introduction to ethical issues in science.

**BIOL 2371 Principles of Evolution**

3 Semester Credit Hours (3 Lecture Hours)

An overview of the mechanisms by which heritable information changes, adaptations develop, and species diversify. Provides a foundation for molecular, cellular, and organismal studies in the biological sciences.

**Prerequisite:** BIOL 1407.

**BIOL 2401 Anatomy and Physiology I**

4 Semester Credit Hours (4 Lecture Hours)

Structure and function of the human body emphasizing biological chemistry, cell biology, tissues, and the integumentary, skeletal, muscular, and nervous systems. Not recommended for majors in the College of Science and Engineering. To count this course toward a major in the Department of Life Sciences, a student must demonstrate that it is required by professional schools in his or her career track and obtain approval for a substitution from his or her faculty mentor. Students may not receive credit for both this course and either BIOL 3425 - Functional Anatomy or BIOL 3430 - Physiology.

**Prerequisite:** SMTE 0091.

**TCCNS:** BIOL 2401
BIOL 2402 Anatomy and Physiology II
4 Semester Credit Hours (4 Lecture Hours)
Structure and function of the human body emphasizing blood, growth, development, genetics, and the endocrine, digestive, respiratory, cardiovascular, lymphatic, immune and urogenital systems. Not recommended for majors in the College of Science and Engineering. To count this course toward a major in the Department of Life Sciences, a student must demonstrate that is is required by professional schools in his or her career track and obtain approval for a substitution from his or her faculty mentor. Students may not receive credit for both this course and either BIOL 3425 - Functional Anatomy or BIOL 3430 - Physiology.
Prerequisite: BIOL 2401.
Co-requisite: SMTE 0091.
TCCNS: BIMS 2200

BIOL 2416 Genetics
4 Semester Credit Hours (3 Lecture Hours)
Principles of genetic transmissions and molecular basis of heredity and variation. Weekly recitation periods will involve team assignments, problem solving activities, and seminars.
Prerequisite: BIOL 1406 and 1407.
TCCNS: BIOL 2416

BIOL 2420 Principles of Microbiology
4 Semester Credit Hours (4 Lecture Hours)
Introduction to microorganisms with emphasis on those of importance in patient care. Principles of disinfection, sterilization, immunity. This class is intended for nursing majors; it cannot substitute for BIOL 2421 - Microbiology.
Co-requisite: SMTE 0092.
TCCNS: BIOL 2420

BIOL 2421 Microbiology
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
An introduction to microorganisms including the bacteria, fungi, and viruses. Laboratory involves microbiological techniques and development of basic laboratory skills.
Prerequisite: BIOL 1406, 1407, CHEM 1411 and 1412.
Co-requisite: SMTE 0092.
TCCNS: BIOL 2421

BIOL 2472 Principles of Botany
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
Introduction to the structure, function, diversity and application of plants. Laboratory focus on anatomical features, physiological adaptations, classification, and life cycles.
Prerequisite: BIOL 1407 and CHEM 1411.
Co-requisite: SMTE 0091.

BIOL 3300 Animal Nutrition
3 Semester Credit Hours (3 Lecture Hours)
Examines the dietary requirements of both companion animals and livestock. Includes the anatomy, physiology and biochemistry of the gastrointestinal system, nutrient procurement and use, feed additives, growth stimulants, metabolic diseases, and diet therapy. Cross listed with BIMS 3300.
Prerequisite: BIOL 1407 and CHEM 3411 and (CHEM 3412 or 3412*).
* May be taken concurrently.

BIOL 3325 Biostatistics
3 Semester Credit Hours (3 Lecture Hours)
The application of statistical analyses to biological data. Students will gain an understanding of how to apply statistical analyses to biological data through study of the principles of experimental design including how to frame informative research questions. At a fundamental level, these concepts are linked to the philosophy of science and our understanding of the way the world works.

BIOL 3345 Cell Physiology
3 Semester Credit Hours (3 Lecture Hours)
Emphasis on cellular functions that underlie physiological processes, transport across membranes, membrane potential and excitability, the cell nucleus, and organelles and their relationship to energy, metabolism, and transport mechanisms within the cell. Offered during Spring semester of odd-numbered years.
Prerequisite: BIMS 2200 and BIOL 3410.

BIOL 3403 Molecular Biology
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
Principles of molecular biology including advanced concepts of gene structure, expression and regulation, chromatin structure, recombination, and current molecular biology techniques. Laboratory emphasis is on basic skills for nucleic acid analyses, including extraction, PCR amplification, quantification, restriction, and electrophoresis. DNA sequencing-based approaches are covered including bioinformatics for sequence comparisons, polymorphisms, and molecular identification. Cross listed with BIMS 3403.
Prerequisite: BIOL 2416 and 2421.
Co-requisite: SMTE 0092.

BIOL 3410 Cell Biology
4 Semester Credit Hours (4 Lecture Hours)
Study of cellular architecture and function. Topics include membranes, transport, organelles, cytoskeleton, and signaling mechanisms. Interrelationships of structure, function, energy and metabolism are explored. Laboratory will emphasize basic techniques of cell biology.
Prerequisite: BIOL 2416 and CHEM 3411.
Co-requisite: SMTE 0092.

BIOL 3413 Invertebrate Zoology
4 Semester Credit Hours (3 Lecture Hours, 1 Lab Hour)
Structure, life history, and evolution of the invertebrates with special emphasis on the phylogeny and ecological relationships of the major phyla. Laboratory will involve field trips and survey collections. Offered fall semester every year.
Prerequisite: BIOL 1407.
Co-requisite: SMTE 0091.

BIOL 3414 Vertebrate Zoology
4 Semester Credit Hours (4 Lecture Hours)
Structure, life history, and evolution of the vertebrates with special emphasis on the phylogeny and ecological relationships of the classes. Laboratory will involve field trips and survey collections. Offered only in Spring semester.
Prerequisite: BIOL 1407.
Co-requisite: SMTE 0091.
BIOL 3425  Functional Anatomy
4 Semester Credit Hours (4 Lecture Hours)
General trends in morphological development and adaptation as demonstrated by the anatomy and embryology of living and extinct chordates. Students may not receive credit for both this course and either BIOL 2401 - Anatomy and Physiology I or BIOL 2402 - Anatomy and Physiology II.
Prerequisite: BIOL 1407.
Co-requisite: SMTE 0091.

BIOL 3428  Principles of Ecology
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
Introduction to the interrelationships of organisms and their environment. Population structure, community classification and regulation, and energy flow in ecosystems will also be covered. Laboratory sections will focus on experimental design and field techniques in ecology.
Prerequisite: BIOL 1407 and (BIOL 2200, 2300, BIMS 2200 or UNIV 1101 and UNIV 1102) and CHEM 1411 and (MATH 2413 or 2413). *May be taken concurrently.
Co-requisite: SMTE 0091.

BIOL 3430  Physiology
4 Semester Credit Hours (4 Lecture Hours)
The study of physiological processes that are the product of complex interactions between tissues, organs and organ systems, with emphasis on the circulatory, respiratory, endocrine, muscular, digestive, and urogenital systems. Particular focus on homeostasis, and the role of the environment and evolution on organ systems. Students may not receive credit for both this course and either BIOL 2401 - Anatomy and Physiology I, or BIOL 2402 - Anatomy and Physiology II.
Prerequisite: BIOL 1407.
Co-requisite: SMTE 0091.

BIOL 3455  Plant form and Function
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
Anatomy of vegetative and reproductive organs of plants, unique cellular features, development and differentiation of cell and tissue types. Emphasis on physiological mechanisms of response and adaptation to the environment.
Prerequisite: BIOL 1407.
Co-requisite: SMTE 0091.

BIOL 3479  Plant Ecology
4 Semester Credit Hours (4 Lecture Hours)
Structure, physiology, life cycles, and economic impact of plants. Factors influencing diversity, succession and ecological distribution of plants.
Prerequisite: BIOL 1407.
Co-requisite: SMTE 0091.

BIOL 4100  Research Ethics and Professionalism
1 Semester Credit Hour (1 Lecture Hour)
A course designed to enhance the professionalism of undergraduate researchers. This course discusses the codified aspects of research ethics, including fabrication, falsification and plagiarism of data; assigning authorship, submitting manuscripts to more than one journal and management of lab teams. It also addresses careers in science, resume writing, producing the successful application and interviewing skills.

BIOL 4301  Embryology
3 Semester Credit Hours (3 Lecture Hours)
Studies the events that occur just prior to and during gestation. Includes gametogenesis, chromosomal and single gene aberrations, teratology, and the development of the body systems.
Prerequisite: BIOL 2416.

BIOL 4302  Coral Reef Conservation
3 Semester Credit Hours (3 Lecture Hours)
Survey of challenges and threats facing coral reef ecosystems in the 21st century and discussion of conservation and management strategies. Topics include biology and ecology of reef ecosystems, climate change impacts, coral bleaching, over-fishing and the effectiveness and design of marine protected areas.

BIOL 4304  Biology of Viruses
3 Semester Credit Hours (3 Lecture Hours)
Introduction to the study of viruses, including viral life cycles, replication schemes and Baltimore classification of representative bacteriophages, plant and animal viruses. Emphasis on analysis and review of primary literature on viruses.
Prerequisite: BIOL 2416, 2421 and CHEM 1411.

BIOL 4308  Biogeography
3 Semester Credit Hours (3 Lecture Hours)
This course offers an overview of the theories, methods, and current directions in modern biogeography, emphasizing marine and terrestrial plant and animal species and communities.

BIOL 4309  Biological Systematics and Phylogenetics
3 Semester Credit Hours (3 Lecture Hours)
Introduction to the theories of biological systematics and phylogenetics. Including species concepts, biological classification, nomenclature, and phylogenetic methods including ancestral state reconstruction and divergence time estimation. Offered in the spring semester of odd years. Stacked with BIOL 5309.
Prerequisite: BIOL 1407.

BIOL 4311  Biological Bases of Behavior
3 Semester Credit Hours (3 Lecture Hours)
This lecture-based course examines the processes by which neuronal circuits generate behaviors and the mechanisms by which experience modulates the activity of these circuits.
Prerequisite: BIMS 4323.

BIOL 4312  Mariculture Techniques
3 Semester Credit Hours (2 Lecture Hours, 2 Lab Hours)
The study and hands-on application of biological, mechanical, and other concepts required to develop the skills and techniques necessary for efficient operation and management of public and private aquaculture facilities. Offered in Fall of odd-numbered years.
Prerequisite: BIOL 4370.

BIOL 4315  Animal Behavior
3 Semester Credit Hours (3 Lecture Hours)
What mechanisms cause behavior? How does behavior develop? How does behavior affect survival and reproduction? How does behavior evolve? These questions will be explored in vertebrate and invertebrate species. Offered in the fall semester Stacked with BIOL 5315.

BIOL 4319  Biology of Marine Mammals
3 Semester Credit Hours (3 Lecture Hours)
Introduction to marine mammals, with a focus on their interactions with their biotic and abiotic environment
Prerequisite: BIOL 1407.

BIOL 4323  Global Change Ecology
3 Semester Credit Hours (3 Lecture Hours)
An introduction to the effects of climatic and anthropogenic change on terrestrial and aquatic structure and function. Includes readings from the current literature and discussion of controversial articles.
Prerequisite: BIOL 3428.
**BIOL 4328 Fisheries**  
3 Semester Credit Hours (3 Lecture Hours)  
A study of theory and techniques in fisheries science, including practical fisheries sampling designs and techniques, behavior of fisheries populations and application to resource management with emphasis in tide-influenced waters. Includes readings in the current literature.  
**Prerequisite:** BIOL 1407.

**BIOL 4329 Fisheries Techniques**  
3 Semester Credit Hours (2 Lecture Hours)  
This class is designed to provide practical experience in the theory and application of traditional and modern fisheries sampling and analytical techniques used in Fisheries Science and Management. This is a hands-on field- and laboratory-based course that will develop skills that are most commonly used by fisheries biologists and technicians. Offered in Fall of even-numbered years.  
**Prerequisite:** BIOL 4328.

**BIOL 4330 Conservation Biology**  
3 Semester Credit Hours (3 Lecture Hours)  
Principles and theories relating to the conservation of biological diversity, including patterns and processes creating biological diversity, estimates of extinction rates, consequences of losses of biodiversity and causes of diversity loss.

**BIOL 4334 Biology and Ecology of Coral Reefs**  
3 Semester Credit Hours (3 Lecture Hours)  
This course will introduce the biology of corals, describe the abiotic and biotic interactions among coral reef ecosystem inhabitants, identify the threats of climate change, and discuss the conservation and management of reefs for the future. Offered every Spring.  
**Prerequisite:** BIOL 3428.

**BIOL 4336 Marine Ecology**  
3 Semester Credit Hours (3 Lecture Hours)  
Habitats and community structure in marine environments; biotic and abiotic factors governing the distribution of marine organisms. (Offered every Spring)  
**Prerequisite:** BIOL 3428.

**BIOL 4340 Genomics, Proteomics and Bioinformatics**  
3 Semester Credit Hours (3 Lecture Hours)  
An introduction to integrative biological study using genome-wide approaches and bioinformatics. The “-omics” technologies (Genomics, Proteomics, Metabolomics, etc.) will be surveyed for current and potential contributions to understanding biological function at molecular, cellular, organismal and ecosystem levels.  
**Prerequisite:** BIOL 2416 and 3410 or CHEM 4401.

**BIOL 4343 Oceans and Human Health**  
3 Semester Credit Hours (3 Lecture Hours)  
Healthy oceans are essential to the habitability of our planet — for humans and all other forms of life. Students will explore links between oceans, pollution, human well-being, ecosystem services, resource management, and the science and legislation governing the enforcement of water quality standards.

**BIOL 4350 Research and Design**  
1-3 Semester Credit Hours (1-3 Lecture Hours)  
Course will include experimental design, literature review of a research topic and laboratory work on the research topic.

**BIOL 4353 Down the River: Biology of Gulf Coast Fishes**  
3 Semester Credit Hours (3 Lecture Hours)  
This course covers aspects of ecology and biogeography of riverine and estuarine fishes while exposing students to field sampling techniques and museum preparation of specimens. This will be a unique opportunity for students to gain an in-depth understanding of the biological complexity of Texas Gulf Coast river systems while gaining hands-on experience in field and museum ichthyological techniques that are employed by state, federal and academic researchers alike.  
**Co-requisite:** SMTE 0091.

**BIOL 4355 Public Aquarium and Animal Care Operations**  
3 Semester Credit Hours (3 Lecture Hours)  
This course examines the unique requirements needed for public aquariums and zoos to balance animal care and health with public display for general education and conservation research.  
**Co-requisite:** SMTE 0091.

**BIOL 4360 Computation for 21st Century Biologists**  
3 Semester Credit Hours (3 Lecture Hours)  
This course is designed to prepare and enable students to use computational tools for bioinformatic applications in advanced courses and independent research projects. Students will be introduced to powerful open-source computing tools used in biological research for creation, organization, manipulation, processing, analysis, and archiving of big data. While not a formal requirement, it is assumed that students have a firm command of basic algebra. Offered every Fall semester Stacked with BIOL 5360

**BIOL 4370 Mariculture**  
3 Semester Credit Hours (3 Lecture Hours)  
Survey of the physiological, behavioral, environmental, and economic parameters governing the culture of selected aquatic species. Included are techniques employed worldwide to produce aquatic products.  
**Prerequisite:** BIOL 1407.

**BIOL 4371 Population Genetics**  
3 Semester Credit Hours (3 Lecture Hours)  
An introduction to evolutionary processes and their genetic basis, this course focuses on theoretical and experimental approaches to the study of population genetics, quantitative genetics, evolutionary ecology, and molecular evolution.  
**Prerequisite:** BIOL 2416 and MATH 2413.

**BIOL 4396 Directed Independent Study**  
1-3 Semester Credit Hours (1-3 Lecture Hours)  
Research in areas of current interest. Written report required. May be repeated for a maximum of 6 semester hours.  
**Prerequisite:** BIOL 1407 and CHEM 1412.

**BIOL 4399 Directed Independent Research**  
3-6 Semester Credit Hours (3-6 Lecture Hours)  
Independent laboratory- or field-based research project on topic of current interest. Project developed in conjunction with a faculty advisor. Written report required. May be repeated once for a total of 6 semester credit hours

**BIOL 4405 Limnology**  
4 Semester Credit Hours (4 Lecture Hours)  
The study of the functional relationships and productivity of aquatic communities as they are affected by their physical, chemical, and biotic environment. The influence of man’s activities on these systems will be the focus of the course.  
**Prerequisite:** BIOL 3428.  
**Co-requisite:** SMTE 0091.
BIOL 4406  Immunology
4 Semester Credit Hours (4 Lecture Hours)
An overview of immunology with emphasis on current knowledge of the immune system. Detailed examination of the specific cells, cytokines, antibodies, and molecules that comprise the immune system. Laboratory exercises demonstrate the basic principles and techniques used in immunologic studies. Cross listed with BIMS 4406.
Prerequisite: BIOL 2421.
Co-requisite: SMTE 0092.

BIOL 4407  BIOLOGY OF THE FUNGI
4 Semester Credit Hours (3 Lecture Hours, 1 Lab Hour)
Overview of the fungi, including their characteristics, diversity, and ecology. Interactions between fungi and other organisms are explored along with the role and importance of the fungi.
Prerequisite: BIOL 2421 or 4328.
Co-requisite: SMTE 0092.

BIOL 4408  Microbial Diversity and Ecology
4 Semester Credit Hours (4 Lecture Hours)
Biodiversity and roles of microorganisms in natural environments. Interactions with other micro- and macro-organisms (humans, animals and plants) and with abiotic factors. Unique abilities of microorganisms such as nitrogen fixation and adaptation to extreme environments.
Prerequisite: (BIOL 2421 or 4328).
Co-requisite: SMTE 0092.

BIOL 4410  Mammalogy
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
Systematics and ecology of mammals. Offered in even Fall semesters.
Prerequisite: BIOL 1407.
Co-requisite: SMTE 0091.

BIOL 4413  Entomology
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
A broad overview of the natural history, classification, phylogeny, ecology, behavior, development and physiology of insects and their kin. The lab will involve field work, collection and curation. Offered in spring semester of even years. Stacked with BIOL 5413.
Prerequisite: BIOL 3413.
Co-requisite: SMTE 0091.

BIOL 4417  Field Biology
4 Semester Credit Hours (1 Lecture Hour, 6 Lab Hours)
is a hands-on course designed to teach students key concepts by immersing them in nature. Topics include adaptations of plants and animals in different habitats, food web interactions, and how biotic and abiotic forces interact to structure natural communities including spatial and temporal variation in communities.
Prerequisite: BIOL 3428.
Co-requisite: SMTE 0091.

BIOL 4422  Plant Taxonomy
4 Semester Credit Hours (4 Lecture Hours)
Principles and practice in the classification of flowering plants. Field trips are required.
Prerequisite: BIOL 1407.
Co-requisite: SMTE 0091.

BIOL 4425  Ornithology
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
Systematics, anatomy, physiology, ecology, behavior, and field identification of birds. Offered in odd Fall semester.
Prerequisite: BIOL 1407.
Co-requisite: SMTE 0091.

BIOL 4429  Marine Botany
4 Semester Credit Hours (4 Lecture Hours)
The ecology of marine plants with emphasis on identification, life histories, and environmental factors of distribution.
Prerequisite: BIOL 1407.
Co-requisite: SMTE 0091.

BIOL 4430  Marine Plankton
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
In this class we will investigate the systematics, distribution, and ecology of major marine plankton groups and introduce major concepts in biological oceanography. Offered in Spring of odd-numbered years.

BIOL 4432  Ichthyology
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
Systematics, evolution, biology, and ecology of fishes. Laboratory identification of marine and freshwater fishes collected during field excursions.
Prerequisite: BIOL 1407.
Co-requisite: SMTE 0091.

BIOL 4433  Parasitology
4 Semester Credit Hours (4 Lecture Hours)
An introduction to parasitology with emphasis on internal parasites and appropriate references to human endoparasites and parasites of veterinary importance.
Prerequisite: BIOL 2421.
Co-requisite: SMTE 0092.

BIOL 4435  Biological Microtechniques
4 Semester Credit Hours (4 Lecture Hours)
Theory and techniques of processing specimens for histochemistry and microscopic examination. Laboratory includes preparation of tissues and small specimens for analysis and display.
Prerequisite: BIOL 1407 and CHEM 3411.
Co-requisite: SMTE 0092.

BIOL 4439  Case Work Methods in Forensic Anthropology
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
This course combines the study of human bones (osteology) and skeletal anatomy with established and validated forensic anthropological methods to solve theoretical and actual forensic cases involving human remains. Offered during the spring semester. Stacked with BIOL 5439. Cross-listed with BIMS 4439.
Prerequisite: BIOL 2401.

BIOL 4442  Herpetology
4 Semester Credit Hours (4 Lecture Hours)
Systematics, ecology, and behavior of amphibians and reptiles.
Prerequisite: BIOL 1407.
Co-requisite: SMTE 0091.

BIOL 4444  Estuarine Organisms
4 Semester Credit Hours (4 Lecture Hours)
Systematics, distribution, and ecology of estuarine macrofauna and macroflora. Weekend field trips and individual study required.
Prerequisite: BIOL 3413.
Co-requisite: SMTE 0091.

BIOL 4446  Tropical Ecosystems & Conservation
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
Survey of the ecology and conservation issues of the major ecosystems in the tropics and field techniques used to study tropical forest ecology.
Prerequisite: BIOL 3428.
Co-requisite: SMTE 0091.
How to Become a Science, Mathematics or Technology Teacher in Texas

In order to be recommended for teacher certification at this university, a candidate must fulfill three basic requirements:

1. have a bachelor's degree from an accredited college or university that includes an academic major and teacher training courses,
2. complete teacher training through an approved program, and
3. successfully complete the appropriate teacher certification tests for the subject and grade level that the candidate wishes to teach.

Additional information on the requirements to become a teacher in Texas can be obtained at the State Board of Educator Certification (SBEC) website: http://www.sbec.state.tx.us/SBECOnline/certinfo/becometeacher.asp. This website also provides information on the resources available to help students pay for a teacher training program.

SBEC has approved three levels of teacher certification for regular educators:

1. Early childhood to grade 6 which includes foundation subjects and enrichment areas such as art, PE, and music,
2. Grade 4-8 which includes the foundation areas only, and
3. Grade 7-12 certification.

Students can find information on the different certifications at the official Texas Examinations of Educator Standards (TExES) Web site: http://www.texas.ets.org. Texas A&M University-Corpus Christi offers several bachelor's degrees leading to teacher certification in the sciences, mathematics and technology at the 4-8 and the 7-12 levels:

- Biology, BS - Grades 7-12 Life Science Education Concentration
- Chemistry, BS - Grades 7-12 Physical Science Education Concentration
- Environmental Science, BS - Grades 4-8 Science Education Concentration
- Elementary Education, BS - Grades 4-8 with Mathematics Certification
- Mathematics, BS - Grades 7-12 Mathematics Education Concentration

Mathematics 7-12 teacher certification is also possible with an undergraduate major other than mathematics. Details can be found in the Mathematics, Grades 7-12 Teacher Certification Without a Mathematics Major section.

The individual programs, Biology, Chemistry, Computer Science, Environmental Science, and Mathematics offer these degrees and courses.

Students seeking Teacher Certification are also strongly urged to contact the Certification Officer in the College of Education and Human Development about current requirements and procedures that must be met to obtain the certificate. In particular, students following a degree plan leading to teacher certification must be admitted to the Teacher Education Program at Texas A&M University-Corpus Christi prior to enrolling in any 4000 level EDCI or EDUC courses. Application forms for admission to the teacher education program may be obtained from the
Undergraduate or Certification Office, room FC 201. The students are referred to the College of Education and Human Development section of this catalog for more information on the Teacher Education Program.

Grade Point Average for Admission to Teacher Education
A minimum grade point average of 2.75 (4.0 = A) in all work attempted, a minimum grade point average of 2.75 in all science, math, or specialization areas, and no grade below "C" in any science or mathematics course on a student’s degree plan and/or education courses within the professional block of courses are required. (See College of Education and Human Development, “Admission to Teacher Education” and “Admission to Student Teaching” for other requirements.)

Alteration of a Certification Plan
Any amendment to a degree plan originally filed must be approved by the student’s academic advisor, the Department Chair, the Dean of the College of Science and Engineering, and the Certification Officer of the College of Education and Human Development for the degree to be granted.

General Requirements
The Bachelor of Science degree in Chemistry with a Physical Science Education concentration is designed for those planning to teach chemistry or physics at the 7-12 level, or who need chemical knowledge and skills relevant to future studies in the sciences. The BS in Chemistry requires at least 120 semester hours with a university required 45 upper-division hours. Students may have to take additional hours to meet university general education requirements such as First-Year Seminar courses. The degree requirements for the physical science education concentration are as follows:

<table>

Students choosing a physical science education concentration must take THE FOLLOWING as part of their core curriculum requirements:

- MATH 2413 Calculus I
- MATH 2414 Calculus II
- PHYS 2425 University Physics I
- PHYS 2426 University Physics II
- PSYC 2301 General Psychology

Special Foundations for Physical Science Education Concentration

- PHYS 2425 University Physics I (included in University Core) 2
- PHYS 2426 University Physics II (included in University Core) 2
- MATH 2413 Calculus I (included in University Core) 2
- MATH 2414 Calculus II (lecture included in University Core) 2
- MATH 3315 Differential Equations

Chemistry Major for Physical Science Education Concentration

- CHEM 1411 General Chemistry I
- CHEM 1412 General Chemistry II
- CHEM 3411 Organic Chemistry I
- CHEM 3412 Organic Chemistry II
- CHEM 3417 Quantitative Analysis
- CHEM 3418 Instrumental Analysis
- CHEM 4401 Biochemistry I
- CHEM 4443 Environmental Chemistry
- CHEM 4423 Physical Chemistry I
- PHYS 3334 Modern Physics I
- SMTE 4217 Secondary Approaches to the Life Sciences
- SMTE 4270 Science Education Topics I
- SMTE 4320 Secondary Science Laboratory Techniques

Electives

- BIOL 1406 Biology I
- BIOL 1407 Biology II
- One 3 hour English course 2000-level or higher

Total Hours

1

Students entering with some college credit may not be required to take one or both of the First-Year Seminar courses (see the “First-Year Seminar” section of the Core Curriculum Program for rules and exceptions concerning these courses).

2 Fifteen of these hours are used to fulfill the University Core Curriculum science and mathematics requirements.
Professional Development Sequence

Students who seek an 7-12 level Physical Science teaching certificate should contact a Certification Officer in the College of Education and Human Development about requirements and procedures that must be met to obtain the certificate. The professional development sequence must be taken in a specific order and it is recommended that students contact the College of Education and Human Development early in their academic careers for specific details on these courses.

Total Hours: 136

Courses

CHEM 1305 Introductory Chemistry
3 Semester Credit Hours (3 Lecture Hours)
A one-semester principles course for students in non-science related majors covering the major concepts of chemistry (atomic structure, bonding, stoichiometry, elementary thermodynamics) and the role of chemistry in contemporary society (polymers, energy, pollution, etc.). Will not substitute for CHEM 1411.
TCCNS: CHEM 1305

CHEM 1411 General Chemistry I
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
The foundation course in chemistry. Stoichiometry, chemical equilibria, atomic structure, chemical bonding, periodic properties, thermodynamics, chemical kinetics, and descriptive chemistry of the elements. Laboratory involves development of basic skills. This course counts toward the natural science component of the University Core Curriculum. Either CHEM 1305 - Introductory Chemistry or CHEM 1411, but not both, may be applied towards the core requirement. This course is offered in Fall, Spring and typically during both Summer sessions.
Co-requisite: SMTE 0093.
TCCNS: CHEM 1411
CHEM 1412  General Chemistry II
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
The continuation of CHEM 1411 - General Chemistry I, the foundation course in chemistry with emphasis on quantitative aspects. Laboratory involves development of basic skills. This course counts toward the natural science component of the University Core Curriculum.
Prerequisite: CHEM 1411 and MATH 1314.
Co-requisite: SMTE 0093.
TCCNS: CHEM 1412
CHEM 2490  Special Topics
4 Semester Credit Hours (1-4 Lecture Hours, 3 Lab Hours)
May be repeated for credit. Subject materials variable. Offered on sufficient demand.
CHEM 3411  Organic Chemistry I
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
The structure, nomenclature, synthesis, reactions, and reaction mechanisms of the principal classes of organic compounds. Stereochemistry and spectroscopy of organic compounds. Laboratory involves separation and synthetic techniques and development of basic skills. This course is offered in Fall, Spring and typically during the Summer I session.
Prerequisite: CHEM 1411.
Co-requisite: SMTE 0093.
CHEM 3412  Organic Chemistry II
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
A continuation of CHEM 3411. The course concludes with a survey of the structures of biomolecules. Laboratory involves spectroscopy and qualitative analysis techniques. This course is offered in Fall, Spring and typically during the Summer II session.
Prerequisite: CHEM 3411.
Co-requisite: SMTE 0093.
CHEM 3417  Quantitative Analysis
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
A course in quantitative analysis, which includes chemical statistics and the use of acid-base, complexation, precipitation, and redox reactions to perform analyses and separations. Laboratory includes standard volumetric and gravimetric methods and development of basic quantitative techniques. This course is typically offered in Spring.
Prerequisite: CHEM 1412.
Co-requisite: SMTE 0093.
CHEM 3418  Instrumental Analysis
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
An introduction to instrumental methods of analysis: spectroscopy, chromatography, and electrochemical methods. Laboratory involves use of instrumentation in chemical analysis. This course is typically offered in Fall and Spring.
Prerequisite: CHEM 1412.
Co-requisite: SMTE 0093.
CHEM 4085  Major Field Test in Chemistry
0 Semester Credit Hours
The Major Field Test (MFT) in Chemistry is a national examination given in the Fall and Spring semesters only. It is a graduation requirement for all Chemistry students. Students enroll in this course during the semester that they plan to take the MFT. There is no cost to the student for either this course or for the MFT.
CHEM 4292  Senior Chemistry Seminar
2 Semester Credit Hours (2 Lecture Hours)
Presentation and discussion of selected topics in chemistry. Includes literature searches and reviews, paper presentations, survey of professional opportunities and requirements, career guidance and job searching skills.
CHEM 4309  Advanced Instrumental Analysis
3 Semester Credit Hours (3 Lecture Hours)
An advanced course in analytical chemistry covering the underlying theories of instrumental methods. This course is typically offered on an irregular basis.
Prerequisite: (CHEM 3411, 3412 and 3418).
CHEM 4320  Drugs, Toxins and Natural Products Chemistry
3 Semester Credit Hours (3 Lecture Hours)
The chemistry and biological activity of pharmaceuticals, toxins and selected natural products. Examines how chemical structure relates to biological activity. Also examines action of antibiotics, chemotherapy agents, analgesics, steroids, and compounds targeting the central and peripheral nervous system. This course is typically offered in Fall and Spring.
Prerequisite: CHEM 4401.
CHEM 4341  Advanced Organic Chemistry
3 Semester Credit Hours (3 Lecture Hours)
This three-credit hour course will entail detailed description of structure, synthesis, and reactions and mechanisms in organic chemistry including important named reactions. This course will also introduce them to the art of writing reaction mechanisms and retrosynthetic analysis. Moreover, they will be learning about separation, purification and characterization of organic compounds followed by scientific abstract writing. Designed only for science major. There is NO laboratory associated with the course.
Prerequisite: CHEM 3412.
CHEM 4344  Chemical Oceanography
3 Semester Credit Hours (3 Lecture Hours)
The study of the oceans and seas as a chemical system, including interactions with both the biota and the solid earth. This course is typically offered in Spring.
Prerequisite: CHEM 1412.
CHEM 4350  Polymer Chemistry
3 Semester Credit Hours (3 Lecture Hours)
An advanced lecture course in organic chemistry. Characterization of polymers. Polymerization mechanisms. Current research directions such as biomedical applications and electroactive polymers. This course is offered on an irregular basis.
Prerequisite: CHEM 3412.
CHEM 4360  Molecular Spectroscopy
3 Semester Credit Hours (3 Lecture Hours)
Spectroscopy and Structure of Organic Compounds is a three-credit that introduce you to concepts used in the identification of organic compounds with methods based on NMR, mass spectrometry, UV and IR.
Prerequisite: CHEM 3412.
CHEM 4401  Biochemistry I
4 Semester Credit Hours (3 Lecture Hours)
The structure and function of carbohydrates, lipids, proteins, and nucleic acids. An introduction to enzyme kinetics, cell membrane structure and biochemical signaling. Laboratory exercises demonstrate the basic principles and techniques used in Biochemistry. This course is typically offered in Fall, Spring and Summer.
Prerequisite: CHEM 3412 and (BIOL 1406 and 1407).
Co-requisite: SMTE 0093.
CHEM 4402 Biochemistry II
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
A continuation of CHEM 4401. Biochemical energetics, including glycolysis, fatty acid oxidation, amino acid oxidation, citric acid cycle, oxidative phosphorylation, photophosphorylation and photosynthesis. Carbohydrate, fatty acid and amino acid biosynthesis. Laboratory is a continuation of biochemical techniques. This course is typically offered in Fall and Spring.
Prerequisite: CHEM 4401.
Co-requisite: SMTE 0093.

CHEM 4407 Advanced Inorganic Chemistry
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
A survey of inorganic chemistry. Theories of atomic structure, covalent bonding, ionic solids, metallic solids, and coordination compounds. Modern acid-base concepts. Laboratory involves the synthesis of inorganic compounds.
Prerequisite: CHEM 3412.
Co-requisite: SMTE 0093.

CHEM 4420 Physical Biochemistry
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
A fundamental approach to the study of physical and chemical phenomena, including the study of thermodynamics, gases and phase equilibria. This course is typically offered on an irregular basis.
Prerequisite: CHEM 1412 and (PHYS 1402 or 2426) and MATH 2414.
Co-requisite: SMTE 0093.

CHEM 4423 Physical Chemistry I
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
A fundamental approach to the study of physical and chemical phenomena, including the study of thermodynamics, gases and phase equilibria. This course is typically offered in Fall.
Prerequisite: CHEM 1412 and (PHYS 1402 or 2426) and MATH 2414.
Co-requisite: SMTE 0093.

CHEM 4424 Physical Chemistry II
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
A continuation of CHEM 4423, including the study of chemical kinetics, electrochemistry, molecular structure, and quantum mechanics. This course is typically offered in Spring.
Prerequisite: CHEM 4423.
Co-requisite: SMTE 0093.

CHEM 4443 Environmental Chemistry
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
A study of the impact of chemistry on the environment, including topics of air pollution, water pollution, and beneficial chemical modifications of the environment. Laboratory devoted to field techniques of sampling, sample preservation, and analytical techniques applied to the environment. This course is typically offered in Spring.
Prerequisite: CHEM 1412 and 3411.
Co-requisite: SMTE 0093.

CHEM 4490 Special Topics
4 Semester Credit Hours (1 Lecture Hour, 1 Lab Hour)
May be repeated for credit. Subject materials variable.

CHEM 4696 Directed Independent Study
1-6 Semester Credit Hours
Requires a formal proposal of study to be completed in advance of registration, to be approved by the supervising faculty, the chairperson and the dean of the College.

Elementary Education, BS - Grades 4-8 with Mathematics Certification

Program Description

Introduction

The College of Science and Engineering is committed to the support of students seeking to become science, mathematics and technology educators at all levels. The Science, Mathematics and Technology Education (SMTE) program offers content courses for students seeking K-12 science, mathematics and technology education. SMTE classes are also an integral part of the course work for degrees preparing students for Teacher Certifications. The SMTE program does not offer a degree; rather, degrees leading to Teacher Certification are offered by other Science and Technology programs and by the College of Education and Human Development. Students seeking to teach in the elementary and secondary schools of Texas must meet degree requirements as well as certification requirements. The requirements and procedure to become a science, mathematics or technology teacher in Texas are outlined below. Undergraduate students who are graduating from the College of Science & Engineering or the College of Liberal Arts who are seeking initial teacher certification at the 4-8, 7-12 and EC-12 levels prior to graduation, automatically qualify for the Minor in Education.

How to Become a Science, Mathematics or Technology Teacher in Texas

In order to be recommended for teacher certification at this university, a candidate must fulfill three basic requirements:

1. have a bachelor's degree from an accredited college or university that includes an academic major and teacher training courses,
2. complete teacher training through an approved program, and
3. successfully complete the appropriate teacher certification tests for the subject and grade level that the candidate wishes to teach.

Additional information on the requirements to become a teacher in Texas can be obtained at the State Board of Educator Certification (SBEC) website: http://www.sbec.state.tx.us/SBECOnline/certinfo/becometeacher.asp. This website also provides information on the resources available to help students pay for a teacher training program.

SBEC has approved three levels of teacher certification for regular educators:

1. Early childhood to grade 6 which includes foundation subjects and enrichment areas such as art, PE, and music,
2. Grade 4-8 which includes the foundation areas only, and
3. Grade 7-12 certification.

Students can find information on the different certifications at the official Texas Examinations of Educator Standards (TExES) Web site: http://www.texas.ets.org. Texas A&M University-Corpus Christi offers several degrees leading to a number of these teacher certifications. The College of Education and Human Development offers several degrees leading to teacher certification. The College of Science and Engineering offers bachelor's degrees leading to teacher certification in the sciences, mathematics and technology at the 4-8 and the 7-12 levels:

- Biology, BS - Grades 7-12 Life Science Education Concentration (p. 560) (121-123 sem. hrs.)
• Chemistry, BS - Grades 7-12 Physical Science Education Concentration (p. 568) (126-128 sem. hrs.)
• Environmental Science, BS - Grades 4-8 Science Education Concentration (p. 573) (125-130 sem. hrs.)
• Elementary Education, BS - Grades 4-8 with Mathematics Certification (College of Education and Human Development) Details immediately follow below.
• Mathematics, BS - Grades 7-12 Mathematics Education Concentration (p. 577) (120 sem. hrs.)

Mathematics 7-12 teacher certification is also possible with an undergraduate major other than mathematics. Details can be found in the Mathematics, Grades 7-12 Teacher Certification Without a Mathematics Major (p. 583) section.

The individual programs, Biology, Chemistry, Environmental Science, and Mathematics offer these degrees and courses.

Students seeking Teacher Certification are also strongly urged to contact the Certification Officer in the College of Education and Human Development about current requirements and procedures that must be met to obtain the certificate. In particular, students following a degree plan leading to teacher certification must be admitted to the Teacher Education Program at Texas A&M University-Corpus Christi prior to enrolling in any 4000 level EDCI or EDUC courses. Application forms for admission to the teacher education program may be obtained from the Undergraduate or Certification Office, room FC 201. The students are referred to the College of Education and Human Development section of this catalog for more information on the Teacher Education Program.

Grade Point Average for Admission to Teacher Education
A minimum grade point average of 2.75 (4.0 = A) in all work attempted, a minimum grade point average of 2.75 in all science, math, or specialization areas, and no grade below “C” in any science or mathematics course on a student’s degree plan and/or education courses within the professional block of courses are required. (See College of Education and Human Development, “Admission to Teacher Education” and “Admission to Student Teaching” for other requirements.)

Alteration of a Certification Plan
Any amendment to a degree plan originally filed must be approved by the student’s academic advisor, the Department Chair, the Dean of the College of Science and Engineering, and the Certification Officer of the College of Education and Human Development for the degree to be granted.

Program Requirements
Grades 4-8 certification in mathematics is completed with an Elementary Education major in the College of Education and Human Development. See the College of Education and Human Development section of the catalog for more details.

Environmental Science, BS - Grades 4-8 Science Education Concentration

Program Description
Introduction
The College of Science and Engineering is committed to the support of students seeking to become science, mathematics and technology educators at all levels. The Science, Mathematics and Technology Education (SMTE) program offers content courses for students seeking K-12 science, mathematics and technology education. (See College of Education and Human Development, “Admission to Teacher Education” and “Admission to Student Teaching” for other requirements.)

Alteration of a Certification Plan

Any amendment to a degree plan originally filed must be approved by the student’s academic advisor, the Department Chair, the Dean of the College of Science and Engineering, and the Certification Officer of the College of Education and Human Development for the degree to be granted.

General Requirements

The minimum requirement for a Bachelor of Science Degree in Environmental Science with a science education concentration is a total of 120 hours. The concentration is designed for those students who plan on obtaining a 4-8 Science certificate. The degree requirements are divided among the following areas:

<table>
<thead>
<tr>
<th>Requirements</th>
<th>Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>Core Curriculum Program</td>
<td>42</td>
</tr>
<tr>
<td>First-Year Seminars (when applicable)</td>
<td>0-2</td>
</tr>
<tr>
<td>Science Content Courses</td>
<td>38</td>

Core Curriculum Program

University Core Curriculum | 42

Science Education Concentration must take:
- MATH 1442 Statistics for Life
- BIOL 1406 Biology I
- CHEM 1411 General Chemistry I
- ESCI 1401 Environmental Science I: Intro to Environmental Science
- PSYC 2301 General Psychology

Science Content Courses

Physics Courses
- PHYS 1304 Introduction to Astronomy: Solar System | 3
- BIOL 1406 Biology (included in University Core) | 1
- BIOL 1407 Biology II | 4
- CHEM 1411 General Chemistry I (included in University Core) | 1
- ESCI 1401 Environmental Science I: Intro to Environmental Science (included in University Core) | 1
- ESCI 4202 Issues in Environmental Science | 2
- GEOL 1403 Physical Geology | 4
- GEOL 1404 Historical Geology | 4
- PHYS 1401 General Physics I | 4
- SMTE 4217 Secondary Approaches to the Life Sciences | 2
- SMTE 4270 Science Education Topics I | 1
- SMTE 4320 Secondary Science Laboratory Techniques | 3
- ESCI 3351 Oceanography | 3
- or ESCI 3403 Introduction to Meteorology
- SMTE 3315 Foundational Approaches to the Physical Sciences | 3-4
- or PHYS 1402 General Physics II

Select one of the following:
- ESCI 3443 Environmental Biology
- CHEM 4443 Environmental Chemistry
- ESCI 3351 Oceanography
- ESCI 3403 Introduction to Meteorology
- ESCI 4230 Oil Spill Prevention and Response Theory
- ESCI 4335 Climate and Climate Variability
- ESCI 4360 Physical Oceanography
- GEOL 3443 Environmental Geology

Mathematics Courses

Select one of the following:
- MATH 1316 Trigonometry
- MATH 2312 Precalculus
- MATH 1442 Statistics for Life (included in University Core) **
**Professional Development Sequence**

Students who seek a 4-8 level Science teaching certificate should contact a Certification Officer in the College of Education and Human Development about requirements and procedures that must be met to obtain the certificate. The professional development sequence must be taken in a specific order and it is recommended that students contact the College of Education and Human Development early in their academic careers for specific details on these courses.

**Course Sequencing**

### First Year

**Fall**

- ESCI 1401 Environmental Science I: Intro to Environmental Science 4
- GEOL 1403 Physical Geology 4
- ENGL 1301 Writing and Rhetoric I 3
- UNIV 1101 University Seminar I 1
- HIST 1301 U.S. History to 1865 3

**Hours** 15

**Spring**

- MATH 1442 Statistics for Life 4
- GEOL 1404 Historical Geology 4
- ENGL 1302 Writing and Rhetoric II 3
- or COMM 1311 or Foundation of Communication 1
- UNIV 1102 University Seminar II 1
- HIST 1302 U.S. History Since 1865 3

**Total Hours** 15

### Second Year

**Fall**

- BIOL 1406 Biology I 4
- PHYS 1401 General Physics I 4
- POLS 2305 U.S. Government and Politics 3
- SMTE 1350 Fundamentals of Mathematics I 3
- MATH 2312 or MATH 1316 or Trigonometry or Calculus I 3

**Hours** 15

**Spring**

- BIOL 1407 Biology II 4
- PHYS 1304 Introduction to Astronomy: Solar System 3
- CHEM 1411 General Chemistry I 4
- Language, Philosophy & Culture Core Requirement 3
- POLS 2306 State and Local Government 3

**Total Hours** 15

### Third Year

**Fall**

- READ 3320 Principles and Practices of Reading Instruction 3
- ESCI 3351 Oceanography 3
- SMTE 4217 Secondary Approaches to the Life Sciences 2
- READ 3321 Principles and Practices of Reading Instruction, Grades 4 – 8 3
- ENGL Course (Additional Teaching Requirement) 3
- EDUC 3311 School and Society 3

**Hours** 15

**Spring**

- READ 3351 Reading Assessment and Intervention 3
- ESCI 4230 Oil Spill Prevention and Response Theory 3
- SMTE 3315 Foundational Approaches to the Physical Sciences 3
- SMTE 4270 Science Education Topics I 2
- ESCI 4202 Issues in Environmental Science 2
- SMTE 4320 Secondary Science Laboratory Techniques 3

**Total Hours** 15

### Fourth Year

**Fall**

- Creative Arts Core Requirement 3
- EDUC 4311 Classroom Management 3
- EDUC 4605 Planning, Teaching, Assessment and Technology 6

**Hours** 12

**Spring**

- EDUC 4321 Instructional Design for Special Populations 3
- EDUC 4995 Clinical Teaching 9

**Total Hours** 12

**Total Hours** 123
Courses

ESCI 1401  Environmental Science I: Intro to Environmental Science
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Principles of the scientific method and critical thinking provide a foundation for subsequent consideration of environmental issues through a multidisciplinary approach. Laboratory exercises and local field experiences reinforce concepts introduced in the lectures. Fall, Spring.
Co-requisite: SMTE 0096.
TCCNS: ENVR 1401

ESCI 1490  Selected Topics
1-4 Semester Credit Hours (1-4 Lecture Hours)
Subject materials variable. May be repeated for credit when topics are significantly different. Faculty approval required. Offered on sufficient demand.

ESCI 3202  Professional Skills
2 Semester Credit Hours (2 Lecture Hours)
Presentation and discussion of selected topics relating to the professional skills of practicing environmental scientists including literature searches, reviews, paper presentation, professional and career opportunities, professional ethics. Fall, Spring.

ESCI 3351  Oceanography
3 Semester Credit Hours (3 Lecture Hours)
Methods and principles of oceanography. A survey of oceanography with emphasis placed on the physical processes affecting water and water masses of the world oceans. Fall (on sufficient demand), Spring.
Prerequisite: CHEM 1412, ESCI 1401 or GEOL 1403.

ESCI 3403  Introduction to Meteorology
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
This course is an introduction to meteorology and the dynamics of planetary atmospheres. Emphasis on atmospheric accretion, composition, evolution, structure, and dynamics. Lab exercises cover basic measurement techniques, weather maps, and forecasting. Fall, Spring (on sufficient demand).
Co-requisite: SMTE 0096.

ESCI 3443  Environmental Biology
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Historical, contemporary, and projected concerns of human activities on biological aspects of ecosystem functioning.
Prerequisite: BIOL 1407.
Co-requisite: SMTE 0096.

ESCI 4130  Oil Spill Prevention and Response Lab
1 Semester Credit Hour (2 Lab Hours)
Practical techniques for control, containment, countermeasures, removal, and disposal of oil spills in an environmentally safe manner. Field exercises will include use of boats, booms and skimmers. Fall, Spring, Summer (on sufficient demand).
Prerequisite: ESCI 4230*.
May be taken concurrently.
Co-requisite: SMTE 0096.

ESCI 4170  Hazardous Waste Operations and Emergency Response Lab
1 Semester Credit Hour (2 Lab Hours)
Practical techniques for handling, reducing, and disposing of hazardous wastes in an environmentally safe manner. Lab exercises in use of personal protective gear and safe handling of hazardous substances. Fall, Spring, Summer (on sufficient demand).
Prerequisite: ESCI 4270*.
May be taken concurrently.
Co-requisite: SMTE 0096.

ESCI 4201  Scientific Diving Techniques
2 Semester Credit Hours (2 Lecture Hours)
Theory, science, and art of underwater diving technology and its application to scientific objectives. Course helps fulfill some training requirements of the Texas A&M University-Corpus Christi Guidelines for scientific diving.

ESCI 4202  Issues in Environmental Science
2 Semester Credit Hours (2 Lecture Hours)
Exploration of major issues in environmental science posing past, present and future challenges. Selected readings, student presentations and papers.
Prerequisite: ESCI 1401.

ESCI 4230  Oil Spill Prevention and Response Theory
2 Semester Credit Hours (2 Lecture Hours)
Historical perspective of laws and regulations governing oil spill prevention and response. Current methods for control, containment, countermeasures, removal, and disposal of oil spills in an environmentally safe manner. Fall, Spring, Summer (on sufficient demand).

ESCI 4270  Hazardous Waste Operations and Emergency Response Theory
2 Semester Credit Hours (2 Lecture Hours)
Study of the laws and regulations of hazardous waste management from an historical perspective followed by current techniques for handling, reducing, and disposing of hazardous wastes in an environmentally safe manner. Fall, Spring, Summer (on sufficient demand).

ESCI 4301  Environmental Regulations
3 Semester Credit Hours (3 Lecture Hours)
A survey of state and federal environmental laws and regulations, and their impact on the environment. Case studies of environmental issues and legislated regulations.
Prerequisite: POLS 2305 and 2306.

ESCI 4320  Environmental Health
3 Semester Credit Hours (3 Lecture Hours)
Overview of the toxicology and epidemiology of pollutants in the air, water and soil. Associations of environmental exposure with adverse health effects such as cancer, cardiovascular disease, and reproductive outcomes; also chemical markers and symptoms of disease. Pollutants studied include lead, asbestos, radiation, radon, noise, metals, halogenated hydrocarbons, aromatic hydrocarbons, silica, indoor air quality, formaldehyde, and outdoor air pollutants. Offered on sufficient demand.

ESCI 4321  Introduction to Soil and Groundwater Restoration
3 Semester Credit Hours (3 Lecture Hours)
Introduction to methods for restoring contaminated soil and groundwater by examining the factors and processes influencing the efficacy of remediation systems. An emphasis will be placed on the scientific principles upon which soil and groundwater remediation is based. Cross listed with GEOL 4321.

ESCI 4322  Introduction to Industrial Hygiene
3 Semester Credit Hours (3 Lecture Hours)
Introduction to health protection practices in the industrial environment. Health basis for OSHA laws, regulations. Sampling and testing procedures.
ESCI 4324 Introduction to Industrial Toxicology
3 Semester Credit Hours (3 Lecture Hours)
Review of human physiology, general concepts of toxicology: dose-response relationship, interactions between the host and the agents, risk assessment, to provide an introductory understanding of toxicology related to the chemicals in the workplace.

ESCI 4332 Wetlands and Water Quality
3 Semester Credit Hours (3 Lecture Hours)
Introduction to wetland ecosystems (natural, constructed and restored) with an emphasis on the role of wetlands in water quality. Topics include wetland systems, their history and role in society, relationships between biology, geology, ecology, hydrology and chemistry in wetland environments. Offered on sufficient demand.
Prerequisite: CHEM 1412 and BIOL 1406.

ESCI 4335 Climate and Climate Variability
3 Semester Credit Hours (3 Lecture Hours)
Course intended to guide environmental science majors in developing a conceptual understanding of Earth's global climate and its variability. Review of past climates, present mean state of the climate system, climate variability from seasonal to multidecadal time scales, and climate change. Special attention given to climates of the Gulf of Mexico, Caribbean Sea and surrounding land regions. Plausible climate-change scenarios, as well as mitigation and adaptation strategies are also discussed. Cross listed with ATSC 4335. Spring.
Prerequisite: (ESCI 3351 or 3403) and (PHYS 1401 or 2425).

ESCI 4340 Severe Weather
3 Semester Credit Hours (3 Lecture Hours)
Introduction to mesoscale weather systems including thunderstorms, squall lines and hurricanes, as well as the mechanisms of tornado and lightning. Methods of observing, analyzing, and predicting these severe weather systems with the interpretation of satellite and radar images will also be introduced in this class.
Prerequisite: ESCI 3403.

ESCI 4344 Air Pollution and the Clean Air Act
3 Semester Credit Hours (3 Lecture Hours)
Introduction to the chemistry and physics of air pollution and regulations. Topics include photochemistry, acid rain, air pollution meteorology and dispersion, global change, and the Clean Air Act.

ESCI 4360 Physical Oceanography
3 Semester Credit Hours (3 Lecture Hours)
Physical description of the sea, physical properties of seawater and sea ice, methods and measurements, wind-driven ocean circulation, thermohaline ocean circulation, boundary processes, waves, tides and mixing. Seasonal and interannual variability such as El Niño/Southern Oscillation phenomena. Implications for marine biology, marine geology, human impacts, other topics. Fall.
Prerequisite: PHYS 1401 or 2425.

ESCI 4365 Occupational Safety and Accident Prevention
3 Semester Credit Hours (3 Lecture Hours)
This course provides students with fundamental knowledge of regulatory requirements on occupational safety and practical techniques on accident prevention in the work environment. Offered on sufficient demand.

ESCI 4408 Environmental Microbiology
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Relationships between microorganisms and their biotic and abiotic environment. Current topics such as air quality (i.e., molds), water quality and bioremediation will be discussed. Laboratory will include techniques for sampling from soil, air and water. Offered on sufficient demand.
Prerequisite: BIOL 2421.
Co-requisite: SMTE 0096.

ESCI 4480 Environmental Site Assessment
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Interdisciplinary application of environmental regulations, risk assessment to specific examples. Knowledge of United States environmental regulations assumed; ESCI 4301 Environmental Regulations recommended.

ESCI 4490 Selected Topics
4 Semester Credit Hours (4 Lecture Hours, 4 Lab Hours)
Subject materials variable. May be repeated for credit when topics are significantly different. Faculty approval required. Offered on sufficient demand.

ESCI 4496 Directed Independent Study
1-4 Semester Credit Hours
Requires a formal proposal of study to be completed in advance of registration and to be approved by the supervising faculty, the Chairperson, and the Dean of the College. Fall, Spring, Summer.

ESCI 4498 Internship in Environmental Science
1-4 Semester Credit Hours (4 Lecture Hours)
Two to four semester hours of credit may be earned by working in an internship position in a governmental agency or industry.

Mathematics, BS - Grades 7-12 Mathematics Education Concentration

Program Description

Introduction
The College of Science is committed to the support of students seeking to become science, mathematics and technology educators at all levels. The Science, Mathematics and Technology Education (SMTE) program offers content courses for students seeking K-12 science, mathematics and technology education. SMTE classes are also an integral part of the course work for degrees preparing students for Teacher Certifications. The SMTE program does not offer a degree; rather, degrees leading to Teacher Certification are offered by other Science and Technology programs and by the College of Education and Human Development. Students seeking to teach in the elementary and secondary schools of Texas must meet degree requirements as well as certification requirements. The requirements and procedure to become a science, mathematics or technology teacher in Texas are outlined below. Undergraduate students who are graduating from the College of Science or the College of Liberal Arts who are seeking initial teacher certification at the 4-8, 7-12 and EC-12 levels prior to graduation, automatically qualify for the Minor in Education.

How to Become a Science, Mathematics or Technology Teacher in Texas
In order to be recommended for teacher certification at this university, a candidate must fulfill three basic requirements:
1. have a bachelor's degree from an accredited college or university that includes an academic major and teacher training courses,
2. complete teacher training through an approved program, and
3. successfully complete the appropriate teacher certification tests for the subject and grade level that the candidate wishes to teach.

Additional information on the requirements to become a teacher in Texas can be obtained at the State Board of Educator Certification (SBEC) website: http://www.sbec.state.tx.us/SBECOnline/certinfo/becometeacher.asp. This website also provides information on the resources available to help students pay for a teacher training program.

SBEC has approved three levels of teacher certification for regular educators:

1. Early childhood to grade 6 which includes foundation subjects and enrichment areas such as art, PE, and music,
2. Grade 4-8 which includes the foundation areas only, and
3. Grade 7-12 certification.

Students can find information on the different certifications at the official Texas Examinations of Educator Standards (TExES) Web site: http://www.texas.ets.org. Texas A&M University-Corpus Christi offers several degrees leading to a number of these teacher certifications. The College of Education and Human Development offers several degrees leading to teacher certification. The College of Science offers bachelor’s degrees leading to teacher certification in the sciences, mathematics and technology at the 4-8 and the 7-12 levels:

- Biology, BS - Grades 7-12 Life Science Education Concentration (p. 560) (120-122 sem. hrs.)
- Chemistry, BS - Grades 7-12 Physical Science Education Concentration (p. 568) (126-128 sem. hrs.)
- Environmental Science, BS - Grades 4-8 Science Education Concentration (p. 573) (125-130 sem. hrs.)
- Elementary Education, BS - Grades 4-8 with Mathematics Certification (p. 572) (College of Education and Human Development)
- Mathematics, BS — Grades 7-12 Mathematics Education Concentration (120 sem. hrs.) Details immediately follow below.

Mathematics 7-12 teacher certification is also possible with an undergraduate major other than mathematics. Details can be found in the Mathematics, Grades 7-12 Teacher Certification Without a Mathematics Major (p. 583) section.

The individual programs, Biology, Chemistry, Environmental Science, and Mathematics offer these degrees and courses.

Students seeking Teacher Certification are also strongly urged to contact the Certification Officer in the College of Education and Human Development about current requirements and procedures that must be met to obtain the certificate. In particular, students following a degree plan leading to teacher certification must be admitted to the Teacher Education Program at Texas A&M University-Corpus Christi prior to enrolling in any 4000 level EDCI or EDUC courses. Application forms for admission to the teacher education program may be obtained from the Undergraduate or Certification Office, room FC 201. The students are referred to the College of Education and Human Development section of this catalog for more information on the Teacher Education Program.

**Grade Point Average for Admission to Teacher Education**

A minimum grade point average of 2.75 (4.0 = A) in all work attempted, a minimum grade point average of 2.75 in all science, math, or specialization areas, and no grade below "C" in any science or mathematics course on a student’s degree plan and/or education courses within the professional block of courses are required. (See College of Education and Human Development, “Admission to Teacher Education” and “Admission to Student Teaching” for other requirements.)

**Alteration of a Certification Plan**

Any amendment to a degree plan originally filed must be approved by the student’s academic advisor, the Department Chair, the Dean of the College of Science and Engineering, and the Certification Officer of the College of Education and Human Development for the degree to be granted.

**General Requirements**

This plan is designed for those students who desire a Bachelor of Science Degree in Mathematics and a secondary teaching certificate in mathematics. The requirements for a Bachelor of Science in Mathematics degree are a minimum of 120 semester hours. Forty-two are designated University core curriculum courses; 38 are mathematics courses. All students must take the Major Field Test in Mathematics their senior year, prior to graduation.

Core Curriculum Program

University Core Curriculum 42

Students must take:

- MATH 2413 Calculus I
- PHYS 2425 University Physics I
- PHYS 2426 University Physics II

Mathematics Core

- MATH 2413 Calculus I (1 hour laboratory component) 2,3 1
- MATH 2414 Calculus II 2
- MATH 3311 Linear Algebra 3
- MATH 3313 Foundations of Number Theory 3
- MATH 2415 Calculus III 4
- COSC 1330 Programming for Scientists, Engineers, and Mathematicians 4
- MATH 3315 Differential Equations 3

Mathematics Electives

- MATH 3312 College Geometry 3
- MATH 3314 Foundations of Real Numbers 3
- MATH 3342 Applied Probability and Statistics 3
- SMTE 4370 Mathematics Education Topics I 3

Select one of the following:

- MATH 4315 Partial Differential Equations 3
- MATH 4342 Introduction to Mathematical Statistics 3

Psychology

- PSYC 2301 General Psychology (hours counted in Core Curriculum Program) 3

Professional Development and Reading Sequence

Preliminary Courses

- READ 3353 Content Area Reading for Secondary Students 3
- EDUC 3311 School and Society 3

Field-Based Semester

- EDUC 4605 Planning, Teaching, Assessment and Technology 6
- EDUC 4311 Classroom Management 3
- EDUC 4995 Clinical Teaching 9
- EDUC 4321 Instructional Design for Special Populations 3

Elective

Electives (as needed to fulfill University graduation requirements 2-20 hrs)

Total Hours 123

1 Only 3 hours of these courses will apply to the University Core Curriculum. The three 1 hour laboratory components apply to the Mathematics Core or Supporting Courses requirement.

2 May be waived with suitable placement; see placement section below for more details. Upper-division classes may be required to increase total hours to the university minimum. See the degree requirements section of the catalog for details.

3 3 hours of MATH 2413 Calculus I (4 sch) apply to the University Core Curriculum. The 1 hour laboratory component applies to the Mathematics major requirement.

4 May substitute COSC 1435 Introduction to Problem Solving with Computers I (4 sch) or COSC 1436 Introduction to Problem Solving with Computers II (4 sch).

Professional Development and Reading Sequence

Students who seek a 7-12 level Mathematics teaching certificate should contact a Certification Officer in the College of Education and Human Development about requirements and procedures that must be met to obtain the certificate. The professional development sequence must be taken in a specific order and it is recommended that students contact the College of Education and Human Development early in their academic careers for specific details on these courses.

</tbody>
</table>
MATH 0399  Intermediate Algebra  
3 Semester Credit Hours (3 Lecture Hours) 
Topics include linear equations and inequalities, rational expressions, exponents and radicals, quadratics and word problems.  
Prerequisite: MATH 0398.

MATH 1314  College Algebra  
3 Semester Credit Hours (3 Lecture Hours)  
Quadratic equations, inequalities, graphs, logarithms and exponents, theory of polynomial equations, systems of equations.  
Prerequisite: MATH 0300, minimum score of 530 in 'SAT MATH SECTION', minimum score of 19 in 'ACT1 Math', MATH 0320, minimum score of 350 in 'TSIA Math', minimum score of 910 in 'TSIA2 Math' or minimum score of 6 in 'TSIA2 Math Diagnostic'.  
TCCNS: MATH 1314

MATH 1316  Trigonometry  
3 Semester Credit Hours (3 Lecture Hours)  
Trigonometric functions, identities, equations involving trigonometric functions, solutions of right and oblique triangles.  
Prerequisite: (MATH 1314, minimum score of 550 in 'SAT MATH SECTION' or minimum score of 21 in 'ACT1 Math') or minimum score of 21 in 'ACT Math'.  
TCCNS: MATH 1316

MATH 1324  Mathematics for Business and Social Sciences  
3 Semester Credit Hours (3 Lecture Hours)  
Students will learn how the properties and language of mathematics can be used in business and real-world problem solving and understand the techniques and applications of finance problems, basic matrix operation, basic counting principles, and probability analysis in modeling real-world scenarios. This course could be taught in 14-weeks 7-weeks semesters and in F2F or fully online formats  
Prerequisite: minimum score of 550 in 'SAT MATH SECTION', minimum score of 21 in 'ACT Math' or minimum score of 21 in 'ACT1 Math'.  
TCCNS: MATH 1324

MATH 1325  Calculus for Business & Social Sciences  
3 Semester Credit Hours (3 Lecture Hours)  
Students will develop and combine the concepts in and relationships between Mathematics and Business from the fundamentals of calculus and optimization in all Business fields. Students are expected to learn the materials algebraically with technology. Students will combine the concepts of limits, continuation, differentiation and integration techniques to solve problems in business, economics, and social sciences. This course could be taught in 14-weeks and 7-weeks semesters in F2F and fully online formats  
Prerequisite: (MATH 1324 and 1314).  
TCCNS: MATH 1325

MATH 1332  Contemporary Mathematics  
3 Semester Credit Hours (3 Lecture Hours)  
This course serves as a terminal course and supplies a brief overview of several topics in mathematics. Topics may include introductory treatments of sets, logic, number systems, number theory, relations, functions, probability and statistics. Appropriate applications are included. This course emphasizes using critical thinking to make decisions based on information.  
TCCNS: MATH 1332

MATH 1390  Introduction to Mathematical Topics  
1-3 Semester Credit Hours (1-3 Lab Hours)  
A course to introduce students to mathematical topics in a formal setting. The course may support problem solving, or systematic investigations of topics outside the current mathematical catalog. May not be substituted for regularly scheduled offerings.

MATH 1442  Statistics for Life  
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)  
An introduction to statistical concepts and methods used in all disciplines to enhance decision making based on data analysis, including: basic experimental design models, measurement and data collection through sampling; display and summary of information, and assessment of relationship through descriptive techniques; probability concepts leading to estimation and hypothesis testing of means, variance and proportions, regression analysis, one-factor ANOVA and chi-square test of independence; and applications through case studies. The laboratory component of the course offers applications of the theory presented during the classroom sessions.  
Prerequisite: MATH 0300, minimum score of 530 in 'SAT MATH SECTION', minimum score of 19 in 'ACT1 Math', MATH 0310, 0320, minimum score of 350 in 'TSIA Math' or minimum score of 19 in 'ACT Math'.  
TCCNS: MATH 1442

MATH 2305  Discrete Mathematics I  
3 Semester Credit Hours (3 Lecture Hours)  
An introduction to topics in Discrete Mathematics with an emphasis on applications in Mathematics and Computer Science. Topics include formal logic, graphs, trees and related algorithms, and combinatorics and discrete probability.  
Prerequisite: MATH 2413, minimum score of 620 in 'SAT Math', minimum score of 620 in 'SAT1 Mathematics', minimum score of 640 in 'SAT MATH SECTION', minimum score of 27 in 'ACT Math' or minimum score of 27 in 'ACT1 Math'.  
TCCNS: MATH 2305

MATH 2312  Precalculus  
3 Semester Credit Hours (3 Lecture Hours)  
A more rapid treatment of the material in MATH 1314 and MATH 1316, this course is designed for students who wish a review of the above material, or who are very well prepared. Functions, graphs, trigonometry, and analytic geometry.  
Prerequisite: MATH 1314, minimum score of 550 in 'SAT MATH SECTION', minimum score of 21 in 'ACT Math' or minimum score of 21 in 'ACT1 Math'.  
TCCNS: MATH 2312

MATH 2413  Calculus I  
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)  
Limits, continuity, derivatives, applications of the derivative, and an introduction to integrals. Contains a laboratory component.  
Prerequisite: MATH 1316, 2312, minimum score of 640 in 'SAT MATH SECTION' or minimum score of 27 in 'ACT1 Math'.  
TCCNS: MATH 2413

MATH 2414  Calculus II  
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)  
Prerequisite: MATH 2413.  
TCCNS: MATH 2414
**MATH 2415  Calculus III**  
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)  
Vectors and space curves, partial derivatives, multiple integrals, special coordinate systems, line and surface integrals, Green's, Stokes', and the Divergence Theorems. Contains a laboratory component. Vectors and space curves, partial derivatives, multiple integrals, special coordinate systems, line and surface integrals, Green's, Stokes', and the Divergence Theorems. Contains a laboratory component.  
Prerequisite: MATH 2414.  
TCCNS: MATH 2415

**MATH 3300  Geospatial Mathematical Techniques**  
3 Semester Credit Hours (3 Lecture Hours)  
Characteristics of geographic/spatial information; overview of relevant sections of numbers, algebra and geometry, plane and spherical trigonometry, matrices, determinants and vectors, curves and surfaces, integral and differential calculus, partial derivatives, with an emphasis on geospatial applications. Concepts of geospatial coordinate systems and geospatial coordinate transformations; overview of spatial statistics and best-fit solutions with geospatial applications. Students may not receive credit for both MATH 3300 and GISC 3300.  
Prerequisite: MATH 2413 and 2414.

**MATH 3301  Introduction to Complex Analysis**  
3 Semester Credit Hours (3 Lecture Hours)  
This course introduces functions of a complex variable and their applications. Contents include differentiation and integration; zeros, poles and residues; conformal mappings.  
Prerequisite: (MATH 2415) or (MATH 2414 and 3314).

**MATH 3310  Mathematical Analysis for Mechanical Engineering**  
3 Semester Credit Hours (3 Lecture Hours)  
Applications of fundamentals of linear algebra, vector analysis, numerical methods, computer programming and probability and statistics into mechanical engineering. May not count towards the MATH major. Students may not receive credit for both MATH 3310 and MEEN 3310.  
Prerequisite: MATH 3315.

**MATH 3311  Linear Algebra**  
3 Semester Credit Hours (3 Lecture Hours)  
Fundamentals of linear algebra and matrix theory. Topics include vectors, matrix operations, linear transformations, fundamental properties of vector spaces, systems of linear equations, eigenvalues and eigenvectors. Applications.  
Prerequisite: MATH 2413.

**MATH 3312  College Geometry**  
3 Semester Credit Hours (2 Lecture Hours, 2 Lab Hours)  
A careful study of the foundations of Euclidean geometry by synthetic methods with an introduction to non-Euclidean geometries. An introduction to transformational geometry.  
Prerequisite: MATH 2413.

**MATH 3313  Foundations of Number Theory**  
3 Semester Credit Hours (3 Lecture Hours)  
This course assists a student’s transition to advanced mathematics. Fundamentals of logic and proof are reviewed and applied to topics from elementary number theory.  
Prerequisite: MATH 2414.

**MATH 3314  Foundations of Real Numbers**  
3 Semester Credit Hours (3 Lecture Hours)  
This course assists a student’s transition to advanced mathematics. Fundamentals of logic and proof are reviewed and applied to development of the real number line.  
Prerequisite: MATH 2414.

**MATH 3315  Differential Equations**  
3 Semester Credit Hours (3 Lecture Hours)  
An introduction to both theoretical and applied aspects of ordinary differential equations. Topics include: first order equations, linear second order equations, elementary numerical methods, and the Laplace transform.  
Prerequisite: MATH 2414.

**MATH 3342  Applied Probability and Statistics**  
3 Semester Credit Hours (3 Lecture Hours)  
A calculus based introduction to probability and statistics. Emphasis will be on development of statistical thinking and working with data. Topics include probability theory, descriptive statistics, common distributions, and statistical inference.  
Prerequisite: MATH 2413.

**MATH 3345  Statistical Modeling and Data Analysis**  
3 Semester Credit Hours (3 Lecture Hours)  
An introduction to probability/statistical modeling and data analysis techniques to investigate data. Topics include: exploratory data analysis, probability models and simulation, sampling distributions, statistical inference. Applications to real world problems. Students will be expected to present and justify results orally and in writing. Note: MATH 3342 and MATH 3345 cannot both be counted for credit.  
Prerequisite: MATH 2413 and (COSC 1330 or 1435).

**MATH 3347  Introduction to Probability**  
3 Semester Credit Hours (3 Lecture Hours)  
This is an introduction to probability. In the course, key fundamental concepts of probability, random variables and their distributions, expectations, and conditional probabilities will be covered. Topics include counting rules, combinatorial analysis, sample spaces, axioms of probability, conditional probability and independence, discrete and continuous random variables, jointly distributed random variables, characteristics of random variables, law of large numbers and central limit theorem, random processes, Markov chains, Markov chain-Monte Carlo, Poisson Process and Entropy.  
Prerequisite: MATH 2415.

**MATH 3385  Linear Optimization and Decisions**  
3 Semester Credit Hours (3 Lecture Hours)  
This course introduces the linear programming and optimization problems arising in many applications. Contents include linear programming models with solutions, the simplex method, duality theory and its use for management decision making, dual simplex method and sensitivity analysis.  
Prerequisite: MATH 3311 and 2413.

**MATH 3390  Problem Solving in Mathematics**  
1-3 Semester Credit Hours (1-3 Lecture Hours)  
A problem solving course for students who want to participate in math problem solving competitions, train for the actuarial or other professional examinations, work on research aimed at conference presentations, or perform research projects at the junior level that are not at the level of directed independent study material.  
Prerequisite: MATH 2414.

**MATH 4185  Senior Mathematics Seminar**  
1 Semester Credit Hour (1 Lecture Hour)  
This course introduces a weekly mathematics seminar. Students will generate a viable project for the capstone course.
MATH 4285 Mathematics Major Capstone
2 Semester Credit Hours (2 Lecture Hours)
Development of projects as proposed in MATH 4185, as well as mathematics communication skills. Students will present their projects, and take a national level assessment.
Prerequisite: MATH 4185.

MATH 4301 Introduction to Analysis
3 Semester Credit Hours (3 Lecture Hours)
An advanced treatment of the foundations of calculus stressing rigorous proofs of theorems. Topics include: elements of propositional and predicate logic, topology of the real numbers, sequences, limits, the derivative, and the Riemann integral.
Prerequisite: MATH 2415 and 3314.

MATH 4306 Modern Algebra
3 Semester Credit Hours (3 Lecture Hours)
Fundamentals of set operations, maps and relations, groups, rings and field theory. Topics include permutation groups, cosets, homomorphisms and isomorphisms, direct product of groups and rings, integral domains field of quotients, fundamental properties of integers, the ring of integers modulo n, and rings of polynomials. Applications.
Prerequisite: MATH 3311 and 3313.

MATH 4312 Differential Geometry
3 Semester Credit Hours (3 Lecture Hours)
Differential forms on R1, R2, R3, and Rn; Integration and differentiation of differential forms; Stokes’ Theorem; manifolds; Gaussian curvature and the Gauss-Bonnet Theorem.
Prerequisite: MATH 2415.

MATH 4315 Partial Differential Equations
3 Semester Credit Hours (3 Lecture Hours)
An introduction to partial differential equations emphasizing the wave, diffusion and potential (Laplace) equations. A focus on understanding the physical meaning and mathematical properties of solutions of partial differential equations. Methods include fundamental solutions and transform methods for problems on the line, and separation of variables using orthogonal series for problems in regions with boundary. Additional topics include higher dimensional problems and special topics like Harmonic functions, the maximum principle, Green’s functions etc.
Prerequisite: MATH 3315 and 2415.

MATH 4321 Applied Regression Analysis
3 Semester Credit Hours (3 Lecture Hours)
Introduction to the formulation of linear models and the estimation of the parameters of such models, with primary emphasis on least squares. Application of multiple regression and curve fitting and the design of experiments for fitting regression models.
Prerequisite: MATH 1342, 2342 or 1470.

MATH 4328 Discrete Mathematics II
3 Semester Credit Hours (3 Lecture Hours)
A continued study of topics from Discrete Mathematics I with additional topics from discrete mathematics that have strong application to the field of computer science. Additional topics include: recurrence relations, formal languages, and finite-state machines.
Prerequisite: MATH 2305 and COSC 2437.

MATH 4342 Introduction to Mathematical Statistics
3 Semester Credit Hours (3 Lecture Hours)
This is a first course in mathematical statistics, topics include: moment-generating functions, functions of random variables, sampling distributions, methods of estimation including Bayesian estimation, characteristics of estimators, interval estimation, hypothesis testing, Neyman-Pearson Lemma, likelihood ratio test, tests involving means and variances, regression and correlation, multiple linear regression, introduction to ANOVA, non-parametric tests.
Prerequisite: MATH 2415.

MATH 4385 Applied Modeling
3 Semester Credit Hours (3 Lecture Hours)
Capstone course for mathematics majors. The construction of mathematical models from areas such as economics, refining, biology and mariculture, etc. Where possible, local phenomena will be modeled with the assistance of outside consultants.
Prerequisite: MATH 3315 and 3342 or MATH 3345.

MATH 4390 Selected Topics
3 Semester Credit Hours (3 Lecture Hours)
Offered on sufficient demand.

MATH 4696 Directed Independent Study
1-6 Semester Credit Hours
See college description.

Mathematics, Grades 7-12, Teacher Certification Without a Mathematics Major

Program Description

Introduction

The College of Science and Engineering is committed to the support of students seeking to become science, mathematics and technology educators at all levels. The Science, Mathematics and Technology Education (SMTE) program offers content courses for students seeking K-12 science, mathematics and technology education. SMTE classes are also an integral part of the course work for degrees preparing students for Teacher Certifications. The SMTE program does not offer a degree; rather, degrees leading to Teacher Certification are offered by other Science and Technology programs and by the College of Education and Human Development. Students seeking to teach in the elementary and secondary schools of Texas must meet degree requirements as well as certification requirements. The requirements and procedure to become a science, mathematics or technology teacher in Texas are outlined below. Undergraduate students who are graduating from the College of Science & Engineering or the College of Liberal Arts who are seeking initial teacher certification at the 4-8, 7-12 and EC-12 levels prior to graduation, automatically qualify for the Minor in Education.

How to Become a Science, Mathematics or Technology Teacher in Texas

In order to be recommended for teacher certification at this university, a candidate must fulfill three basic requirements:

1. have a bachelor’s degree from an accredited college or university that includes an academic major and teacher training courses, and
2. complete teacher training through an approved program, and
3. successfully complete the appropriate teacher certification tests for the subject and grade level that the candidate wishes to teach.

Additional information on the requirements to become a teacher in Texas can be obtained at the State Board of Educator Certification (SBEC) website: http://www.sbec.state.tx.us/SBECOnline/certinfo/becometeacher.asp. This website also provides information on the resources available to help students pay for a teacher training program.

SBEC has approved three levels of teacher certification for regular educators:

1. Early childhood to grade 6 which includes foundation subjects and enrichment areas such as art, PE, and music,
2. Grade 4-8 which includes the foundation areas only, and (3) Grade 7-12 certification.

Students can find information on the different certifications at the official Texas Examinations of Educator Standards (TExES) Web site: http://www.texas.ets.org. Texas A&M University-Corpus Christi offers several degrees leading to a number of these teacher certifications. The College of Education and Human Development offers several degrees leading to teacher certification. The College of Science and Engineering offers bachelor's degrees leading to teacher certification in the sciences, mathematics and technology at the 4-8 and the 7-12 levels. These bachelor's degrees are the following:

- Biology, BS - Grades 7-12 Life Science Education Concentration (p. 560) (120-122 sem. hrs.)
- Chemistry, BS - Grades 7-12 Physical Science Education Concentration (p. 568) (126-128 sem. hrs.)
- Environmental Science, BS - Grades 4-8 Science Education Concentration (p. 573) (125-130 sem. hrs.)
- Elementary Education, BS - Grades 4-8 with Mathematics Certification (p. 572) (College of Education and Human Development)
- Mathematics, BS - Grades 7-12 Mathematics Education Concentration (p. 577) (120 sem. hrs.)

Mathematics 7-12 teacher certification is also possible with an undergraduate major other than mathematics. Details immediately follow below.

The individual programs, Biology, Chemistry, Environmental Science, and Mathematics offer these degrees and courses.

Students seeking Teacher Certification are also strongly urged to contact the Certification Officer in the College of Education and Human Development about current requirements and procedures that must be met to obtain the certificate. In particular, students following a degree plan leading to teacher certification must be admitted to the Teacher Education Program at Texas A&M University-Corpus Christi prior to enrolling in any 4000 level EDCI or EDUC courses. Application forms for admission to the teacher education program may be obtained from the Undergraduate or Certification Office, room FC 201. The students are referred to the College of Education and Human Development section of this catalog for more information on the Teacher Education Program.

Grade Point Average for Admission to Teacher Education

A minimum grade point average of 2.75 (4.0 = A) in all work attempted, a minimum grade point average of 2.75 in all science, math, or specialization areas, and no grade below “C” in any science or mathematics course on a student's degree plan and/or education courses within the professional block of courses are required. (See College of Education and Human Development (p. 105), “Admission to Teacher Education” and “Admission to Student Teaching” for other requirements.)

Alteration of a Certification Plan

Any amendment to a degree plan originally filed must be approved by the student's academic advisor, the Department Chair, the Dean of the College of Science and Engineering, and the Certification Officer of the College of Education and Human Development for the degree to be granted.

Program Requirements

Mathematics 7-12 teacher certification without a mathematics major requires at least 27 hours of mathematics and 27 hours of professional development and reading courses. The required mathematics courses are listed in the Mathematics, BS — Grades 7-12 Mathematics Education Concentration. Students seeking certification through this route should contact a Certification Officer in the College of Education and Human Development. The mathematics major as described includes all required courses.

Courses

MATH 0099 Math Non-Course Based Development
0 Semester Credit Hours
Preparation workshop to help students achieve College Readiness in mathematics under the Texas Success Initiative. Topics include five general areas: fundamental mathematics, algebra, geometry, statistics, and problem solving.

MATH 0200 Brief Developmental Mathematics
1-2 Semester Credit Hours (1-2 Lecture Hours)
Topics as in MATH 0300. For students who have completed most topics in MATH 0300. Requires permission of MATH department. (Not counted toward graduation) Fall, Spring, Maymester, Summer.
Co-requisite: MATH 1314, MATH 1442.
MATH 0214  Brief Developmental Mathematics-Algebra
2 Semester Credit Hours (2 Lecture Hours)
This course is co-requisite course supporting for MATH 1314. Support will focus on essential skills required for success in College Algebra (Math 1314). Supporting topics include review of intermediate algebra, polynomial equations, graphing techniques, and applications. Course provides the necessary academic support for TSI liable students concurrently enrolled in MATH 1314 as the co-requisite with MATH 0214. Students who register for MATH 0214 must co-register in MATH 1314. Math 0214 is not counted toward graduation. Fall, Spring, Summer.
Co-requisite: MATH 1314, UNIV 1102.

MATH 0224  Brief Developmental Mathematics-Business Mathematics
2 Semester Credit Hours (2 Lecture Hours)
This course is the co-requisite course supporting for MATH 1324. Support will focus on essential skills required for success in Business Math (Math 1324). Supporting topics include the use of calculators and technology. Topics focus on basic review of mathematical skills, elementary algebra, mathematical and logical reasoning, probability, and financial management, while providing the necessary academic support for TSI liable students concurrently enrolled in MATH 1324 as the co-requisite with MATH 0224. Students who register for MATH 0224 must co-register in MATH 1324. Math 0224 is not counted toward graduation. Fall, Spring, Summer.
Co-requisite: MATH 1324.

MATH 0232  Brief Developmental Mathematics-Contemporary Mathematics
2 Semester Credit Hours (2 Lecture Hours)
This course is co-requisite course supporting for MATH 1332. Support will focus on essential skills required for success in Contemporary Mathematics (Math 1332). Supporting topics include a basic review of mathematical skills, elementary algebra, mathematical and logical reasoning, probability, and descriptive statistics, while providing the necessary academic support for TSI liable students concurrently enrolled in MATH 1332 as the co-requisite with MATH 0232. Students who register for MATH 0232 must co-register in MATH 1332. Math 0232 is not counted toward graduation. Fall, Spring, Summer.
Co-requisite: MATH 1332.

MATH 0242  Brief Developmental Mathematics-Statistics
2 Semester Credit Hours (2 Lecture Hours)
This course is co-requisite course supporting for MATH 1442. Support will focus on essential skills required for success in Statistics for Life (Math 1442). Supporting topics include the use of calculators and technology. Topics focus on descriptive and inferential statistics, probabilities including notation, while providing the necessary academic support for TSI liable students concurrently enrolled in MATH 1442 as the co-requisite with MATH 0242. Students who register for MATH 0242 must co-register in MATH 1442. Math 0242 is not counted toward graduation. Fall, Spring, Summer.
Co-requisite: MATH 1442.

MATH 0300  Developmental Mathematics
3 Semester Credit Hours (3 Lecture Hours)
Topics include number concepts, computation, elementary algebra, geometry, and mathematical reasoning. Also, linear equations and inequalities, rational expressions, exponents and radicals, quadratics and word problems. May be repeated for credit as needed to complete mastery of all topics. (Not counted toward graduation.) Fall, Spring, Summer.

MATH 0310  Developmental Mathematics-Algebra
3 Semester Credit Hours (2 Lecture Hours, 2 Lab Hours)
3 sem. hrs. (2:2) Topics include number concepts, computation, elementary algebra, and geometry. Also, linear equations and inequalities, rational expressions, exponents and radicals, quadratics and word problems. May be repeated for credit as needed to complete mastery of all topics. (Not counted toward graduation.) Fall, Spring, Summer.

MATH 0398  Introduction to Algebra
3 Semester Credit Hours (3 Lecture Hours)
Number concepts, computation, elementary algebra, geometry, and mathematical reasoning.

MATH 0399  Intermediate Algebra
3 Semester Credit Hours (3 Lecture Hours)
Topics include linear equations and inequalities, rational expressions, exponents and radicals, quadratics and word problems.
Prerequisite: MATH 0398.

MATH 1314  College Algebra
3 Semester Credit Hours (3 Lecture Hours)
Quadratic equations, inequalities, graphs, logarithms and exponentials, theory of polynomial equations, systems of equations.
Prerequisite: MATH 0300, minimum score of 530 in 'SAT MATH SECTION', minimum score of 19 in 'ACT1 Math', MATH 0320, minimum score of 350 in 'TSI Math', minimum score of 910 in 'TSIA2 Math' or minimum score of 6 in 'TSIA2 Math Diagnostic'.
TCCNS: MATH 1314

MATH 1316  Trigonometry
3 Semester Credit Hours (3 Lecture Hours)
Trigonometric functions, identities, equations involving trigonometric functions, solutions of right and oblique triangles.
Prerequisite: (MATH 1314, minimum score of 550 in 'SAT MATH SECTION' or minimum score of 21 in 'ACT1 Math') or minimum score of 21 in 'ACT Math'.
TCCNS: MATH 1316

MATH 1324  Mathematics for Business and Social Sciences
3 Semester Credit Hours (3 Lecture Hours)
Students will learn how the properties and language of mathematics can be used in business and real-world problem solving and understand the techniques and applications of finance problems, basic matrix operation, basic counting principles, and probability analysis in modeling real-world scenarios. This course could be taught in 14-weeks 7-weeks semesters and in F2F or fully online formats
Prerequisite: minimum score of 550 in 'SAT MATH SECTION', minimum score of 21 in 'ACT Math' or minimum score of 21 in 'ACT1 Math'.
TCCNS: MATH 1324

MATH 1325  Calculus for Business & Social Sciences
3 Semester Credit Hours (3 Lecture Hours)
Students will develop and combine the concepts in and relationships between Mathematics and Business from the fundamentals of calculus and optimization in all Business fields. Students are expected to learn the materials algebraically with technology. Students will combine the concepts of limits, continuation, differentiation and integration techniques to solve problems in business, economics, and social sciences. This course could be taught in 14-weeks and 7-weeks semesters in F2F and fully online formats
Prerequisite: (MATH 1324 and 1314).
TCCNS: MATH 1325
MATH 1332 Contemporary Mathematics
3 Semester Credit Hours (3 Lecture Hours)
This course serves as a terminal course and supplies a brief overview of several topics in mathematics. Topics may include introductory treatments of sets, logic, number systems, number theory, relations, functions, probability and statistics. Appropriate applications are included. This course emphasizes using critical thinking to make decisions based on information.
TCCNS: MATH 1332

MATH 1390 Introduction to Mathematical Topics
1-3 Semester Credit Hours (1-3 Lab Hours)
A course to introduce students to mathematical topics in a formal setting. The course may support problem solving, or systematic investigations of topics outside the current mathematical catalog. May not be substituted for regularly scheduled offerings.

MATH 1442 Statistics for Life
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
An introduction to statistical concepts and methods used in all disciplines to enhance decision making based on data analysis, including: basic experimental design models, measurement and data collection through sampling; display and summary of information, and assessment of relationship through descriptive techniques; probability concepts leading to estimation and hypothesis testing of means, variance and proportions, regression analysis, one-factor ANOVA and chi-square test of independence; and applications through case studies. The laboratory component of the course offers applications of the theory presented during the classroom sessions.
Prerequisite: MATH 0300, minimum score of 530 in 'SAT MATH SECTION', minimum score of 19 in 'ACT1 Math', MATH 0310, 0320, minimum score of 350 in 'TSI Math' or minimum score of 19 in 'ACT Math'.
TCCNS: MATH 1442

MATH 2305 Discrete Mathematics I
3 Semester Credit Hours (3 Lecture Hours)
An introduction to topics in Discrete Mathematics with an emphasis on applications in Mathematics and Computer Science. Topics include formal logic, graphs, trees and related algorithms, and combinatorics and discrete probability.
Prerequisite: MATH 2413, minimum score of 620 in 'SAT Math', minimum score of 620 in 'SAT1 Mathematics', minimum score of 640 in 'SAT MATH SECTION', minimum score of 27 in 'ACT Math' or minimum score of 27 in 'ACT1 Math'.
TCCNS: MATH 2305

MATH 2312 Precalculus
3 Semester Credit Hours (3 Lecture Hours)
A more rapid treatment of the material in MATH 1314 and MATH 1316, this course is designed for students who wish a review of the above material, or who are very well prepared. Functions, graphs, trigonometry, and analytic geometry.
Prerequisite: MATH 1314, minimum score of 550 in 'SAT MATH SECTION', minimum score of 21 in 'ACT Math' or minimum score of 21 in 'ACT1 Math'.
TCCNS: MATH 2312

MATH 2413 Calculus I
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Limits, continuity, derivatives, applications of the derivative, and an introduction to integrals. Contains a laboratory component.
Prerequisite: MATH 1316, 2312, minimum score of 640 in 'SAT MATH SECTION' or minimum score of 27 in 'ACT1 Math'.
TCCNS: MATH 2413

MATH 2414 Calculus II
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Prerequisite: MATH 2413.
TCCNS: MATH 2414

MATH 2415 Calculus III
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Vectors and space curves, partial derivatives, multiple integrals, special coordinate systems, line and surface integrals, Green's, Stokes', and the Divergence Theorem. Contains a laboratory component. Vectors and space curves, partial derivatives, multiple integrals, special coordinate systems, line and surface integrals, Green's, Stokes', and the Divergence Theorem. Contains a laboratory component.
Prerequisite: MATH 2414.
TCCNS: MATH 2415

MATH 3300 Geospatial Mathematical Techniques
3 Semester Credit Hours (3 Lecture Hours)
Characteristics of geographic/spatial information; overview of relevant sections of numbers, algebra and geometry, plane and spherical trigonometry, matrices, determinants and vectors, curves and surfaces, integral and differential calculus, partial derivatives, with an emphasis on geospatial applications. Concepts of geospatial coordinate systems and geospatial coordinate transformations; overview of spatial statistics and best-fit solutions with geospatial applications. Students may not receive credit for both MATH 3300 and GISC 3300.
Prerequisite: MATH 2413 and 2414.

MATH 3301 Introduction to Complex Analysis
3 Semester Credit Hours (3 Lecture Hours)
This course introduces functions of a complex variable and their applications. Contents include differentiation and integration; zeros, poles and residues; conformal mappings.
Prerequisite: (MATH 2415) or (MATH 2414 and 3314).

MATH 3310 Mathematical Analysis for Mechanical Engineering
3 Semester Credit Hours (3 Lecture Hours)
Applications of fundamentals of linear algebra, vector analysis, numerical methods, computer programming and probability and statistics into mechanical engineering. May not count towards the MATH major. Students may not receive credit for both MATH 3310 and MEEN 3310.
Prerequisite: MATH 3315.

MATH 3311 Linear Algebra
3 Semester Credit Hours (3 Lecture Hours)
Fundamentals of linear algebra and matrix theory. Topics include vectors, matrix operations, linear transformations, fundamental properties of vector spaces, systems of linear equations, eigenvalues and eigenvectors. Applications.
Prerequisite: MATH 2413.

MATH 3312 College Geometry
3 Semester Credit Hours (2 Lecture Hours, 2 Lab Hours)
A careful study of the foundations of Euclidean geometry by synthetic methods with an introduction to non-Euclidean geometries. An introduction to transformational geometry.
Prerequisite: MATH 2413.
MATH 3313 Foundations of Number Theory
3 Semester Credit Hours (3 Lecture Hours)
This course assists a student's transition to advanced mathematics. Fundamentals of logic and proof are reviewed and applied to topics from elementary number theory.
Prerequisite: MATH 2414.

MATH 3314 Foundations of Real Numbers
3 Semester Credit Hours (3 Lecture Hours)
This course assists a student's transition to advanced mathematics. Fundamentals of logic and proof are reviewed and applied to development of the real number line.
Prerequisite: MATH 2414.

MATH 3315 Differential Equations
3 Semester Credit Hours (3 Lecture Hours)
An introduction to both theoretical and applied aspects of ordinary differential equations. Topics include: first order equations, linear second order equations, elementary numerical methods, and the Laplace transform.
Prerequisite: MATH 2413.

MATH 3342 Applied Probability and Statistics
3 Semester Credit Hours (3 Lecture Hours)
A calculus based introduction to probability and statistics. Emphasis will be on development of statistical thinking and working with data. Topics include probability theory, descriptive statistics, common distributions, and statistical inference.
Prerequisite: MATH 2413.

MATH 3345 Statistical Modeling and Data Analysis
3 Semester Credit Hours (3 Lecture Hours)
An introduction to probability/statistical modeling and data analysis techniques to investigate data. Topics include: exploratory data analysis, probability models and simulation, sampling distributions, statistical inference. Applications to real world problems. Students will be expected to present and justify results orally and in writing. Note: MATH 3342 and MATH 3345 cannot both be counted for credit.
Prerequisite: MATH 2413 and (COSC 1330 or 1435).

MATH 3347 Introduction to Probability
3 Semester Credit Hours (3 Lecture Hours)
This is an introduction to probability. In the course, key fundamental concepts of probability, random variables and their distributions, expectations, and conditional probabilities will be covered. Topics include counting rules, combinatorial analysis, sample spaces, axioms of probability, conditional probability and independence, discrete and continuous random variables, jointly distributed random variables, characteristics of random variables, law of large numbers and central limit theorem, random processes, Markov chains, Markov chain-Monte Carlo, Poisson Process and Entropy.
Prerequisite: MATH 2415.

MATH 3385 Linear Optimization and Decisions
3 Semester Credit Hours (3 Lecture Hours)
This course introduces the linear programming and optimization problems arising in many applications. Contents include linear programming models with solutions, the simplex method, duality theory and its use for management decision making, dual simplex method and sensitivity analysis.
Prerequisite: MATH 3311 and 2413.

MATH 3390 Problem Solving in Mathematics
1-3 Semester Credit Hours (1-3 Lecture Hours)
A problem solving course for students who want to participate in math problem solving competitions, train for the actuarial or other professional examinations, work on research aimed at conference presentations, or perform research projects at the junior level that are not at the level of directed independent study material.
Prerequisite: MATH 2414.

MATH 4185 Senior Mathematics Seminar
1 Semester Credit Hour (1 Lecture Hour)
This course introduces a weekly mathematics seminar. Students will generate a viable project for the capstone course.

MATH 4285 Mathematics Major Capstone
2 Semester Credit Hours (2 Lecture Hours)
Development of projects as proposed in MATH 4185, as well as mathematics communication skills. Students will present their projects, and take a national level assessment.
Prerequisite: MATH 4185.

MATH 4301 Introduction to Analysis
3 Semester Credit Hours (3 Lecture Hours)
An advanced treatment of the foundations of calculus stressing rigorous proofs of theorems. Topics include: elements of propositional and predicate logic, topology of the real numbers, sequences, limits, the derivative, and the Riemann integral.
Prerequisite: MATH 2415 and 3314.

MATH 4306 Modern Algebra
3 Semester Credit Hours (3 Lecture Hours)
Fundamentals of set operations, maps and relations, groups, rings and field theory. Topics include permutation groups, cosets, homomorphisms and isomorphisms, direct product of groups and rings, integral domains, field of quotients, fundamental properties of integers, the ring of integers modulo n, and rings of polynomials. Applications.
Prerequisite: MATH 3311 and 3313.

MATH 4312 Differential Geometry
3 Semester Credit Hours (3 Lecture Hours)
Differential forms on R1, R2, R3, and Rn; Integration and differentiation of differential forms; Stokes' Theorem; manifolds; Gaussian curvature and the Gauss-Bonnet Theorem.
Prerequisite: MATH 2415.

MATH 4315 Partial Differential Equations
3 Semester Credit Hours (3 Lecture Hours)
An introduction to partial differential equations emphasizing the wave, diffusion and potential (Laplace) equations. A focus on understanding the physical meaning and mathematical properties of solutions of partial differential equations. Methods include fundamental solutions and transform methods for problems on the line, and separation of variables using orthogonal series for problems in regions with boundary. Additional topics include higher dimensional problems and special topics like Harmonic functions, the maximum principle, Green's functions etc.
Prerequisite: MATH 3315 and 2415.

MATH 4321 Applied Regression Analysis
3 Semester Credit Hours (3 Lecture Hours)
Introduction to the formulation of linear models and the estimation of the parameters of such models, with primary emphasis on least squares. Application of multiple regression and curve fitting and the design of experiments for fitting regression models.
Prerequisite: MATH 1342, 2342 or 1470.
MATH 4328 Discrete Mathematics II
3 Semester Credit Hours (3 Lecture Hours)
A continued study of topics from Discrete Mathematics I with additional topics from discrete mathematics that have strong application to the field of computer science. Additional topics include: recurrence relations, formal languages, and finite-state machines.
Prerequisite: MATH 2305 and COSC 2437.

MATH 4342 Introduction to Mathematical Statistics
3 Semester Credit Hours (3 Lecture Hours)
This is a first course in mathematical statistics, topics include: moment-generating functions, functions of random variables, sampling distributions, methods of estimation including Bayesian estimation, characteristics of estimators, interval estimation, hypothesis testing, Neyman-Pearson Lemma, likelihood ratio test, tests involving means and variances, regression and correlation, multiple linear regression, introduction to ANOVA, non-parametric tests.
Prerequisite: MATH 2415.

MATH 4385 Applied Modeling
3 Semester Credit Hours (3 Lecture Hours)
Capstone course for mathematics majors. The construction of mathematical models from areas such as economics, refining, biology and mariculture, etc. Where possible, local phenomena will be modeled with the assistance of outside consultants.
Prerequisite: MATH 3315 and 3342 or MATH 3345.

MATH 4390 Selected Topics
3 Semester Credit Hours (3 Lecture Hours)
Offered on sufficient demand.

MATH 4696 Directed Independent Study
1-6 Semester Credit Hours
See college description.

Science, Mathematics and Technology Education, Teacher Certificate

Program Description

Introduction
The College of Science and Engineering is committed to the support of students seeking to become science, mathematics and technology educators at all levels. The Science, Mathematics and Technology Education (SMTE) program offers content courses for students seeking K-12 science, mathematics and technology education. SMTE classes are also an integral part of the course work for degrees preparing students for Teacher Certifications. The SMTE program does not offer a degree; rather, degrees leading to Teacher Certification are offered by other Science and Technology programs and by the College of Education and Human Development. Students seeking to teach in the elementary and secondary schools of Texas must meet degree requirements as well as certification requirements. The requirements and procedure to become a science, mathematics or technology teacher in Texas are outlined below; presentation of such details about multiple programs in a single catalog section is intended for clarity and ease of readers in locating information.

How to Become a Science, Mathematics or Technology Teacher in Texas
In order to be recommended for teacher certification at this university, a candidate must fulfill three basic requirements:

1. have a bachelor's degree from an accredited college or university that includes an academic major and teacher training courses,
2. complete teacher training through an approved program, and
3. successfully complete the appropriate teacher certification tests for the subject and grade level that the candidate wishes to teach.

Additional information on the requirements to become a teacher in Texas can be obtained at the State Board of Educator Certification (SBEC) website: http://www.sbec.state.tx.us/SBECOnline/certinfo/becometeacher.asp. This website also provides information on the resources available to help students pay for a teacher training program.

SBEC has approved three levels of teacher certification for regular educators:

1. Early childhood to grade 6 which includes foundation subjects and enrichment areas such as art, PE, and music,
2. Grade 4-8 which includes the foundation areas only, and
3. Grade 7-12 certification.

Students can find information on the different certifications at the official Texas Examinations of Educator Standards (TExES) Web site: http://www.texas.ets.org. Texas A&M University-Corpus Christi offers several degrees leading to a number of these teacher certifications. The College of Education and Human Development offers several degrees leading to teacher certification. The College of Science and Engineering offers bachelor's degrees leading to teacher certification in the sciences, mathematics and technology at the 4-8 and the 7-12 levels. These bachelor's degrees are the following; they are described in Section V below, in the order listed:

- Biology, BS - Grades 7-12 Life Science Education Concentration (p. 560) (120-122 sem. hrs.)
- Chemistry, BS - Grades 7-12 Physical Science Education Concentration (p. 568) (126-128 sem. hrs.)
- Environmental Science, BS - Grades 4-8 Science Education Concentration (p. 572) (125-130 sem. hrs.)
- Elementary Education, BS - Grades 4-8 with Mathematics Certification (p. 572) (College of Education and Human Development)
- Mathematics, BS - Grades 7-12 Mathematics Education Concentration (p. 577) (120 sem. hrs.)

Mathematics 7-12 teacher certification is also possible with an undergraduate major other than mathematics. Details immediately follow the BS in Mathematics listing.

The individual programs, Biology, Chemistry, Environmental Science, and Mathematics offer these degrees and courses.

Students seeking Teacher Certification are also strongly urged to contact the Certification Officer in the College of Education and Human Development about current requirements and procedures that must be met to obtain the certificate. In particular, students following a degree plan leading to teacher certification must be admitted to the Teacher Education Program at Texas A&M University-Corpus Christi prior to enrolling in any 4000 level EDCI or EDUC courses. Application forms for admission to the teacher education program may be obtained from the Undergraduate or Certification Office, room FC 201. The students are referred to the College of Education and Human Development section of this catalog for more information on the Teacher Education Program.
Grade Point Average for Admission to Teacher Education
A minimum grade point average of 2.75 (4.0 = A) in all work attempted, including a minimum grade point average of 2.75 in all science, math, or specialization areas, and no grade below "C" in any science or mathematics course on a student's degree plan and/or education courses within the professional block of courses are required. (See College of Education and Human Development (p. 105), "Admission to Teacher Education" and "Admission to Student Teaching" for other requirements.)

Alteration of a Certification Plan
Any amendment to a degree plan originally filed must be approved by the student's academic advisor, the Department Chair, the Dean of the College of Science and Engineering, and the Certification Officer of the College of Education and Human Development for the degree to be granted.

Fast Track Programs
- Fast Track Biology, BS to Biology, MS (p. 589)
- Fast Track Biomedical Sciences, BS to Biology, MS (p. 597)
- Fast Track Environmental Science, BS and Environmental Science, MS (p. 599)
- Fast Track Geology, BS and Environmental Science, MS (p. 603)
- Fast Track Mathematics, BS and Mathematics, MS (p. 608)

Fast Track Biology, BS to Biology, MS Program Description
The university allows the opportunity for high-achieving students to count a select number of graduate credits toward their undergraduate degree and thereby obtain a graduate degree at an accelerated pace. Students interested in the Fast Track in Biology must meet the following application criteria:

- Currently seeking a BS in Biology at A&M-Corpus Christi.
- Minimum of a 3.0 GPA (with 3.4 GPA in math and science courses) in the last 60 SCH at the time of Fast Track application.
- Classified as a Senior with successful completion of at least 90 SCH, including

College of Education and Human Development for the degree to be granted.

No criterion is weighted more heavily than any other criterion. Applications received or completed after the deadline for admission during one semester may be considered for admission in the following semester at the applicant's request. Applicants will be notified of the outcome of their application by email.

Academic Preparation
A degree candidate who lacks adequate academic preparation may be required by his or her Graduate Advisory Committee to complete undergraduate course work prior to the completion of the MS degree. Such course work (4000-sequence or lower) will be regarded as foundation or prerequisite work and will not count as credit towards the total required for completion of the degree.

Fast Track Curriculum in the Senior Year
During their last semester of undergraduate studies, BS Biology students accepted into the Fast Track will take up to six hours of approved graduate courses. The hours for these graduate courses will “double-count” toward both the (120-hour) undergraduate and (36-hour) graduate programs. The BS and MS degrees will be awarded sequentially (i.e., upon completion of each degree) and not simultaneously. Students will be allowed to continue enrollment in the graduate program upon successful completion of the 120-hour undergraduate degree.

Admissions Requirements
Applicants must provide the following at the time of application:

- A completed application form. Application fees are waived for Fast Track applicants.
- Official transcripts of all college and university coursework.
- A faculty member must be willing to serve as the chair of the applicant’s Graduate Advisory Committee and the applicant must include a summary of discussions with faculty members in their essay. Students must contact potential advisors prior to and during the application process to discuss research opportunities in faculty member labs.
- An essay (not more than 1000 words) describing educational and career goals and interests as they relate to program faculty.
- Applicants who do not have a faculty member willing to serve as their committee chair at the time of the transition from BS to MS cannot remain in the program.
- Official GRE scores by the time the student is reclassified to MS.

Courses
BIOL 1308  Science for Life I (Non-Majors Biology)
3 Semester Credit Hours (3 Lecture Hours)
A non-majors science course. Students will learn basic biological principles, identify the relevance of science in everyday life, and will understand the scientific method. This course does NOT substitute for BIOL 1406 - Biology I or BIOL 1407 - Biology II for science majors.

TCCNS: BIOL 1308
BIOL 1406 Biology I
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Presentation of basic biological concepts including scientific method, cytology, energetics, nucleic acids and genetics. This course is suitable for all majors.
Prerequisite: (MATH 1314, 1316, 2305, 2413, minimum score of 21 in 'ACT Math' or minimum score of 550 in 'SAT Math').
Co-requisite: SMTE 0091.
TCCNS: BIOL 1406

BIOL 1407 Biology II
4 Semester Credit Hours (4 Lecture Hours)
This course is an overview of the major concepts in biological diversity and plant and animal biology. Laboratory work will include individual/team activities as well as technology-related assignments.
Prerequisite: BIOL 1406.
Co-requisite: SMTE 0091.
TCCNS: BIOL 1407

BIOL 2300 Science Communication
3 Semester Credit Hours (3 Lecture Hours)
This course involves presentation and discussion of selected topics relating to the professional skills of practicing biological scientists, including basic software instruction, a review of library services pertinent to science, the application of scientific literature research skills, hypothesis generation and statistical tests, critical reviews of scientific articles, and an introduction to ethical issues in science.

BIOL 2371 Principles of Evolution
3 Semester Credit Hours (3 Lecture Hours)
An overview of the mechanisms by which heritable information changes, adaptations develop, and species diversify. Provides a foundation for molecular, cellular, and organismal studies in the biological sciences.
Prerequisite: BIOL 1407.

BIOL 2401 Anatomy and Physiology I
4 Semester Credit Hours (4 Lecture Hours)
Structure and function of the human body emphasizing biological chemistry, cell biology, tissues, and the integumentary, skeletal, muscular, and nervous systems. Not recommended for majors in the College of Science and Engineering. To count this course toward a major in the Department of Life Sciences, a student must demonstrate that it is required by professional schools in his or her career track and obtain approval for a substitution from his or her faculty mentor. Students may not receive credit for both this course and either BIOL 3425 - Functional Anatomy or BIOL 3430 - Physiology.
Co-requisite: SMTE 0091.
TCCNS: BIOL 2401

BIOL 2402 Anatomy and Physiology II
4 Semester Credit Hours (4 Lecture Hours)
Structure and function of the human body emphasizing blood, growth, development, genetics, and the endocrine, digestive, respiratory, cardiovascular, lymphatic, immune and urogenital systems. Not recommended for majors in the College of Science and Engineering. To count this course toward a major in the Department of Life Sciences, a student must demonstrate that it is required by professional schools in his or her career track and obtain approval for a substitution from his or her faculty mentor. Students may not receive credit for both this course and either BIOL 3425 - Functional Anatomy or BIOL 3430 - Physiology.
Prerequisite: BIOL 2401.
Co-requisite: SMTE 0091.
TCCNS: BIOL 2402

BIOL 2402 Animal Nutrition
3 Semester Credit Hours (3 Lecture Hours)
Examines the dietary requirements of both companion animals and livestock. Includes the anatomy, physiology and biochemistry of the gastrointestinal system, nutrient procurement and use, feed additives, growth stimulants, metabolic diseases, and diet therapy. Cross listed with BIMS 3300.
Prerequisite: BIOL 1407 and CHEM 3411 and (CHEM 3412 or 3412').
May be taken concurrently.

BIOL 2402 Microbiology
3 Semester Credit Hours (3 Lecture Hours)
An introduction to microorganisms including the bacteria, fungi, and viruses. Laboratory involves microbiological techniques and development of basic laboratory skills.
Prerequisite: BIOL 1406, 1407, CHEM 1411 and 1412.
Co-requisite: SMTE 0092.
TCCNS: BIOL 2420

BIOL 2416 Genetics
4 Semester Credit Hours (3 Lecture Hours)
Principles of genetic transmissions and molecular basis of heredity and variation. Weekly recitation periods will involve team assignments, problem solving activities, and seminars.
Prerequisite: BIOL 1406 and 1407.
TCCNS: BIOL 2416

BIOL 2420 Principles of Microbiology
4 Semester Credit Hours (4 Lecture Hours)
Introduction to microorganisms with emphasis on those of importance in patient care. Principles of disinfection, sterilization, immunity. This class is intended for nursing majors; it cannot substitute for BIOL 2421 - Microbiology.
Co-requisite: SMTE 0092.
TCCNS: BIOL 2420

BIOL 2421 Microbiology
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
An introduction to microorganisms including the bacteria, fungi, and viruses. Laboratory involves microbiological techniques and development of basic laboratory skills.
Prerequisite: BIOL 1406, 1407, CHEM 1411 and 1412.
Co-requisite: SMTE 0092.
TCCNS: BIOL 2421

BIOL 2472 Principles of Botany
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
Introduction to the structure, function, diversity and application of plants. Laboratory focus on anatomical features, physiological adaptations, classification, and life cycles.
Prerequisite: BIOL 1407 and CHEM 1411.
Co-requisite: SMTE 0091.

BIOL 3300 Animal Nutrition
3 Semester Credit Hours (3 Lecture Hours)
Examines the dietary requirements of both companion animals and livestock. Includes the anatomy, physiology and biochemistry of the gastrointestinal system, nutrient procurement and use, feed additives, growth stimulants, metabolic diseases, and diet therapy. Cross listed with BIMS 3300.
Prerequisite: BIOL 1407 and CHEM 3411 and (CHEM 3412 or 3412').
May be taken concurrently.

BIOL 3325 Biostatistics
3 Semester Credit Hours (3 Lecture Hours)
The application of statistical analyses to biological data. Students will gain an understanding of how to apply statistical analyses to biological data through study of the principles of experimental design including how to frame informative research questions. At a fundamental level, these concepts are linked to the philosophy of science and our understanding of the way the world works.

BIOL 3345 Cell Physiology
3 Semester Credit Hours (3 Lecture Hours)
Emphasis on cellular functions that underlie physiological processes, transport across membranes, membrane potential and excitability, the cell nucleus, and organelles and their relationship to energy, metabolism, and transport mechanisms within the cell. Offered during Spring semester of odd-numbered years
Prerequisite: BIMS 2200 and BIOL 3410.
**BIOL 3403 Molecular Biology**  
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)  
Principles of molecular biology including advanced concepts of gene structure, expression and regulation, chromatin structure, recombination, and current molecular biology techniques. Laboratory emphasis is on basic skills for nucleic acid analyses, including extraction, PCR amplification, quantification, restriction, and electrophoresis. DNA sequencing-based approaches are covered including bioinformatics for sequence comparisons, polymorphisms, and molecular identification. Cross listed with BIMS 3403.  
**Prerequisite:** BIOL 2416 and 2421.  
**Co-requisite:** SMTE 0092.

**BIOL 3410 Cell Biology**  
4 Semester Credit Hours (4 Lecture Hours)  
Study of cellular architecture and function. Topics include membranes, transport, organelles, cytoskeleton, and signaling mechanisms. Interrelationships of structure, function, energy and metabolism are explored. Laboratory will emphasize basic techniques of cell biology.  
**Prerequisite:** BIOL 2416 and CHEM 3411.  
**Co-requisite:** SMTE 0092.

**BIOL 3413 Invertebrate Zoology**  
4 Semester Credit Hours (3 Lecture Hours, 1 Lab Hour)  
Structure, life history, and evolution of the invertebrates with special emphasis on the phylogeny and ecological relationships of the major phyla. Laboratory will involve field trips and survey collections. Offered fall semester every year.  
**Prerequisite:** BIOL 1407.  
**Co-requisite:** SMTE 0091.

**BIOL 3414 Vertebrate Zoology**  
4 Semester Credit Hours (4 Lecture Hours)  
Structure, life history, and evolution of the vertebrates with special emphasis on the phylogeny and ecological relationships of the classes. Laboratory will involve field trips and survey collections. Offered only in Spring semester.  
**Prerequisite:** BIOL 1407.  
**Co-requisite:** SMTE 0091.

**BIOL 3425 Functional Anatomy**  
4 Semester Credit Hours (4 Lecture Hours)  
General trends in morphological development and adaptation as demonstrated by the anatomy and embryology of living and extinct chordates. Students may not receive credit for both this course and either BIOL 2401 - Anatomy and Physiology I or BIOL 2402 - Anatomy and Physiology II.  
**Prerequisite:** BIOL 1407.  
**Co-requisite:** SMTE 0091.

**BIOL 3428 Principles of Ecology**  
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)  
Introduction to the interrelationships of organisms and their environment. Population structure, community classification and regulation, and energy flow in ecosystems will also be covered. Laboratory sections will focus on experimental design and field techniques in ecology.  
**Prerequisite:** BIOL 1407 and (BIOL 2200, 2300, BIMS 2200 or UNIV 1101 and UNIV 1102) and CHEM 1411 and (MATH 2413 or 2413).  
* May be taken concurrently.  
**Co-requisite:** SMTE 0091.

**BIOL 3430 Physiology**  
4 Semester Credit Hours (4 Lecture Hours)  
The study of physiological processes that are the product of complex interactions between tissues, organs and organ systems, with emphasis on the circulatory, respiratory, endocrine, muscular, digestive, and urogenital systems. Particular focus on homeostasis, and the role of the environment and evolution on organ systems. Students may not receive credit for both this course and either BIOL 2401 - Anatomy and Physiology I, or BIOL 2402 - Anatomy and Physiology II.  
**Prerequisite:** BIOL 1407.  
**Co-requisite:** SMTE 0091.

**BIOL 3455 Plant form and Function**  
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)  
Anatomy of vegetative and reproductive organs of plants, unique cellular features, development and differentiation of cell and tissue types. Emphasis on physiological mechanisms of response and adaptation to the environment.  
**Prerequisite:** BIOL 1407.  
**Co-requisite:** SMTE 0091.

**BIOL 3479 Plant Ecology**  
4 Semester Credit Hours (4 Lecture Hours)  
Structure, physiology, life cycles, and economic impact of plants. Factors influencing diversity, succession and ecological distribution of plants.  
**Prerequisite:** BIOL 1407.  
**Co-requisite:** SMTE 0091.

**BIOL 4100 Research Ethics and Professionalism**  
1 Semester Credit Hour (1 Lecture Hour)  
A course designed to enhance the professionalism of undergraduate researchers. This course discusses the codified aspects of research ethics, including fabrication, falsification and plagiarism of data; assigning authorship, submitting manuscripts to more than one journal and management of lab teams. It also addresses careers in science, resume writing, producing the successful application and interviewing skills.  

**BIOL 4301 Embryology**  
3 Semester Credit Hours (3 Lecture Hours)  
Studies the events that occur just prior to and during gestation. Includes gametogenesis, chromosomal and single gene aberrations, teratology, and the development of the body systems.  
**Prerequisite:** BIOL 2416.

**BIOL 4302 Coral Reef Conservation**  
3 Semester Credit Hours (3 Lecture Hours)  
Survey of challenges and threats facing coral reef ecosystems in the 21st century and discussion of conservation and management strategies. Topics include biology and ecology of reef ecosystems, climate change impacts, cooral bleaching, over-fishing and the effectiveness and design of marine protected areas.  

**BIOL 4304 Biology of Viruses**  
3 Semester Credit Hours (3 Lecture Hours)  
Introduction to the study of viruses, including viral life cycles, replication schemes and Baltimore classification of representative bacteriophages, plant and animal viruses. Emphasis on analysis and review of primary literature on viruses.  
**Prerequisite:** BIOL 2416, 2421 and CHEM 1411.

**BIOL 4308 Biogeography**  
3 Semester Credit Hours (3 Lecture Hours)  
This course offers an overview of the theories, methods, and current directions in modern biogeography, emphasizing marine and terrestrial plant and animal species and communities.
BIOL 4309 Biological Systematics and Phylogenetics
3 Semester Credit Hours (3 Lecture Hours)
Introduction to the theories of biological systematics and phylogenetics. Including species concepts, biological classification, nomenclature, and phylogenetic methods including ancestral state reconstruction and divergence time estimation. Offered in the spring semester of odd years. Stacked with BIOL 5309.
Prerequisite: BIOL 1407.

BIOL 4311 Biological Bases of Behavior
3 Semester Credit Hours (3 Lecture Hours)
This lecture-based course examines the processes by which neuronal circuits generate behaviors and the mechanisms by which experience modulates the activity of these circuits.
Prerequisite: BIMS 4323.

BIOL 4312 Mariculture Techniques
3 Semester Credit Hours (2 Lecture Hours, 2 Lab Hours)
The study and hands-on application of biological, mechanical, and other concepts required to develop the skills and techniques necessary for efficient operation and management of public and private aquaculture facilities. Offered in Fall of odd-numbered years.
Prerequisite: BIOL 4370.

BIOL 4315 Animal Behavior
3 Semester Credit Hours (3 Lecture Hours)
What mechanisms cause behavior? How does behavior develop? How does behavior affect survival and reproduction? How does behavior evolve? These questions will be explored in vertebrate and invertebrate species. Offered in the fall semester Stacked with BIOL 5315.

BIOL 4319 Biology of Marine Mammals
3 Semester Credit Hours (3 Lecture Hours)
Introduction to marine mammals, with a focus on their interactions with their biotic and abiotic environment.
Prerequisite: BIOL 1407.

BIOL 4323 Global Change Ecology
3 Semester Credit Hours (3 Lecture Hours)
An introduction to the effects of climatic and anthropogenic change on terrestrial and aquatic structure and function. Includes readings from the current literature and discussion of controversial articles.
Prerequisite: BIOL 3428.

BIOL 4328 Fisheries
3 Semester Credit Hours (3 Lecture Hours)
A study of theory and techniques in fisheries science, including practical fisheries sampling designs and techniques, behavior of fisheries populations and application to resource management with emphasis in tide-influenced waters. Includes readings in the current literature.
Prerequisite: BIOL 1407.

BIOL 4329 Fisheries Techniques
3 Semester Credit Hours (2 Lecture Hours)
This class is designed to provide practical experience in the theory and application of traditional and modern fisheries sampling and analytical techniques used in Fisheries Science and Management. This is a hands-on field- and laboratory-based course that will develop skills that are most commonly used by fisheries biologists and technicians. Offered in Fall of even-numbered years.
Prerequisite: BIOL 4328.

BIOL 4330 Conservation Biology
3 Semester Credit Hours (3 Lecture Hours)
Principles and theories relating to the conservation of biological diversity, including patterns and processes creating biological diversity, estimates of extinction rates, consequences of losses of biodiversity and causes of diversity loss.

BIOL 4334 Biology and Ecology of Coral Reefs
3 Semester Credit Hours (3 Lecture Hours)
This course will introduce the biology of corals, describe the abiotic and biotic interactions among coral reef ecosystem inhabitants, identify the threats of climate change, and discuss the conservation and management of reefs for the future. Offered every spring.
Prerequisite: BIOL 3428.

BIOL 4336 Marine Ecology
3 Semester Credit Hours (3 Lecture Hours)
Habitats and community structure in marine environments; biotic and abiotic factors governing the distribution of marine organisms. (Offered every Spring)
Prerequisite: BIOL 3428.

BIOL 4340 Genomics, Proteomics and Bioinformatics
3 Semester Credit Hours (3 Lecture Hours)
An introduction to integrative biological study using genome-wide approaches and bioinformatics. The "omics" technologies (Genomics, Proteomics, Metabolomics, etc.) will be surveyed for current and potential contributions to understanding biological function at molecular, cellular, organismal and ecosystem levels.
Prerequisite: BIOL 2416 and 3410 or CHEM 4401.

BIOL 4343 Oceans and Human Health
3 Semester Credit Hours (3 Lecture Hours)
Healthy oceans are essential to the habitability of our planet — for humans and all other forms of life. Students will explore links between oceans, pollution, human well-being, ecosystem services, resource management, and the science and legislation governing the enforcement of water quality standards.

BIOL 4350 Research and Design
1-3 Semester Credit Hours (1-3 Lecture Hours)
Course will include experimental design, literature review of a research topic and laboratory work on the research topic.

BIOL 4353 Down the River: Biology of Gulf Coast Fishes
3 Semester Credit Hours (3 Lecture Hours)
This course covers aspects of ecology and biogeography of riverine and estuarine fishes while exposing students to field sampling techniques and museum preparation of specimens. This will be a unique opportunity for students to gain an in-depth understanding of the biological complexity of Texas Gulf Coast river systems while gaining hands-on experience in field and museum ichthyological techniques that are employed by state, federal and academic researchers alike.
Co-requisite: SMTE 0091.

BIOL 4355 Public Aquarium and Animal Care Operations
3 Semester Credit Hours (3 Lecture Hours)
This course examines the unique requirements needed for public aquariums and zoos to balance animal care and health with public display for general education and conservation research.
Co-requisite: SMTE 0091.
BIOL 4360 Computation for 21st Century Biologists
3 Semester Credit Hours (3 Lecture Hours)
This course is designed to prepare and enable students to use computational tools for bioinformatic applications in advanced courses and independent research projects. Students will be introduced to powerful open-source computing tools used in biological research for creation, organization, manipulation, processing, analysis, and archiving of big data. While not a formal requirement, it is assumed that students have a firm command of basic algebra. Offered every Fall semester Stacked with BIOL 5360

BIOL 4370 Marine Culture
3 Semester Credit Hours (3 Lecture Hours)
Survey of the physiological, behavioral, environmental, and economic parameters governing the culture of selected aquatic species. Included are techniques employed worldwide to produce aquatic products.
Prerequisite: BIOL 2416 and MATH 2413.

BIOL 4371 Population Genetics
3 Semester Credit Hours (3 Lecture Hours)
An introduction to evolutionary processes and their genetic basis, this course focuses on theoretical and experimental approaches to the study of population genetics, quantitative genetics, evolutionary ecology, and molecular evolution.
Prerequisite: BIOL 2416 and MATH 2413.

BIOL 4396 Directed Independent Study
1-3 Semester Credit Hours (1-3 Lecture Hours)
Research in areas of current interest. Written report required. May be repeated for a maximum of 6 semester hours.
Prerequisite: BIOL 1407 and CHEM 1412.

BIOL 4399 Directed Independent Research
3-6 Semester Credit Hours (3-6 Lecture Hours)
Independent laboratory- or field-based research project on topic of current interest. Project developed in conjunction with a faculty advisor. Written report required. May be repeated once for a total of 6 semester credit hours.

BIOL 4405 Limnology
4 Semester Credit Hours (4 Lecture Hours)
The study of the functional relationships and productivity of aquatic communities as they are affected by their physical, chemical, and biotic environment. The influence of man's activities on these systems will be the focus of the course.
Prerequisite: BIOL 3428.
Co-requisite: SMTE 0091.

BIOL 4406 Immunology
4 Semester Credit Hours (4 Lecture Hours)
An overview of immunology with emphasis on current knowledge of the immune system. Detailed examination of the specific cells, cytokines, antibodies, and molecules that comprise the immune system. Laboratory exercises demonstrate the basic principles and techniques used in immunologic studies. Cross listed with BIMS 4406.
Prerequisite: BIOL 2421.
Co-requisite: SMTE 0092.

BIOL 4407 BIOLOGY OF THE FUNGI
4 Semester Credit Hours (3 Lecture Hours, 1 Lab Hour)
Overview of the fungi, including their characteristics, diversity, and ecology. Interactions between fungi and other organisms are explored along with the role and importance of the fungi.
Prerequisite: BIOL 2421.
Co-requisite: SMTE 0092.

BIOL 4408 Microbial Diversity and Ecology
4 Semester Credit Hours (4 Lecture Hours)
Biodiversity and roles of microorganisms in natural environments. Interactions with other micro- and macro-organisms (humans, animals and plants) and with abiotic factors. Unique abilities of microorganisms such as nitrogen fixation and adaptation to extreme environments.
Prerequisite: (BIOL 2421 or 4328).
Co-requisite: SMTE 0092.

BIOL 4410 Mammalogy
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
Systematics and ecology of mammals. Offered in even Fall semesters.
Prerequisite: BIOL 1407.
Co-requisite: SMTE 0091.

BIOL 4413 Entomology
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
A broad overview of the natural history, classification, phylogeny, ecology, behavior, development and physiology of insects and their kin. The lab will involve field work, collection and curation. Offered in spring semester of even years. Stacked with BIOL 5413.
Prerequisite: BIOL 3413.
Co-requisite: SMTE 0091.

BIOL 4417 Field Biology
4 Semester Credit Hours (1 Lecture Hour, 6 Lab Hours)
is a hands-on course designed to teach students key concepts by immersing them in nature. Topics include adaptations of plants and animals in different habitats, food web interactions, and how biotic and abiotic forces interact to structure natural communities including spatial and temporal variation in communities.
Prerequisite: BIOL 3428.
Co-requisite: SMTE 0091.

BIOL 4422 Plant Taxonomy
4 Semester Credit Hours (4 Lecture Hours)
Principles and practice in the classification of flowering plants. Field trips are required.
Prerequisite: BIOL 1407.
Co-requisite: SMTE 0091.

BIOL 4425 Ornithology
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
Systematics, anatomy, physiology, ecology, behavior, and field identification of birds. Offered in odd Fall semester.
Prerequisite: BIOL 1407.
Co-requisite: SMTE 0091.

BIOL 4429 Marine Botany
4 Semester Credit Hours (4 Lecture Hours)
The ecology of marine plants with emphasis on identification, life histories, and environmental factors of distribution.
Prerequisite: BIOL 1407.
Co-requisite: SMTE 0091.

BIOL 4430 Marine Plankton
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
In this class we will investigate the systematics, distribution, and ecology of major marine plankton groups and introduce major concepts in biological oceanography. Offered in Spring of odd-numbered years.
BIOL 4432  Ichthyology
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
Systematics, evolution, biology, and ecology of fishes. Laboratory identification of marine and freshwater fishes collected during field excursions.
Prerequisite: BIOL 1407.
Co-requisite: SMTE 0091.

BIOL 4433  Parasitology
4 Semester Credit Hours (4 Lecture Hours)
An introduction to parasitology with emphasis on internal parasites and appropriate references to human endoparasites and parasites of veterinary importance.
Prerequisite: BIOL 2421.
Co-requisite: SMTE 0092.

BIOL 4435  Biological Microtechniques
4 Semester Credit Hours (4 Lecture Hours)
Theory and techniques of processing specimens for histochemistry and microscopic examination. Laboratory includes preparation of tissues and small specimens for analysis and display.
Prerequisite: BIOL 1407 and CHEM 3411.
Co-requisite: SMTE 0092.

BIOL 4439  Case Work Methods in Forensic Anthropology
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
This course combines the study of human bones (osteology) and skeletal anatomy with established and validated forensic anthropological methods to solve theoretical and actual forensic cases involving human remains. Offered during the spring semester. Stacked with BIOL 5439. Cross-listed with BIMS 4439.
Prerequisite: BIOL 2401.

BIOL 4442  Herpetology
4 Semester Credit Hours (4 Lecture Hours)
Systematics, ecology, and behavior of amphibians and reptiles.
Prerequisite: BIOL 1407.
Co-requisite: SMTE 0091.

BIOL 4444  Estuarine Organisms
4 Semester Credit Hours (4 Lecture Hours)
Systematics, distribution, and ecology of estuarine macroflora and macroflora. Weekend field trips and individual study required.
Prerequisite: BIOL 3413.
Co-requisite: SMTE 0091.

BIOL 4446  Tropical Ecosystems & Conservation
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
Survey of the ecology and conservation issues of the major ecosystems in the tropics and field techniques used to study tropical forest ecology.
Prerequisite: BIOL 3428.
Co-requisite: SMTE 0091.

BIOL 4452  Ecology and Evolution of Fishes
4 Semester Credit Hours (3 Lecture Hours, 4 Lab Hours)
This course covers aspects of fish ecology from individual, population, community, and ecosystem levels. We discuss the role of the environment on fish physiology and behavior, food-web dynamics, community assembly and diversity, ecosystem interactions, and anthropogenic impacts on fishes with a focus on conservation.
Prerequisite: BIOL 4432.
Co-requisite: SMTE 0091.

BIOL 4547  Marine Science Field Camp
5 Semester Credit Hours (3 Lecture Hours, 6 Lab Hours)
Students learn techniques required to properly conduct marine science field research. Practical, hands-on experience is gained in a variety of topics including biotic and abiotic sample collection and processing, quantitative analysis of field data, evaluation of environmental factors, survival and distribution of living organisms, and the structure of biotic communities.

BIOL 4590  Selected Topics
5 Semester Credit Hours (5 Lecture Hours)
Variable content. May be repeated for credit.

BIOL 4598  Biology Internship
2-6 Semester Credit Hours
Two to six semester credit hours may be earned by working in an internship position in a governmental agency, private industry, or other appropriate venue.

BIOL 4609  Field and Sampling Techniques
6 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
The study of techniques required for proper field work in the biological sciences. The course includes ecological sampling methods, safety, logistics, equipment operation and maintenance and travel concerns.
Co-requisite: SMTE 0091.

BIOL 5102  Graduate Defense Seminar
1 Semester Credit Hour
Presentation of research conducted for MS degree. Should be taken the last semester of resident graduate study. Open only to MS Thesis and Non-thesis Degree Candidates in Biology. Students can enroll in any semester with the approval of their graduate advisory committee chair.

BIOL 5301  Coral Reef Systems
3 Semester Credit Hours (3 Lecture Hours)

BIOL 5304  Virology
3 Semester Credit Hours (3 Lecture Hours)
Survey of bacteriophages and major pathogenic plant and animal viruses including Baltimore classification, viral replication, and emerging viral diseases. Emphasis on analysis and review of primary literature on viruses.
Prerequisite: BIOL 2416, 2421 and CHEM 3412.

BIOL 5308  Biogeography
3 Semester Credit Hours (3 Lecture Hours)
Selected reading, discussion and projects concerning the geographic distribution of plants and animals.
Prerequisite: BIOL 3428 and 3414.

BIOL 5309  Biological Systematics and Phylogenetics
3 Semester Credit Hours (3 Lecture Hours)
Introduction to the theories and methods of biological systematics and phylogenetics. Offered spring semester of odd-numbered years. Stacked with BIOL 4309.

BIOL 5310  Physiological Adaptations in Animals
3 Semester Credit Hours (3 Lecture Hours)
A study of the physiological adaptations of animals to their environment, including osmoregulatory and temperature regulatory mechanisms.
Prerequisite: BIOL 3430.

BIOL 5311  Cellular Bases of Behavior
3 Semester Credit Hours (3 Lecture Hours)
Using vertebrate and invertebrate animal models, this graduate-level course explores how behaviors emerge from the activity of neural circuits and how experience modulates these circuits.
BIOL 5315 Animal Behavior
3 Semester Credit Hours (3 Lecture Hours)
Adaptive aspects of animal behavior related to how and why behaviors develop, how behaviors affect fitness, and how behaviors evolve. Offered in the fall semester. Stacked with BIOL 4315

BIOL 5319 Biology of Marine Mammals
3 Semester Credit Hours (3 Lecture Hours)
Introduction to marine mammals, with a focus on their interactions with their biotic and abiotic environment.

BIOL 5322 Molecular Genetics
3 Semester Credit Hours (3 Lecture Hours)
In-depth study of the molecular basis of genetic interactions; focus on molecular mechanisms of mutation, suppression and recombination.
Prerequisite: CHEM 3412, BIOL 2416 and 3403.

BIOL 5329 Plant Adaptations
3 Semester Credit Hours (3 Lecture Hours)
Emphasis on living gymnosperms and angiosperms and their adaptive significance.

BIOL 5330 Conservation Biology
3 Semester Credit Hours (3 Lecture Hours)
Principles of and threats to the conservation of biological diversity in its many forms, as well as the contemporary tools to solve conservation problems including patterns and processes creating biological diversity, causes of diversity loss, the role of economics, policy, ethics, and institutions, and the use of models in conservation planning and evaluation. Advanced courses in ecology or marine biology would benefit students. Offered in the fall semester. Stacked with BIOL 4330.

BIOL 5334 Biology and Ecology of Coral Reefs
3 Semester Credit Hours (3 Lecture Hours)
This course will introduce the biology of corals, describe the abiotic and biotic interactions among coral reef ecosystem inhabitants, identify the threats of climate change, and discuss the conservation and management of reefs for the future. Offered every spring.

BIOL 5335 Aquatic Microbiology
3 Semester Credit Hours (3 Lecture Hours)
Types and distribution of microorganisms in aquatic environments. Interactions with other organisms. Role in nutrient cycling, degradation of organic substances, pollution, water purification.
Prerequisite: BIOL 2421.
Co-requisite: SMTE 0092.

BIOL 5340 Genomics, Proteomics and Bioinformatics
3 Semester Credit Hours (3 Lecture Hours)
Integrative biological study using genome-wide approaches and bioinformatics. The “omics” technologies (Genomics, Proteomics, Metabolomics, etc) will be reviewed. Applications to understanding biological function in various biological disciplines will be emphasized. Offered during fall. Cross listed with MARB 6342.
Prerequisite: BIOL 2416 and 3410 or CHEM 4301.

BIOL 5355 Public Aquarium and Animal Care Operations
3 Semester Credit Hours (3 Lecture Hours)
This course examines the unique requirements needed for aquariums and zoos to balance animal care and health with public display for general education and conservation research.
Co-requisite: SMTE 0091.

BIOL 5360 Computation for 21st Century Biologists
3 Semester Credit Hours (3 Lecture Hours)
This course is designed to prepare students to use computational tools for bioinformatic applications in advanced courses and independent research projects. Students will be introduced to powerful open-source computing tools used in biological research for creation, organization, manipulation, processing, analysis, and archiving of "big data." While not a formal requirement, it is assumed that students have a firm command of basic algebra. Offered every fall semester. Stacked with BIOL 4360

BIOL 5371 Evolutionary Genetics
3 Semester Credit Hours (3 Lecture Hours)
EVOLUTIONARY GENETICS An advanced introduction to evolutionary processes and their genetic basis, focusing on theoretical and experimental approaches to the study of population genetics, phylogeography, coalescence theory, evolutionary ecology, and molecular evolution.

BIOL 5392 Thesis Proposal
3 Semester Credit Hours
Thesis track students must complete a proposal for their thesis project. A proposal is considered complete when it is approved and signed by all members of the student’s graduate advisory committee. Open only to thesis track students in the MS Biology program. Qualified students can enroll in any semester with the approval of their graduate advisory committee chair.

BIOL 5393 Thesis Research
3 Semester Credit Hours
Implementation of the Thesis Proposal, and the production of a rough draft of the thesis submitted for initial editing and comment. A course section will be created for the student to enroll. Students can enroll in any semester with the approval of their graduate advisory committee chair.
Prerequisite: BIOL 5392.

BIOL 5394 Thesis Submission
3 Semester Credit Hours
The final draft of the thesis is completed, approved by the graduate advisory committee, and is ready for distribution. Students can enroll in any semester with the approval of their graduate advisory committee chair.
Prerequisite: (BIOL 5392 and 5393).

BIOL 5396 Directed Independent Study
1-3 Semester Credit Hours (1-3 Lecture Hours)
Study in areas of current interest. Credit is not given for research on the thesis project. A total of six semester hours of Directed Independent Study may be counted toward the MS degree.

BIOL 5397 Directed Research
3 Semester Credit Hours
For students in the MS Biology Professional track. Field, laboratory, and/or library research that results in the production of the professional paper, its approval by the graduate advisory committee, and its final submission. Students can enroll in any semester with the approval of their graduate advisory committee chair. This course must be successfully completed for the professional track student to complete the MS degree.
BIOL 5406 Immunochemistry
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
An in-depth study of immunology. Emphasizes function and interaction of specific cells, cytokines, lymphokines, antibodies and molecules that are the essential components of the immune system. The course includes up-to-date coverage of both innate and adaptive immunity, and the immune system in health and disease.
Prerequisite: BIOL 2421.
Co-requisite: SMTE 0092.

BIOL 5407 Mycology
4 Semester Credit Hours (3 Lecture Hours, 1 Lab Hour)
Biology, classification, and ecology of the fungi. Applied aspects and current topics in mycology and mycological techniques.
Prerequisite: BIOL 2421.
Co-requisite: SMTE 0092.

BIOL 5408 Microbial Ecology
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
Relationships between microorganisms and their biotic and abiotic environments. Role of microorganisms in biogeochemical cycling. Methodology in microbial ecology. Biotechnological aspects.
Co-requisite: SMTE 0092.

BIOL 5410 Mammalogy
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
The course is designed for graduate students in biology wanting to acquire a more detailed working knowledge and appreciation of mammalian diversity in structure, function, ethology, and ecology. Knowledge and skills acquired in this course will be useful to field and laboratory studies in ecology, evolution, animal behavior, biogeography, wildlife management, and related disciplines. Offered in even Fall semester.
Co-requisite: SMTE 0091.

BIOL 5412 Ecology of Fresh Waters
4 Semester Credit Hours (4 Lecture Hours)
ECOLOGY OF FRESHWATERS Ecological relationships and productivity of freshwater communities, including rivers, lakes and wetlands. Focus is on interactions of the physical, chemical and biotic environment and influence of human activities on systems.
Co-requisite: SMTE 0091.

BIOL 5413 Entomology
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
A survey of insects and their kin including natural history, classification, phylogeny, ecology, behavior, development, and physiology. Offered in spring semester of even years. Stacked with BIOL 4413.
Co-requisite: SMTE 0091.

BIOL 5414 Growth and Development
4 Semester Credit Hours (4 Lecture Hours)
Special topics involving growth and development in plants and animals.
Co-requisite: SMTE 0092.

BIOL 5415 Biology of Estuarine Organisms
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
Systematics, distribution, and ecology of estuarine macrofauna and macroflora. Weekend field trips and individual study required.
Prerequisite: BIOL 3413.
Co-requisite: SMTE 0091.

BIOL 5417 Field Biology
4 Semester Credit Hours (1 Lecture Hour, 6 Lab Hours)
A hands-on course designed to teach students key concepts by immersing them in nature. Topics include adaptations of plants and animals in different habitats, food web interactions, and how biotic and abiotic forces interact to structure natural communities including spatial and temporal variation in communities.
Prerequisite: BIOL 3428.
Co-requisite: SMTE 0092.

BIOL 5420 Application of Molecular Techniques
4 Semester Credit Hours (4 Lecture Hours)
Application of DNA-RNA technology to selected scientific problems. Emphasis on current research techniques.
Prerequisite: BIOL 3403 and CHEM 3411.
Co-requisite: SMTE 0092.

BIOL 5422 Plant Taxonomy
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
Experimental and analytical approaches to plant variation and evolution, breeding systems, cyto- and molecular genetics, hybridization and phylogeny. The course will present a foundational approach to the methods, research and terminology of plant systematics and summarize information on the most recent knowledge of evolutionary relationships as well as practical information vital to field work.
Co-requisite: SMTE 0091.

BIOL 5425 Ornithology
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
The course is designed for graduate students in biology wanting to acquire a more detailed working knowledge and appreciation of avian diversity in structure, function, ethology, and ecology. Knowledge and skills acquired in this course will be useful to field and laboratory studies in ecology, evolution, animal behavior, biogeography, wildlife management, and related disciplines. Offered in odd Fall semesters.
Co-requisite: SMTE 0091.

BIOL 5426 Avian Biology
4 Semester Credit Hours (4 Lecture Hours)
NCD
Co-requisite: SMTE 0091.

BIOL 5427 Coastal Ecology of Texas
4 Semester Credit Hours (4 Lecture Hours)
COASTAL ECOLOGY OF TEXAS Study of the ecology and environmental issues of the Texas coast. Includes field trips along the entire Texas coastline.
Co-requisite: SMTE 0091.

BIOL 5428 Fisheries Biology
4 Semester Credit Hours (4 Lecture Hours)
FISHERIES BIOLOGY Advanced study of theory and techniques in fisheries science including behavior of fisheries populations and applications to resource management with emphasis in tidal-influenced waters. Includes readings in the current literature and a research project. The laboratory will emphasize practical sampling design and data interpretation.
BIOL 5429  Marine Botany
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
Marine plants are a diverse group that includes unicellular algae, seaweeds, seagrasses, salt marshes, and mangrove forests. The goal is to present taxonomic, physiological, chemical, and ecological aspects of marine plants, their adaptations, and how abiotic and biotic factors interact in their communities. The use of recent journals and original scientific research will allow the student to evaluate anthropogenic effects to these communities and develop methods of restoration and management.
Co-requisite: SMTE 0091.

BIOL 5430  Marine Plankton
4 Semester Credit Hours (4 Lecture Hours)
Investigation of the systematics, distribution, and ecology of marine plankton. Cross listed with MARB 6430.
Co-requisite: SMTE 0091.

BIOL 5431  Phycology
4 Semester Credit Hours (4 Lecture Hours)
Study of the major groups of freshwater and marine algae; morphology, ecology, systematics, life cycles, and physiology. Laboratories emphasize collection, identification, and culturing techniques.
Co-requisite: SMTE 0091.

BIOL 5432  Ichthyology
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
The study of fish encompassing species diversity, natural history, and evolutionary and ecological relationships of fishes. This course will consist of four major parts: (1) Evolution, (2) Systematics, (3) Biology, and (4) Ecology of fish. Laboratory identification of marine and freshwater fishes from the University archives and collected during field excursions.
Co-requisite: SMTE 0091.

BIOL 5435  Biological Microtechniques
4 Semester Credit Hours (2 Lecture Hours, 4 Lab Hours)
The theory and practice of using histochemical and microscopic techniques to prepare tissues and small specimens for research analysis.
Prerequisite: CHEM 3411.
Co-requisite: SMTE 0092.

BIOL 5436  Marine Ecological Processes
4 Semester Credit Hours (4 Lecture Hours)
Advanced studies in structure and habitats of marine environments. Emphasis on factors influencing distribution of marine organisms, including field trips to areas along the Texas coast.
Prerequisite: BIOL 3428.
Co-requisite: SMTE 0091.

BIOL 5437  Ecology of Marine Plants
4 Semester Credit Hours (4 Lecture Hours)
Co-requisite: SMTE 0091.

BIOL 5439  Case Work Methods in Forensic Anthropology
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
This course combines the study of human bones (osteology) with hands-on examination of disarticulated skeletal remains using established and validated forensic anthropological methods to develop the demographic profile of the living individual, including assessment of trauma and pathological conditions. Offered in the spring semester. Stacked with BIOL 4439. Cross-listed with BIMS 4439.
Prerequisite: BIOL 2401.
Co-requisite: SMTE 0092.

BIOL 5442  Herpetology
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
A global perspective and current research topics on the biology of amphibians and reptiles.
Co-requisite: SMTE 0091.

BIOL 5446  Tropical Ecology and Conservation
4 Semester Credit Hours (4 Lecture Hours, 3 Lab Hours)
This is an overview course in major ecosystems in both the New and Old World tropics, the ecological principles at work in these systems, and the current threats and conservation approaches being used. It will be a hybrid course including lectures and journal readings/discussion (seminar-style).
Prerequisite: BIOL 3428.

BIOL 5452  Ecology and Evolution of Fishes
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
This course covers aspects of fish ecology from individual, population, community, and ecosystem levels. We discuss the role of the environment on fish physiology and behavior, food-web dynamics, community assembly and diversity, ecosystem interactions, and anthropogenic impacts on fishes with a focus on conservation.
Co-requisite: SMTE 0091.

BIOL 5590  Special Topics
5 Semester Credit Hours (5 Lecture Hours)
An advanced study of a biological topic. May be repeated with full credit in another area of biology. Topics vary by semester.

BIOL 5609  Field and Sampling Techniques
6 Semester Credit Hours (3 Lecture Hours, 6 Lab Hours)
Experience in field studies, organizing field notes, collecting and methods of preserving organisms for teaching and museum purposes. The course includes field ecological sampling methods, environmental data collection, safety, logistics, and proper scientific equipment operation.
Co-requisite: SMTE 0091.

BIOL 5940  Project Research
1-9 Semester Credit Hours (1-9 Lecture Hours)
Research related to the MS project. Open only to degree candidates in biology with consent of the graduate advisor. This course may be repeated as needed but a maximum of 4 hours can be applied to the MS degree in biology. Course is taken as credit/non-credit. Students can enroll in any semester with the approval of their graduate advisory committee chair.

BIOL 6371  Evolutionary Genetics
3 Semester Credit Hours (3 Lecture Hours)

BIOL 6446  Tropical Ecology and Conservation
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
TROPICAL ECOL OGY AND CONSERVATION Ecological processes and conservation issues in the tropics. Laboratory focuses on field techniques used to study tropical forest ecology. Principals of Ecology (BIOL 3428) or equivalent, or permission of instructor. SMTE 0091 is a co-requisite for this course. Documented completion of this safety training is required early in the semester for continued participation in this course.
Co-requisite: SMTE 0091.

Fast Track Biomedical Sciences, BS to Biology, MS
Program Description
The university allows the opportunity for high-achieving students to waive a select number of undergraduate credits in order to obtain a
graduate degree at an accelerated pace. Students interested in the Fast Track in Biomedical Sciences must meet the following application criteria:

- Currently seeking a BS in Biomedical Sciences at A&M-Corpus Christi.
- Minimum of a 2.75 GPA in the BIOL 1406-07 and CHEM 1411-12 courses
- Students must have a 3.0 cumulative GPA (and a science and mathematics GPA of 3.0) by the fifth (5th) semester of university enrollment, with successful completion of coursework in the following: Genetics, Microbiology, Organic Chemistry I, Organic Chemistry II and two other upper-level courses (Physiology or Pathophysiology or Cell Biology).
- Transfer students from Del Mar College, Alamo Colleges, Austin Community College or other two-year institutions may enter as juniors in the 5th semester if they have a 3.0 or greater OR they meet one of the requirements below:
  - a GRE combined score of 300 OR
  - Grades of "B" or higher in the following courses or equivalents will allow entry into the program with two semesters to complete Organic Chemistry I and II, if they have both overall and science and mathematics GPA of 3.0 or higher.

If accepted to the Fast Track program, the student will be given permission to enroll in prescribed graduate courses during their last semester of undergraduate studies. Six hours of upper level undergraduate courses will “double-count” and will replace up to six graduate hours. Students will be allowed to continue enrollment in the graduate program upon successful completion of the undergraduate degree.

The BS and MS degrees will be awarded sequentially (i.e., upon completion of each degree) and not simultaneously.

In their undergraduate portion, students are strongly advised to take DIS (BIOL 4396/BIMS 4396) or the Research and Design course (BIOL 4350 – 3 SCH) or the Directed Independent Research (BIOL 4399 3-6 SCH, max 6) course to formulate a topic.

Admissions Requirements
Applicants must provide the following at the time of application:

- A completed application form. Application fees are waived for Fast Track applicants.
- Official transcripts of all college and university coursework.
- An essay (not more than 1000 words) describing educational and career goals and interests as they relate to program faculty.
- A faculty member must be willing to serve as the chair of the applicant’s Graduate Advisory Committee and the applicant must include a summary of discussions with faculty members in their essay. Students must contact potential advisors prior to and during the application process to discuss research opportunities in faculty member labs.
- Applicants who do not have a faculty member willing to serve as their committee chair at the time of the transition from BS to MS cannot remain in the program.
- Official GRE scores by the time the student is reclassified to MS.

Revised GRE scores by the time the student is reclassified to MS.

### Fast Track Environmental Science, BS and Environmental Science, MS

#### Program Description

The university allows the opportunity for high-achieving students to count a select number of graduate credits toward their undergraduate degree and thereby obtain a graduate degree at an accelerated pace. Students interested in the Fast Track in Environmental Science must meet the following application criteria:

- Currently seeking a BS in Environmental Science at A&M-Corpus Christi.
- Minimum of a 3.0 GPA in the last 60 SCH (and a 3.0 GPA in all science and math courses) at the time of Fast Track application.
- Classified as a Senior with successful completion of at least 90 SCH, including:

</table>

Students accepted into the Fast Track program will be given permission to enroll in up to six hours of prescribed graduate courses during their last semester of undergraduate studies. The hours for these graduate courses will “double-count” toward both the undergraduate and graduate programs. The BS and MS degrees will be awarded sequentially (i.e., upon completion of each degree) and not simultaneously. Students will be allowed to continue enrollment in the graduate program upon successful completion of the undergraduate degree.

### Admissions Requirements

Applicants must provide the following at the time of application:

- A completed application form. Application fees are waived for Fast Track applicants.
- Official transcripts of all college and university coursework.
- An essay of at least 300 words describing their educational and career interests, goals, and challenges.
- Three letters of evaluation from persons knowledgeable about their potential for success in graduate studies.
- Identify a faculty member willing to serve as their graduate advisor. Applicants will not be admitted to the program without a graduate advisor.
- Official GRE scores by the time the student is reclassified to MS.

No criterion is weighted more heavily than any other criterion. Applications received or completed after the deadline for admission during one semester may be considered for admission in the following semester at the applicant’s request. Applicants will be notified of the outcome of their application by email.

### Academic Preparation

Students accepted to the degree program with insufficient background in science, computer science, mathematics, or communication skills will be required to take undergraduate or graduate prerequisite courses prescribed by their advisory committees. These courses may or may not apply towards the total required for the master’s degree.

### Fast Track Curriculum in the Senior Year

BS, Environmental Science students accepted in the Fast Track will have up to six hours of undergraduate elective credit replaced with six hours of graduate credit during the final semester of the senior year. A Fast Track student, in consultation with the faculty adviser, will be able to substitute six hours of undergraduate courses from BIOL, CHEM, COSC, ESCI GEOL, GISC, MATH, PHYS, or other disciplines as approved.

In place of the six hours of undergraduate courses, the student will take the following graduate courses instead:

- ESCI 5302 (sch) or ESCI 5360 (sch) or BLAW 5330 Environmental Law and Policy (3 sch) and
- An approved graduate elective.

See the Graduate Catalog for a complete description of the degree requirements for the MS in Environmental Science.
Courses

ESCI 1401 Environmental Science I: Intro to Environmental Science
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Principles of the scientific method and critical thinking provide a foundation for subsequent consideration of environmental issues through a multidisciplinary approach. Laboratory exercises and local field experiences reinforce concepts introduced in the lectures. Fall, Spring.
Co-requisite: SMTE 0096.
TCCNS: ENVR 1401

ESCI 1490 Selected Topics
1-4 Semester Credit Hours (1-4 Lecture Hours)
Subject materials variable. May be repeated for credit when topics are significantly different. Faculty approval required. Offered on sufficient demand.

ESCI 3202 Professional Skills
2 Semester Credit Hours (2 Lecture Hours)
Presentation and discussion of selected topics relating to the professional skills of practicing environmental scientists including literature searches, reviews, paper presentation, professional and career opportunities, professional ethics. Fall, Spring.

ESCI 3351 Oceanography
3 Semester Credit Hours (3 Lecture Hours)
Methods and principles of oceanography. A survey of oceanography with emphasis placed on the physical processes affecting water and water masses of the world oceans. Fall (on sufficient demand), Spring.
Prerequisite: CHEM 1412, ESCI 1401 or GEOL 1403.

ESCI 3403 Introduction to Meteorology
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
This course is an introduction to meteorology and the dynamics of planetary atmospheres. Emphasis on atmospheric accretion, composition, evolution, structure, and dynamics. Lab exercises cover basic measurement techniques, weather maps, and forecasting. Fall, Spring (on sufficient demand).
Co-requisite: SMTE 0096.

ESCI 3443 Environmental Biology
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Historical, contemporary, and projected concerns of human activities on biological aspects of ecosystem functioning.
Prerequisite: BIOL 1407.
Co-requisite: SMTE 0096.

ESCI 4130 Oil Spill Prevention and Response Lab
1 Semester Credit Hour (2 Lab Hours)
Practical techniques for control, containment, countermeasures, removal, and disposal of oil spills in an environmentally safe manner. Field exercises will include use of boats, booms and skimmers. Fall, Spring, Summer. (on sufficient demand).
Prerequisite: ESCI 4230.
*May be taken concurrently.
Co-requisite: SMTE 0096.

ESCI 4170 Hazardous Waste Operations and Emergency Response Lab
1 Semester Credit Hour (2 Lab Hours)
Practical techniques for handling, reducing, and disposing of hazardous wastes in an environmentally safe manner. Lab exercises in use of personal protective gear and safe handling of hazardous substances. Fall, Spring, Summer. (on sufficient demand).
Prerequisite: ESCI 4270.
*May be taken concurrently.
Co-requisite: SMTE 0096.

ESCI 4201 Scientific Diving Techniques
2 Semester Credit Hours (2 Lecture Hours)
Theory, science, and art of underwater diving technology and its application to scientific objectives. Course helps fulfill some training requirements of the Texas A&M University-Corpus Christi Guidelines for scientific diving.

ESCI 4202 Issues in Environmental Science
2 Semester Credit Hours (2 Lecture Hours)
Exploration of major issues in environmental science posing past, present and future challenges. Selected readings, student presentations and papers.
Prerequisite: ESCI 1401.

ESCI 4230 Oil Spill Prevention and Response Theory
2 Semester Credit Hours (2 Lecture Hours)
Historical perspective of laws and regulations governing oil spill prevention and response. Current methods for control, containment, countermeasures, removal, and disposal of oil spills in an environmentally safe manner. Fall, Spring, Summer. (on sufficient demand).

ESCI 4270 Hazardous Waste Operations and Emergency Response Theory
2 Semester Credit Hours (2 Lecture Hours)
Study of the laws and regulations of hazardous waste management from an historical perspective followed by current techniques for handling, reducing, and disposing of hazardous wastes in an environmentally safe manner. Fall, Spring, Summer. (on sufficient demand).

ESCI 4301 Environmental Regulations
3 Semester Credit Hours (3 Lecture Hours)
A survey of state and federal environmental laws and regulations, and their impact on the environment. Case studies of environmental issues and legislated regulations.
Prerequisite: POLS 2305 and 2306.

ESCI 4320 Environmental Health
3 Semester Credit Hours (3 Lecture Hours)
Overview of the toxicology and epidemiology of pollutants in the air, water and soil. Associations of environmental exposure with adverse health effects such as cancer, cardiovascular disease, and reproductive outcomes; also chemical markers and symptoms of disease. Pollutants studied include lead, asbestos, radiation, radon, noise, metals, halogenated hydrocarbons, aromatic hydrocarbons, silica, indoor air quality, formaldehyde, and outdoor air pollutants. Offered on sufficient demand.

ESCI 4321 Introduction to Soil and Groundwater Restoration
3 Semester Credit Hours (3 Lecture Hours)
Introduction to methods for restoring contaminated soil and groundwater by examining the factors and processes influencing the efficacy of remediation systems. An emphasis will be placed on the scientific principles upon which soil and groundwater remediation is based. Cross listed with GEOL 4321.

ESCI 4322 Introduction to Industrial Hygiene
3 Semester Credit Hours (3 Lecture Hours)
Introduction to health protection practices in the industrial environment. Health basis for OSHA laws, regulations. Sampling and testing procedures.
ESCI 4324 Introduction to Industrial Toxicology
3 Semester Credit Hours (3 Lecture Hours)
Review of human physiology, general concepts of toxicology: dose-response relationship, interactions between the host and the agents, risk assessment, to provide an introductory understanding of toxicology related to the chemicals in the workplace.

ESCI 4332 Wetlands and Water Quality
3 Semester Credit Hours (3 Lecture Hours)
Introduction to wetland ecosystems (natural, constructed and restored) with an emphasis on the role of wetlands in water quality. Topics include wetland systems, their history and role in society, relationships between biology, geology, ecology, hydrology and chemistry in wetland environments. Offered on sufficient demand.
Prerequisite: CHEM 1412 and BIOL 1406.

ESCI 4335 Climate and Climate Variability
3 Semester Credit Hours (3 Lecture Hours)
Course intended to guide environmental science majors in developing a conceptual understanding of Earth's global climate and its variability. Review of past climates, present mean state of the climate system, climate variability from seasonal to multidecadal time scales, and climate change. Special attention given to climates of the Gulf of Mexico, Caribbean Sea and surrounding land regions. Plausible climate-change scenarios, as well as mitigation and adaptation strategies are also discussed. Cross listed with ATSC 4335. Spring.
Prerequisite: (ESCI 3351 or 3403) and (PHYS 1401 or 2425).

ESCI 4340 Severe Weather
3 Semester Credit Hours (3 Lecture Hours)
Introduction to mesoscale weather systems including thunderstorms, squall lines and hurricanes, as well as the mechanisms of tornado and lightning. Methods of observing, analyzing, and predicting these severe weather systems with the interpretation of satellite and radar images will also be introduced in this class.
Prerequisite: ESCI 3403.

ESCI 4344 Air Pollution and the Clean Air Act
3 Semester Credit Hours (3 Lecture Hours)
Introduction to the chemistry and physics of air pollution and regulations. Topics include photochemistry, acid rain, air pollution meteorology and dispersion, global change, and the Clean Air Act.

ESCI 4360 Physical Oceanography
3 Semester Credit Hours (3 Lecture Hours)
Physical description of the sea, physical properties of seawater and sea ice, methods and measurements, wind-driven ocean circulation, thermohaline ocean circulation, boundary processes, waves, tides and mixing. Seasonal and interannual variability such as El Niño/Southern Oscillation phenomena. Implications for marine biology, marine geology, human impacts, other topics. Fall.
Prerequisite: PHYS 1401 or 2425.

ESCI 4365 Occupational Safety and Accident Prevention
3 Semester Credit Hours (3 Lecture Hours)
This course provides students with fundamental knowledge of regulatory requirements on occupational safety and practical techniques on accident prevention in the work environment. Offered on sufficient demand.

ESCI 4408 Environmental Microbiology
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Relationships between microorganisms and their biotic and abiotic environment. Current topics such as air quality (i.e., molds), water quality and bioremediation will be discussed. Laboratory will include techniques for sampling from soil, air and water. Offered on sufficient demand.
Prerequisite: BIOL 2421.
Co-requisite: SMTE 0096.

ESCI 4480 Environmental Site Assessment
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Interdisciplinary application of environmental regulations, risk assessment to specific examples. Knowledge of United States environmental regulations assumed; ESCI 4301 Environmental Regulations recommended.

ESCI 4490 Selected Topics
4 Semester Credit Hours (4 Lecture Hours, 4 Lab Hours)
Subject materials variable. May be repeated for credit when topics are significantly different. Faculty approval required. Offered on sufficient demand.

ESCI 4496 Directed Independent Study
1-4 Semester Credit Hours
Requires a formal proposal of study to be completed in advance of registration and to be approved by the supervising faculty, the Chairperson, and the Dean of the College. Fall, Spring, Summer.

ESCI 4498 Internship in Environmental Science
1-4 Semester Credit Hours (4 Lecture Hours)
Two to four semester hours of credit may be earned by working in an internship position in a governmental agency or industry.

ESCI 5350 Fundamentals of Physical Oceanography
3 Semester Credit Hours (3 Lecture Hours)
Principles that rule water motions and associated transport and dispersion of natural and man-made substances in the sea including a review of the mean ocean circulation and its spatial and temporal variability, observational methods, ocean circulation theories and air-sea interactions.

ESCI 5392 Thesis I: Thesis Proposal
3 Semester Credit Hours (3 Lecture Hours)
Review of the literature on a thesis topic. Completion of a written research proposal including proposed experimental design. If the thesis proposal is not completed by the end of the semester, a mark of "IP" will be awarded. An "IP" is a permanent, non-punitive grade notation. In order to receive a qualitative grade in the course, the student must enroll in and complete this course in a subsequent semester.

ESCI 5393 Thesis II: Thesis Research
3 Semester Credit Hours (3 Lecture Hours)
Collection and organization of research data and presentation of a rough draft of the thesis manuscript to the thesis advisor. May be repeated; no more than three hours may be taken per semester. If the thesis draft is not completed by the end of the semester, a mark of "IP" will be awarded. An "IP" is a permanent, non-punitive grade notation. In order to receive a qualitative grade in the course, the student must enroll in and complete this course in a subsequent semester.
Prerequisite: ESCI 5392.
ESCI 5394  Thesis III: Thesis Submission
3 Semester Credit Hours (3 Lecture Hours)
Thesis defense and completion of the thesis manuscript including acceptance of the final copy by the advisory committee. May be repeated; no more than three hours may be taken per semester. If the thesis is not completed by the end of the semester, a mark of "IP" will be awarded. An "IP" is a permanent, non-punitive grade notation. In order to receive a qualitative grade in the course, the student must enroll in and complete this course in a subsequent semester.
Prerequisite: ESCI 5392.

ESCI 5397  Directed Research
3 Semester Credit Hours (3 Lecture Hours)
Emphasis on experimental design as related to environmental science. For students selecting the professional (non-thesis) option. Only three semester hours will count towards the non-thesis degree. Requires presentation of results in a written paper and seminar. If the professional paper is not completed by the end of the semester, a mark of "IP" will be awarded. An "IP" is a permanent, non-punitive grade notation. In order to receive a qualitative grade in the course, the student must enroll in and complete this course in a subsequent semester.

ESCI 5596  Directed Independent Study
1-5 Semester Credit Hours (1-5 Lecture Hours)
DIRECTED INDEPENDENT STUDY. Study in areas of current interest. (A total of six hours of Directed Independent Study may be counted toward the MS degree.)

ESCI 5940  Project Research
1-9 Semester Credit Hours
Research related to the MS project. Requires consent of graduate advisor. Does not count as credit toward the MS degree in Environmental Science. Course is taken as credit/no credit.

ESCI 6101  Environmental Research Seminar
1 Semester Credit Hour (1 Lecture Hour)
Studies and analysis of pertinent literature. May be repeated for credit, but credit may count only once towards the degree plan.

ESCI 6130  Oil Spill Management Lab
1 Semester Credit Hour (1 Lab Hour)
Field exercises in Oil Spill Response, utilizing a Spill Management Team incorporating the elements of incident command.
Prerequisite: ESCI 6230.
May be taken concurrently.
Co-requisite: SMTE 0096.

ESCI 6170  Hazardous Waste Treatment Technologies Lab
1 Semester Credit Hour (1 Lab Hour)
Review of practical techniques for handling, reducing and disposing of hazardous wastes in an environmentally safe manner.
Prerequisite: ESCI 6270.
May be taken concurrently.
Co-requisite: SMTE 0096.

ESCI 6201  Advanced Scientific Diving Techniques
2 Semester Credit Hours
Advanced study of the theory, science, and art of underwater diving technology and its application to scientific objectives. Course helps fulfill some training requirements of the Texas A&M University-Corpus Christi guidelines for scientific diving.

ESCI 6203  Professional Skills for Scientists
2 Semester Credit Hours
Presentation and discussion of professional skills of practicing scientists including literature searches, evaluation of information sources, oral and written communication skills, lifelong learning, careers and professional opportunities.

ESCI 6230  Oil Spill Management Theory
2 Semester Credit Hours (2 Lab Hours)
REVIEW OF LAWS AND REGULATIONS GOVERNING OIL SPILL PREVENTION AND RESPONSE. CURRENT METHODS FOR CONTROL, CONTAINMENT, COUNTERMEASURES, REMOVAL, AND DISPOSAL OF OIL SPILLS IN AN ENVIRONMENTALLY SAFE MANNER. DEVELOPMENT OF A SPILL MANAGEMENT TEAM INCORPORATING THE ELEMENTS OF INCIDENT COMMAND.

ESCI 6270  Hazardous Waste Treatment Technologies Theory
2 Semester Credit Hours (2 Lecture Hours)
REVIEW OF THE LAWS AND REGULATIONS OF HAZARDOUS WASTE MANAGEMENT FROM AN HISTORICAL PERSPECTIVE FOLLOWED BY REPORTS ON CURRENT TECHNIQUES FOR HANDLING, REDUCING, AND DISPOSING OF HAZARDOUS WASTES IN AN ENVIRONMENTALLY SAFE MANNER.

ESCI 6302  Federal Environmental Laws and Regulations
3 Semester Credit Hours (3 Lecture Hours)
Advanced study of case histories involving the application of state and federal environmental laws and regulations. Review of permits, waste registrations, manifests, self-reporting and inspection reports.

ESCI 6310  Fundamentals of Remote Sensing
3 Semester Credit Hours (3 Lecture Hours)
Fundamental theory of satellite/airborne remote sensing techniques, sensor performance and calibration, and the scientific applications for land, ocean and atmosphere observations. Topics include physical principles of remote sensing, radiometry, sensors and sensor technology from infrared to microwave sensing, and scientific applications for land, ocean and atmosphere observations.

ESCI 6314  Biogeochemical Processes
3 Semester Credit Hours
Water and element cycling in the atmosphere, hydrosphere and geosphere. Microbial interactions and physical processes will be emphasized.
Prerequisite: CHEM 1311, 1312 and GEOL 1403 or ESCI 1401 or 3351.

ESCI 6320  Advanced Environmental Health
3 Semester Credit Hours
Advanced study of the toxicology and epidemiology of pollutants in the air, water and soil. Associations of environmental exposure with adverse health effects such as cancer, cardiovascular disease and reproductive outcomes, also chemical markers and symptoms of disease. Pollutants studied include lead, asbestos, radiation, radon, noise, metals, halogenated hydrocarbons, aromatic hydrocarbons, silica, indoor air quality, formaldehyde, and outdoor air pollutants.

ESCI 6321  Advanced Soil and Groundwater Restoration
3 Semester Credit Hours (3 Lecture Hours)
Advanced study of methods for restoring contaminated soil and groundwater by examining the factors and processes influencing the efficacy of remediation systems. An emphasis will be placed on the scientific principles upon which soil and groundwater remediation is based.
ESCI 6322 Industrial Hygiene
3 Semester Credit Hours
Health protection practices in the industrial environment. Health basis for OSHA laws, regulations. Sampling and testing procedures.

ESCI 6324 Advanced Industrial Toxicology
3 Semester Credit Hours (3 Lecture Hours)
Advanced review of human physiology, general concepts of toxicology: dose-response relationship, interactions between the host and the agents, risk assessment, to provide a fundamental understanding of toxicology related to the chemicals in the workplace.

ESCI 6332 Advanced Wetlands and Water Quality
3 Semester Credit Hours (3 Lecture Hours)
Introduction to wetland ecosystems (natural, constructed and restored) with an emphasis on the role of wetlands in water quality. Topics include wetland systems, their history and role in society, relationships between biology, geology, ecology, hydrology and chemistry in wetland environments.
Prerequisite: CHEM 1412 and BIOL 1406.

ESCI 6340 Ocean Resources
3 Semester Credit Hours (3 Lecture Hours)
Investigation of topics related to the discovery, distribution, and exploitation of marine resources of the ocean with a focus on the Gulf of Mexico, including the impact of resource exploitation on biological systems, and the development of marine policy.

ESCI 6345 Living with Coastal Hazards
3 Semester Credit Hours (3 Lecture Hours)
Study of how coastal processes, such as hurricanes, sea-level rise, and erosion, intersect with human activities to create hazardous conditions and how society responds to these conditions, presented through discussion, case studies, and field trips.

ESCI 6359 Ecosystem Dynamics
3 Semester Credit Hours (3 Lecture Hours)
Investigation of the interactions between organisms and physical processes that regulate marine ecosystem functions.

ESCI 6360 Coastal Management and Ocean Law
3 Semester Credit Hours (3 Lecture Hours)
The legal and policy framework associated with the coastal zone and ocean environment. Public access to coastal lands and waters, public trust, wetlands regulation; international law of the sea, fisheries law, and marine pollution.

ESCI 6365 Managing Occupational Safety and Accident Prevention
3 Semester Credit Hours (3 Lecture Hours)
This course provides students with advanced knowledge of regulatory requirements on occupational safety and practical techniques on accident prevention in the work environment.

ESCI 6380 Environmental Management Systems
3 Semester Credit Hours (3 Lecture Hours)
This course explores the systems management approach used by businesses and governments to promote environmental quality and sustainability. EMS and ISO 14001 standards go beyond minimally acceptable environmental compliance.

ESCI 6408 Environmental Microbiology
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
Relationships between microorganisms and their biotic and abiotic environments. Role of microorganisms in biogeochemical cycling. Methodology in microbial ecology. Biotechnological aspects.
Prerequisite: BIOL 2421.

ESCI 6416 Advanced Geochemistry
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Advanced study of the Earth processes using principles of chemical equilibrium, thermodynamics, isotope geochemistry and organic geochemistry. Applications of low-temperature geochemistry to geologic problems.

ESCI 6480 Environmental Site Assessment
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Interdisciplinary application of environmental regulations, risk assessment to specific examples. Knowledge of United States environmental regulations assumed; ESCI 4301 or ESCI 6203 - Professional Skills for Scientists recommended.

ESCI 6590 Advanced Topics
1-5 Semester Credit Hours (1-3 Lecture Hours, 4 Lab Hours)
Advanced study in a specific area of environmental science. May be repeated for credit when topics vary. Offered on sufficient demand.

ESCI 6596 Directed Independent Study
1-5 Semester Credit Hours (1-5 Lecture Hours)
Study in areas of current interest. (A total of six hours of Directed Independent Study may be counted toward the MS degree.)

Fast Track Geology, BS and Environmental Science, MS

Program Description
The university allows the opportunity for high-achieving students to count a select number of graduate credits toward their undergraduate degree and thereby obtain a graduate degree at an accelerated pace. Students interested in the Fast Track from Geology to Environmental Science must meet the following application criteria:

- Currently seeking a BS in Geology at A&M-Corpus Christi.
- Minimum of a 3.0 GPA in the last 60 SCH (and a 3.0 GPA in all science and math courses) at the time of Fast Track application.
- Classified as a Senior with successful completion of at least 90 SCH, including

Fast Track Curriculum in the Senior Year

BS, Geology students accepted in the Fast Track will have up to six hours of undergraduate elective credit replaced with six hours of graduate credit during the final semester of the senior year. A Fast Track student, in consultation with the faculty adviser, will be able to substitute six hours of undergraduate courses from BIOL, CHEM, COSC, ESCI, GEOL, GISC, MATH, PHYS, or other disciplines as approved.

In place of the six hours of undergraduate courses, the student will take two of the following graduate courses instead:

- ESCI 6302 Federal Environmental Laws and Regulations (3 sch) or ESCI 6360 Coastal Management and Ocean Law (3 sch) or BLAW 5330 Environmental Law and Policy (3 sch)
- GEOL 5490 Advanced Topics (4 sch)
- ESCI 6130 Oil Spill Management Lab (1 sch) & ESCI 6230 Oil Spill Management Theory (2 sch)
- ESCI 6170 Hazardous Waste Treatment Technologies Lab (1 sch) & ESCI 6270 Hazardous Waste Treatment Technologies Theory (2 sch)
- ESCI 5596 Directed Independent Study (1-5 sch)
- GEOL 5596 Directed independent Study (1-5 sch)
- An approved graduate elective.

See the Graduate Catalog for a complete description of the degree requirements for the MS in Environmental Science (http://catalog.tamucc.edu/graduate/science/masters/environmental-science-ms/).

Courses

GEOL 1303 Essentials of Geology
3 Semester Credit Hours (3 Lecture Hours)
One-semester introductory Earth science course for students majoring in a non-science subject area. Covers basic geologic material and concepts, such as minerals, rocks, the rock cycle, and plate tectonics theory. Origin, composition, and evolution of our planet, as well as the importance of geology in everyday life, including geologic resources, global change, earthquakes, and volcanism are examined. This course is not recommended for students majoring in Geology or Environmental Sciences. Course counts toward the natural science component of the Core Curriculum Program.
TCCNS: GEOL 1303

GEOL 1403 Physical Geology
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Introduction to the origin, classification, and composition of Earth materials. Study of internal and surface processes which shape and modify Earth. Laboratory studies of minerals and rocks, as well as topo graphic maps, geologic maps and geologic cross-sections.
Co-requisite: SMTE 0094.
TCCNS: GEOL 1403

GEOL 1404 Historical Geology
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Introduction to the origin and evolution of Earth and other planets. Changes in the form and distribution of Earth's continents and oceans, and succession of plants and animals through geologic time. Laboratory studies of fossils, geological maps, and the interpretation of ancient environments of rock formation.
Prerequisite: GEOL 1403 or 1303.
Co-requisite: SMTE 0094.
TCCNS: GEOL 1404

GEOL 2102 Undergraduate Seminar in Geology-Careers in the Geosciences
1 Semester Credit Hour (1 Lecture Hour)
Introductory level seminar featuring diverse topics and speakers. Focus on careers in the geosciences as well as on how to successfully plan a college career. In-house as well as external speakers. May not be repeated for credit but attendance in subsequent semesters is encouraged.

GEOL 2103 Undergraduate Seminar in Geology-Research in the Geosciences
1 Semester Credit Hour (1 Lecture Hour)
Introductory level seminar featuring diverse topics and speakers. Focus on current geologic research. In-house as well as external speakers. May not be repeated for credit but attendance in subsequent semesters is highly encouraged. Credit/no credit

GEOL 2222 Karst Geology and Paleoclimatology
2 Semester Credit Hours (1 Lecture Hour)
This course describes the different types of caves and karst rocks, the water rock interactions in carbonate rock systems, and it explains cave formation via hydrological and geochemical processes. It also deals with how speleothem proxies such as oxygen and carbon stable isotope, trace elements, carbonate petrography are used to decipher past changes in climate.

GEOL 2490 Selected Topics
1-4 Semester Credit Hours (1-4 Lecture Hours, 6 Lab Hours)
May be repeated for credit if topics are significantly different. Subject material variable. Faculty approval required.
GEOL 3326 Introduction to Geological Field Methods
3 Semester Credit Hours (2 Lecture Hours, 3 Lab Hours)
Introduction to the basic techniques of geological fieldwork. Note taking in the field, proper use of geological field equipment, measurement and description of rock sections by several methods and degrees of detail, plus small area mapping of several types of terrain with topographic maps. Reports, sections, and maps will be produced from the field notes. Field trips required.
Prerequisite: GEOL 1403 and 1404 and (GEOL 3411 or 3411*).
* May be taken concurrently.
Co-requisite: SMTE 0094.

GEOL 3329 Geology of National Parks
3 Semester Credit Hours (3 Lecture Hours)
Introduction to the regional geology of the United States using selected U.S. National Parks representing a wide variety of geologic settings as examples. Application of major geologic principles and basic geologic concepts such as plate tectonics, rock cycle, stratigraphy, and geologic time.
Prerequisite: GEOL 1303, 1403 or 1404.

GEOL 3411 Mineralogy
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Study of the physical and chemical properties of minerals. Introduction to the crystallography of minerals, optical mineralogy, and the use of the polarized light microscope. Laboratory study of mineral identification in hand specimens and thin sections.
Prerequisite: GEOL 1403 and CHEM 1411 and (CHEM 1412 or 1412*).
* May be taken concurrently.
Co-requisite: SMTE 0094.

GEOL 3414 Igneous and Metamorphic Petrology
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Genesis and occurrence of igneous and metamorphic rocks. Mineralogical composition and thermodynamics of geologic systems. Determination of rock types in hand specimens and thin sections.
Prerequisite: GEOL 1403, CHEM 1411, 1412 and GEOL 3411.
Co-requisite: SMTE 0094.

GEOL 3441 Invertebrate Paleontology
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Morphology, classification, and paleoecology of fossil invertebrates. Applications to marine geology including paleoceanography, stratigraphy, economic geology. Field trip to Texas invertebrate fossil beds.
Prerequisite: GEOL 1403.
Co-requisite: SMTE 0094.

GEOL 3442 Geomorphology
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Study of landscapes and landforms at the surface of the Earth, and the processes and mechanisms by which they are developed.
Prerequisite: GEOL 1403.
Co-requisite: SMTE 0094.

GEOL 3443 Environmental Geology
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Study of the relationships of humans to Earth's physical environment. Geologic aspects of waste disposal, resources, conservation, land reclamation, geologic hazards, and land-use planning.
Prerequisite: GEOL 1403.
Co-requisite: SMTE 0094.

GEOL 3490 Selected Topics
1-4 Semester Credit Hours (1-4 Lecture Hours)
May be repeated for credit if topics are significantly different. Subject materials variable.
GEOL 4416 Introduction to Geochemistry
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Introductory study of the Earth processes using principles of chemical equilibrium, thermodynamics, isotopic geochemistry and organic geochemistry. Applications of low-temperature geochemistry to geologic problems.
Prerequisite: CHEM 1411, 1412, MATH 2413 and GEOL 3411.
Co-requisite: SMTE 0094.

GEOL 4421 Structural Geology
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
PHYS 1401 Geometric and quantitative description of deformation of the Earth's crust, mechanics of brittle and crystal-plastic deformation processes of Earth materials, introduction to continuum mechanics of geologic systems, crustal deformation from micro-scale to global tectonics. Laboratory introduces principles of three-dimensional data representation and analysis, geologic map interpretation, cross-section techniques, and problems in stress and strain analysis.
Prerequisite: GEOL 3411 and MATH 2413 and (PHYS 1401 or 2425).
Co-requisite: SMTE 0094.

GEOL 4422 Geophysics
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Introduction to quantitative techniques to assess physical properties and processes of the Earth. Topics include earthquake seismology, refraction and reflection seismology, gravimetry, magnetism, electrical methods, and radioactivity of Earth materials. Application of geophysical methods to the study of the Earth, in oil and gas exploration, and in economic and environmental geology.
Prerequisite: (GEOL 4421, PHYS 1401 or 2425) and (PHYS 1402 or 2426) and (MATH 2413).

GEOL 4423 Seismic Methods
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Introduction to the acquisition, processing, and interpretation of 2D and 3D seismic data. Lectures and field exercises are covered. Topics include conceptual and historical foundations of modern reflection seismology; an overview of seismic wave phenomena in acoustic, elastic, and porous media; acquisition principles for land and marine seismic surveys; methods used to create 2D and 3D seismic images from field data; concepts of dip moveout, prestack migration, and depth migration; concepts and limitations of 3D seismic interpretation for structure, stratigraphy, and rock property estimation; and the interpretation role of attributes, impedance estimation, and AVO.
Prerequisite: GEOL 4422.

GEOL 4424 Environmental and Engineering Geophysics
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Geophysical techniques for exploring the shallow subsurface for environmental and engineering purposes. Topics include seismic, resistivity, ground penetrating radar, electromagnetic, gravity, and magnetic methods. This course includes both lectures and labs (field exercises) components.
Prerequisite: (PHYS 1401 or 2425) and (PHYS 1402 or 2426) and (MATH 2413).

GEOL 4430 Internship in Geology
1-4 Semester Credit Hours
One to four semester hours of credit may be earned by working in an internship position in industry, with local government, a private firm, or an independent geologist.

GEOL 4436 Introduction to Petroleum Geology
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Basic concepts of petroleum geology and techniques used in the exploration and production of hydrocarbon systems. Lectures and lab exercises will cover principles of stratigraphy, sedimentology, hydrocarbon generation, hydrocarbon-trapping mechanisms, reservoir characterization, seismic interpretation, well-log interpretation, and geologic risk analysis.
Prerequisite: GEOL 4111 or 4411*.
* May be taken concurrently.
Co-requisite: SMTE 0094.

GEOL 4444 Hydrogeology
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Introduction to the fundamentals of groundwater and surface water flow; well hydraulics and evaluation of groundwater as a resource; chemical properties of groundwater and groundwater contamination; groundwater and the environment; and groundwater modeling. This course also examines some of the techniques associated with field hydrogeology and laboratory methods in hydrogeology.
Prerequisite: GEOL 1403 and MATH 2413 and (PHYS 1401 or 2425).
Co-requisite: SMTE 0094.

GEOL 4490 Selected Topics
4 Semester Credit Hours (1-4 Lecture Hours, 1-4 Lab Hours)
May be repeated for credit if topics are significantly different. Subject materials variable.

GEOL 4496 Directed Independent Study
1-4 Semester Credit Hours
DIRECTED INDEPENDENT STUDY Requires a formal proposal of study to be completed in advance of registration and to be approved by the supervising faculty, the chairperson, and the Dean of the College.

GEOL 4649 Karst of the Yucatan Peninsula
6 Semester Credit Hours (3 Lecture Hours, 6 Lab Hours)
This course describes the different types of caves and karst rocks, the water rock interactions in carbonate rock systems, and it explains cave formation via hydrogeological and geochemical processes. It offers field work experience such as sample collection, determining field parameters, karst and cave surveys, measuring spring discharges in the Yucatán Peninsula of Mexico and laboratory experience on the Texas A&M University-Corpus Christi campus.
Prerequisite: (GEOL 1403 and 4411) or GEOL 4444, 4416 or 4311.

GEOL 4650 Field Geology
6 Semester Credit Hours (12 Lab Hours)
Field course involving practical application of geologic principles to field problems. Locations visited and material covered depends on hosting institution. Generally should include: mapping and outcrop data collection; measurement of stratigraphic sections; mapping and preparation of geologic cross-sections; preparation of geologic reports.
Prerequisite: GEOL 3326, 3414, 3441, 4411 and 4421.
Co-requisite: SMTE 0094.

GEOL 5101 Geology Seminar
1 Semester Credit Hour (1 Lecture Hour)
An examination of concepts and theories in geology and their linkages to other disciplines such as environmental science, computer science, geographic information science, and education. Seminar themes may vary from year to year. May be repeated for credit but credit may be applied only once towards degree.
GEOL 5308 Coastal Geoenvironments and Change
3 Semester Credit Hours (3 Lecture Hours)
Investigations of the origin, character, and processes of coastal geoenvironments with an emphasis on tracking historical and projecting future changes. Involves examination of the interactions of geological and biological processes and impacts of human activities on coastal depositional systems. Includes applications of remote sensing, ground studies, and GIS for mapping geoenvironments and analyzing change. Readings in current literature, day field trips, and a project.

GEOL 5321 Advanced Soil and Groundwater
3 Semester Credit Hours (3 Lecture Hours)
Advanced study of methods for restoring contaminated soil and groundwater by examining the factors and processes influencing the efficacy of remediation systems. An emphasis will be placed on the scientific principles upon which soil and groundwater remediation is based.

GEOL 5322 Advanced Geophysical Techniques Seminar
3 Semester Credit Hours (3 Lecture Hours)
This graduate-level course is for coastal and marine system science and environmental science majors and professional petroleum geologists who would like a better understanding of advanced geophysical techniques and principles available to geoscientist working subsurface problems. The course will consist of an examination of current topics, techniques, and software. New techniques and topics will be presented by geology staff and visiting experts working in those fields.
Prerequisite: GEOL 4411 and 4422.

GEOL 5336 Groundwater Geochemistry
3 Semester Credit Hours (3 Lecture Hours)
Principles of the geochemistry of groundwater including chemical thermodynamics. Characterization of the chemistry of natural and contaminated groundwater. Chemical measurements, analyses, and calculations. Includes readings in current literature and research on a selected topic.
Prerequisite: GEOL 4444.

GEOL 5437 Computer Applications and Modeling in Hydrogeology
4 Semester Credit Hours (4 Lecture Hours)
Principles of analytical and numerical modeling in hydrogeology. Use of available software for aquifer test solutions, aquifer simulation modeling, and mass transport. Completion of modeling projects. Includes readings in current literature.
Prerequisite: GEOL 4444.
Co-requisite: SMTE 0094.

GEOL 5438 Mass Transport Modeling in Hydrogeology
4 Semester Credit Hours (4 Lecture Hours)
Principles of numerical modeling of mass transport in groundwater systems. Use of software and computer systems for numerical simulations. Laboratory time devoted to completion of modeling projects. Includes readings in current literature.
Prerequisite: GEOL 4444.
Co-requisite: SMTE 0094.

GEOL 5490 Advanced Topics
4 Semester Credit Hours (1-4 Lecture Hours, 1-4 Lab Hours)
Subject varies. Advanced topics including current literature research. May be repeated for credit when topics are sufficiently different.

GEOL 5596 Directed independent Study
1-5 Semester Credit Hours
Study in areas of current interest.

GEOL 6321 Advanced Soil and Groundwater Restoration
3 Semester Credit Hours (3 Lecture Hours)
Advanced study of methods for restoring contaminated soil and groundwater by examining the factors and processes influencing the efficacy of remediation systems. An emphasis will be placed on the scientific principles upon which soil and groundwater remediation is based. Cross listed with ESCI 6321.

GEOL 6416 Advanced Geochemistry
4 Semester Credit Hours (4 Lecture Hours)
Advanced study of the Earth processes using principles of chemical equilibrium, thermodynamics, isotope geochemistry and organic geochemistry. Applications of low-temperature geochemistry to geologic problems.
Prerequisite: CHEM 1411, 1412, MATH 2413 and 3414.

GEOL 6422 Advanced Geophysics
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Advanced techniques to assess physical properties and processes of the Earth. Topics include earthquake seismology, refraction and reflection seismology, gravimetry, magnetism, electrical methods, and radioactivity of Earth materials. Application of geophysical methods to the study of the Earth, in oil and gas exploration, and in economic and environmental geology.
Prerequisite: (GEOL 4421, PHYS 1401 or 2425) or (PHYS 1402 or 2426) and (MATH 2413).

GEOL 6423 Advanced Seismic Methods
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Advanced methods for the acquisition, processing, and interpretation of 2D and 3D seismic data. Lectures and field exercises are covered. Topics include conceptual and historical foundations of modern reflection seismology; an overview of seismic wave phenomena in acoustic, elastic, and porous media; acquisition principles for land and marine seismic surveys; methods used to create 2D and 3D seismic images from field data; concepts of dip moveout, prestack migration, and depth migration; concepts and limitations of 3D seismic interpretation for structure, stratigraphy, and rock property estimation; and the interpretation role of attributes, impedance estimation, and AVO.
Prerequisite: GEOL 4422.

GEOL 6424 Advanced Environmental and Engineering Geophysics
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Advanced geophysical techniques for exploring the shallow subsurface for environmental and engineering purposes. Topics include seismic, resistivity, ground penetrating radar, electromagnetic, gravity, and magnetic methods. This course includes both lectures and labs (field exercises) components.
Prerequisite: (PHYS 1401 or 2425) and (PHYS 1402 or 2426) and (MATH 2413).

GEOL 6436 Principles of Petroleum Geology
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Advanced concepts of petroleum geology and techniques used in the exploration and production of hydrocarbon systems. Lectures will cover principles of stratigraphy, sedimentology, hydrocarbon generation, hydrocarbon-trapping mechanisms, reservoir characterization, seismic interpretation, well-log interpretation, and geologic risk analysis.
Prerequisite: GEOL 4411.
GEOL 6444  Advanced Hydrogeology
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Advanced study of hydrogeology concepts necessary to understand
and question the hydrologic cycle, and specifically, surface water flow;
groundwater flow; groundwater-surface water interaction; groundwater
sources, occurrence, movement, contamination, and resources; and
environmental topics of interest related to water resources.
Prerequisite: CHEM 1411, 1412, MATH 2413 and 3414.

Fast Track Mathematics, BS and Mathematics, MS
Program Description
The university allows the opportunity for high-achieving students to count
a select number of graduate credits toward their undergraduate degree
and thereby obtain a graduate degree at an accelerated pace. Students
interested in the Fast Track in Mathematics must meet the following
application criteria:

- Currently seeking a BS in Mathematics at A&M-Corpus Christi.
- Minimum of a 3.25 GPA (no grades below C in math classes) in the
  last 60 SCH at the time of Fast Track application.
- Classified as a Senior with successful completion of at least 90
  SCH, including MATH 4301 Introduction to Analysis (3 sch) and
  MATH 4306 Modern Algebra (3 sch).

Students accepted into the Fast Track program will be given permission
to enroll in up to six hours of prescribed graduate courses during their
last semester of undergraduate studies. The hours for these graduate
courses will "double-count" toward both the undergraduate and graduate
programs. The BS and MS degrees will be awarded sequentially (i.e., upon
completion of each degree) and not simultaneously. Students will be
allowed to continue enrollment in the graduate program upon successful
completion of the undergraduate degree.

Admissions Requirements
Applicants must provide the following at the time of application:

- A completed application form. Application fees are waived for Fast
  Track applicants.
- Official transcripts of all college and university coursework.
- An essay, 300-500 words in length, should discuss the applicant’s
educational and professional goals, pertinent work and
undergraduate experience, and other factors relating to the chosen
option for graduate study.
- One or more letters of recommendation specifically addressing an
  applicant’s ability to do graduate level study of mathematics may
  be submitted to strengthen an application. The letters should be
  submitted directly to the Department at the time of application.
- A note from a faculty member willing to serve as their graduate
  advisor. Applicants will not be admitted to the program without a
  graduate advisor.

No criterion is weighted more heavily than any other criterion.
Applications received or completed after the deadline for admission
during one semester may be considered for admission in the following
semester at the applicant’s request. Applicants will be notified of the
outcome of their application by email.

Academic Preparation
Applicants are expected to enter the program with adequate academic
preparation. If the graduate committee determines that an applicant’s
preparation is deficient, the individual will be required to complete course
work to remedy these deficiencies. Such course work will be regarded as
leveling work, and will not count as credit towards the total required for
completion of the MS degree in mathematics.

Fast Track Curriculum in the Senior Year
BS, Mathematics students accepted in the Fast Track will substitute six
semester credit hours their senior year. Students will take any two core
courses applicable to the MS program Track for which they are applying.
See the Graduate Catalog for a complete description of the degree
requirements for the MS in Mathematics.

Courses
MATH 0099  Math Non-Course Based Development
0 Semester Credit Hours
Preparation workshop to help students achieve College Readiness in
mathematics under the Texas Success Initiative. Topics include five
general areas: fundamental mathematics, algebra, geometry, statistics,
and problem solving.

MATH 0200  Brief Developmental Mathematics
1-2 Semester Credit Hours (1-2 Lecture Hours)
Topics as in MATH 0300. For students who have completed most topics
in MATH 0300. Requires permission of MATH department. (Not counted
toward graduation) Fall, Spring, Maymester, Summer.
Co-requisite: MATH 1314, MATH 1442.

MATH 0214  Brief Developmental Mathematics-Algebra
2 Semester Credit Hours (2 Lecture Hours)
This course is co-requisite course supporting for MATH 1314. Support
will focus on essential skills required for success in College Algebra
(Math 1314). Supporting topics include review of intermediate algebra,
polynomial equations, graphing techniques, and applications. Course
provides the necessary academic support for TSI liable students
concurrently enrolled in MATH 1314 as the co-requisite with MATH 0214.
Students who register for MATH 0214 must co-register in MATH 1314.
Math 0214 is not counted toward graduation. Fall, Spring, Summer.
Co-requisite: MATH 1314, UNIV 1102.

MATH 0224  Brief Developmental Mathematics-Business Mathematics
2 Semester Credit Hours (2 Lecture Hours)
This course is the co-requisite course supporting for MATH 1324. Support
will focus on essential skills required for success in Business Math (Math 1324).
Supporting topics include the use of calculators and technology. Topics focus on basic review of mathematical skills,
elementary algebra, mathematical and logical reasoning, probability, and
financial management, while providing the necessary academic support
for TSI liable students concurrently enrolled in MATH 1324 as the co-
requisite with MATH 0224. Students who register for MATH 0224 must
co-register in MATH 1324. Math 0224 is not counted toward graduation.
Fall, Spring, Summer.
Co-requisite: MATH 1324.
MATH 0232 Brief Developmental Mathematics-Contemporary Mathematics
2 Semester Credit Hours (2 Lecture Hours)
This course is co-requisite course supporting for MATH 1332. Support will focus on essential skills required for success in Contemporary Mathematics (Math 1332). Supporting topics include a basic review of mathematical skills, elementary algebra, mathematical and logical reasoning, probability, and descriptive statistics, while providing the necessary academic support for TSI liable students concurrently enrolled in MATH 1332 as the co-requisite with MATH 0232. Students who register for MATH 0232 must co-register in MATH 1332. Math 0232 is not counted toward graduation. Fall, Spring, Summer.
Co-requisite: MATH 1332.

MATH 0242 Brief Developmental Mathematics-Statistics
2 Semester Credit Hours (2 Lecture Hours)
This course is co-requisite course supporting for MATH 1442. Support will focus on essential skills required for success in Statistics for Life (Math 1442). Supporting topics include the use of calculators and technology. Topics focus on descriptive and inferential statistics, probabilities including notation, while providing the necessary academic support for TSI liable students concurrently enrolled in MATH 1442 as the co-requisite with MATH 0242. Students who register for MATH 0242 must co-register in MATH 1442. Math 0242 is not counted toward graduation. Fall, Spring, Summer.
Co-requisite: MATH 1442.

MATH 0300 Developmental Mathematics
3 Semester Credit Hours (3 Lecture Hours)
Topics include number concepts, computation, elementary algebra, geometry, and mathematical reasoning. Also, linear equations and inequalities, rational expressions, exponents and radicals, quadratics and word problems. May be repeated for credit as needed to complete mastery of all topics. (Not counted toward graduation.) Fall, Spring, Summer.

MATH 0310 Developmental Mathematics-Algebra
3 Semester Credit Hours (2 Lecture Hours, 2 Lab Hours)
3 sem. hrs. (2:2) Topics include number concepts, computation, elementary algebra, geometry, and mathematical reasoning. Also, linear equations and inequalities, rational expressions, exponents and radicals, quadratics and word problems. May be repeated for credit as needed to complete mastery of all topics. (Not counted toward graduation.) Fall, Spring, Summer.

MATH 0398 Introduction to Algebra
3 Semester Credit Hours (3 Lecture Hours)
Number concepts, computation, elementary algebra, geometry, and mathematical reasoning.

MATH 0399 Intermediate Algebra
3 Semester Credit Hours (3 Lecture Hours)
Topics include linear equations and inequalities, rational expressions, exponents and radicals, quadratics and word problems.
Prerequisite: MATH 0398.

MATH 1314 College Algebra
3 Semester Credit Hours (3 Lecture Hours)
Quadratic equations, inequalities, graphs, logarithms and exponentials, theory of polynomial equations, systems of equations.
Prerequisite: MATH 0300, minimum score of 530 in 'SAT MATH SECTION', minimum score of 19 in 'ACT1 Math', MATH 0320, minimum score of 350 in 'TSI Math', minimum score of 910 in 'TSIA2 Math' or minimum score of 6 in 'TSIA2 Math Diagnostic'.

MATH 1316 Trigonometry
3 Semester Credit Hours (3 Lecture Hours)
Trigonometric functions, identities, equations involving trigonometric functions, solutions of right and oblique triangles.
Prerequisite: (MATH 1314, minimum score of 550 in 'SAT MATH SECTION' or minimum score of 21 in 'ACT Math') or minimum score of 21 in 'ACT Math'.
TCCNS: MATH 1316

MATH 1324 Mathematics for Business and Social Sciences
3 Semester Credit Hours (3 Lecture Hours)
Students will learn how the properties and language of mathematics can be used in business and real-world problem solving and understand the techniques and applications of finance problems, basic matrix operation, basic counting principles, and probability analysis in modeling real-world scenarios. This course could be taught in 14-weeks 7-weeks semesters and in F2F or fully online formats.
Prerequisite: minimum score of 550 in 'SAT MATH SECTION', minimum score of 21 in 'ACT Math' or minimum score of 21 in 'ACT1 Math'.
TCCNS: MATH 1324

MATH 1325 Calculus for Business & Social Sciences
3 Semester Credit Hours (3 Lecture Hours)
Students will develop and combine the concepts in and relationships between Mathematics and Business from the fundamentals of calculus and optimization in all Business fields. Students are expected to learn the materials algebraically with technology. Students will combine the concepts of limits, continuation, differentiation and integration techniques to solve problems in business, economics, and social sciences. This course could be taught in 14-weeks and 7-weeks semesters in F2F and fully online formats.
Prerequisite: (MATH 1324 and 1314).
TCCNS: MATH 1325

MATH 1332 Contemporary Mathematics
3 Semester Credit Hours (3 Lecture Hours)
This course serves as a terminal course and supplies a brief overview of several topics in mathematics. Topics may include introductory treatments of sets, logic, number systems, number theory, relations, functions, probability and statistics. Appropriate applications are included. This course emphasizes using critical thinking to make decisions based on information.
TCCNS: MATH 1332

MATH 1390 Introduction to Mathematical Topics
1-3 Semester Credit Hours (1-3 Lab Hours)
A course to introduce students to mathematical topics in a formal setting. The course may support problem solving, or systematic investigations of topics outside the current mathematical catalog. May not be substituted for regularly scheduled offerings.
MATH 1442  Statistics for Life  
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)  
An introduction to statistical concepts and methods used in all disciplines to enhance decision making based on data analysis, including: basic experimental design models, measurement and data collection through sampling; display and summary of information, and assessment of relationship through descriptive techniques; probability concepts leading to estimation and hypothesis testing of means, variance and proportions, regression analysis, one-factor ANOVA and chi-square test of independence; and applications through case studies. The laboratory component of the course offers applications of the theory presented during the classroom sessions.  
Prerequisite: MATH 0300, minimum score of 530 in 'SAT MATH SECTION', minimum score of 19 in 'ACT Math', MATH 0310, 0320, minimum score of 350 in 'TSI Math' or minimum score of 19 in 'ACT Math'.  
TCCNS: MATH 1442  

MATH 2305  Discrete Mathematics I  
3 Semester Credit Hours (3 Lecture Hours)  
An introduction to topics in Discrete Mathematics with an emphasis on applications in Mathematics and Computer Science. Topics include formal logic, graphs, trees and related algorithms, and combinatorics and discrete probability.  
Prerequisite: MATH 2413, minimum score of 620 in 'SAT MATH', minimum score of 620 in 'SAT1 Mathematics', minimum score of 640 in 'SAT MATH SECTION', minimum score of 27 in 'ACT Math' or minimum score of 27 in 'ACT1 Math'.  
TCCNS: MATH 2305  

MATH 2312  Precalculus  
3 Semester Credit Hours (3 Lecture Hours)  
A more rapid treatment of the material in MATH 1314 and MATH 1316, this course is designed for students who wish a review of the above material, or who are very well prepared. Functions, graphs, trigonometry, and analytic geometry.  
Prerequisite: MATH 1314, minimum score of 550 in 'SAT MATH SECTION', minimum score of 21 in 'ACT Math' or minimum score of 21 in 'ACT1 Math'.  
TCCNS: MATH 2312  

MATH 2413  Calculus I  
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)  
Limits, continuity, derivatives, applications of the derivative, and an introduction to integrals. Contains a laboratory component.  
Prerequisite: MATH 1316, 2312, minimum score of 640 in 'SAT MATH SECTION' or minimum score of 27 in 'ACT1 Math'.  
TCCNS: MATH 2413  

MATH 2414  Calculus II  
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)  
Prerequisite: MATH 2413.  
TCCNS: MATH 2414  

MATH 2415  Calculus III  
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)  
Vectors and space curves, partial derivatives, multiple integrals, special coordinate systems, line and surface integrals, Green’s, Stokes’, and the Divergence Theorems. Contains a laboratory component. Vectors and space curves, partial derivatives, multiple integrals, special coordinate systems, line and surface integrals, Green’s, Stokes’, and the Divergence Theorems. Contains a laboratory component.  
Prerequisite: MATH 2414.  
TCCNS: MATH 2415  

MATH 3300  Geospatial Mathematical Techniques  
3 Semester Credit Hours (3 Lecture Hours)  
Characteristics of geographic/spatial information; overview of relevant sections of numbers, algebra and geometry, plane and spherical trigonometry, matrices, determinants and vectors, curves and surfaces, integral and differential calculus, partial derivatives, with an emphasis on geospatial applications. Concepts of geospatial coordinate systems and geospatial coordinate transformations; overview of spatial statistics and best-fit solutions with geospatial applications. Students may not receive credit for both MATH 3300 and GISC 3300.  
Prerequisite: MATH 2413 and 2414.  

MATH 3301  Introduction to Complex Analysis  
3 Semester Credit Hours (3 Lecture Hours)  
This course introduces functions of a complex variable and their applications. Contents include differentiation and integration; zeros, poles and residues; conformal mappings.  
Prerequisite: (MATH 2415) or (MATH 2414 and 3314).  

MATH 3310  Mathematical Analysis for Mechanical Engineering  
3 Semester Credit Hours (3 Lecture Hours)  
Applications of fundamentals of linear algebra, vector analysis, numerical methods, computer programming and probability and statistics into mechanical engineering. May not count towards the MATH major. Students may not receive credit for both MATH 3310 and MEEN 3310.  
Prerequisite: MATH 3315.  

MATH 3311  Linear Algebra  
3 Semester Credit Hours (3 Lecture Hours)  
Fundamentals of linear algebra and matrix theory. Topics include vectors, matrix operations, linear transformations, fundamental properties of vector spaces, systems of linear equations, eigenvalues and eigenvectors. Applications.  
Prerequisite: MATH 2413.  

MATH 3312  College Geometry  
3 Semester Credit Hours (2 Lecture Hours, 2 Lab Hours)  
A careful study of the foundations of Euclidean geometry by synthetic methods with an introduction to non-Euclidean geometries. An introduction to transformational geometry.  
Prerequisite: MATH 2413.  

MATH 3313  Foundations of Number Theory  
3 Semester Credit Hours (3 Lecture Hours)  
This course assists a student’s transition to advanced mathematics. Fundamentals of logic and proof are reviewed and applied to topics from elementary number theory.  
Prerequisite: MATH 2414.  

MATH 3314  Foundations of Real Numbers  
3 Semester Credit Hours (3 Lecture Hours)  
This course assists a student’s transition to advanced mathematics. Fundamentals of logic and proof are reviewed and applied to development of the real number line.  
Prerequisite: MATH 2414.
MATH 3315 Differential Equations  
3 Semester Credit Hours (3 Lecture Hours)  
An introduction to both theoretical and applied aspects of ordinary differential equations. Topics include: first order equations, linear second order equations, elementary numerical methods, and the Laplace transform.  
Prerequisite: MATH 2414.

MATH 3342 Applied Probability and Statistics  
3 Semester Credit Hours (3 Lecture Hours)  
A calculus based introduction to probability and statistics. Emphasis will be on development of statistical thinking and working with data. Topics include probability theory, descriptive statistics, common distributions, and statistical inference.  
Prerequisite: MATH 2413.

MATH 3345 Statistical Modeling and Data Analysis  
3 Semester Credit Hours (3 Lecture Hours)  
An introduction to probability/statistical modeling and data analysis techniques to investigate data. Topics include: exploratory data analysis, probability models and simulation, sampling distributions, statistical inference. Applications to real world problems. Students will be expected to present and justify results orally and in writing. Note: MATH 3342 and MATH 3345 cannot both be counted for credit.  
Prerequisite: MATH 2413 and (COSC 1330 or 1435).

MATH 3347 Introduction to Probability  
3 Semester Credit Hours (3 Lecture Hours)  
This is an introduction to probability. In the course, key fundamental concepts of probability, random variables and their distributions, expectations, and conditional probabilities will be covered. Topics include counting rules, combinatorial analysis, sample spaces, axioms of probability, conditional probability and independence, discrete and continuous random variables, characteristics of random variables, law of large numbers and central limit theorem, random processes, Markov chains, Markov chain-Monte Carlo, Poisson Process and Entropy.  
Prerequisite: MATH 2415.

MATH 3385 Linear Optimization and Decisions  
3 Semester Credit Hours (3 Lecture Hours)  
This course introduces the linear programming and optimization problems arising in many applications. Contents include linear programming models with solutions, the simplex method, duality theory and its use for management decision making, dual simplex method and sensitivity analysis.  
Prerequisite: MATH 3311 and 2413.

MATH 3390 Problem Solving in Mathematics  
1-3 Semester Credit Hours (1-3 Lecture Hours)  
A problem solving course for students who want to participate in math problem solving competitions, train for the actuarial or other professional examinations, work on research aimed at conference presentations, or perform research projects at the junior level that are not at the level of directed independent study material.  
Prerequisite: MATH 2414.

MATH 4185 Senior Mathematics Seminar  
1 Semester Credit Hour (1 Lecture Hour)  
This course introduces a weekly mathematics seminar. Students will generate a viable project for the capstone course.

MATH 4285 Mathematics Major Capstone  
2 Semester Credit Hours (2 Lecture Hours)  
Development of projects as proposed in MATH 4185, as well as mathematics communication skills. Students will present their projects, and take a national level assessment.  
Prerequisite: MATH 4185.

MATH 4301 Introduction to Analysis  
3 Semester Credit Hours (3 Lecture Hours)  
An advanced treatment of the foundations of calculus stressing rigorous proofs of theorems. Topics include: elements of propositional and predicate logic, topology of the real numbers, sequences, limits, the derivative, and the Riemann integral.  
Prerequisite: MATH 2415 and 3314.

MATH 4306 Modern Algebra  
3 Semester Credit Hours (3 Lecture Hours)  
Fundamentals of set operations, maps and relations, groups, rings and field theory. Topics include permutation groups, cosets, homomorphisms and isomorphisms, direct product of groups and rings, integral domains field of quotients, fundamental properties of integers, the ring of integers modulo n, and rings of polynomials. Applications.  
Prerequisite: MATH 3311 and 3313.

MATH 4312 Differential Geometry  
3 Semester Credit Hours (3 Lecture Hours)  
Differential forms on R1, R2, R3, and Rn; Integration and differentiation of differential forms; Stokes' Theorem; manifolds; Gaussian curvature and the Gauss-Bonnet Theorem.  
Prerequisite: MATH 2415.

MATH 4315 Partial Differential Equations  
3 Semester Credit Hours (3 Lecture Hours)  
An introduction to partial differential equations emphasizing the wave, diffusion and potential (Laplace) equations. A focus on understanding the physical meaning and mathematical properties of solutions of partial differential equations. Methods include fundamental solutions and transform methods for problems on the line, and separation of variables using orthogonal series for problems in regions with boundary. Additional topics include higher dimensional problems and special topics like Harmonic functions, the maximum principle, Green's functions etc.  
Prerequisite: MATH 3315 and 2415.

MATH 4321 Applied Regression Analysis  
3 Semester Credit Hours (3 Lecture Hours)  
Introduction to the formulation of linear models and the estimation of the parameters of such models, with primary emphasis on least squares. Application of multiple regression and curve fitting and the design of experiments for fitting regression models.  
Prerequisite: MATH 1342, 2342 or 1470.

MATH 4328 Discrete Mathematics II  
3 Semester Credit Hours (3 Lecture Hours)  
A continued study of topics from Discrete Mathematics I with additional topics from discrete mathematics that have strong application to the field of computer science. Additional topics include: recurrence relations, formal languages, and finite-state machines.  
Prerequisite: MATH 2305 and COSC 2437.
MATH 4342 Introduction to Mathematical Statistics
3 Semester Credit Hours (3 Lecture Hours)
This is a first course in mathematical statistics, topics include: moment-generating functions, functions of random variables, sampling distributions, methods of estimation including Bayesian estimation, characteristics of estimators, interval estimation, hypothesis testing, Neyman-Pearson Lemma, likelihood ratio test, tests involving means and variances, regression and correlation, multiple linear regression, introduction to ANOVA, non-parametric tests.
Prerequisite: MATH 2415.

MATH 4385 Applied Modeling
3 Semester Credit Hours (3 Lecture Hours)
Capstone course for mathematics majors. The construction of mathematical models from areas such as economics, refining, biology and mariculture, etc. Where possible, local phenomena will be modeled with the assistance of outside consultants.
Prerequisite: MATH 3315 and 3342 or MATH 3345.

MATH 4390 Selected Topics
3 Semester Credit Hours (3 Lecture Hours)
Offered on sufficient demand.

MATH 4696 Directed Independent Study
1-6 Semester Credit Hours
See college description.

MATH 5301 Foundations for Advanced Mathematics
3 Semester Credit Hours (3 Lecture Hours)
This course is an advanced treatment of the foundations of calculus, linear algebra and differential equations. Major focus on the proofs of theorems in the area of analysis, linear algebra and differential equations. Topics are as follows: • Analysis: properties of the real numbers, sequences and series, limits, convergence, continuity, the derivative, and the Riemann integral. • Linear Algebra: matrix theory, system of equations, vector spaces, eigenvalues and eigenvectors, diagonalization and orthogonalization, change of basis. • Differential Equations: ordinary differential equations, solutions in series, solutions using Laplace transforms, systems of differential equations, applications.
Prerequisite: MATH 2415.

MATH 5310 Topics in Mathematics
3 Semester Credit Hours (3 Lecture Hours)
May not be used for graduate credit towards the MS in mathematics. Course included to provide a suitable vehicle for anticipated future service courses.

MATH 5315 Statistical Methods in Research I
3 Semester Credit Hours (2 Lecture Hours, 2 Lab Hours)
STATISTICAL METHODS IN RESEARCH I This course is for graduate students in other disciplines and is designed to prepare them to use statistical methods in their research. This is a non-calculus exposition of the concepts, methods and usage of statistical data collection and analysis. Topics include descriptive statistics, the t-test, the one and two-way analysis of variance, multiple comparison tests, and multiple regression. Students also learn how to conduct these analyses using computer software and how to properly report their findings.
Prerequisite: MATH 5315.

MATH 5316 Statistical Methods in Research II
3 Semester Credit Hours (2 Lecture Hours, 2 Lab Hours)
STATISTICAL METHODS IN RESEARCH II This course is a continuation of MATH 5315. Topics include: statistical experimental design, randomized blocks and factorial analysis, multiple regression, chi-squared tests, analysis of covariance, non-parametric methods and sample surveys. Emphasis will be placed on the computer analysis of research data and how to properly report statistical findings.
Prerequisite: MATH 5315.

MATH 5321 Problem Solving and Mathematical Reasoning for Teachers
3 Semester Credit Hours (3 Lecture Hours)
An investigation of problems that span a variety of domains with a focus on making and evaluating mathematical arguments, using tools such as manipulatives and technology, identifying and analyzing the connections within and outside of mathematics, and using symbols and representations to communicate mathematical ideas.

MATH 5322 Mathematics Assessment
3 Semester Credit Hours (3 Lecture Hours)
A historical overview of assessment of mathematics, statistical description of norm- and criterion-reference tests, scaling of standardized exams, varieties of assessment and rubrics, the mathematical analysis of error patterns, and equity.

MATH 5323 Mathematics Instruction and Mentoring
3 Semester Credit Hours (3 Lecture Hours)
A study of how the use of appropriate mathematical content can create and support a mathematics classroom environment in which students are engaged in mathematical problem solving and how to use these understandings to be effective in supporting teacher development.

MATH 5324 Principles of Reforming Mathematics Instruction
3 Semester Credit Hours (3 Lecture Hours)
This course introduces participants to the theory and practice of teacher-led inquiry within mathematics education. The course prepares teachers to engage in a school-based mathematics education action research project. It is intended for in-service mathematics teachers.

MATH 5325 Structure of Number Concepts
3 Semester Credit Hours (3 Lecture Hours)
An in-depth investigation of real and complex number systems, base ten and other number bases, operations and algorithms, divisibility, Euclidean algorithm, congruence, modular arithmetic, and the Fundamental Theorem of Arithmetic, with an emphasis on quantitative and qualitative reasoning.

MATH 5326 Structure of Patterns and Algebra
3 Semester Credit Hours (3 Lecture Hours)
Algebraic reasoning incorporating the use of technology. This course includes investigations of patterns, relations, functions, and analysis, with a focus on representations and the relationships among them.

MATH 5327 Structure of Geometry and Measurement
3 Semester Credit Hours (3 Lecture Hours)
An investigation of concepts and principles in geometry and measurement with emphasis on deductive reasoning and on inductive reasoning with the use of dynamic geometry software.

MATH 5328 Structure of Probability and Statistics
3 Semester Credit Hours (3 Lecture Hours)
An investigation of the principles and applications of probability and descriptive and inferential statistics.
MATH 5329 Structure of Modeling with Rates of Change
3 Semester Credit Hours (3 Lecture Hours)
A study of rates of change through modeling. Direct applications of rates of change to number concepts, algebra, geometry, probability, and statistics.

MATH 5331 Evolution of Mathematical Systems
3 Semester Credit Hours (3 Lecture Hours)
Covers the evolution of mathematical concepts and thought from ancient to modern times, including women and men who played key roles, from original and secondary sources. Provides a better understanding of the historical development of larger context for topics studied in other courses, and deepens understanding and appreciation of these topics. This course is intended to benefit current and future mathematics teachers.
Prerequisite: MATH 5321.

MATH 5332 Integrating Technology in Mathematics Education
3 Semester Credit Hours (3 Lecture Hours)
An introduction to technology appropriate for the mathematics classroom, including calculators, CAS systems, handhelds, computer software and multimedia. This course is intended for in-service mathematics teachers at the middle/high school level.
Prerequisite: MATH 5321.

MATH 5333 Numerical Linear Algebra
3 Semester Credit Hours (3 Lecture Hours)
Prerequisite: MATH 3311.

MATH 5336 Advanced Differential Equations
3 Semester Credit Hours (3 Lecture Hours)
A continuation of MATH 3315, Differential Equations. Relying heavily on linear algebra concepts, this course covers linear systems of differential equations; introductory operator theory; existence, uniqueness and continuity of solutions; stability of equilibria; planar nonlinear systems; and the Poincaré-Bendixson Theorem. Several applications are covered to illustrate the mathematical concepts.
Prerequisite: MATH 3311 and 3315.

MATH 5337 Theory and Applications of Partial Differential Equations
3 Semester Credit Hours (3 Lecture Hours)
The purpose of this course is to study the mathematical theory and real-world applications of the three major categories of partial differential equations: elliptic equations, parabolic equations, and hyperbolic equations. Specific topics to be covered include: first-order equations, second-order elliptic equations, second-order parabolic equations, and second-order hyperbolic equations.
Prerequisite: MATH 3311, 3315, 4301 and 4315.

MATH 5339 Numerical Analysis
3 Semester Credit Hours (3 Lecture Hours)
Prerequisite: MATH 3311, 3315, 3470 and 4315 and (COSC 5311 or 1435).

MATH 5341 Statistical Methods and Data Analysis
3 Semester Credit Hours (3 Lecture Hours)
Introduction to the basic concepts of probability, common distributions, statistical methods, data analysis and a wide variety of statistical inference techniques. Demonstrations of the interplay between probability models and statistical inference. Data sets will be analyzed using the R software package.
Prerequisite: (MATH 3342 or 3345).

MATH 5342 Linear Statistical Models
3 Semester Credit Hours (3 Lecture Hours)
Prerequisite: MATH 3311, 3342 and 3470.

MATH 5343 Mathematical Theory of Statistics
3 Semester Credit Hours (3 Lecture Hours)
This course is intended for graduate students that need a solid background on statistical theory. This is a one-semester course in probability and mathematical statistics. Topics include: basic probability, random variables, transformations and expectations, distributions and important families thereof, multiple random variables, random samples, notions of convergence, and an overview of point estimates and hypothesis tests.
Prerequisite: MATH 3311, 3342 and 3470.

MATH 5344 Environmental Statistics
3 Semester Credit Hours (3 Lecture Hours)
SPATIAL STATISTICS An introduction to methods of spatial statistics commonly used in scientific settings. Topics include the nature of geospatial sampling, analysis and modeling of spatial point patterns, and development and analysis of common continuous spatial models such as kriging. Additional topics to be covered, as time and student interest permit, include Bayesian modeling, hierarchical environmental modeling, and spatiotemporal modeling. Use of appropriate software is emphasized.
Prerequisite: MATH 3342 or 3515.

MATH 5345 Computational Methods for Statistics
3 Semester Credit Hours (3 Lecture Hours)
An introduction to computing tools needed by the modern statistician. Topics include: floating point numbers, reformatting large datasets, important statistical algorithms, and parallel processing.

MATH 5348 Optimization
3 Semester Credit Hours (3 Lecture Hours)
Unconstrained optimization, necessary and sufficient conditions for solutions, basic algorithms. Constrained optimization. KKT conditions, linear programming, convex programming, algorithms.
Prerequisite: MATH 4301.

MATH 5351 Real Analysis
3 Semester Credit Hours (3 Lecture Hours)
This course includes such topics as sequences and series of constants and functions, the Riemann integral, Fourier Series, and an introduction to Lebesgue measure and integration.
Prerequisite: MATH 4301.

MATH 5360 Combinatorics and Graph Theory
3 Semester Credit Hours (3 Lecture Hours)
Topics to include basic counting rules, connectivity, graph coloring and applications, chromatic polynomials, trees and their applications to searching and sorting, generating functions, recurrence relations, the Pigeonhole Principle, Eulerian and Hamiltonian chains and paths, and applications.
Prerequisite: MATH 2305 and 3313.
MATH 5370 Modeling of Natural Systems
3 Semester Credit Hours (3 Lecture Hours)
This course is designed to expose science and technology majors to models of real problems arising in the environment and ecology. Students will learn how to create solvable models of the real world situations and how to find answers on the posted questions by using tools of mathematics and computing. There will be modeling and simulations of tides in the Gulf of Mexico, multi-species models of the food chains, circulation of carbon, water, and oxygen. Students will learn some new tools based on calculus and elementary statistics such as numerical algorithms, Monte-Carlo methods, Markov Processes, multivariate analysis, evaluation of stability, methods of extrapolation (predictions) and interpolations.
Prerequisite: (MATH 1442 or 2342) and (MATH 2413 or 5329).

MATH 5375 Applied Analysis
3 Semester Credit Hours (3 Lecture Hours)
Topics to include basic theory of Euclidean, Banach and Hilbert spaces, calculus of variations and optimal control, elements of system analysis, and elements of complex analysis. All theoretical topics will be illustrated by real application.
Prerequisite: MATH 4301 or 5351.

MATH 5378 Mathematical Modeling
3 Semester Credit Hours (3 Lecture Hours)
Modeling of applied problems using analytical, stochastic, and dynamical methods.

MATH 5390 Special Topics
1-3 Semester Credit Hours (1-3 Lecture Hours)
An advanced study of a mathematical topic. May be repeated with full credit in another area of mathematics. Topics vary by semester and offering.

MATH 5393 Literature Review and Research
3 Semester Credit Hours (3 Lecture Hours)
LITERATURE REVIEW AND RESEARCH METHODOLOGY Reading, analyzing, and synthesizing mathematics education research literature for the purpose of informing teaching practice. Includes a study of qualitative research with a focus on the components of a research study (research question(s), literature review, conceptual framework, methods, analysis, findings) and the relationships among them.

MATH 5394 Research Methods in Mathematics
1-3 Semester Credit Hours
RESEARCH METHODS IN MATHEMATICS This course develops an ability to independently investigate a technical topic of interest, and the skills necessary to successfully communicate on that topic. The student learns how to find, organize, assimilate, and report on technical information derived from published sources. Specific areas of study include literature searches, technical word processing, technical writing style, and oral presentation techniques. The instructor and selected additional faculty members review and critique oral and written reports submitted throughout the semester. A final paper and a formal presentation are submitted in lieu of a final exam in the final semester. This course is a co-requisite for all other courses (except thesis) taken by students in the Environmental Modeling option.

MATH 5396 Directed independent Study
3 Semester Credit Hours
Study in areas of current interest. See College description for further details.

MATH 5993 Literature Review and Research
1-9 Semester Credit Hours
Reading, analyzing, and synthesizing appropriate mathematics and/or mathematics education research literature under supervision. May be repeated for credit.

MATH 5994 Proposal Research
1-9 Semester Credit Hours
This course develops an ability to independently investigate a technical topic of interest, and the skills necessary to successfully communicate on that topic. The student learns how to find, organize, assimilate, and report on technical information derived from published sources. Specific areas of study include literature searches, technical word processing, technical writing style, and oral presentation techniques. A final paper and a formal presentation are submitted in lieu of a final exam in the final semester.

MATH 5995 Thesis
1-9 Semester Credit Hours
Students work with an advisor to complete and present their proposed thesis. Students may register for 3 to 9 semester hours per semester. Only 3 hours total will count toward the MS degree in mathematics.
Prerequisite: MATH 5994.

MATH 5997 Project
1-9 Semester Credit Hours
Students work with an advisor to complete and present their proposed research project. Students may register for 3 to 9 semester hours of directed research per semester. Only 3 hours total will count toward the MS degree in mathematics.
Prerequisite: MATH 5994.

MATH 6315 Statistical Methods in Research I
3 Semester Credit Hours (2 Lecture Hours, 2 Lab Hours)
This course is for graduate students in other disciplines and is designed to prepare them to use statistical methods in their research. This is a non-calculus exposition of the concepts, methods and usage of statistical data collection and analysis. Topics include descriptive statistics, the t-test, the one and two-way analysis of variance, multiple comparison tests, and multiple regression. Students also learn how to conduct these analyses using computer software and how to properly report their findings.
Prerequisite: MATH 1442 or 3342.

MATH 6316 Statistical Methods Research II
3 Semester Credit Hours (2 Lecture Hours, 2 Lab Hours)
This course is a continuation of MATH 6315. Topics include: statistical experimental design, randomized blocks and factorial analysis, multiple regression, chi-squared tests, analysis of covariance, non-parametric methods and sample surveys. Emphasis will be placed on the computer analysis of research data and how to properly report statistical findings.
Prerequisite: MATH 6315.

MATH 6317 Mixed Effects Models for Scientists
3 Semester Credit Hours (3 Lecture Hours)
This course will deal with extensions to the regression and ANOVA that are frequently useful in dealing with ecological data. Topics include: using bootstrapping for significance testing; generalized additive models; using generalized least squares to deal with non-homogeneous data; working with fixed and random factors; handling temporally correlated and spatially correlated data; and the generalized linear model (Poisson, logistic, and negative binomial regression).
Prerequisite: MATH 6315 or 6316.
MATH 6318 An Introduction to Bayesian Statistics
3 Semester Credit Hours (3 Lecture Hours)
An introduction to Bayesian Statistics for scientists. Topics include: Bayesian paradigm, with advantages and disadvantages; brief coverage of probability and calculus; basics of Markov Chain Monte Carlo methods, including the Gibbs sampler and the Metropolis-Hastings algorithm; validating, comparing, and interpreting Bayesian models; and examples from literature relevant to students interests. The course assumes no prior exposure to calculus or programming.

MATH 6344 Spatial Statistics
3 Semester Credit Hours (3 Lecture Hours)
An introduction to methods of spatial statistics commonly used in scientific settings. Topics include the nature of geospatial sampling, analysis and modeling of spatial point patterns, and development and analysis of common continuous spatial models such as kriging. Additional topics to be covered, as time and student interest permit, include Bayesian modeling, hierarchical environmental modeling, and spatiotemporal modeling. Use of appropriate software is emphasized.
Prerequisite: MATH 3342 or 5315.

Minors
• Applied Mathematics, Minor (p. 615)
• Atmospheric Sciences, Minor (p. 619)
• Biology, Minor (p. 620)
• Chemistry, Minor (p. 626)
• Environmental Science, Minor (p. 627)
• Geology, Minor (p. 629)
• Mathematics, Minor (p. 632)
• Physics, Minor (p. 636)

Applied Mathematics, Minor
Program Requirements
Students majoring in other academic fields who wish to earn a minor in applied mathematics must complete the following courses.

Total Hours 20-21

1 Waivable 3: May be waived with suitable placement; see placement section below for more details. If needed, upper-level mathematics electives must be taken to bring the total to 19 hours.

* Online offering

Courses

MATH 0099 Math Non-Course Based Development
0 Semester Credit Hours
Preparation workshop to help students achieve College Readiness in mathematics under the Texas Success Initiative. Topics include five general areas: fundamental mathematics, algebra, geometry, statistics, and problem solving.

MATH 0200 Brief Developmental Mathematics
1-2 Semester Credit Hours (1-2 Lecture Hours)
Topics as in MATH 0300. For students who have completed most topics in MATH 0300. Requires permission of MATH department. (Not counted toward graduation) Fall, Spring, Maymester, Summer.
Co-requisite: MATH 1314, MATH 1442.

MATH 0214 Brief Developmental Mathematics-Algebra
2 Semester Credit Hours (2 Lecture Hours)
This course is co-requisite course supporting for MATH 1314. Support will focus on essential skills required for success in College Algebra (Math 1314). Supporting topics include review of intermediate algebra, polynomial equations, graphing techniques, and applications. Course provides the necessary academic support for TSI liable students concurrently enrolled in MATH 1314 as the co-requisite with MATH 0214.
Students who register for MATH 0214 must co-register in MATH 1314. MATH 0214 is not counted toward graduation. Fall, Spring, Summer.
Co-requisite: MATH 1314, UNIV 1102.

MATH 0224 Brief Developmental Mathematics-Business Mathematics
2 Semester Credit Hours (2 Lecture Hours)
This course is the co-requisite course supporting for MATH 1324. Support will focus on essential skills required for success in Business Math (Math 1324). Supporting topics include the use of calculators and technology. Topics focus on basic review of mathematical skills, elementary algebra, mathematical and logical reasoning, probability, and financial management, while providing the necessary academic support for TSI liable students concurrently enrolled in MATH 1324 as the co-requisite with MATH 0224.
Students who register for MATH 0224 must co-register in MATH 1324. MATH 0224 is not counted toward graduation. Fall, Spring, Summer.
Co-requisite: MATH 1324.

MATH 0232 Brief Developmental Mathematics-Contemporary Mathematics
2 Semester Credit Hours (2 Lecture Hours)
This course is co-requisite course supporting for MATH 1332. Support will focus on essential skills required for success in Contemporary Mathematics (Math 1332). Supporting topics include a basic review of mathematical skills, elementary algebra, mathematical and logical reasoning, probability, and descriptive statistics, while providing the necessary academic support for TSI liable students concurrently enrolled in MATH 1332 as the co-requisite with MATH 0232. Students who register for MATH 0232 must co-register in MATH 1332. MATH 0232 is not counted toward graduation. Fall, Spring, Summer.
Co-requisite: MATH 1332.
MATH 0242  Brief Developmental Mathematics-Statistics
2 Semester Credit Hours (2 Lecture Hours)
This course is co-requisite course supporting for MATH 1442. Support will focus on essential skills required for success in Statistics for Life (Math 1442). Supporting topics include the use of calculators and technology. Topics focus on descriptive and inferential statistics, probabilities including notation, while providing the necessary academic support for TSI liable students concurrently enrolled in MATH 1442 as the co-requisite with MATH 0242. Students who register for MATH 0242 must co-register in MATH 1442. Math 0242 is not counted toward graduation. Fall, Spring, Summer.
Co-requisite: MATH 1442.

MATH 0300  Developmental Mathematics
3 Semester Credit Hours (3 Lecture Hours)
Topics include number concepts, computation, elementary algebra, geometry, and mathematical reasoning. Also, linear equations and inequalities, rational expressions, exponents and radicals, quadratics and word problems. May be repeated for credit as needed to complete mastery of all topics. (Not counted toward graduation.) Fall, Spring, Summer.

MATH 0310  Developmental Mathematics-Algebra
3 Semester Credit Hours (2 Lecture Hours, 2 Lab Hours)
3 sem. hrs. (2:2) Topics include number concepts, computation, elementary algebra, and geometry. Also, linear equations and inequalities, rational expressions, exponents and radicals, quadratics and word problems. May be repeated for credit as needed to complete mastery of all topics. (Not counted toward graduation.) Fall, Spring, Summer.

MATH 0398  Introduction to Algebra
3 Semester Credit Hours (3 Lecture Hours)
Number concepts, computation, elementary algebra, geometry, and mathematical reasoning.

MATH 0399  Intermediate Algebra
3 Semester Credit Hours (3 Lecture Hours)
Topics include linear equations and inequalities, rational expressions, exponents and radicals, quadratics and word problems.
Prerequisite: MATH 0398.

MATH 1314  College Algebra
3 Semester Credit Hours (3 Lecture Hours)
Quadratic equations, inequalities, graphs, logarithms and exponentials, theory of polynomial equations, systems of equations.
Prerequisite: MATH 0300, minimum score of 530 in 'SAT MATH SECTION', minimum score of 19 in 'ACT1 Math', MATH 0320, minimum score of 350 in 'TSI Math', minimum score of 910 in 'TSIA2 Math' or minimum score of 6 in 'TSIA2 Math Diagnostic'.
TCCNS: MATH 1314

MATH 1316  Trigonometry
3 Semester Credit Hours (3 Lecture Hours)
Trigonometric functions, identities, equations involving trigonometric functions, solutions of right and oblique triangles.
Prerequisite: (MATH 1314, minimum score of 550 in 'SAT MATH SECTION' or minimum score of 21 in 'ACT Math') or minimum score of 21 in 'ACT Math'.
TCCNS: MATH 1316

MATH 1324  Mathematics for Business and Social Sciences
3 Semester Credit Hours (3 Lecture Hours)
Students will learn how the properties and language of mathematics can be used in business and real-world problem solving and understand the techniques and applications of finance problems, basic matrix operation, basic counting principles, and probability analysis in modeling real-world scenarios. This course could be taught in 14-weeks 7-weeks semesters and in F2F or fully online formats.
Prerequisite: minimum score of 550 in 'SAT MATH SECTION', minimum score of 21 in 'ACT Math' or minimum score of 21 in 'ACT1 Math'.
TCCNS: MATH 1324

MATH 1325  Calculus for Business & Social Sciences
3 Semester Credit Hours (3 Lecture Hours)
Students will develop and combine the concepts in and relationships between Mathematics and Business from the fundamentals of calculus and optimization in all Business fields. Students are expected to learn the materials algebraically with technology. Students will combine the concepts of limits, continuation, differentiation and integration techniques to solve problems in business, economics, and social sciences. This course could be taught in 14-weeks and 7-weeks semesters in F2F and fully online formats.
Prerequisite: (MATH 1324 and 1314).
TCCNS: MATH 1325

MATH 1332  Contemporary Mathematics
3 Semester Credit Hours (3 Lecture Hours)
This course serves as a terminal course and supplies a brief overview of several topics in mathematics. Topics may include introductory treatments of sets, logic, number systems, number theory, relations, functions, probability and statistics. Appropriate applications are included. This course emphasizes using critical thinking to make decisions based on information.
TCCNS: MATH 1332

MATH 1390  Introduction to Mathematical Topics
1-3 Semester Credit Hours (1-3 Lab Hours)
A course to introduce students to mathematical topics in a formal setting. The course may support problem solving, or systematic investigations of topics outside the current mathematical catalog. May not be substituted for regularly scheduled offerings.

MATH 1442  Statistics for Life
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
An introduction to statistical concepts and methods used in all disciplines to enhance decision making based on data analysis, including: basic experimental design models, measurement and data collection through sampling; display and summary of information, and assessment of relationship through descriptive techniques; probability concepts leading to estimation and hypothesis testing of means, variance and proportions, regression analysis, one-factor ANOVA and chi-square test of independence; and applications through case studies. The laboratory component of the course offers applications of the theory presented during the classroom sessions.
Prerequisite: MATH 0300, minimum score of 530 in 'SAT MATH SECTION', minimum score of 19 in 'ACT1 Math', MATH 0310, 0320, minimum score of 350 in 'TSI Math' or minimum score of 19 in 'ACT Math'.
TCCNS: MATH 1442
MATH 2305  Discrete Mathematics I
3 Semester Credit Hours (3 Lecture Hours)
An introduction to topics in Discrete Mathematics with an emphasis on applications in Mathematics and Computer Science. Topics include formal logic, graphs, trees and related algorithms, and combinatorics and discrete probability.
Prerequisite: MATH 2413, minimum score of 620 in 'SAT Math', minimum score of 620 in 'SAT Mathematics', minimum score of 640 in 'SAT MATH SECTION', minimum score of 27 in 'ACT Math' or minimum score of 27 in 'ACT1 Math'.
TCCNS: MATH 2305

MATH 2312  Precalculus
3 Semester Credit Hours (3 Lecture Hours)
A more rapid treatment of the material in MATH 1314 and MATH 1316, this course is designed for students who wish a review of the above material, or who are very well prepared. Functions, graphs, trigonometry, and analytic geometry.
Prerequisite: MATH 1314, minimum score of 550 in 'SAT MATH SECTION', minimum score of 21 in 'ACT Math' or minimum score of 21 in 'ACT1 Math'.
TCCNS: MATH 2312

MATH 2413  Calculus I
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Limits, continuity, derivatives, applications of the derivative, and an introduction to integrals. Contains a laboratory component.
Prerequisite: MATH 1316, 2312, minimum score of 640 in 'SAT MATH SECTION' or minimum score of 27 in 'ACT1 Math'.
TCCNS: MATH 2413

MATH 2414  Calculus II
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Prerequisite: MATH 2413.
TCCNS: MATH 2414

MATH 2415  Calculus III
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Vectors and space curves, partial derivatives, multiple integrals, special coordinate systems, line and surface integrals, Green's, Stokes', and the Divergence Theorems. Contains a laboratory component. Vectors and space curves, partial derivatives, multiple integrals, special coordinate systems, line and surface integrals, Green's, Stokes', and the Divergence Theorems. Contains a laboratory component.
Prerequisite: MATH 2414.
TCCNS: MATH 2415

MATH 3301  Introduction to Complex Analysis
3 Semester Credit Hours (3 Lecture Hours)
This course introduces functions of a complex variable and their applications. Contents include differentiation and integration; zeros, poles and residues; conformal mappings.
Prerequisite: (MATH 2415) or (MATH 2414 and 3314).

MATH 3310  Mathematical Analysis for Mechanical Engineering
3 Semester Credit Hours (3 Lecture Hours)
Applications of fundamentals of linear algebra, vector analysis, numerical methods, computer programming and probability and statistics into mechanical engineering. May not count towards the MATH major.
Students may not receive credit for both MATH 3310 and MEEN 3310.
Prerequisite: MATH 3315.

MATH 3311  Linear Algebra
3 Semester Credit Hours (3 Lecture Hours)
Fundamentals of linear algebra and matrix theory. Topics include vectors, matrix operations, linear transformations, fundamental properties of vector spaces, systems of linear equations, eigenvalues and eigenvectors. Applications.
Prerequisite: MATH 2413.

MATH 3312  College Geometry
3 Semester Credit Hours (2 Lecture Hours, 2 Lab Hours)
A careful study of the foundations of Euclidean geometry by synthetic methods with an introduction to non-Euclidean geometries. An introduction to transformational geometry.
Prerequisite: MATH 2413.

MATH 3313  Foundations of Number Theory
3 Semester Credit Hours (3 Lecture Hours)
This course assists a student's transition to advanced mathematics. Fundamentals of logic and proof are reviewed and applied to topics from elementary number theory.
Prerequisite: MATH 2414.

MATH 3314  Foundations of Real Numbers
3 Semester Credit Hours (3 Lecture Hours)
This course assists a student's transition to advanced mathematics. Fundamentals of logic and proof are reviewed and applied to development of the real number line.
Prerequisite: MATH 2414.

MATH 3315  Differential Equations
3 Semester Credit Hours (3 Lecture Hours)
An introduction to both theoretical and applied aspects of ordinary differential equations. Topics include: first order equations, linear second order equations, elementary numerical methods, and the Laplace transform.
Prerequisite: MATH 2414.

MATH 3342  Applied Probability and Statistics
3 Semester Credit Hours (3 Lecture Hours)
A calculus based introduction to probability and statistics. Emphasis will be on development of statistical thinking and working with data. Topics include probability theory, descriptive statistics, common distributions, and statistical inference.
Prerequisite: MATH 2413.
MATH 3345 Statistical Modeling and Data Analysis
3 Semester Credit Hours (3 Lecture Hours)
An introduction to probability/statistical modeling and data analysis techniques to investigate data. Topics include: exploratory data analysis, probability models and simulation, sampling distributions, statistical inference. Applications to real world problems. Students will be expected to present and justify results orally and in writing. Note: MATH 3342 and MATH 3345 cannot both be counted for credit.
Prerequisite: MATH 2413 and (COSC 1330 or 1435).

MATH 3347 Introduction to Probability
3 Semester Credit Hours (3 Lecture Hours)
This is an introduction to probability. In the course, key fundamental concepts of probability, random variables and their distributions, expectations, and conditional probabilities will be covered. Topics include counting rules, combinatorial analysis, sample spaces, axioms of probability, conditional probability and independence, discrete and continuous random variables, jointly distributed random variables, characteristics of random variables, law of large numbers and central limit theorem, random processes, Markov chains, Markov chain-Monte Carlo, Poisson Process and Entropy.
Prerequisite: MATH 2415.

MATH 3385 Linear Optimization and Decisions
3 Semester Credit Hours (3 Lecture Hours)
This course introduces the linear programming and optimization problems arising in many applications. Contents include linear programming models with solutions, the simplex method, duality theory and its use for management decision making, dual simplex method and sensitivity analysis.
Prerequisite: MATH 3311 and 2413.

MATH 3390 Problem Solving in Mathematics
1-3 Semester Credit Hours (1-3 Lecture Hours)
A problem solving course for students who want to participate in math problem solving competitions, train for the actuarial or other professional examinations, work on research aimed at conference presentations, or perform research projects at the junior level that are not at the level of directed independent study material.
Prerequisite: MATH 2414.

MATH 4185 Senior Mathematics Seminar
1 Semester Credit Hour (1 Lecture Hour)
This course introduces a weekly mathematics seminar. Students will generate a viable project for the capstone course.

MATH 4285 Mathematics Major Capstone
2 Semester Credit Hours (2 Lecture Hours)
Development of projects as proposed in MATH 4185, as well as mathematics communication skills. Students will present their projects, and take a national level assessment.
Prerequisite: MATH 4185.

MATH 4301 Introduction to Analysis
3 Semester Credit Hours (3 Lecture Hours)
An advanced treatment of the foundations of calculus stressing rigorous proofs of theorems. Topics include: elements of propositional and predicate logic, topology of the real numbers, sequences, limits, the derivative, and the Riemann integral.
Prerequisite: MATH 2415 and 3314.

MATH 4306 Modern Algebra
3 Semester Credit Hours (3 Lecture Hours)
Fundamentals of set operations, maps and relations, groups, rings and field theory. Topics include permutation groups, cosets, homomorphisms and isomorphisms, direct product of groups and rings, integral domains field of quotients, fundamental properties of integers, the ring of integers modulo n, and rings of polynomials. Applications.
Prerequisite: MATH 3311 and 3313.

MATH 4312 Differential Geometry
3 Semester Credit Hours (3 Lecture Hours)
Differential forms on R1, R2, R3, and Rn; Integration and differentiation of differential forms; Stokes' Theorem; manifolds; Gaussian curvature and the Gauss-Bonnet Theorem.
Prerequisite: MATH 2415.

MATH 4315 Partial Differential Equations
3 Semester Credit Hours (3 Lecture Hours)
An introduction to partial differential equations emphasizing the wave, diffusion and potential (Laplace) equations. A focus on understanding the physical meaning and mathematical properties of solutions of partial differential equations. Methods include fundamental solutions and transform methods for problems on the line, and separation of variables using orthogonal series for problems in regions with boundary. Additional topics include higher dimensional problems and special topics like Harmonic functions, the maximum principle, Green's functions etc.
Prerequisite: MATH 3315 and 2415.

MATH 4321 Applied Regression Analysis
3 Semester Credit Hours (3 Lecture Hours)
Introduction to the formulation of linear models and the estimation of the parameters of such models, with primary emphasis on least squares. Application of multiple regression and curve fitting and the design of experiments for fitting regression models.
Prerequisite: MATH 1342, 2342 or 1470.

MATH 4328 Discrete Mathematics II
3 Semester Credit Hours (3 Lecture Hours)
A continued study of topics from Discrete Mathematics I with additional topics from discrete mathematics that have strong application to the field of computer science. Additional topics include: recurrence relations, formal languages, and finite-state machines.
Prerequisite: MATH 2305 and COSC 2437.

MATH 4342 Introduction to Mathematical Statistics
3 Semester Credit Hours (3 Lecture Hours)
This is a first course in mathematical statistics, topics include: moment-generating functions, functions of random variables, sampling distributions, methods of estimation including Bayesian estimation, characteristics of estimators, interval estimation, hypothesis testing, Neyman-Pearson Lemma, likelihood ratio test, tests involving means and variances, regression and correlation, multiple linear regression, introduction to ANOVA, non-parametric tests.
Prerequisite: MATH 2415.

MATH 4385 Applied Modeling
3 Semester Credit Hours (3 Lecture Hours)
Capstone course for mathematics majors. The construction of mathematical models from areas such as economics, refining, biology and mariculture, etc. Where possible, local phenomena will be modeled with the assistance of outside consultants.
Prerequisite: MATH 3315 and 3342 or MATH 3345.

MATH 4390 Selected Topics
3 Semester Credit Hours (3 Lecture Hours)
Offered on sufficient demand.
MATH 4696 Directed Independent Study
1-6 Semester Credit Hours
See college description.

ATmospheric Sciences, Minor
Program Requirements

Students from other disciplines who choose the minor in atmospheric sciences must complete 10 semester hours from the following courses.

<table>

Total Hours 20

1

Pre-approval is required by ATSC faculty for taking ATSC 4590 Selected Topics (1-5 sch).

Notes:

Students should consult the catalog to determine any additional prerequisites for the courses. Students must earn a 2.50 minimum cumulative grade point average on all courses attempted in the minor discipline. The selection of courses must be made in agreement with the ATSC Advisor for minor programs.

Courses

ATSC 2101 Weathercasting
1 Semester Credit Hour (1 Lecture Hour)
This course is to practice in preparing and presenting weathercasts for radio and television. The instructors of this course will provide the students with: (1) information in the form of lectures and supplemental readings; (2) opportunities to practice weathercasting on video, and (3) advice, supervision, and guidance. In lecture, students will spend most of the course learning about geography and weathercasting rules. A large portion of the course is to practice the weathercasting and report.
Prerequisite: ATSC 2403.

ATSC 2301 Weather Observations
3 Semester Credit Hours (3 Lecture Hours)
This course is an introduction of the basic concept of meteorology. The focus is on the measurements of the atmosphere and weather related phenomenon. The principle of the instruments used to measure temperature, pressure, moisture, radiation, precipitation and other weather related properties of the atmosphere will be introduced. The differences among the observations from in-situ, balloon borne, airborne, and satellite borne instruments will be examined and discussed.
Prerequisite: ATSC 2403.

ATSC 2302 Introduction of Data Analysis in Atmospheric Sciences
3 Semester Credit Hours (3 Lecture Hours)
This course will enhance student skills for analyzing atmospheric science-related datasets under various scientific programming environments. The focus is on developing a data analysis and problem-solving skill sets using mostly Python. The course includes: basic concepts of operating systems and high-level programming languages; basics of programming in Python; general data analysis methods and tools; scientific data formats used in remote sensing data and numerical model output; publication-quality scientific graphics; and critical steps of building a large programming project. Examples with IDL and FORTRAN are also included.

ATSC 2403 Introduction to Meteorology
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
This course is an introduction to meteorology and the dynamics of planetary atmospheres. Emphasis on atmospheric accretion, composition, evolution, structure, and dynamics. Lab exercises cover basic measurement techniques, weather maps, and forecasting.
Co-requisite: SMTE 0096.

ATSC 3305 Physical Meteorology
3 Semester Credit Hours (3 Lecture Hours)
This course will cover the fundamentals of atmospheric physics including the atmospheric composition, kinetic theory of gases, moist processes, aerosol, solar and terrestrial radiation, scattering of electromagnetic radiation and radiative transfer.
Prerequisite: ATSC 2403 and PHYS 2426.

ATSC 3306 Atmospheric Thermodynamics
3 Semester Credit Hours (3 Lecture Hours)
This course introduces a foundation in the thermodynamics of the atmosphere. After a brief review of general thermodynamics, the emphasis is given to the basic principles that are useful for the application to atmospheric problems. The course covers a number of atmospheric processes that are basically thermodynamic in nature. The specific topics include aerological diagrams, atmospheric statics, and vertical stability.
Prerequisite: ATSC 2403 and PHYS 2425.

ATSC 3401 Synoptic Meteorology
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
This course focuses on introducing middle-latitude synoptic weather phenomenon, including planet waves, frontal systems etc. We will apply principles of Dynamic Meteorology in regards to processes in the atmosphere, weather elements and forecasting. We will examine the structure and dynamics of these systems by integrating weather observations with the current state of dynamic theory, numerical weather prediction models, and the physical principles of atmospheric thermodynamics and cloud and precipitation physics.
Prerequisite: ATSC 3306 and MATH 2414.
Co-requisite: SMTE 0096.
ATSC 3402  Mesoscale Meteorology
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
This course focuses on introducing mesoscale weather systems including thunderstorms, squall lines and hurricanes, as well as the mechanisms of tornado and lightning. The methods of observing, analyzing, and predicting these severe weather systems with the interpretation of satellite and radar images will also be introduced in this class.
Prerequisite: ATSC 3306.
Co-requisite: SMTE 0096.

ATSC 4301  Dynamic Meteorology I
3 Semester Credit Hours (3 Lecture Hours)
This course focuses on introductory-level atmospheric dynamics. Basic concepts of geophysical fluid dynamics and its application to a variety of atmospheric phenomena are introduced. Specific topics include the equations of motion on rotating earth, vorticity, potential vorticity, divergence, circulation theorem, and planetary wave.
Prerequisite: ATSC 3306 and MATH 2414.

ATSC 4302  Dynamic Meteorology II
3 Semester Credit Hours (3 Lecture Hours)
This course is a continuation of ATSC 4301 (Dynamic Meteorology I), which covers the introductory-level atmospheric dynamics. The course introduces more advanced materials including equatorial waves, baroclinic and barotropic instability, two-dimensional turbulence, atmospheric teleconnection, El Nino/Southern Oscillation, Madden-Julian Oscillation, global warming, and numerical modeling of atmospheric circulations.
Prerequisite: ATSC 4301.

ATSC 4305  Remote Sensing
3 Semester Credit Hours (3 Lecture Hours)
This course aims to introduce the fundamentals of satellite/airborne remote sensing techniques and demonstrates its application to various aspects of Earth Sciences. Topics include physical principles of remote sensing from ultraviolet to the microwave, radiometry, sensors and sensor technology, calibration, and environmental applications for land, ocean and atmosphere research.
Prerequisite: PHYS 2426.

ATSC 4335  Climate and Climate Variability
3 Semester Credit Hours (3 Lecture Hours)
This course intended to guide environmental science undergraduate students in developing a conceptual understanding of Earth’s global climate and its variability. Review past climates, present mean state of the climate system, climate variability from seasonal to multi-decadal time scales, and climate change. Special attention will be given to climates of the Gulf of Mexico, Caribbean Sea and surrounding land regions. Plausible climate-change scenarios, as well as mitigation and adaptation strategies will also be discussed. Cross listed with ESCI 4335.
Prerequisite: (ATSC 2403 or ESCI 3351).

ATSC 4498  Internship in Atmospheric Science
1-4 Semester Credit Hours
ATSC 4498 (Internship in Atmospheric Science) gives ATSC undergraduates an opportunity to obtain valuable paid or unpaid work experience related to atmospheric science, to better position them for employment after graduation. Students contract to work a specified number of hours weekly over a full semester with a state or federal agency or private industry related to atmospheric science, in return for college credit as follows: 3-6 hrs./week=1 sem. hr., 6-9 hrs./week =2 sem. hrs., 9-12 hrs./week=3 sem. hrs., 12-15 hrs./week=4 sem. hrs. Students may contract for 1-2 sem. hrs. in a single summer session (5.5 weeks) but may contract for up to 4 sem. hrs. if carrying out internship over a regular long semester or two summer sessions (11 weeks). If interning for the summer, students should increase the number of hours interned weekly to account for the shortened period worked, so total hours interned will be equivalent to those in a regular long semester. A student may intern only twice with a single office or agency. The internships will not apply towards graduate credit.

ATSC 4590  Selected Topics
1-5 Semester Credit Hours (1-5 Lecture Hours, 5 Lab Hours)
This course includes special topics with variable content. May be repeated for credit. Offered on sufficient demand.

Biology, Minor

Program Description
The 20 hours that comprise the Biology Minor provide students from any discipline the opportunity to explore the life sciences beyond the University Core Curriculum. It is recommended that students who wish to take the Biology Minor use Biology I and Biology II to fulfill the Life and Physical Sciences requirement in the University Core Curriculum. All coursework in the Biology Minor must be from either the Biology BS program, or, with approval, the Biomedical BS program. Non-majors courses in either prefix (BIOL or BIMS) cannot be applied to the Biology Minor.

Students majoring in Biomedical Sciences may not minor in Biology.

Total Hours 19-21

^Blended offering

Upper-level Electives
A minor requires at least six hours of upper-division (3000-4000 level) courses. At least one course at the 2000-, 3000-, or 4000-level must
include a laboratory component. With the exception of the courses listed below, any upper-division course with the BIOL prefix can be taken as an elective provided required prerequisites are met.

Upper division BIMS courses may be taken as electives with approval and if required prerequisites are met.

BIOL 4590 Selected Topics (5 sch) or BIMS 4590 Selected Topics (1-5 sch) may be taken with approval but no more than 4 hours of Selected Topics coursework can be applied to the Biology Minor.

The following courses will not count toward the Biology Minor:

**Courses**

**BIOL 1308 Science for Life I (Non-Majors Biology)**
3 Semester Credit Hours (3 Lecture Hours)
A non-majors science course. Students will learn basic biological principles, identify the relevance of science in everyday life, and will understand the scientific method. This course does NOT substitute for BIOL 1406 - Biology I or BIOL 1407 - Biology II for science majors.

_TCCNS: BIOL 1308_

**BIOL 1406 Biology I**
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Presentation of basic biological concepts including scientific method, cytology, energetics, nucleic acids and genetics. This course is suitable for all majors.

_Prerequisite: (MATH 1314, 1316, 2305, 2413, minimum score of 21 in 'ACT Math' or minimum score of 550 in 'SAT Math')._

_Co-requisite: SMTE 0091._

_TCCNS: BIOL 1406_

**BIOL 1407 Biology II**
4 Semester Credit Hours (4 Lecture Hours)
This course is an overview of the major concepts in biological diversity and plant and animal biology. Laboratory work will include individual/team activities as well as technology-related assignments.

_Prerequisite: BIOL 1406._

_Co-requisite: SMTE 0091._

_TCCNS: BIOL 1407_

**BIOL 2300 Science Communication**
3 Semester Credit Hours (3 Lecture Hours)
This course involves presentation and discussion of selected topics relating to the professional skills of practicing biological scientists, including basic software instruction, a review of library services pertinent to science, the application of scientific literature research skills, hypothesis generation and statistical tests, critical reviews of scientific articles, and an introduction to ethical issues in science.

**BIOL 2371 Principles of Evolution**
3 Semester Credit Hours (3 Lecture Hours)
An overview of the mechanisms by which heritable information changes, adaptations develop, and species diversify. Provides a foundation for molecular, cellular, and organismal studies in the biological sciences.

_Prerequisite: BIOL 1407._

**BIOL 2401 Anatomy and Physiology I**
4 Semester Credit Hours (4 Lecture Hours)
Structure and function of the human body emphasizing biological chemistry, cell biology, tissues, and the integumentary, skeletal, muscular, and nervous systems. Not recommended for majors in the College of Science and Engineering. To count this course toward a major in the Department of Life Sciences, a student must demonstrate that it is required by professional schools in his or her career track and obtain approval for a substitution from his or her faculty mentor. Students may not receive credit for both this course and either BIOL 3425 - Functional Anatomy or BIOL 3430 - Physiology.

_Co-requisite: SMTE 0091._

_TCCNS: BIOL 2401_

**BIOL 2402 Anatomy and Physiology II**
4 Semester Credit Hours (4 Lecture Hours)
Structure and function of the human body emphasizing blood, growth, development, genetics, and the endocrine, digestive, respiratory, cardiovascular, lymphatic, immune and urogenital systems. Not recommended for majors in the College of Science and Engineering. To count this course toward a major in the Department of Life Sciences, a student must demonstrate that is is required by professional schools in his or her career track and obtain approval for a substitution from his or her faculty mentor. Students may not receive credit for both this course and either BIOL 3425 - Functional Anatomy or BIOL 3430 - Physiology.

_Prerequisite: BIOL 2401._

_Co-requisite: SMTE 0091._

_TCCNS: BIOL 2402_

**BIOL 2416 Genetics**
4 Semester Credit Hours (3 Lecture Hours)
Principles of genetic transmissions and molecular basis of heredity and variation. Weekly recitation periods will involve team assignments, problem solving activities, and seminars.

_Prerequisite: BIOL 1406 and 1407._

_TCCNS: BIOL 2416_

**BIOL 2420 Principles of Microbiology**
4 Semester Credit Hours (4 Lecture Hours)
Introduction to microorganisms with emphasis on those of importance in patient care. Principles of disinfection, sterilization, immunity. This class is intended for nursing majors; it cannot substitute for BIOL 2421 - Microbiology.

_Co-requisite: SMTE 0092._

_TCCNS: BIOL 2420_

**BIOL 2421 Microbiology**
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
An introduction to microorganisms including the bacteria, fungi, and viruses. Laboratory involves microbiological techniques and development of basic laboratory skills.

_Prerequisite: BIOL 1406, 1407, CHEM 1411 and 1412._

_Co-requisite: SMTE 0092._

_TCCNS: BIOL 2421_

**BIOL 2472 Principles of Botany**
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
Introduction to the structure, function, diversity and application of plants. Laboratory focus on anatomical features, physiological adaptations, classification, and life cycles.

_Prerequisite: BIOL 1407 and CHEM 1411._

_Co-requisite: SMTE 0091._
BIOL 3300  Animal Nutrition
3 Semester Credit Hours (3 Lecture Hours)
Examines the dietary requirements of both companion animals and livestock. Includes the anatomy, physiology and biochemistry of the gastrointestinal system, nutrient procurement and use, feed additives, growth stimulants, metabolic diseases, and diet therapy. Cross listed with BIMS 3300.
Prerequisite: BIOL 1407 and CHEM 3411 and (CHEM 3412 or 3412*).
May be taken concurrently.

BIOL 3325  Biostatistics
3 Semester Credit Hours (3 Lecture Hours)
The application of statistical analyses to biological data. Students will gain an understanding of how to apply statistical analyses to biological data through study of the principles of experimental design including how to frame informative research questions. At a fundamental level, these concepts are linked to the philosophy of science and our understanding of the way the world works.

BIOL 3345  Cell Physiology
3 Semester Credit Hours (3 Lecture Hours)
Emphasis on cellular functions that underlie physiological processes, transport across membranes, membrane potential and excitability, the cell nucleus, and organelles and their relationship to energy, metabolism, and transport mechanisms within the cell. Offered during Spring semester of odd-numbered years
Prerequisite: BIMS 2200 and BIOL 3410.

BIOL 3403  Molecular Biology
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
Principles of molecular biology including advanced concepts of gene structure, expression and regulation, chromatin structure, recombination, and current molecular biology techniques. Laboratory emphasis is on basic skills for nucleic acid analyses, including extraction, PCR amplification, quantification, restriction, and electrophoresis. DNA sequencing-based approaches are covered including bioinformatics for sequence comparisons, polymorphisms, and molecular identification. Cross listed with BIMS 3403.
Prerequisite: BIOL 2416 and 2421.
Co-requisite: SMTE 0092.

BIOL 3410  Cell Biology
4 Semester Credit Hours (4 Lecture Hours)
Study of cellular architecture and function. Topics include membranes, transport, organelles, cytoskeleton, and signaling mechanisms. Interrelationships of structure, function, energy and metabolism are explored. Laboratory will emphasize basic techniques of cell biology.
Prerequisite: BIOL 2416 and CHEM 3411.
Co-requisite: SMTE 0092.

BIOL 3413  Invertebrate Zoology
4 Semester Credit Hours (3 Lecture Hours, 1 Lab Hour)
Structure, life history, and evolution of the invertebrates with special emphasis on the phylogeny and ecological relationships of the major phyla. Laboratory will involve field trips and survey collections. Offered fall semester every year.
Prerequisite: BIOL 1407.
Co-requisite: SMTE 0091.

BIOL 3414  Vertebrate Zoology
4 Semester Credit Hours (4 Lecture Hours)
Structure, life history, and evolution of the vertebrates with special emphasis on the phylogeny and ecological relationships of the classes. Laboratory will involve field trips and survey collections. Offered only in Spring semester.
Prerequisite: BIOL 1407.
Co-requisite: SMTE 0091.

BIOL 3425  Functional Anatomy
4 Semester Credit Hours (4 Lecture Hours)
General trends in morphological development and adaptation as demonstrated by the anatomy and embryology of living and extinct chordates. Students may not receive credit for both this course and either BIOL 2401 - Anatomy and Physiology I or BIOL 2402 - Anatomy and Physiology II.
Prerequisite: BIOL 1407.
Co-requisite: SMTE 0091.

BIOL 3428  Principles of Ecology
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
Introduction to the interrelationships of organisms and their environment. Population structure, community classification and regulation, and energy flow in ecosystems will also be covered. Laboratory sections will focus on experimental design and field techniques in ecology.
Prerequisite: BIOL 1407 and (BIOL 2200, 2300, BIMS 2200 or UNIV 1101 and UNIV 1102) and CHEM 1411 and (MATH 2413 or 2413*).
May be taken concurrently.
Co-requisite: SMTE 0091.

BIOL 3430  Physiology
4 Semester Credit Hours (4 Lecture Hours)
The study of physiological processes that are the product of complex interactions between tissues, organs and organ systems, with emphasis on the circulatory, respiratory, endocrine, muscular, digestive, and urogenital systems. Particular focus on homeostasis, and the role of the environment and evolution on organ systems. Students may not receive credit for both this course and either BIOL 2401 - Anatomy and Physiology I, or BIOL 2402 - Anatomy and Physiology II.
Prerequisite: BIOL 1407.
Co-requisite: SMTE 0091.

BIOL 3455  Plant form and Function
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
Anatomy of vegetative and reproductive organs of plants, unique cellular features, development and differentiation of cell and tissue types. Emphasis on physiological mechanisms of response and adaptation to the environment.
Prerequisite: BIOL 1407.
Co-requisite: SMTE 0091.

BIOL 3479  Plant Ecology
4 Semester Credit Hours (4 Lecture Hours)
Structure, physiology, life cycles, and economic impact of plants. Factors influencing diversity, succession and ecological distribution of plants.
Prerequisite: BIOL 1407.
Co-requisite: SMTE 0091.
BIOL 4100  Research Ethics and Professionalism
1 Semester Credit Hour (1 Lecture Hour)
A course designed to enhance the professionalism of undergraduate researchers. This course discusses the codified aspects of research ethics, including fabrication, falsification and plagiarism of data; assigning authorship, submitting manuscripts to more than one journal and management of lab teams. It also addresses careers in science, resume writing, producing the successful application and interviewing skills.

BIOL 4301  Embryology
3 Semester Credit Hours (3 Lecture Hours)
Studies the events that occur just prior to and during gestation. Includes gametogenesis, chromosomal and single gene aberrations, teratology, and the development of the body systems.
Prerequisite: BIOL 2416.

BIOL 4302  Coral Reef Conservation
3 Semester Credit Hours (3 Lecture Hours)
Survey of challenges and threats facing coral reef ecosystems in the 21st century and discussion of conservation and management strategies. Topics include biology and ecology of reef ecosystems, climate change impacts, coral bleaching, over-fishing and the effectiveness and design of marine protected areas.

BIOL 4304  Biology of Viruses
3 Semester Credit Hours (3 Lecture Hours)
Introduction to the study of viruses, including viral life cycles, replication schemes and Baltimore classification of representative bacteriophages, plant and animal viruses. Emphasis on analysis and review of primary literature on viruses.
Prerequisite: BIOL 2416, 2421 and CHEM 1411.

BIOL 4308  Biogeography
3 Semester Credit Hours (3 Lecture Hours)
This course offers an overview of the theories, methods, and current directions in modern biogeography, emphasizing marine and terrestrial plant and animal species and communities.

BIOL 4309  Biological Systematics and Phylogenetics
3 Semester Credit Hours (3 Lecture Hours)
Introduction to the theories of biological systematics and phylogenetics. Including species concepts, biological classification, nomenclature, and phylogenetic methods including ancestral state reconstruction and divergence time estimation. Offered in the spring semester of odd years. Stacked with BIOL 5309
Prerequisite: BIOL 1407.

BIOL 4311  Biological Bases of Behavior
3 Semester Credit Hours (3 Lecture Hours)
This lecture-based course examines the processes by which neuronal circuits generate behaviors and the mechanisms by which experience modulates the activity of these circuits.
Prerequisite: BIMS 4323.

BIOL 4312  Mariculture Techniques
3 Semester Credit Hours (2 Lecture Hours, 2 Lab Hours)
The study and hands-on application of biological, mechanical, and other concepts required to develop the skills and techniques necessary for efficient operation and management of public and private aquaculture facilities. Offered in Fall of odd-numbered years.
Prerequisite: BIOL 4370.

BIOL 4315  Animal Behavior
3 Semester Credit Hours (3 Lecture Hours)
What mechanisms cause behavior? How does behavior develop? How does behavior affect survival and reproduction? How does behavior evolve? These questions will be explored in vertebrate and invertebrate species. Offered in the fall semester Stacked with BIOL 5315

BIOL 4319  Biology of Marine Mammals
3 Semester Credit Hours (3 Lecture Hours)
Introduction to marine mammals, with a focus on their interactions with their biotic and abiotic environment.
Prerequisite: BIOL 1407.

BIOL 4323  Global Change Ecology
3 Semester Credit Hours (3 Lecture Hours)
An introduction to the effects of climatic and anthropogenic change on terrestrial and aquatic structure and function. Includes readings from the current literature and discussion of controversial articles.
Prerequisite: BIOL 3428.

BIOL 4328  Fisheries
3 Semester Credit Hours (3 Lecture Hours)
A study of theory and techniques in fisheries science, including practical fisheries sampling designs and techniques, behavior of fisheries populations and application to resource management with emphasis in tide-influenced waters. Includes readings in the current literature.
Prerequisite: BIOL 1407.

BIOL 4329  Fisheries Techniques
3 Semester Credit Hours (2 Lecture Hours)
This class is designed to provide practical experience in the theory and application of traditional and modern fisheries sampling and analytical techniques used in Fisheries Science and Management. This is a hands-on field- and laboratory-based course that will develop skills that are most commonly used by fisheries biologists and technicians. Offered in Fall of even-numbered years.
Prerequisite: BIOL 4328.

BIOL 4330  Conservation Biology
3 Semester Credit Hours (3 Lecture Hours)
Principles and theories relating to the conservation of biological diversity, including patterns and processes creating biological diversity, estimates of extinction rates, consequences of losses of biodiversity and causes of diversity loss.

BIOL 4334  Biology and Ecology of Coral Reefs
3 Semester Credit Hours (3 Lecture Hours)
This course will introduce the biology of corals, describe the abiotic and biotic interactions among coral reef ecosystem inhabitants, identify the threats of climate change, and discuss the conservation and management of reefs for the future. Offered every spring.
Prerequisite: BIOL 3428.

BIOL 4336  Marine Ecology
3 Semester Credit Hours (3 Lecture Hours)
Habits and community structure in marine environments; biotic and abiotic factors governing the distribution of marine organisms. (Offered every Spring)
Prerequisite: BIOL 3428.
BIOL 4340 Genomics, Proteomics and Bioinformatics
3 Semester Credit Hours (3 Lecture Hours)
An introduction to integrative biological study using genome-wide approaches and bioinformatics. The "omics" technologies (Genomics, Proteomics, Metabolomics, etc.) will be surveyed for current and potential contributions to understanding biological function at molecular, cellular, organismal and ecosystem levels.
Prerequisite: BIOL 2416 and 3410 or CHEM 4401.

BIOL 4343 Oceans and Human Health
3 Semester Credit Hours (3 Lecture Hours)
Healthy oceans are essential to the habitability of our planet – for humans and all other forms of life. Students will explore links between oceans, pollution, human well-being, ecosystem services, resource management, and the science and legislation governing the enforcement of water quality standards.

BIOL 4350 Research and Design
1-3 Semester Credit Hours (1-3 Lecture Hours)
Course will include experimental design, literature review of a research topic and laboratory work on the research topic.

BIOL 4353 Down the River: Biology of Gulf Coast Fishes
3 Semester Credit Hours (3 Lecture Hours)
This course covers aspects of ecology and biogeography of riverine and estuarine fishes while exposing students to field sampling techniques and museum preparation of specimens. This will be a unique opportunity for students to gain an in-depth understanding of the biological complexity of Texas Gulf Coast river systems while gaining hands-on experience in field and museum ichthyological techniques that are employed by state, federal and academic researchers alike.
Co-requisite: SMTE 0091.

BIOL 4355 Public Aquarium and Animal Care Operations
3 Semester Credit Hours (3 Lecture Hours)
This course examines the unique requirements needed for public aquariums and zoos to balance animal care and health with public display for general education and conservation research.
Co-requisite: SMTE 0091.

BIOL 4360 Computation for 21st Century Biologists
3 Semester Credit Hours (3 Lecture Hours)
This course is designed to prepare and enable students to use computational tools for bioinformatic applications in advanced courses and independent research projects. Students will be introduced to powerful open-source computing tools used in biological research for creation, organization, manipulation, processing, analysis, and archiving of big data. While not a formal requirement, it is assumed that students have a firm command of basic algebra. Offered every Fall semester Stacked with BIOL 5360

BIOL 4370 Mariculture
3 Semester Credit Hours (3 Lecture Hours)
Survey of the physiological, behavioral, environmental, and economic parameters governing the culture of selected aquatic species. Included are techniques employed worldwide to produce aquatic products.
Prerequisite: BIOL 1407.

BIOL 4371 Population Genetics
3 Semester Credit Hours (3 Lecture Hours)
An introduction to evolutionary processes and their genetic basis, this course focuses on theoretical and experimental approaches to the study of population genetics, quantitative genetics, evolutionary ecology, and molecular evolution.
Prerequisite: BIOL 2416 and MATH 2413.

BIOL 4396 Directed Independent Study
1-3 Semester Credit Hours (1-3 Lecture Hours)
Research in areas of current interest. Written report required. May be repeated for a maximum of 6 semester hours.
Prerequisite: BIOL 1407 and CHEM 1412.

BIOL 4399 Directed Independent Research
3-6 Semester Credit Hours (3-6 Lecture Hours)
Independent laboratory- or field-based research project on topic of current interest. Project developed in conjunction with a faculty advisor. Written report required. May be repeated once for a total of 6 semester credit hours

BIOL 4405 Limnology
4 Semester Credit Hours (4 Lecture Hours)
The study of the functional relationships and productivity of aquatic communities as they are affected by their physical, chemical, and biotic environment. The influence of man's activities on these systems will be the focus of the course.
Prerequisite: BIOL 3428.
Co-requisite: SMTE 0092.

BIOL 4406 Immunology
4 Semester Credit Hours (4 Lecture Hours)
An overview of immunology with emphasis on current knowledge of the immune system. Detailed examination of the specific cells, cytokines, antibodies, and molecules that comprise the immune system. Laboratory exercises demonstrate the basic principles and techniques used in immunologic studies. Cross listed with BIMS 4406.
Prerequisite: BIOL 2421.
Co-requisite: SMTE 0092.

BIOL 4407 BIOLOGY OF THE FUNGI
4 Semester Credit Hours (3 Lecture Hours, 1 Lab Hour)
Overview of the fungi, including their characteristics, diversity, and ecology. Interactions between fungi and other organisms are explored along with the role and importance of the fungi.
Prerequisite: BIOL 2421.
Co-requisite: SMTE 0092.

BIOL 4408 Microbial Diversity and Ecology
4 Semester Credit Hours (4 Lecture Hours)
Biodiversity and roles of microorganisms in natural environments. Interactions with other micro- and macro-organisms (humans, animals and plants) and with abiotic factors. Unique abilities of microorganisms such as nitrogen fixation and adaptation to extreme environments.
Prerequisite: BIOL 2421 or 4328.
Co-requisite: SMTE 0092.

BIOL 4410 Mammalogy
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
Systematics and ecology of mammals. Offered in even Fall semesters.
Prerequisite: BIOL 1407.
Co-requisite: SMTE 0091.

BIOL 4413 Entomology
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
A broad overview of the natural history, classification, phylogeny, ecology, behavior, development and physiology of insects and their kin. The lab will involve field work, collection and curation. Offered in spring semester of even years. Stacked with BIOL 5413.
Prerequisite: BIOL 3413.
Co-requisite: SMTE 0091.
BIOL 4417 Field Biology
4 Semester Credit Hours (1 Lecture Hour, 6 Lab Hours)
is a hands-on course designed to teach students key concepts by
immersing them in nature. Topics include adaptations of plants and
animals in different habitats, food web interactions, and how biotic
and abiotic forces interact to structure natural communities including spatial
and temporal variation in communities.
Prerequisite: BIOL 3428.
Co-requisite: SMTE 0091.

BIOL 4422 Plant Taxonomy
4 Semester Credit Hours (4 Lecture Hours)
Principles and practice in the classification of flowering plants. Field trips
are required.
Prerequisite: BIOL 1407.
Co-requisite: SMTE 0091.

BIOL 4425 Ornithology
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
Systematics, anatomy, physiology, ecology, behavior, and field
identification of birds. Offered in odd Fall semester.
Prerequisite: BIOL 1407.
Co-requisite: SMTE 0091.

BIOL 4429 Marine Botany
4 Semester Credit Hours (4 Lecture Hours)
The ecology of marine plants with emphasis on identification, life
histories, and environmental factors of distribution.
Prerequisite: BIOL 1407.
Co-requisite: SMTE 0091.

BIOL 4430 Marine Plankton
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
In this class we will investigate the systematics, distribution, and ecology
of major marine plankton groups and introduce major concepts in
biological oceanography. Offered in Spring of odd-numbered years.

BIOL 4432 Ichthyology
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
Systematics, evolution, biology, and ecology of fishes. Laboratory
identification of marine and freshwater fishes collected during field
excursions.
Prerequisite: BIOL 1407.
Co-requisite: SMTE 0091.

BIOL 4433 Parasitology
4 Semester Credit Hours (4 Lecture Hours)
An introduction to parasitology with emphasis on internal parasites
and appropriate references to human endoparasites and parasites of
veterinary importance.
Prerequisite: BIOL 2421.
Co-requisite: SMTE 0092.

BIOL 4435 Biological Microtechniques
4 Semester Credit Hours (4 Lecture Hours)
Theory and techniques of processing specimens for histochemistry and
microscopic examination. Laboratory includes preparation of tissues and
small specimens for analysis and display.
Prerequisite: BIOL 1407 and CHEM 3411.
Co-requisite: SMTE 0092.

BIOL 4439 Case Work Methods in Forensic Anthropology
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
This course combines the study of human bones (osteology) and
skeletal anatomy with established and validated forensic anthropological
methods to solve theoretical and actual forensic cases involving human
remains. Offered during the spring semester. Stacked with BIOL 5439.
Cross-listed with BIMS 4439.
Prerequisite: BIOL 2401.

BIOL 4442 Herpetology
4 Semester Credit Hours (4 Lecture Hours)
Systematics, ecology, and behavior of amphibians and reptiles.
Prerequisite: BIOL 1407.
Co-requisite: SMTE 0091.

BIOL 4444 Estuarine Organisms
4 Semester Credit Hours (4 Lecture Hours)
Systematics, distribution, and ecology of estuarine macrofauna and
macroflora. Weekend field trips and individual study required.
Prerequisite: BIOL 3413.
Co-requisite: SMTE 0091.

BIOL 4446 Tropical Ecosystems & Conservation
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
Survey of the ecology and conservation issues of the major ecosystems
in the tropics and field techniques used to study tropical forest ecology.
Prerequisite: BIOL 3428.
Co-requisite: SMTE 0091.

BIOL 4452 Ecology and Evolution of Fishes
4 Semester Credit Hours (3 Lecture Hours, 4 Lab Hours)
This course covers aspects of fish ecology from individual, population,
community, and ecosystem levels. We discuss the role of the
environment on fish physiology and behavior, food-web dynamics,
community assembly and diversity, ecosystem interactions, and
anthropogenic impacts on fishes with a focus on conservation.
Prerequisite: BIOL 4432.
Co-requisite: SMTE 0091.

BIOL 4547 Marine Science Field Camp
5 Semester Credit Hours (3 Lecture Hours, 6 Lab Hours)
Students learn techniques required to properly conduct marine
science field research. Practical, hands-on experience is gained in a
variety of topics including biotic and abiotic sample collection
and processing, quantitative analysis of field data, evaluation of
environmental factors, survival and distribution of living organisms, and
the structure of biotic communities.

BIOL 4598 Biology Internship
2-6 Semester Credit Hours
Two to six semester credit hours may be earned by working in an
internship position in a governmental agency, private industry, or other
appropriate venue.

BIOL 4609 Field and Sampling Techniques
6 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
The study of techniques required for proper field work in the biological
sciences. The course includes ecological sampling methods, safety,
logistics, equipment operation and maintenance and travel concerns.
Co-requisite: SMTE 0091.

Courses

CHEM 1305 Introductory Chemistry
3 Semester Credit Hours (3 Lecture Hours)
A one-semester principles course for students in non-science related majors covering the major concepts of chemistry (atomic structure, bonding, stoichiometry, elementary thermodynamics) and the role of chemistry in contemporary society (polymers, energy, pollution, etc.). Will not substitute for CHEM 1411.
TCCNS: CHEM 1305

CHEM 1411 General Chemistry I
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
The foundation course in chemistry. Stoichiometry, chemical equilibria, atomic structure, chemical bonding, periodic properties, thermodynamics, chemical kinetics, and descriptive chemistry of the elements. Laboratory involves development of basic skills. This course counts toward the natural science component of the University Core Curriculum. Either CHEM 1305 - Introductory Chemistry or CHEM 1411, but not both, may be applied towards the core requirement. This course is offered in Fall, Spring and typically during both Summer sessions.
Co-requisite: SMTE 0093.
TCCNS: CHEM 1411

CHEM 1412 General Chemistry II
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
The continuation of CHEM 1411 - General Chemistry I*, the foundation course in chemistry with emphasis on quantitative aspects. Laboratory involves development of basic skills. This course counts toward the natural science component of the University Core Curriculum.
Prerequisite: CHEM 1411 and MATH 1314.
Co-requisite: SMTE 0093.
TCCNS: CHEM 1412

CHEM 2490 Special Topics
4 Semester Credit Hours (1-4 Lecture Hours, 3 Lab Hours)
May be repeated for credit. Subject materials variable. Offered on sufficient demand.

CHEM 3411 Organic Chemistry I
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
The structure, nomenclature, synthesis, reactions, and reaction mechanisms of the principal classes of organic compounds. Stereochemistry and spectroscopy of organic compounds. Laboratory involves separation and synthetic techniques and development of basic skills. This course is offered in Fall, Spring and typically during the Summer I session.
Prerequisite: CHEM 1411.
Co-requisite: SMTE 0093.

CHEM 3412 Organic Chemistry II
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
A continuation of CHEM 3411. The course concludes with a survey of the structures of biomolecules. Laboratory involves spectroscopy and qualitative analysis techniques. This course is offered in Fall, Spring and typically during the Summer II session.
Prerequisite: CHEM 3411.
Co-requisite: SMTE 0093.

CHEM 3417 Quantitative Analysis
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
A course in quantitative analysis, which includes chemical statistics and the use of acid-base, complexation, precipitation, and redox reactions to perform analyses and separations. Laboratory includes standard volumetric and gravimetric methods and development of basic quantitative techniques. This course is typically offered in Spring.
Prerequisite: CHEM 1412.
Co-requisite: SMTE 0093.

CHEM 3418 Instrumental Analysis
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
An introduction to instrumental methods of analysis: spectroscopy, chromatography, and electrochemical methods. Laboratory involves use of instrumentation in chemical analysis. This course is typically offered in Fall and Spring.
Prerequisite: CHEM 1412.
Co-requisite: SMTE 0093.

CHEM 4085 Major Field Test in Chemistry
0 Semester Credit Hours
The Major Field Test (MFT) in Chemistry is a national examination given in the Fall and Spring semesters only. It is a graduation requirement for all Chemistry students. Students enroll in this course during the semester that they plan to take the MFT. There is no cost to the student for either this course or for the MFT.

CHEM 4292 Senior Chemistry Seminar
2 Semester Credit Hours (2 Lecture Hours)
Presentation and discussion of selected topics in chemistry. Includes literature searches and reviews, paper presentations, survey of professional opportunities and requirements, career guidance and job searching skills.

CHEM 4309 Advanced Instrumental Analysis
3 Semester Credit Hours (3 Lecture Hours)
An advanced course in analytical chemistry covering the underlying theories of instrumental methods. This course is typically offered on an irregular basis.
Prerequisite: (CHEM 3411, 3412 and 3418).
CHEM 4320 Drugs, Toxins and Natural Products Chemistry  
3 Semester Credit Hours (3 Lecture Hours)  
The chemistry and biological activity of pharmaceuticals, toxins and selected natural products. Examines how chemical structure relates to biological activity. Also examines action of antibiotics, chemotherapy agents, analgesics, steroids, and compounds targeting the central and peripheral nervous system. This course is typically offered in Fall and Spring.  
Prerequisite: CHEM 4401.

CHEM 4341 Advanced Organic Chemistry  
3 Semester Credit Hours (3 Lecture Hours)  
This three-credit hour course will entail detailed description of structure, synthesis, and reactions and mechanisms in organic chemistry including important named reactions. This course will also introduce them to the art of writing reaction mechanisms and retrosynthetic analysis. Moreover, they will be learning about separation, purification and characterization of organic compounds followed by scientific abstract writing. Designed only for science major. There is NO laboratory associated with the course.  
Prerequisite: CHEM 3412.

CHEM 4344 Chemical Oceanography  
3 Semester Credit Hours (3 Lecture Hours)  
The study of the oceans and seas as a chemical system, including interactions with both the biota and the solid earth. This course is typically offered in Spring.  
Prerequisite: CHEM 1412.

CHEM 4350 Polymer Chemistry  
3 Semester Credit Hours (3 Lecture Hours)  
An advanced lecture course in organic chemistry. Characterization of polymers. Polymerization mechanisms. Current research directions such as biomedical applications and electroactive polymers. This course is offered on an irregular basis.  
Prerequisite: CHEM 3412.

CHEM 4360 Molecular Spectroscopy  
3 Semester Credit Hours (3 Lecture Hours)  
Spectroscopy and Structure of Organic Compounds is a three-credit that introduce you to concepts used in the identification of organic compounds with methods based on NMR, mass spectrometry, UV and IR.  
Prerequisite: CHEM 3412.

CHEM 4401 Biochemistry I  
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)  
The structure and function of carbohydrates, lipids, proteins, and nucleic acids. An introduction to enzyme kinetics, cell membrane structure and biochemical signaling. Laboratory exercises demonstrate the basic principles and techniques used in Biochemistry. This course is typically offered in Fall, Spring and Summer.  
Prerequisite: CHEM 3412 and (BIOL 1406 and 1407).

CHEM 4402 Biochemistry II  
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)  
A continuation of CHEM 4401. Biochemical energetics, including glycolysis, fatty acid oxidation, amino acid oxidation, citric acid cycle, oxidative phosphorylation, photophosphorylation and photosynthesis. Carbohydrate, fatty acid and amino acid biosynthesis. Laboratory is a continuation of biochemical techniques. This course is typically offered in Fall and Spring.  
Prerequisite: CHEM 4401.

CHEM 4407 Advanced Inorganic Chemistry  
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)  
A survey of inorganic chemistry. Theories of atomic structure, covalent bonding, ionic solids, metallic solids, and coordination compounds. Modern acid?base concepts. Laboratory involves the synthesis of inorganic compounds.  
Prerequisite: CHEM 3412.

Co-requisite: SMTE 0093.

CHEM 4420 Physical Biochemistry  
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)  
A fundamental approach to the study of physical and chemical phenomena, including the study of thermodynamics, gases and phase equilibria. This course is typically offered on an irregular basis.  
Prerequisite: CHEM 1412 and (PHYS 1402 or 2426) and MATH 2414.

Co-requisite: SMTE 0093.

CHEM 4423 Physical Chemistry I  
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)  
A fundamental approach to the study of physical and chemical phenomena, including the study of thermodynamics, gases and phase equilibria. This course is typically offered in Fall.  
Prerequisite: CHEM 1412 and (PHYS 1402 or 2426) and MATH 2414.

Co-requisite: SMTE 0093.

CHEM 4424 Physical Chemistry II  
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)  
A continuation of CHEM 4423, including the study of chemical kinetics, electrochemistry, molecular structure, and quantum mechanics. This course is typically offered in Spring.  
Prerequisite: CHEM 4423.

Co-requisite: SMTE 0093.

CHEM 4443 Environmental Chemistry  
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)  
A study of the impact of chemistry on the environment, including topics of air pollution, water pollution, and beneficial chemical modifications of the environment. Laboratory devoted to field techniques of sampling, sample preservation, and analytical techniques applied to the environment. This course is typically offered in Spring.  
Prerequisite: CHEM 1412 and 3411.

Co-requisite: SMTE 0093.

CHEM 4490 Special Topics  
4 Semester Credit Hours (1 Lecture Hour, 1 Lab Hour)  
May be repeated for credit. Subject materials variable.

CHEM 4696 Directed Independent Study  
1-6 Semester Credit Hours  
Requires a formal proposal of study to be completed in advance of registration, to be approved by the supervising faculty, the chairperson and the dean of the College.

   ESCI 3443 Environmental Biology
   ESCI 4365 Occupational Safety and Accident Prevention
   ESCI 4270 Hazardous Waste Operations and Emergency Response Theory
   ESCI 4230 Oil Spill Prevention and Response Theory
   ESCI 4320 Environmental Health
   ESCI 4322 Introduction to Industrial Hygiene
   GEOL 3443 Environmental Geology

Total Hours 20-22

Note:
Students wishing to minor in environmental science should consult
the appropriate section of the catalog to determine any additional
prerequisites needed before they may take these courses.

Courses

ESCI 1401 Environmental Science I: Introduction to Environmental Science 4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Principles of the scientific method and critical thinking provide a foundation for subsequent consideration of environmental issues through a multidisciplinary approach. Laboratory exercises and local field experiences reinforce concepts introduced in the lectures. Fall, Spring.
Co-requisite: SMTE 0096.
TCCNS: ENVR 1401

ESCI 1490 Selected Topics 1-4 Semester Credit Hours (1-4 Lecture Hours)
Subject materials variable. May be repeated for credit when topics are significantly different. Faculty approval required. Offered on sufficient demand.

ESCI 3202 Professional Skills 2 Semester Credit Hours (2 Lecture Hours)
Presentation and discussion of selected topics relating to the professional skills of practicing environmental scientists including literature searches, reviews, paper presentation, professional and career opportunities, professional ethics. Fall, Spring.

ESCI 3351 Oceanography 3 Semester Credit Hours (3 Lecture Hours)
Methods and principles of oceanography. A survey of oceanography with emphasis placed on the physical processes affecting water and water masses of the world oceans. Fall (on sufficient demand), Spring.
Prerequisite: CHEM 1412, ESCI 1401 or GEOL 1403.

ESCI 3403 Introduction to Meteorology 4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
This course is an introduction to meteorology and the dynamics of planetary atmospheres. Emphasis on atmospheric accretion, composition, evolution, structure, and dynamics. Lab exercises cover basic measurement techniques, weather maps, and forecasting. Fall, Spring (on sufficient demand).
Co-requisite: SMTE 0096.

ESCI 3443 Environmental Biology 4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Historical, contemporary, and projected concerns of human activities on biological aspects of ecosystem functioning.
Prerequisite: BIOL 1407.

ESCI 4130 Oil Spill Prevention and Response Lab 1 Semester Credit Hour (2 Lab Hours)
Practical techniques for control, containment, countermeasures, removal, and disposal of oil spills in an environmentally safe manner. Field exercises will include use of boats, booms and skimmers. Fall, Spring, Summer (on sufficient demand).
Prerequisite: ESCI 4230.
* May be taken concurrently.
Co-requisite: SMTE 0096.

ESCI 4170 Hazardous Waste Operations and Emergency Response Lab 1 Semester Credit Hour (2 Lab Hours)
Practical techniques for handling, reducing, and disposing of hazardous wastes in an environmentally safe manner. Lab exercises in use of personal protective gear and safe handling of hazardous substances. Fall, Spring, Summer (on sufficient demand).
Prerequisite: ESCI 4270.
* May be taken concurrently.
Co-requisite: SMTE 0096.

ESCI 4201 Scientific Diving Techniques 2 Semester Credit Hours (2 Lecture Hours)
Theory, science, and art of underwater diving technology and its application to scientific objectives. Course helps fulfill some training requirements of the Texas A&M University-Corpus Christi Guidelines for scientific diving.

ESCI 4202 Issues in Environmental Science 2 Semester Credit Hours (2 Lecture Hours)
Exploration of major issues in environmental science posing past, present and future challenges. Selected readings, student presentations and papers.
Prerequisite: ESCI 1401.

ESCI 4230 Oil Spill Prevention and Response Theory 2 Semester Credit Hours (2 Lecture Hours)
Historical perspective of laws and regulations governing oil spill prevention and response. Current methods for control, containment, countermeasures, removal, and disposal of oil spills in an environmentally safe manner. Fall, Spring, Summer (on sufficient demand).

ESCI 4270 Hazardous Waste Operations and Emergency Response Theory 2 Semester Credit Hours (2 Lecture Hours)
Study of the laws and regulations of hazardous waste management from an historical perspective followed by current techniques for handling, reducing, and disposing of hazardous wastes in an environmentally safe manner. Fall, Spring, Summer (on sufficient demand).

ESCI 4301 Environmental Regulations 3 Semester Credit Hours (3 Lecture Hours)
A survey of state and federal environmental laws and regulations, and their impact on the environment. Case studies of environmental issues and legislated regulations.
Prerequisite: POLS 2305 and 2306.
ESCI 4320 Environmental Health
3 Semester Credit Hours (3 Lecture Hours)
Overview of the toxicology and epidemiology of pollutants in the air, water and soil. Associations of environmental exposure with adverse health effects such as cancer, cardiovascular disease, and reproductive outcomes; also chemical markers and symptoms of disease. Pollutants studied include lead, asbestos, radiation, radon, noise, metals, halogenated hydrocarbons, aromatic hydrocarbons, silica, indoor air quality, formaldehyde, and outdoor air pollutants. Offered on sufficient demand.

ESCI 4321 Introduction to Soil and Groundwater Restoration
3 Semester Credit Hours (3 Lecture Hours)
Introduction to methods for restoring contaminated soil and groundwater by examining the factors and processes influencing the efficacy of remediation systems. An emphasis will be placed on the scientific principles upon which soil and groundwater remediation is based. Cross listed with GEOL 4321.

ESCI 4322 Introduction to Industrial Hygiene
3 Semester Credit Hours (3 Lecture Hours)
Introduction to health protection practices in the industrial environment. Health basis for OSHA laws, regulations. Sampling and testing procedures.

ESCI 4324 Introduction to Industrial Toxicology
3 Semester Credit Hours (3 Lecture Hours)
Review of human physiology, general concepts of toxicology: dose-response relationship, interactions between the host and the agents, risk assessment, to provide an introductory understanding of toxicology related to the chemicals in the workplace.

ESCI 4332 Wetlands and Water Quality
3 Semester Credit Hours (3 Lecture Hours)
Introduction to wetland ecosystems (natural, constructed and restored) with an emphasis on the role of wetlands in water quality. Topics include wetland systems, their history and role in society, relationships between biology, geology, ecology, hydrology and chemistry in wetland environments. Offered on sufficient demand. 
Prerequisite: CHEM 1412 and BIOL 1406.

ESCI 4335 Climate and Climate Variability
3 Semester Credit Hours (3 Lecture Hours)
Course intended to guide environmental science majors in developing a conceptual understanding of Earth's global climate and its variability. Review of past climates, present mean state of the climate system, climate variability from seasonal to multidecadal time scales, and climate change. Special attention given to climates of the Gulf of Mexico, Caribbean Sea and surrounding land regions. Plausible climate-change scenarios, as well as mitigation and adaptation strategies are also discussed. Cross listed with ATSC 4335. Spring.
Prerequisite: (ESCI 3351 or 3403) and (PHYS 1401 or 2425).

ESCI 4340 Severe Weather
3 Semester Credit Hours (3 Lecture Hours)
Introduction to mesoscale weather systems including thunderstorms, squall lines and hurricanes, as well as the mechanisms of tornado and lightning. Methods of observing, analyzing, and predicting these severe weather systems with the interpretation of satellite and radar images will also be introduced in this class.
Prerequisite: ESCI 3403.

ESCI 4344 Air Pollution and the Clean Air Act
3 Semester Credit Hours (3 Lecture Hours)
Introduction to the chemistry and physics of air pollution and regulations. Topics include photochemistry, acid rain, air pollution meteorology and dispersion, global change, and the Clean Air Act.

ESCI 4360 Physical Oceanography
3 Semester Credit Hours (3 Lecture Hours)
Physical description of the sea, physical properties of seawater and sea ice, methods and measurements, wind-driven ocean circulation, thermohaline ocean circulation, boundary processes, waves, tides and mixing. Seasonal and interannual variability such as El Niño/Southern Oscillation phenomena. Implications for marine biology, marine geology, human impacts, other topics. Fall.
Prerequisite: PHYS 1401 or 2425.

ESCI 4365 Occupational Safety and Accident Prevention
3 Semester Credit Hours (3 Lecture Hours)
This course provides students with fundamental knowledge of regulatory requirements on occupational safety and practical techniques on accident prevention in the work environment. Offered on sufficient demand.

ESCI 4408 Environmental Microbiology
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Relationships between microorganisms and their biotic and abiotic environment. Current topics such as air quality (i.e., molds), water quality and bioremediation will be discussed. Laboratory will include techniques for sampling from soil, air and water. Offered on sufficient demand.
Prerequisite: BIOL 2421.
Co-requisite: SMTE 0096.

ESCI 4480 Environmental Site Assessment
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Interdisciplinary application of environmental regulations, risk assessment to specific examples. Knowledge of United States environmental regulations assumed; ESCI 4301 Environmental Regulations recommended.

ESCI 4490 Selected Topics
4 Semester Credit Hours (4 Lecture Hours, 4 Lab Hours)
Subject materials variable. May be repeated for credit when topics are significantly different. Faculty approval required. Offered on sufficient demand.

ESCI 4496 Directed Independent Study
1-4 Semester Credit Hours
Requires a formal proposal of study to be completed in advance of registration and to be approved by the supervising faculty, the Chairperson, and the Dean of the College. Fall, Spring, Summer.

ESCI 4498 Internship in Environmental Science
1-4 Semester Credit Hours (4 Lecture Hours)
Two to four semester hours of credit may be earned by working in an internship position in a governmental agency or industry.

Geology, Minor

Program Description
The mission of the Geology Program is to provide integrated and process-oriented curricula, based on fundamental scientific principles and processes that enable graduates to pursue challenging careers and maintain lifelong learning. The Geology Program is designed to serve students majoring in geology and environmental science as well as students in other fields who are interested in adding to their knowledge...
of the Earth. Support is also provided for students preparing to earn certification for teaching at the K-12 level, and interested non-science majors. Members of the geoscience faculty provide majors with a broad overview of geologic processes while offering the opportunity to pursue specialized knowledge in selected areas of geoscience in preparation for graduate study and careers in government, industry, or academia.

**Program Requirements**

Students majoring in other academic fields who wish to earn a minor in geology must complete the following requirements:

**Total Hours** 20

**Courses**

**GEOL 1303** Essentials of Geology  
3 Semester Credit Hours (3 Lecture Hours)  
One-semester introductory Earth science course for students majoring in a non-science subject area. Covers basic geologic material and concepts, such as minerals, rocks, the rock cycle, and plate tectonics theory. Origin, composition, and evolution of our planet, as well as the importance of geology in everyday life, including geologic resources, global change, earthquakes, and volcanism are examined. This course is not recommended for students majoring in Geology or Environmental Sciences. Course counts toward the natural science component of the Core Curriculum Program.  
TCCNS: GEOL 1303

**GEOL 1403** Physical Geology  
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)  
Introduction to the origin, classification, and composition of Earth materials. Study of internal and surface processes which shape and modify Earth. Laboratory studies of minerals and rocks, as well as topographic maps, geologic maps and geologic cross-sections.  
Co-requisite: SMTE 0094.  
TCCNS: GEOL 1403

**GEOL 1404** Historical Geology  
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)  
Introduction to the origin and evolution of Earth and other planets. Changes in the form and distribution of Earth's continents and oceans, and succession of plants and animals through geologic time. Laboratory studies of fossils, geological maps, and the interpretation of ancient environments of rock formation.  
Prerequisite: GEOL 1403 or 1303.  
Co-requisite: SMTE 0094.  
TCCNS: GEOL 1404

**GEOL 1404** Historical Geology  
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)  
Introduction to the origin and evolution of Earth and other planets. Changes in the form and distribution of Earth's continents and oceans, and succession of plants and animals through geologic time. Laboratory studies of fossils, geological maps, and the interpretation of ancient environments of rock formation.  
Prerequisite: GEOL 1403 or 1303.  
Co-requisite: SMTE 0094.  
TCCNS: GEOL 1404

**GEOL 2102** Undergraduate Seminar in Geology-Careers in the Geosciences  
1 Semester Credit Hour (1 Lecture Hour)  
Introductory level seminar featuring diverse topics and speakers. Focus on current geologic research. In-house as well as external speakers. May not be repeated for credit but attendance in subsequent semesters is highly encouraged.  
Prerequisite: GEOL 1403 and 1404 and (GEOL 3411 or 3411').  
May be taken concurrently.

**GEOL 2222** Karst Geology and Paleoclimatology  
2 Semester Credit Hours (1 Lecture Hour)  
This course describes the different types of caves and karst rocks, the water rock interactions in carbonate rock systems, and it explains cave formation via hydrological and geochemical processes. It also deals with how speleothem proxies such as oxygen and carbon stable isotope, trace elements, carbonate petrography are used to decipher past changes in climate.  
Field trips required.

**GEOL 2490** Selected Topics  
1-4 Semester Credit Hours (1-4 Lecture Hours, 6 Lab Hours)  
May be repeated for credit if topics are significantly different. Subject material variable. Faculty approval required.

**GEOL 3326** Introduction to Geological Field Methods  
3 Semester Credit Hours (2 Lecture Hours, 3 Lab Hours)  
Introduction to the basic techniques of geological fieldwork. Note taking in the field, proper use of geological field equipment, measurement and description of rock sections by several methods and degrees of detail, plus small area mapping of several types of terrain with topographic maps. Reports, sections, and maps will be produced from the field notes. Field trips required.  
Prerequisite: GEOL 1403 and 1404 and (GEOL 3411 or 3411').  
May be taken concurrently.

**GEOL 3329** Geology of National Parks  
3 Semester Credit Hours (3 Lecture Hours)  
Introduction to the regional geology of the United States using selected U.S. National Parks representing a wide variety of geologic settings as examples. Application of major geologic principles and basic geologic concepts such as plate tectonics, rock cycle, stratigraphy, and geologic time.  
Prerequisite: GEOL 1303, 1403 or 1404.

**GEOL 3411** Mineralogy  
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)  
Study of the physical and chemical properties of minerals. Introduction to the crystallography of minerals, optical mineralogy, and the use of the polarized light microscope. Laboratory study of mineral identification in hand specimens and thin sections.  
Prerequisite: GEOL 1403 and CHEM 1411 and (CHEM 1412 or 1412').  
May be taken concurrently.

Co-requisite: SMTE 0094.

---

* May be taken concurrently.

**SMTE 0094.**
GEOL 3414 Igneous and Metamorphic Petrology
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Genesis and occurrence of igneous and metamorphic rocks. Mineralogical composition and thermodynamics of geologic systems. Determination of rock types in hand specimens and thin sections.
Prerequisite: GEOL 1403, CHEM 1411, 1412 and GEOL 3411.
Co-requisite: SMTE 0094.

GEOL 3441 Invertebrate Paleontology
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Morphology, classification, and paleoecology of fossil invertebrates. Applications to marine geology including paleoceanography, stratigraphy, economic geology. Field trip to Texas invertebrate fossil beds.
Prerequisite: GEOL 1404.
Co-requisite: SMTE 0094.

GEOL 3442 Geomorphology
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Study of landscapes and landforms at the surface of the Earth, and the processes and mechanisms by which they are developed.
Prerequisite: GEOL 1403.
Co-requisite: SMTE 0094.

GEOL 3443 Environmental Geology
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Study of the relationships of humans to Earth's physical environment. Geologic aspects of waste disposal, resources, conservation, land reclamation, geologic hazards, and land-use planning.
Prerequisite: GEOL 1403.
Co-requisite: SMTE 0094.

GEOL 3490 Selected Topics
1-4 Semester Credit Hours (1-4 Lecture Hours)
May be repeated for credit if topics are significantly different. Subject materials variable.

GEOL 4050 Geology Field Safety Seminar
0 Semester Credit Hours
Restricted to geology majors attending field camp. Students required to meet with geology program coordinator prior to registration for this course.

GEOL 4311 Paleoclimatology
3 Semester Credit Hours (3 Lecture Hours)
Reconstruction of Earth's climate system through time using natural archives and proxy evidence. Focus is mostly towards the Quaternary, though longer time spans will be considered, too. Mixed format with lectures, hand-on activities involving paleoclimate data sets, and seminar-style readings and discussions.
Prerequisite: GEOL 1404 and 3441.

GEOL 4316 Marine Geoscience
3 Semester Credit Hours (3 Lecture Hours)
Introduction to the geology of the marine environment. Review of plate tectonic processes relevant to the evolution of continental margins and plate boundaries; geophysics and ocean morphology; geology of ocean crust; controls on the types, origin, and distribution of marine sediments; marine geochemistry; nearshore geological processes and the continental shelf; introduction to paleoceanography; global paleoceanographic evolution; critical events in ocean history. Special focus on the Gulf of Mexico.
Prerequisite: GEOL 1403, 1404, CHEM 1411 and 1412.

GEOL 4321 Introduction to Soil and Groundwater Restoration
3 Semester Credit Hours (3 Lecture Hours)
Introduction to methods for restoring contaminated soil and groundwater by examining the factors and processes influencing the efficacy of remediation systems. An emphasis will be placed on the scientific principles upon which soil and groundwater remediation is based.
Prerequisite: (GEOL 1403, CHEM 1411, 1412 and GEOL 3443).

GEOL 4326 Field Seminar in Geology
3 Semester Credit Hours (4 Lecture Hours, 1 Lab Hour)
Designed to prepare students for summer field camp. Basic techniques of geologic mapping in the field, data analysis and interpretation, and report writing.
Prerequisite: GEOL 4411 and 4421.
Co-requisite: SMTE 0094.

GEOL 4411 Sedimentation and Stratigraphy
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Composition and origin of sediments and sedimentary rocks. Description and classification of rocks in hand specimen. Principles of stratigraphy, including stratigraphic units and correlation. Facies models for major depositional systems. Field trips.
Prerequisite: (GEOL 1403) and (GEOL 1404) and (GEOL 3411*).
May be taken concurrently.
Co-requisite: SMTE 0094.

GEOL 4415 Economic Geology
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Study of geologic and tectonic parameters of mineral and metals formation. Ore geology and geochemistry. Mining, processing, fabrication, and marketing of natural resources. Field trip to mining operations.
Prerequisite: GEOL 1403 and 3411.
Co-requisite: SMTE 0094.

GEOL 4416 Introduction to Geochemistry
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Introductory study of the Earth processes using principles of chemical equilibrium, thermodynamics, isotope geochemistry and organic geochemistry. Applications of low-temperature geochemistry to geologic problems.
Prerequisite: CHEM 1411, 1412, MATH 2413 and GEOL 3411.
Co-requisite: SMTE 0094.

GEOL 4421 Structural Geology
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
PHYS 1401 Geometric and quantitative description of deformation of the Earth's crust, mechanics of brittle and crystal-plastic deformation processes of Earth materials, introduction to continuum mechanics of geologic systems, crustal deformation from micro-scale to global tectonics. Laboratory introduces principles of three-dimensional data representation and analysis, geologic map interpretation, cross-section techniques, and problems in stress and strain analysis.
Prerequisite: GEOL 3411 and MATH 2413 and (PHYS 1401 or 2425).
Co-requisite: SMTE 0094.

GEOL 4422 Geophysics
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Introduction to quantitative techniques to assess physical properties and processes of the Earth. Topics include earthquake seismology, refraction and reflection seismology, gravimetry, magnetism, electrical methods, and radioactivity of Earth materials. Application of geophysical methods to the study of the Earth, in oil and gas exploration, and in economic and environmental geology.
Prerequisite: (GEOL 4421, PHYS 1401 or 2425) and (PHYS 1402 or 2426) and (MATH 2413).
GEOL 4423 Seismic Methods  
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)  
Introduction to the acquisition, processing, and interpretation of 2D and 3D seismic data. Lectures and field exercises are covered. Topics include conceptual and historical foundations of modern reflection seismology; an overview of seismic wave phenomena in acoustic, elastic, and porous media; acquisition principles for land and marine seismic surveys; methods used to create 2D and 3D seismic images from field data; concepts of dip moveout, prestack migration, and depth migration; concepts and limitations of 3D seismic interpretation for structure, stratigraphy, and rock property estimation; and the interpretation role of attributes, impedance estimation, and AVO.  
Prerequisite: GEOL 4422.  

GEOL 4424 Environmental and Engineering Geophysics  
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)  
Geophysical techniques for exploring the shallow subsurface for environmental and engineering purposes. Topics include seismic, resistivity, ground penetrating radar, electromagnetics, gravity, and magnetic methods. This course includes both lectures and labs (field exercises) components.  
Prerequisite: (PHYS 1401 or 2425) and (PHYS 1402 or 2426) and (MATH 2413).  

GEOL 4430 Internship in Geology  
1-4 Semester Credit Hours  
One to four semester hours of credit may be earned by working in an internship position in industry, with local government, a private firm, or an independent geologist.  

GEOL 4436 Introduction to Petroleum Geology  
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)  
Basic concepts of petroleum geology and techniques used in the exploration and production of hydrocarbon systems. Lectures and lab exercises will cover principles of stratigraphy, sedimentology, hydrocarbon generation, hydrocarbon-trapping mechanisms, reservoir characterization, seismic interpretation, well-log interpretation, and geologic risk analysis.  
Prerequisite: GEOL 4411 or 4411*.  
*May be taken concurrently.  
Co-requisite: SMTE 0094.  

GEOL 4444 Hydrogeology  
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)  
Introduction to the fundamentals of groundwater and surface water flow; well hydraulics and evaluation of groundwater as a resource; chemical properties of groundwater and groundwater contamination; groundwater and the environment; and groundwater modeling. This course also examines some of the techniques associated with field hydrogeology and laboratory methods in hydrogeology.  
Prerequisite: GEOL 1403 and MATH 2413 and (PHYS 1401 or 2425).  
Co-requisite: SMTE 0094.  

GEOL 4490 Selected Topics  
4 Semester Credit Hours (1-4 Lecture Hours, 1-4 Lab Hours)  
May be repeated for credit if topics are significantly different. Subject materials variable.  

GEOL 4496 Directed Independent Study  
1-4 Semester Credit Hours  
DIRECTED INDEPENDENT STUDY Requires a formal proposal of study to be completed in advance of registration and to be approved by the supervising faculty, the chairperson, and the Dean of the College.  

GEOL 4649 Karst of the Yucatan Peninsula  
6 Semester Credit Hours (3 Lecture Hours, 6 Lab Hours)  
This course describes the different types of caves and karst rocks, the water rock interactions in carbonate rock systems, and it explains cave formation via hydrogeological and geochemical processes. It offers field work experience such as sample collection, determining field parameters, karst and cave surveys, measuring spring discharges in the Yucatán Peninsula of Mexico and laboratory experience on the Texas A&M University-Corpus Christi campus.  
Prerequisite: (GEOL 1403 and 4411) or GEOL 4444, 4416 or 4311.  

GEOL 4650 Field Geology  
6 Semester Credit Hours (12 Lab Hours)  
Field course involving practical application of geologic principles to field problems. Locations visited and material covered depends on hosting institution. Generally should include: mapping and outcrop data collection; measurement of stratigraphic sections; mapping; and preparation of geologic cross-sections; preparation of geologic reports.  
Prerequisite: GEOL 3326, 3414, 3441, 4411 and 4421.  
Co-requisite: SMTE 0094.  

Mathematics, Minor  
Program Requirements

Total Hours  
20-21  

May be waived with suitable placement; see placement section below for more details. If needed, upper-level mathematics electives must be taken to bring the total to 18 hours.  

Courses  
MATH 0099 Math Non-Course Based Development  
0 Semester Credit Hours  
Preparation workshop to help students achieve College Readiness in mathematics under the Texas Success Initiative. Topics include five general areas: fundamental mathematics, algebra, geometry, statistics, and problem solving.  

MATH 0200 Brief Developmental Mathematics  
1-2 Semester Credit Hours (1-2 Lecture Hours)  
Topics as in MATH 0300. For students who have completed most topics in MATH 0300. Requires permission of MATH department. (Not counted toward graduation) Fall, Spring, Maymester, Summer.  
Co-requisite: MATH 1314, MATH 1442.
MATH 0214 Brief Developmental Mathematics-Algebra
2 Semester Credit Hours (2 Lecture Hours)
This course is co-requisite course supporting for MATH 1314. Support will focus on essential skills required for success in College Algebra (Math 1314). Supporting topics include review of intermediate algebra, polynomial equations, graphing techniques, and applications. Course provides the necessary academic support for TSI liable students concurrently enrolled in MATH 1314 as the co-requisite with MATH 0214. Students who register for MATH 0214 must co-register in MATH 1314. MATH 0214 is not counted toward graduation. Fall, Spring, Summer.
**Co-requisite:** MATH 1314, UNIV 1102.

MATH 0224 Brief Developmental Mathematics-Business Mathematics
2 Semester Credit Hours (2 Lecture Hours)
This course is the co-requisite course supporting for MATH 1324. Support will focus on essential skills required for success in Business Math (Math 1324). Supporting topics include the use of calculators and technology. Topics focus on basic review of mathematical skills, elementary algebra, mathematical and logical reasoning, probability, and financial management, while providing the necessary academic support for TSI liable students concurrently enrolled in MATH 1324 as the co-requisite with MATH 0224. Students who register for MATH 0224 must co-register in MATH 1324. MATH 0224 is not counted toward graduation. Fall, Spring, Summer.
**Co-requisite:** MATH 1324.

MATH 0232 Brief Developmental Mathematics-Contemporary Mathematics
2 Semester Credit Hours (2 Lecture Hours)
This course is co-requisite course supporting for MATH 1332. Support will focus on essential skills required for success in Contemporary Mathematics (Math 1332). Supporting topics include a basic review of mathematical skills, elementary algebra, mathematical and logical reasoning, probability, and descriptive statistics, while providing the necessary academic support for TSI liable students concurrently enrolled in MATH 1332 as the co-requisite with MATH 0232. Students who register for MATH 0232 must co-register in MATH 1332. MATH 0232 is not counted toward graduation. Fall, Spring, Summer.
**Co-requisite:** MATH 1332.

MATH 0242 Brief Developmental Mathematics-Statistics
2 Semester Credit Hours (2 Lecture Hours)
This course is co-requisite course supporting for MATH 1442. Support will focus on essential skills required for success in Statistics for Life (Math 1442). Supporting topics include the use of calculators and technology. Topics focus on descriptive and inferential statistics, probabilities including notation, while providing the necessary academic support for TSI liable students concurrently enrolled in MATH 1442 as the co-requisite with MATH 0242. Students who register for MATH 0242 must co-register in MATH 1442. MATH 0242 is not counted toward graduation. Fall, Spring, Summer.
**Co-requisite:** MATH 1442.

MATH 0300 Developmental Mathematics
3 Semester Credit Hours (3 Lecture Hours)
Topics include number concepts, computation, elementary algebra, geometry, and mathematical reasoning. Also, linear equations and inequalities, rational expressions, exponents and radicals, quadratics and word problems. May be repeated for credit as needed to complete mastery of all topics. (Not counted toward graduation.) Fall, Spring, Summer.

MATH 0310 Developmental Mathematics-Algebra
3 Semester Credit Hours (2 Lecture Hours, 2 Lab Hours)
3 sem. hrs. (2.2) Topics include number concepts, computation, elementary algebra, and geometry. Also, linear equations and inequalities, rational expressions, exponents and radicals, quadratics and word problems. May be repeated for credit as needed to complete mastery of all topics. (Not counted toward graduation.) Fall, Spring, Summer.

MATH 0398 Introduction to Algebra
3 Semester Credit Hours (3 Lecture Hours)
Number concepts, computation, elementary algebra, geometry, and mathematical reasoning.

MATH 0399 Intermediate Algebra
3 Semester Credit Hours (3 Lecture Hours)
Topics include linear equations and inequalities, rational expressions, exponents and radicals, quadratics and word problems.
**Prerequisite:** MATH 0398.

MATH 1314 College Algebra
3 Semester Credit Hours (3 Lecture Hours)
Quadratic equations, inequalities, graphs, logarithms and exponentials, properties and language of mathematics, the concepts of limits, continuity, differentiation and integration techniques to solve problems in business, economics, and social sciences. Students will develop and combine the concepts in and relationships between Mathematics and Business from the fundamentals of calculus and optimization in all Business fields. Students are expected to learn the materials algebraically with technology. Students will combine the concepts of limits, continuation, differentiation and integration techniques to solve problems in business, economics, and social sciences. This course could be taught in 14-weeks 7-weeks semesters and in F2F or fully online formats
**Prerequisite:** minimum score of 550 in ‘SAT MATH SECTION’, minimum score of 19 in ‘ACT1 Math’, MATH 0320, minimum score of 350 in ‘TSI Math’, minimum score of 910 in ‘TSIA2 Math’ or minimum score of 6 in ‘TSIA2 Math Diagnostic’.
**TCCNS:** MATH 1314

MATH 1325 Calculus for Business & Social Sciences
3 Semester Credit Hours (3 Lecture Hours)
Calculus for Business & Social Sciences
3 Semester Credit Hours (3 Lecture Hours)
Trigonometric functions, identities, equations involving trigonometric functions, solutions of right and oblique triangles.
**Prerequisite:** (MATH 1314, minimum score of 550 in ‘SAT MATH SECTION’ or minimum score of 21 in ‘ACT1 Math’) or minimum score of 21 in ‘ACT Math’.
**TCCNS:** MATH 1316

MATH 1324 Mathematics for Business and Social Sciences
3 Semester Credit Hours (3 Lecture Hours)
Mathematics for Business and Social Sciences
3 Semester Credit Hours (3 Lecture Hours)
Students will learn how the properties and language of mathematics can be used in business and real-world problem solving and understand the techniques and applications of finance problems, basic matrix operation, basic counting principles, and probability analysis in modeling real-world scenarios. This course could be taught in 14-weeks 7-weeks semesters and in F2F or fully online formats
**Prerequisite:** minimum score of 550 in ‘SAT MATH SECTION’, minimum score of 21 in ‘ACT Math’ or minimum score of 21 in ‘ACT1 Math’.
**TCCNS:** MATH 1324

MATH 1325 Calculus for Business & Social Sciences
3 Semester Credit Hours (3 Lecture Hours)
Students will develop and combine the concepts in and relationships between Mathematics and Business from the fundamentals of calculus and optimization in all Business fields. Students are expected to learn the materials algebraically with technology. Students will combine the concepts of limits, continuation, differentiation and integration techniques to solve problems in business, economics, and social sciences. This course could be taught in 14-weeks and 7-weekes semesters in F2F and fully online formats
**Prerequisite:** (MATH 1324 and 1314).
**TCCNS:** MATH 1325
MATH 1332 Contemporary Mathematics
3 Semester Credit Hours (3 Lecture Hours)
This course serves as a terminal course and supplies a brief overview of several topics in mathematics. Topics may include introductory treatments of sets, logic, number systems, number theory, relations, functions, probability and statistics. Appropriate applications are included. This course emphasizes using critical thinking to make decisions based on information.
TCCNS: MATH 1332

MATH 1390 Introduction to Mathematical Topics
1-3 Semester Credit Hours (1-3 Lab Hours)
A course to introduce students to mathematical topics in a formal setting. The course may support problem solving, or systematic investigations of topics outside the current mathematical catalog. May not be substituted for regularly scheduled offerings.

MATH 1442 Statistics for Life
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
An introduction to statistical concepts and methods used in all disciplines to enhance decision making based on data analysis, including: basic experimental design models, measurement and data collection through sampling; display and summary of information, and assessment of relationship through descriptive techniques; probability concepts leading to estimation and hypothesis testing of means, variance and proportions, regression analysis, one-factor ANOVA and chi-square test of independence; and applications through case studies. The laboratory component of the course offers applications of the theory presented during the classroom sessions.
Prerequisite: MATH 0300, minimum score of 530 in 'SAT MATH SECTION', minimum score of 19 in 'ACT1 Math', MATH 0310, 0320, minimum score of 350 in 'TSI Math' or minimum score of 19 in 'ACT Math'.
TCCNS: MATH 1442

MATH 2305 Discrete Mathematics I
3 Semester Credit Hours (3 Lecture Hours)
An introduction to topics in Discrete Mathematics with an emphasis on applications in Mathematics and Computer Science. Topics include formal logic, graphs, trees and related algorithms, and combinatorics and discrete probability.
Prerequisite: MATH 2413, minimum score of 620 in 'SAT Math', minimum score of 620 in 'SAT1 Mathematics', minimum score of 640 in 'SAT MATH SECTION', minimum score of 27 in 'ACT Math' or minimum score of 27 in 'ACT1 Math'.
TCCNS: MATH 2305

MATH 2312 Precalculus
3 Semester Credit Hours (3 Lecture Hours)
A more rapid treatment of the material in MATH 1314 and MATH 1316, this course is designed for students who wish a review of the above material, or who are very well prepared. Functions, graphs, trigonometry, and analytic geometry.
Prerequisite: MATH 1314, minimum score of 550 in 'SAT MATH SECTION', minimum score of 21 in 'ACT Math' or minimum score of 21 in 'ACT1 Math'.
TCCNS: MATH 2312

MATH 2413 Calculus I
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Limits, continuity, derivatives, applications of the derivative, and an introduction to integrals. Contains a laboratory component.
Prerequisite: MATH 1316, 2312, minimum score of 640 in 'SAT MATH SECTION' or minimum score of 27 in 'ACT1 Math'.
TCCNS: MATH 2413

MATH 2414 Calculus II
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Prerequisite: MATH 2413.
TCCNS: MATH 2414

MATH 2415 Calculus III
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Vectors and space curves, partial derivatives, multiple integrals, special coordinate systems, line and surface integrals, Green's, Stokes', and the Divergence Theorems. Contains a laboratory component. Vectors and space curves, partial derivatives, multiple integrals, special coordinate systems, line and surface integrals, Green's, Stokes', and the Divergence Theorems. Contains a laboratory component.
Prerequisite: MATH 2414.
TCCNS: MATH 2415

MATH 3300 Geospatial Mathematical Techniques
3 Semester Credit Hours (3 Lecture Hours)
Characteristics of geographic/spatial information; overview of relevant sections of numbers, algebra and geometry, plane and spherical trigonometry, matrices, determinants and vectors, curves and surfaces, integral and differential calculus, partial derivatives, with an emphasis on geospatial applications. Concepts of geospatial coordinate systems and geospatial coordinate transformations; overview of spatial statistics and best-fit solutions with geospatial applications. Students may not receive credit for both MATH 3300 and GISC 3300.
Prerequisite: MATH 2413 and 2414.

MATH 3301 Introduction to Complex Analysis
3 Semester Credit Hours (3 Lecture Hours)
This course introduces functions of a complex variable and their applications. Contents include differentiation and integration; zeros, poles and residues; conformal mappings.
Prerequisite: (MATH 2415) or (MATH 2414 and 3314).

MATH 3310 Mathematical Analysis for Mechanical Engineering
3 Semester Credit Hours (3 Lecture Hours)
Applications of fundamentals of linear algebra, vector analysis, numerical methods, computer programming and probability and statistics into mechanical engineering. May not count towards the MATH major. Students may not receive credit for both MATH 3310 and MEEN 3310.
Prerequisite: MATH 3315.

MATH 3311 Linear Algebra
3 Semester Credit Hours (3 Lecture Hours)
Fundamentals of linear algebra and matrix theory. Topics include vectors, matrix operations, linear transformations, fundamental properties of vector spaces, systems of linear equations, eigenvalues and eigenvectors. Applications.
Prerequisite: MATH 2413.

MATH 3312 College Geometry
3 Semester Credit Hours (2 Lecture Hours, 1 Lab Hours)
A careful study of the foundations of Euclidean geometry by synthetic methods with an introduction to non-Euclidean geometries. An introduction to transformational geometry.
Prerequisite: MATH 2413.
MATH 3313  Foundations of Number Theory
3 Semester Credit Hours (3 Lecture Hours)
This course assists a student's transition to advanced mathematics. Fundamentals of logic and proof are reviewed and applied to topics from elementary number theory.
Prerequisite: MATH 2414.

MATH 3314  Foundations of Real Numbers
3 Semester Credit Hours (3 Lecture Hours)
This course assists a student's transition to advanced mathematics. Fundamentals of logic and proof are reviewed and applied to development of the real number line.
Prerequisite: MATH 2414.

MATH 3315  Differential Equations
3 Semester Credit Hours (3 Lecture Hours)
An introduction to both theoretical and applied aspects of ordinary differential equations. Topics include: first order equations, linear second order equations, elementary numerical methods, and the Laplace transform.
Prerequisite: MATH 2413.

MATH 3342  Applied Probability and Statistics
3 Semester Credit Hours (3 Lecture Hours)
A calculus based introduction to probability and statistics. Emphasis will be on development of statistical thinking and working with data. Topics include probability theory, descriptive statistics, common distributions, and statistical inference.
Prerequisite: MATH 2413.

MATH 3345  Statistical Modeling and Data Analysis
3 Semester Credit Hours (3 Lecture Hours)
An introduction to probability/statistical modeling and data analysis techniques to investigate data. Topics include: exploratory data analysis, probability models and simulation, sampling distributions, statistical inference. Applications to real world problems. Students will be expected to present and justify results orally and in writing. Note: MATH 3342 and MATH 3345 cannot both be counted for credit.
Prerequisite: MATH 2413 and (COSC 1330 or 1435).

MATH 3347  Introduction to Probability
3 Semester Credit Hours (3 Lecture Hours)
This is an introduction to probability. In the course, key fundamental concepts of probability, random variables and their distributions, expectations, and conditional probabilities will be covered. Topics include counting rules, combinatorial analysis, sample spaces, axioms of probability, conditional probability and independence, discrete and continuous random variables, jointly distributed random variables, characteristics of random variables, law of large numbers and central limit theorem, random processes, Markov chains, Markov chain-Monte Carlo, Poisson Process and Entropy.
Prerequisite: MATH 2415.

MATH 3385  Linear Optimization and Decisions
3 Semester Credit Hours (3 Lecture Hours)
This course introduces the linear programming and optimization problems arising in many applications. Contents include linear programming models with solutions, the simplex method, duality theory and its use for management decision making, dual simplex method and sensitivity analysis.
Prerequisite: MATH 3311 and 2413.

MATH 3390  Problem Solving in Mathematics
1-3 Semester Credit Hours (1-3 Lecture Hours)
A problem solving course for students who want to participate in math problem solving competitions, train for the actuarial or other professional examinations, work on research aimed at conference presentations, or perform research projects at the junior level that are not at the level of directed independent study material.
Prerequisite: MATH 2414.

MATH 4185  Senior Mathematics Seminar
1 Semester Credit Hour (1 Lecture Hour)
This course introduces a weekly mathematics seminar. Students will generate a viable project for the capstone course.

MATH 4285  Mathematics Major Capstone
2 Semester Credit Hours (2 Lecture Hours)
Development of projects as proposed in MATH 4185, as well as mathematics communication skills. Students will present their projects, and take a national level assessment.
Prerequisite: MATH 4185.

MATH 4301  Introduction to Analysis
3 Semester Credit Hours (3 Lecture Hours)
An advanced treatment of the foundations of calculus stressing rigorous proofs of theorems. Topics include: elements of propositional and predicate logic, topology of the real numbers, sequences, limits, the derivative, and the Riemann integral.
Prerequisite: MATH 2415 and 3314.

MATH 4306  Modern Algebra
3 Semester Credit Hours (3 Lecture Hours)
Fundamentals of set operations, maps and relations, groups, rings and field theory. Topics include permutation groups, cosets, homomorphisms and isomorphisms, direct product of groups and rings, integral domains field of quotients, fundamental properties of integers, the ring of integers modulo n, and rings of polynomials. Applications.
Prerequisite: MATH 3311 and 3313.

MATH 4312  Differential Geometry
3 Semester Credit Hours (3 Lecture Hours)
Differential forms on R1, R2, R3, and Rn; Integration and differentiation of differential forms; Stokes' Theorem; manifolds; Gaussian curvature and the Gauss-Bonnet Theorem.
Prerequisite: MATH 2415.

MATH 4315  Partial Differential Equations
3 Semester Credit Hours (3 Lecture Hours)
An introduction to partial differential equations emphasizing the wave, diffusion and potential (Laplace) equations. A focus on understanding the physical meaning and mathematical properties of solutions of partial differential equations. Methods include fundamental solutions and transform methods for problems on the line, and separation of variables using orthogonal series for problems in regions with boundary. Additional topics include higher dimensional problems and special topics like Harmonic functions, the maximum principle, Green's functions etc.
Prerequisite: MATH 3315 and 2415.

MATH 4321  Applied Regression Analysis
3 Semester Credit Hours (3 Lecture Hours)
Introduction to the formulation of linear models and the estimation of the parameters of such models, with primary emphasis on least squares. Application of multiple regression and curve fitting and the design of experiments for fitting regression models.
Prerequisite: MATH 1342, 2342 or 1470.
MATH 4328 Discrete Mathematics II
3 Semester Credit Hours (3 Lecture Hours)
A continued study of topics from Discrete Mathematics I with additional
topics from discrete mathematics that have strong application to the
field of computer science. Additional topics include: recurrence relations,
formal languages, and finite-state machines.
Prerequisite: MATH 2305 and COSC 2437.

MATH 4342 Introduction to Mathematical Statistics
3 Semester Credit Hours (3 Lecture Hours)
This is a first course in mathematical statistics, topics include:
moment-generating functions, functions of random variables, sampling
distributions, methods of estimation including Bayesian estimation,
characteristics of estimators, interval estimation, hypothesis testing,
Neyman-Pearson Lemma, likelihood ratio test, tests involving means
and variances, regression and correlation, multiple linear regression,
introduction to ANOVA, non-parametric tests.
Prerequisite: MATH 2305.

MATH 4385 Applied Modeling
3 Semester Credit Hours (3 Lecture Hours)
The construction of
mathematical models from areas such as economics, refining, biology
and mariculture, etc. Where possible, local phenomena will be modeled
with the assistance of outside consultants.
Prerequisite: MATH 3315 and 3342 or MATH 3345.

MATH 4390 Selected Topics
3 Semester Credit Hours (3 Lecture Hours)
Offered on sufficient demand.

Physics, Minor

Program Description

Introduction
A minor in physics is offered for students who are interested in a broad
foundation in classical and modern physics. For students majoring in
physical sciences, geographic information science, engineering and
technology, the physics minor offers a solid foundational base in the
application of fundamental physical laws in their disciplines. It provides
training in computation and applied mathematics for computer science
and mathematics students.

Substitutions
Students majoring in technical areas may ask the Physics faculty to
support a Degree Plan Exceptions Form to list Course Substitutions in
their pursuit of a physics minor. Possibilities include:
• EEEN 3310 Electromagnetic Theory (3 sch) for PHYS 3332
  Electromagnetism (3 sch)
• ENGR 3316 Thermodynamics (3 sch) for PHYS 3333
  Thermodynamics (3 sch)
• MATH 4315 Partial Differential Equations (3 sch) for PHYS 4330
  Mathematical Methods for Physicists (3 sch)

Total Hours 20

1

The upper-level physics courses are offered from one of the members of
the Texas Physics Consortium (possibly from TAMUCC) via live two-way
video conference.

^ Blended offering

Prerequisites

Students pursuing a minor in physics may need to take one or more of
the following prerequisite courses:

<table>

Courses

PHYS 1303 Introduction to Astronomy: Stars and Galaxies
3 Semester Credit Hours (2 Lecture Hours, 2 Lab Hours)
This is one of two courses in the introduction to astronomy sequence
which emphasizes the nature of astronomical phenomena over the
mathematical analysis of them. This course will focus mostly on the
nature of light, the nature and evolution of stars, the material between
the stars, the Milky Way Galaxy, external galaxies, and the structure and
evolution of the universe as a whole.
Co-requisite: SMTE 0095.
TCCNS: PHYS 1303
PHYS 1304 Introduction to Astronomy: Solar System
3 Semester Credit Hours (2 Lecture Hours, 2 Lab Hours)
This is one of two courses in the introduction to astronomy sequence which emphasizes the nature of astronomical phenomena over the mathematical analysis of them. This course introduces astronomical phenomena related to the Solar System such as apparent motion of the Sun, phases of the Moon and apparent and true motion of the planets. Main focus will be on the objects comprising the Solar System: planets, their moons, asteroids, comets and trans-Neptunian bodies. A portion of the course will be dedicated to the formation and development of the Solar System and other, extrasolar planetary systems. The course also will touch the aspects of human exploration of the Solar System and the role of technology in our learning and understanding of the Solar System. This includes the history and the basics of robotic and manned spacecrafts. Offered every Spring and Summer.
Co-requisite: SMTE 0095.
TCCNS: PHYS 1304

PHYS 1401 General Physics I
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
Introduction to Newtonian physics. Topics include Aristotelian physics and its overthrow, Newton's laws of motion and gravitation, and the motion of particles, rigid bodies and fluids. The idea of the universe as a law-governed system will be developed. Laboratory activities provide introduction to empirical methods in science.
Prerequisite: (MATH 1314, 1316, 1324, 1325, 2312, 2413, 2414, 2415, minimum score of 21 in 'ACT1 Math', minimum score of 500 in 'SAT Math', minimum score of 21 in 'ACT Math', minimum score of 500 in 'SAT1 Mathematics' or minimum score of 615 in 'Local Placement Test').
Co-requisite: SMTE 0095.
TCCNS: PHYS 1401

PHYS 1402 General Physics II
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
Introduction to oscillatory and wave phenomena, electricity and magnetism. The classical theory of fields will be used to study electric and magnetic phenomena, including light, and their role in modern technology. Laboratory activities provide introduction to empirical methods in science.
Prerequisite: (PHYS 1401 or 2425).
* May be taken concurrently.
Co-requisite: SMTE 0095.
TCCNS: PHYS 1402

PHYS 2425 University Physics I
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
A calculus based introduction to Newtonian physics. Topics include Aristotelian physics and its overthrow, Newton's laws of motion and gravitation, and the motion of particles, rigid bodies, and fluids. The idea of the universe as a law-governed system will be developed. Laboratory activities provide introduction to empirical methods in science.
Prerequisite: MATH 2413.
Co-requisite: SMTE 0095.
TCCNS: PHYS 2425

PHYS 2426 University Physics II
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
Calculus based introduction to oscillatory and wave phenomena, electricity and magnetism. The classical theory of fields will be used to study electric and magnetic phenomena, including light, and their role in modern technology.
Prerequisite: PHYS 2425 and MATH 2414.
Co-requisite: SMTE 0095.
TCCNS: PHYS 2426

PHYS 3331 Mechanics I
3 Semester Credit Hours (3 Lecture Hours)
Fundamentals of classical mechanics. Topics include particle dynamics in one, two and three dimensions: conservation laws; dynamics of a system of particles; motion of rigid bodies; central force problems; accelerating coordinate systems; Newton's theory of gravitation; Lagrange's and Hamilton's formulations of classical mechanics. This course is offered through the Texas Physics Consortium (TPC). See their website (http://www.tarleton.edu/tpc/) for details.
Prerequisite: PHYS 2426 and (MATH 3315 or 3315*).
* May be taken concurrently.

PHYS 3332 Electromagnetism
3 Semester Credit Hours (3 Lecture Hours)
Electrostatics; Laplace's equation; the theory of dielectrics; magnetostatic fields; electromagnetic induction; magnetic fields of currents; Maxwell's equations. This course is offered through the Texas Physics Consortium (TPC). See their website (http://www.tarleton.edu/tpc/) for details.
Prerequisite: PHYS 2426 and (MATH 3315* or 2415*).
* May be taken concurrently.

PHYS 3333 Thermodynamics
3 Semester Credit Hours (3 Lecture Hours)
Concept of temperature, equations of state; the first and the second law of thermodynamics; entropy; change of phase; the thermodynamics functions. This course is offered through the Texas Physics Consortium (TPC). See their website (http://www.tarleton.edu/tpc/) for details.
Prerequisite: PHYS 2426 and (MATH 2415 or 2415*).
* May be taken concurrently.

PHYS 3334 Modern Physics I
3 Semester Credit Hours (3 Lecture Hours)
A course in special relativity and elementary quantum mechanics. Topics include relativistic description of space-time, relativistic energy and momentum, the uncertainty principle, Schrödinger's equation, observables and operators, bound states, potential barriers, and the quantum description of the hydrogen atom. This course is offered through the Texas Physics Consortium (TPC). See their website (http://www.tarleton.edu/tpc/) for details.
Prerequisite: PHYS 2426 and (MATH 3315 or 3315*).
* May be taken concurrently.

PHYS 3490 Selected Topics
1-4 Semester Credit Hours (1-4 Lecture Hours)
Subject materials will be chosen from Electromagnetic Field Theory, Thermodynamics, Mathematical Methods of Physics, Waves and Optics, Advanced Modern Physics, Quantum Theory, Computational Physics, Geophysics, Environmental Physics and Medical Physics. May be repeated for credit if topics selected are different. This course will be used for upper-level physics electives offered from other Texas Physics Consortium (TPC) schools. See their website (http://www.tarleton.edu/tpc/) for details.

PHYS 4161 Physics Research Project
1 Semester Credit Hour (1 Lecture Hour)
The first half of a two semester sequence. The student will work with a faculty member to develop and conduct a senior research project including a search of the relevant literature and presentation of the proposed research idea. This course is offered through the Texas Physics Consortium (TPC). See their website (http://www.tarleton.edu/tpc/) for details.
Prerequisite: PHYS 3334.
PHYS 4162 Physics Research Seminar
1 Semester Credit Hour (1 Lecture Hour)
The second half of a two semester sequence. The student will work with a faculty member to conduct a senior research project including giving an oral presentation of the final results and writing up the results in a form suitable for publication. This course is offered through the Texas Physics Consortium (TPC). See their website (http://www.tarleton.edu/tpc/) for details.

Prerequisite: PHYS 4161.

PHYS 4330 Mathematical Methods for Physicists
3 Semester Credit Hours (3 Lecture Hours)
Mathematical techniques from the following areas: infinite series; integral transform; applications of complex variables; vectors; matrices, and tensors; special functions; partial differential equations; Green's functions; perturbation theory; integral equations; calculus of variations; and groups and group representatives. This course offered through the Texas Physics Consortium (TPC). See their website (http://www.tarleton.edu/tpc/) for details.

Prerequisites: (MATH 3315 or 3315*).

*May be taken concurrently.

PHYS 4335 Quantum Physics
3 Semester Credit Hours (3 Lecture Hours)
The Schroedinger equation; one dimensional systems; the Heisenberg uncertainty principle; magnetic moments and angular momentum; two and three dimensional systems; approximation methods; spin. This course is offered through the Texas Physics Consortium (TPC). See their website (http://www.tarleton.edu/tpc/) for details.

Prerequisites: PHYS 3334 and (MATH 3315* or 2415*).

*May be taken concurrently.

PHYS 4337 Nuclear Physics
3 Semester Credit Hours (3 Lecture Hours)
The study of nuclear phenomena and properties including mass, stability, magnetic moment, radioactive decay processes and angular momentum. The use of nuclear techniques as applied to other scientific fields including electronics and medicine. This course is offered through the Texas Physics Consortium (TPC). See their website (http://www.tarleton.edu/tpc/) for details.

Prerequisites: PHYS 3334 and (PHYS 4335* or 4335) and (MATH 3315* or 2415*).

May be taken concurrently.

PHYS 4340 Advanced Physics Lab
3 Semester Credit Hours (1 Lecture Hour, 4 Lab Hours)
A laboratory course focusing on experimental design, advanced data analysis and reduction, and experimental laboratory techniques and instrumentation. Experiments will be drawn from a variety of physics areas. This course is offered through the Texas Physics Consortium (TPC). See their website (http://www.tarleton.edu/tpc/) for details.

Prerequisite: (PHYS 3334 or 3334*).

*May be taken concurrently.

Co-requisite: SMTE 0995.

PHYS 4496 Directed Independent Study
1-4 Semester Credit Hours (1-4 Lecture Hours)
Requires a formal proposal of study to be completed in advance of registration and to be approved by the supervising faculty, the chairperson, and the dean of the college.
Course Numbers

Each course number includes a four-character prefix (identifying the discipline or subject) and a four-digit number. The first digit indicates the level of the course. The second digit usually indicates the credit hour value of the course. The third and fourth digits differentiate the courses in a particular discipline.

Courses numbered in the 1000 and 2000 series are lower-division (freshman or sophomore) courses. The University uses the Texas Common Course Numbering System as the basis for numbering most lower-division courses.

Courses numbered in the 3000 and 4000 series are upper-division (junior or senior) courses.

Courses numbered 5000 or higher are graduate courses. Courses at the 5000 level are open only to students with graduate status and senior undergraduates who meet specific criteria. (See “Graduate Study by Undergraduates” in the "Undergraduate Program (p. 42)s" section of this catalog.) Graduate courses are listed in the Graduate Catalog.

Courses at the 6000 level are open only to students admitted to a doctoral program, or with permission from the program coordinator.

Courses numbered in the 0000 series, such as 0399, are remedial or developmental courses that do not count toward graduation.

Prerequisite/Corequisite

A prerequisite is a requirement that must be completed before a course may be attempted. A corequisite is a requirement that must be completed at the same time a course is attempted.

List of Undergraduate Courses

Undergraduate courses are listed here. Course descriptions may include projected scheduling information. Individual courses, however, are subject to change or withdrawal at any time and may not be offered every semester or every year. When registering for courses, please consult the semester class schedule, a separate publication that provides specific course offering information for a particular semester or session.

Common Courses Designated in Course Descriptions

Freshman and sophomore-level courses that are considered equivalent to courses in the Texas Common Course Numbering System (TCCNS) are identified at the beginning of their course descriptions. The TCCNS prefix and number may be found immediately after the A&M-Corpus Christi prefix and number. Examples follow:

ACCT 2301 Financial Accounting (3 sch) (ACCT 2301)
COMM 1315 Public Speaking (3 sch) (SPCH 1315)

For a list of all common courses taught at A&M-Corpus Christi, see the appendix titled “Lower-Division Transfer Courses: Common Courses (p. 758).”

Online and Blended Courses

Courses that are offered online or blended will have an * or ^ after the title.

* - indicate online offerings
^ - indicate blended offerings

For example:
Courses A-Z

A
- Accounting (ACCT) (p. 641)
- Applied Music (MUAP) (p. 642)
- Arabic (ARAB) (p. 654)
- Art (ARTS) (p. 654)
- Atmospheric Science (ATSC) (p. 657)

B
- Bilingual/ESL/Multicultural Ed (BIEM) (p. 658)
- Biology (BIOL) (p. 659)
- Biomedical Sciences (BIMS) (p. 664)
- Business Law (BLAW) (p. 667)

C
- Chemistry (CHEM) (p. 667)
- Chinese (CHIN) (p. 669)
- Civil Engineering (CEEN) (p. 669)
- Clinical Lab Science (CLSC) (p. 670)
- Communication (COMM) (p. 671)
- Computer Science (COSC) (p. 673)
- Criminal Justice (CRIJ) (p. 677)

D
- Dance (DANC) (p. 679)

E
- Early Childhood Education (ECED) (p. 680)
- Economics (ECON) (p. 681)
- Educational Curriculum & Instr (EDCI) (p. 682)
- Electrical Engineering (EEEN) (p. 683)
- Elementary Education (ELEM) (p. 684)
- Engineering (ENGR) (p. 684)
- Engineering Technology (ENTC) (p. 686)
- English (ENGL) (p. 687)
- Environmental Science (ESCI) (p. 691)

F
- Finance (FINA) (p. 693)
- Foreign Language (LANG) (p. 694)
- French (FREN) (p. 694)

G
- General Business (BUSI) (p. 694)
- Geographic Information Science (GISC) (p. 695)
- Geography (GEOG) (p. 697)
- Geology (GEOL) (p. 697)

H
- German (GERM) (p. 699)
- Graphic Design (GRDS) (p. 699)

I
- Industrial Engineering (IEEN) (p. 708)
- Instructional Des & Educ Tecn (IDET) (p. 709)

K
- Kinesiology (KINE) (p. 709)

M
- Management (MGMT) (p. 711)
- Management Information Systems (MISY) (p. 713)
- Marketing (MKTG) (p. 714)
- Mathematics (MATH) (p. 715)
- Mechanical Engineering (MEEN) (p. 719)
- Media (MEDA) (p. 720)
- Mexican American Studies (MXAS) (p. 723)
- Military Science (MSCI) (p. 723)
- Music (MUSI) (p. 724)
- Music Ensemble (MUEN) (p. 727)
- Music Industry (MIND) (p. 731)

N
- Nursing (NURS) (p. 731)

O
- Operations Management (OPSY) (p. 735)
- Operations Research/Mgmt Scien (ORMS) (p. 735)

P
- Pathway (PATH) (p. 735)
- Philosophy (PHIL) (p. 737)
- Physics (PHYS) (p. 738)
- Political Science (POLS) (p. 740)
- Portuguese (PORT) (p. 742)
- Psychology (PSYC) (p. 742)

R
- Reading (READ) (p. 744)
- Reciprocal Exchange Program (REEP) (p. 745)

S
- Science/Math and Tech Educat (SMTE) (p. 745)
- Social Work (SOCW) (p. 746)
- Sociology (SOCI) (p. 747)
TCCNS: ACCT 2301
Financial Accounting
3 Semester Credit Hours (3 Lecture Hours)
Prerequisite: ACCT 2301.
TCCNS: ACCT 2302
Managerial Accounting
3 Semester Credit Hours (3 Lecture Hours)
The use of accounting information as an aid to management decision making, including performance measurement and budgets.
Prerequisite: ACCT 2301.
TCCNS: ACCT 2302
ACCT 3311 Intermediate Accounting I
3 Semester Credit Hours (3 Lecture Hours)
An intensive study of the balance sheet accounts and the related income statement accounts. It exposes the student to the various Accounting Principles Board opinions and Financial Accounting Standards Board statements, and International Financial Reporting standards, as these publications affect the various accounts and transactions. It covers the various working capital accounts and operational assets.
Prerequisite: (ACCT 2301 and 2302).
ACCT 3312 Intermediate Accounting II
3 Semester Credit Hours (3 Lecture Hours)
A continuation of Intermediate Accounting I involving current and non-current liabilities and owner equity accounts, the Statement of Cash Flows, deferred income tax, financial statement analysis and several special problem areas.
Prerequisite: (ACCT 3311).
ACCT 3314 Cost Accounting
3 Semester Credit Hours (3 Lecture Hours)
A study of procedures and concepts in allocating the costs of firm inputs to outputs, determination and use of standard costs in the control function, profit planning and control techniques used in management decision-making.
Prerequisite: (ACCT 2301 and 2302).
ACCT 3315 Multinational Entities: Accounting and Consolidations
3 Semester Credit Hours (3 Lecture Hours)
A study of the similarities and differences between U.S. and other countries’ accounting and reporting procedures. Basic consolidation of international segments will be covered. Use of spreadsheets and web technology required.
Prerequisite: (ACCT 2302).
ACCT 3316 Governmental and Not-for-Profit Accounting
3 Semester Credit Hours (3 Lecture Hours)
A study of fund accounting used in governmental entities and non-profit organizations. Emphasis on budgetary and fund accounts.
Prerequisite: (ACCT 2301 and 2302).
ACCT 3317 Oil, Gas, & Energy Accounting
3 Semester Credit Hours (3 Lecture Hours)
This course covers the basic principles of oil and gas accounting. Course topics include upstream oil and gas operations, successful efforts accounting, full cost pool accounting, accounting for production, exploration and construction, joint interest accounting, international operations, oil and taxation and analysis of oil and gas financial statements.
Prerequisite: (ACCT 3311).
ACCT 3321 Federal Income Tax I
3 Semester Credit Hours (3 Lecture Hours)
Emphasizes the role of taxation in the business decision-making process. The course introduces the tools to conduct basic tax research and planning.
Prerequisite: (ACCT 2301 and 2302).
ACCT 3322 Federal Income Tax II
3 Semester Credit Hours (3 Lecture Hours)
Examines additional, more complex topics in business decision-making, tax research, and tax planning.
Prerequisite: (ACCT 3321).
ACCT 3340 Fraud Examination
3 Semester Credit Hours (3 Lecture Hours)
This course covers the basic principles of fraud examination. Course topics include the behavioral aspects of fraud and common fraud schemes including skimming, larceny, check tampering, register disbursement schemes, billing schemes, payroll and expense reimbursement, non-cash misappropriations, corruption and bribery, and fraudulent financial statements.
Prerequisite: (ACCT 2301 and 2302).
ACCT 4311 Auditing Principles and Procedures
3 Semester Credit Hours (3 Lecture Hours)
Auditing principles and techniques underlying the audit process; procedures used in conducting external audits, reviews and compilations.
Prerequisite: (ACCT 3312).
ACCT 4314 Advanced Accounting Problems
3 Semester Credit Hours (3 Lecture Hours)
A study of advanced accounting topics, including leases, pensions, consolidations, asset retirement obligations, accounting for not-for-profit organizations and government entities and other special problem areas.
Prerequisite: (ACCT 3312).
ACCT 4345  Ethics for Texas CPA Candidates and Business Executives
3 Semester Credit Hours (3 Lecture Hours)
This course will cover ethical theory, ethical reasoning, integrity, objectivity, independence and other core values and regulatory requirements associated with the practice of professional accounting and decision making of other executives, with an emphasis on corporate governance in the post-Sarbanes-Oxley regulatory environment. This course satisfies the ethics requirement of the Texas State Board of Public Accountancy (TSBPA); however, it does not count for advanced accounting hours required to sit for the CPA exam. Students who receive credit for ACCT 4345 cannot also receive credit for ACCT 5345.

ACCT 4355  Accounting Information Systems
3 Semester Credit Hours (3 Lecture Hours)
A study of the role of accounting information systems and related subsystems in both profit and not-for-profit entities. The relationship of accounting information systems to other systems, including management information systems, is addressed. Concepts are reinforced by the completion of computer-based projects.

Prerequisite: (ACCT 2301, 2302 and MISY 2305).

ACCT 4390  Current Topics in Accounting
3 Semester Credit Hours (3 Lecture Hours)
Selected topics for special study related to accounting functions, processes or issues. May be repeated for credit when topics vary.

ACCT 4396  Directed Individual Study
1-3 Semester Credit Hours (1-3 Lecture Hours)
Individual supervised study and completion of a final report.

ACCT 4398  Accounting Internship
3 Semester Credit Hours (3 Lecture Hours)
Supervised full-time or part-time, off-campus training in public accounting, industry, or government. Oral and written reports required.

**Arabic (ARAB)**

ARAB 1311 Arabic I
3 Semester Credit Hours (3 Lecture Hours)
This course introduces students to listening, speaking, reading, and writing skills in an Arabic cultural framework. It is designed for students with no previous knowledge of Arabic. The main objective is to communicate in Arabic for understanding. This will be accomplished by learning Modern Standard Arabic as a beginner and by gaining exposure to the instructor's dialect form of Arabic.

ARAB 1312 Arabic II
3 Semester Credit Hours (3 Lecture Hours)
This course will continue to reflect the emphasis of Arabic 1311 on Modern Standard Arabic (MSA) and the spoken dialect of the instructor. Students will continue to build on the skills and strategies acquired in Arabic 1311 for all listening, reading, speaking, writing and culture modalities. In addition to increased vocabulary repertoire, a greater emphasis will be placed on basic grammatical understanding, to deal with more complex sentence structure, and larger spoken and written exercises.

ARAB 2311 Arabic III
3 Semester Credit Hours (3 Lecture Hours)
Continued emphasis on Modern Standard Arabic and the spoken dialect. Students will build on the skills and strategies acquired in beginning Arabic courses, including listening, reading, speaking, writing and culture modalities. In addition to increased vocabulary repertoire, a greater emphasis will be placed on basic grammatical understanding to deal with more complex sentence structure and larger spoken and written exercises.

**Art (ARTS)**

ARTS 1301 Art and Society
3 Semester Credit Hours (3 Lecture Hours)
Designated for non-art majors. Establishes a working vocabulary for evaluating works of art in various media. Objects are interpreted in terms of their specific historical contexts and the changing relationships between art and society. This course does not fulfill the art history requirement for art majors.

TCCNS: ARTS 1301

ARTS 1303 Art History Survey I
3 Semester Credit Hours (3 Lecture Hours)
An examination of painting, sculpture, architecture, and other arts from the ancient through medieval periods.

TCCNS: ARTS 1303

ARTS 1304 Art History Survey II
3 Semester Credit Hours (3 Lecture Hours)
A further examination of painting, sculpture, architecture, and other arts from the Renaissance through Modern periods. This course satisfies the university core curriculum requirement in fine arts.

Prerequisite: ARTS 1303.

TCCNS: ARTS 1304

ARTS 1311 Design I
3 Semester Credit Hours
A studio course concerning the fundamentals of art with emphasis on two-dimensional concepts.

TCCNS: ARTS 1311

ARTS 1312 Design II
3 Semester Credit Hours
A studio course concerning the fundamentals of art with emphasis on three-dimensional concepts. This 3D foundations course utilizes creative problem-solving strategies and basic sculpture tools to explore spatial relationships and to create sculptural forms in space.

Co-requisite: SMTE 0097.

TCCNS: ARTS 1312

ARTS 1316 Drawing I
3 Semester Credit Hours (3 Lecture Hours)
A studio course investigating a variety of media techniques, including their descriptive and expressive possibilities.

TCCNS: ARTS 1316

ARTS 1317 Drawing II
3 Semester Credit Hours
A further investigation of media techniques explored in Drawing I, including their descriptive and expressive possibilities.

Prerequisite: ARTS 1316.

Co-requisite: SMTE 0097.

TCCNS: ARTS 1317

ARTS 2311 Design III: Color
3 Semester Credit Hours
Investigation of the properties of color. Color is studied and applied to studio-oriented design assignments.

Co-requisite: SMTE 0097.

TCCNS: ARTS 2311

ARTS 2316 Painting I
3 Semester Credit Hours (3 Lecture Hours)
A studio course exploring the potentials of painting media.

Prerequisite: ARTS 1316.

Co-requisite: SMTE 0097.

TCCNS: ARTS 2316
ARTS 2323 Drawing III
3 Semester Credit Hours
A studio course continuing the investigation of media and techniques explored in Drawing I and Drawing II. Students investigate how formal aspects and selected media along with conceptual choices create specific visual ideas.
Prerequisite: ARTS 1317.
Co-requisite: SMTE 0097.
TCCNS: ARTS 2323

ARTS 2326 Sculpture I
3 Semester Credit Hours
An introductory studio course exploring sculptural approaches, materials, concepts, and technical processes. Materials include wood, plaster, steel, and plastics.
Co-requisite: SMTE 0097.
TCCNS: ARTS 2326

ARTS 2333 Printmaking I
3 Semester Credit Hours
An introductory studio course in basic printmaking processes and techniques.
Prerequisite: ARTS 1316 or 1311.
Co-requisite: SMTE 0097.
TCCNS: ARTS 2333

ARTS 2346 Ceramics I
3 Semester Credit Hours (3 Lecture Hours)
An introductory studio course in basic ceramic processes.
Co-requisite: SMTE 0097.
TCCNS: ARTS 2346

ARTS 2356 Photography I
3 Semester Credit Hours
This course is an introduction to digital photography capture, processing, and basic editing software. While focusing on the fundamentals of digital photography and printing techniques, it will introduce students to the theory and practice of photography and assist them in producing a conceptually devised and technically consistent portfolio.
Co-requisite: SMTE 0097.
TCCNS: ARTS 2356

ARTS 2367 Watercolor
3 Semester Credit Hours (3 Lecture Hours)
A studio course exploring techniques in water-base media.
Co-requisite: SMTE 0097.

ARTS 3301 Life Drawing
3 Semester Credit Hours
Drawing from the model using a variety of techniques and media.
Prerequisite: (ARTS 1317).
Co-requisite: SMTE 0097.

ARTS 3302 Screen Printing
3 Semester Credit Hours
Traditional printmaking processes will be explored using black and white and color techniques, including but not limited to screenprinting.
Prerequisite: ARTS 1311 or 1316.
Co-requisite: SMTE 0097.

ARTS 3303 Intermediate Painting
3 Semester Credit Hours (3 Lecture Hours)
Explores the issues of content, imagery, application, and influences of master artists.
Prerequisite: ARTS 2316.
Co-requisite: SMTE 0097.

ARTS 3304 Fabrication Sculpture
3 Semester Credit Hours
Building upon introductory skills, this course explores construction and fabrication in sculpture focusing on a primary material for the semester and applying advanced techniques and processes for this material. Through this material and techniques, students begin defining and developing their visual vocabulary relative to art history and contemporary sculptural issues.
Prerequisite: ARTS 2326.
Co-requisite: SMTE 0097.

ARTS 3305 Mold Making and Casting Sculpture
3 Semester Credit Hours
This course is designed to build upon the fundamental principles of mold making and casting while exploring more complex concepts, materials, and techniques. Creating multi-part molds, flexible molds, and investment molds, the project assignments incorporate the unique versatility of mold making and casting for exchanging media and making a series of multiples. In addition to making casts, students compare methods for assembling cast forms together to create larger sculptural artworks and installations.
Co-requisite: SMTE 0097.

ARTS 3306 Figurative Sculpture
3 Semester Credit Hours
A study of the human figure from an anatomical and artistic perspective. Examines the skeletal and muscular components of the figure in order to create lifelike and emotive sculptures. Discussion of the figure in both classical and contemporary art. Working with armature and modeling clay.
Co-requisite: SMTE 0097.

ARTS 3307 Lithography and Planographic Process
3 Semester Credit Hours
Traditional printmaking processes will be explored using black and white and color techniques, including but not limited to lithography and monoprinting.
Prerequisite: ARTS 2311 or 1316.
Co-requisite: SMTE 0097.

ARTS 3311 Color Theory
3 Semester Credit Hours
This course develops an understanding of color properties and relationships through formal exercises, research and creative thinking. Students build a vocabulary for analyzing and identifying color and color phenomena. Concepts of color theorists and color use in a variety of fields are examined to understand the application of color theory.
Students will investigate the use of color in their own work and in the work of others to understand the conceptual and aesthetic application of color.
Prerequisite: ARTS 1311.

ARTS 3313 Figure Painting
3 Semester Credit Hours
This course addresses the structure and anatomy of the human figure using oil paint. Painting techniques and color theory exercises will familiarize students with tradition painting methods. Students will render proportions, balance, form and mass of the human figure. Research and discussions will address the human form through history as well as in the contemporary context. Image presentations, critiques and live model sessions will supplement studio work.
Prerequisite: ARTS 2316.
Co-requisite: SMTE 0097.
ARTS 3316 Art Activities I
3 Semester Credit Hours (3 Lecture Hours)
Practical experience with basic design, drawing, painting, and sculpture, along with a study of art history and criticism. Includes a consideration of how these experiences relate to art curricula in the elementary school.

ARTS 3322 Art Activities II
3 Semester Credit Hours (3 Lecture Hours)
Practical experiences with basic design, drawing, painting, printmaking, sculpture, and crafts, along with a study of art history and criticism. Includes a consideration of how these experiences relate to art curricula in the secondary school.

ARTS 3324 Wheel Throwing
3 Semester Credit Hours
Covers wheel-thrown ceramics (other production techniques may be included), basic glazemaking, and an introduction to kiln firing and loading.
Prerequisite: ARTS 2346.
Co-requisite: SMTE 0097.

ARTS 3325 Handbuilt Ceramic Techniques
3 Semester Credit Hours
This course is a continuation of hand-building covered in Ceramics I ARTS 2346. The course will cover more advanced forming techniques such as extrusion, hump, slump, and press molds, and slip-casting. New surface and firing techniques will include more advanced techniques such as underglazes, onglaze techniques such as majolica, fired decal application, raku, and an introduction to low fire glazes and surfaces.
Prerequisite: ARTS 2346.

ARTS 3350 Art of the United States
3 Semester Credit Hours (3 Lecture Hours)
A survey of the major developments in the art of North America from Pre-Columbian times to the modern era

ARTS 3352 Modern Art
3 Semester Credit Hours (3 Lecture Hours)
A survey of the major movements of 20th century art and aesthetics, which developed primarily in Europe. Includes a review of late 19th century modernist antecedents with emphasis placed on the principal movements of the early 20th century: Fauvism, German Expressionism, Cubism, Futurism, Abstract Art, Dada, and Surrealism.

ARTS 3353 Art Since 1945
3 Semester Credit Hours (3 Lecture Hours)
An examination of the dispersal of European artists and Modernism, primarily to America, as a result of World War II. Examines the development of Abstract Expressionism in New York in the 1940s and 50s, followed by a survey of recent trends in contemporary art to the present day.

ARTS 3360 Graphic Design I
3 Semester Credit Hours (3 Lecture Hours)
Introduce fundamental graphic communication techniques, software and theory. Explores hand skills by using tools and techniques to produce professional presentations as well as the correct procedures for presenting designs to a client.

ARTS 3365 Photography II
3 Semester Credit Hours
An intermediate studio course using digital cameras and image manipulation software. Prior completion of ARTS 2356 is required. This course will enhance and expand skills developed in Photography I. It is geared toward informing students in the many ways we can make photographs; by seeking them out, framing them, forming them, extracting them, building them, and finally sequencing and presenting them. Students will engage in the theory and practice of photography, refine their photographic technique, and create a conceptually devised and technically consistent portfolio. Emphasis is placed on the development of a strong conceptual foundation from which to approach the making and understanding of photography as an art form. This knowledge will be achieved through photographic assignments, slide lectures of relevant works, and in-class critiques. It can be repeated twice for credit.
Prerequisite: (ARTS 2356).
Co-requisite: SMTE 0097.

ARTS 3366 Analogue Photography
3 Semester Credit Hours
An introductory studio course in analogue photography using film cameras and the silver gelatin darkroom process. While focusing on the fundamentals of black and white, analogue photography and printing techniques this course will assist students in producing a conceptually devised and technically consistent portfolio.
Prerequisite: (ARTS 2356).
Co-requisite: SMTE 0097.

ARTS 3367 Digital Design Tools and Applications
3 Semester Credit Hours
This studio course explores the fundamental principles, standard creative processes and basic digital tools utilized in graphic design. The concepts and software learned are employed in projects specifically targeted to serve the professional and promotional needs of studio artists and design enthusiasts.

ARTS 4085 Senior Capstone
0 Semester Credit Hours
Required for all art students in partial fulfillment of the requirements for the BA in Art, BFA in Art studio track and the BFA with Teacher Certification in Art tracks. This course collects capstone materials for ARTS degrees. The course must be taken in the student’s final semester before graduation.

ARTS 4301 Advanced Drawing
3 Semester Credit Hours
Emphasis on the development of content through drawing. Research on contemporary trends and process investigation will aid students in the development of visual ideas and lead to a cohesive body or work. May be taken three times for credit.
Prerequisite: ARTS 2323.
Co-requisite: SMTE 0097.

ARTS 4302 Advanced Printmaking
3 Semester Credit Hours
Furthers competencies attained in Printmaking I and Intermediate I & II courses. May be taken three times for credit.
Prerequisite: ARTS 3302 and 3307.
Co-requisite: SMTE 0097.
ARTS 4303 Advanced Painting
3 Semester Credit Hours (3 Lecture Hours)
Assumes competencies attained in ARTS 3303. May be taken three times for credit.
Co-requisite: SMTE 0097.

ARTS 4304 Advanced Sculpture
3 Semester Credit Hours (3 Lecture Hours)
Assumes competencies attained in ARTS 3304. May be taken three times for credit.
Co-requisite: SMTE 0097.

ARTS 4306 Advanced Photography
3 Semester Credit Hours (3 Lecture Hours)
Assumes competencies attained in ARTS 3306. Covers content as creative expression in addition to basic photographic skills. May be taken three times for credit.
Co-requisite: SMTE 0097.

ARTS 4324 Advanced Ceramics
3 Semester Credit Hours (3 Lecture Hours)
Assumes competencies attained in ARTS 3324. May be taken three times for credit.
Co-requisite: SMTE 0097.

ARTS 4350 Pre-Columbian Art of Mesoamerica
3 Semester Credit Hours (3 Lecture Hours)
Explores the history of Pre-Columbian art from Mexico and Central America, from the Olmec through the Aztec cultures. May be taken three times for credit.

ARTS 4352 Modern Art of Mexico
3 Semester Credit Hours (3 Lecture Hours)
Explores the history of art during the nineteenth and twentieth centuries in Mexico. May be taken three times for credit.

ARTS 4354 Global Currents in Contemporary Art
3 Semester Credit Hours (3 Lecture Hours)
The course will cover key developments in contemporary art from the post-World War II era in the Western context to global currents in the present international arena. From a socio-political perspective, artistic tendencies will be considered as part of a trajectory that saw the center of the art world shift from being Euro- and Anglo-centric in the mid-twentieth century to one without a discernible center in the early twenty-first century. Analysis of artworks from this decentralized cultural climate will focus on the evolution of conceptualism, the persistence of traditional modes of aesthetic practice, the role of the art market, and notions of environmentalism and sustainability as related to these "transnational transitions." The course will consider works from Eastern Europe, South and Central America, the Caribbean, East/West/South/South East Asia, Oceania, and Africa.

ARTS 4355 Contemporary Art Since 1980
3 Semester Credit Hours (3 Lecture Hours)
The course will examine the evolution of architecture, sculpture, painting, digital media, installation, and interdisciplinary arts in the global context from 1980 to the present, in light of the historical and intellectual background of the period. Topics covered will include the transition from postmodernism to contemporaneity, considering notions of appropriation, commodification, consumerism, memory, history, and globalization. Lectures will be constructed upon thematic analysis of contemporary, primary sources coupled with secondary source material, and complemented by presentation opportunities and class discussion.

ARTS 4356 Advanced Painting
3 Semester Credit Hours (3 Lecture Hours)
Assumes competencies attained in ARTS 3365. Covers content as creative expression in addition to basic photographic skills. May be taken three times for credit.
Co-requisite: SMTE 0097.

ARTS 4359 Topics in Art History
3 Semester Credit Hours (3 Lecture Hours)
May be repeated when topics vary.

ARTS 4390 Topics in Art History
3 Semester Credit Hours (3 Lecture Hours)
May be repeated when topics vary.

ARTS 4391 Topics in Studio Art
3 Semester Credit Hours
May be repeated when topics vary.
Co-requisite: SMTE 0097.

ARTS 4396 Directed Individual Study
1-3 Semester Credit Hours (1-3 Lecture Hours)
See College description. Offered on application
Co-requisite: SMTE 0097.

ARTS 4398 Applied Experience
3 Semester Credit Hours (3 Lecture Hours)
See College description. Offered on application.
Co-requisite: SMTE 0097.

Atmospheric Science (ATSC)

ATSC 2101 Weathercasting
1 Semester Credit Hour (1 Lecture Hour)
This course is to practice in preparing and presenting weathercasts for radio and television. The instructors of this course will provide the students with: (1) information in the form of lectures and supplemental readings; (2) opportunities to practice weathercasting on video, and (3) advice, supervision, and guidance. In lecture, students will spend most of the course learning about geography and weathercasting rules. A large portion of the course is to practice the weathercasting and report.
Prerequisite: ATSC 2403.

ATSC 2301 Weather Observations
3 Semester Credit Hours (3 Lecture Hours)
This course is an introduction of the basic concept of meteorology. The focus is on the measurements of the atmosphere and weather related phenomenon. The principle of the instruments used to measure temperature, pressure, moisture, radiation, precipitation and other weather related properties of the atmosphere will be introduced. The differences among the observations from in-situ, balloon borne, airborne, and satellite borne instruments will be examined and discussed.
Prerequisite: ATSC 2403.

ATSC 2302 Introduction of Data Analysis in Atmospheric Sciences
3 Semester Credit Hours (3 Lecture Hours)
This course will enhance student skills for analyzing atmospheric science-related datasets under various scientific programming environments. The focus is on developing a data analysis and problem-solving skillsets using mostly Python. The course includes: basic concepts of operating systems and high-level programming languages; basics of programming in Python; general data analysis methods and tools; scientific data formats used in remote sensing data and numerical model output; publication-quality scientific graphics; and critical steps of building a large programming project. Examples with IDL and FORTRAN are also included.

ATSC 2403 Introduction to Meteorology
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
This course is an introduction to meteorology and the dynamics of planetary atmospheres. Emphasis on atmospheric accretion, composition, evolution, structure, and dynamics. Lab exercises cover basic measurement techniques, weather maps, and forecasting.
Co-requisite: SMTE 0096.
ATSC 3305 Physical Meteorology
3 Semester Credit Hours (3 Lecture Hours)
This course will cover the fundamentals of atmospheric physics including
the atmospheric composition, kinetic theory of gases, moist processes,
aerosol, solar and terrestrial radiation, scattering of electromagnetic
radiation and radiative transfer.
Prerequisite: ATSC 2403 and PHYS 2426.

ATSC 3306 Atmospheric Thermodynamics
3 Semester Credit Hours (3 Lecture Hours)
This course introduces a foundation in the thermodynamics of the
atmosphere. After a brief review of general thermodynamics, the
emphasis is given to the basic principles that are useful for the
application to atmospheric problems. The course covers a number of
atmospheric processes that are basically thermodynamic in nature. The
specific topics include aerological diagrams, atmospheric statics, and
vertical stability.
Prerequisite: ATSC 2403 and PHYS 2425.

ATSC 3401 Synoptic Meteorology
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
This course focuses on introducing middle-latitude synoptic weather
phenomenon, including planet waves, frontal systems etc. We will
apply principles of Dynamic Meteorology in regards to processes in
the atmosphere, weather elements and forecasting. We will examine
the structure and dynamics of these systems by integrating weather
observations with the current state of dynamic theory, numerical
weather prediction models, and the physical principles of atmospheric
thermodynamics and cloud and precipitation physics.
Prerequisite: ATSC 3306 and MATH 2414.
Co-requisite: SMTE 0096.

ATSC 3402 Mesoscale Meteorology
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
This course focuses on introducing mesoscale weather systems
including thunderstorms, squall lines and hurricanes, as well as the
mechanisms of tornado and lighting. The methods of observing,
analyzing, and predicting these severe weather systems with the
interpretation of satellite and radar images will also be introduced in this
class.
Prerequisite: ATSC 3306.
Co-requisite: SMTE 0096.

ATSC 4301 Dynamic Meteorology I
3 Semester Credit Hours (3 Lecture Hours)
This course focuses on introductory-level atmospheric dynamics. Basic
concepts of geophysical fluid dynamics and its application to a variety
of atmospheric phenomena are introduced. Specific topics include
the equations of motion on rotating earth, vorticity, potential vorticity,
divergence, circulation theorem, and planetary wave.
Prerequisite: ATSC 3306 and MATH 2414.

ATSC 4302 Dynamic Meteorology II
3 Semester Credit Hours (3 Lecture Hours)
This course is a continuation of ATSC 4301 (Dynamic Meteorology I),
which covers the introductory-level atmospheric dynamics. The course
introduces more advance materials including equatorial waves, baroclinic
and barotropic instability, two-dimensional turbulence, atmospheric
teleconnection, El Nino/Southern Oscillation, Madden-Julian Oscillation,
global warming, and numerical modeling of atmospheric circulations.
Prerequisite: ATSC 4301.

ATSC 4305 Remote Sensing
3 Semester Credit Hours (3 Lecture Hours)
This course aims to introduce the fundamentals of satellite/airborne
remote sensing techniques and demonstrates its application to various
aspects of Earth Sciences. Topics include physical principles of remote
sensing from ultraviolet to the microwave, radiometry, sensors and
sensor technology, calibration, and environmental applications for land,
ocean and atmosphere research.
Prerequisite: PHYS 2426.

ATSC 4335 Climate and Climate Variability
3 Semester Credit Hours (3 Lecture Hours)
This course intended to guide environmental science undergraduate
students in developing a conceptual understanding of Earth's global
climate and its variability. Review past climates, present mean state of
the climate system, climate variability from seasonal to multi-decadal
time scales, and climate change. Special attention will be given to
climates of the Gulf of Mexico, Caribbean Sea and surrounding land
regions. Plausible climate-change scenarios, as well as mitigation and
adaptation strategies will also be discussed. Cross listed with ESCI 4335.
Prerequisite: (ATSC 2403 or ESCI 3335).

ATSC 4496 Directed Independent Study
1-4 Semester Credit Hours (1-4 Lecture Hours, 4 Lab Hours)
Requires a formal proposal of study to be completed in advance
of registration and be approved by the supervising faculty, the
Chairperson, and the Dean of the College.

ATSC 4498 Internship in Atmospheric Science
1-4 Semester Credit Hours
ATSC 4498 (Internship in Atmospheric Science) gives ATSC
undergraduates an opportunity to obtain valuable paid or unpaid work
experience related to atmospheric science, to better position them for
employment after graduation. Students contract to work a specified
number of hours weekly over a full semester with a state or federal
agency or private industry related to atmospheric science, in return for
college credit as follows: 3-6 hrs./week=1 sem. hr., 6-9 hrs./week=2 sem.
hrs., 9-12 hrs./week=3 sem. hrs., 12-15 hrs./week=4 sem. hrs. Students
may contract for 1-2 sem. hrs. in a single summer session (5.5 weeks)
but may contract for up to 4 sem. hrs. if carrying out internship over a
regular long semester or two summer sessions (11 weeks). If interning
for the summer, students should increase the number of hours interned
weekly to account for the shortened period worked, so total hours
interned will be equivalent to those in a regular long semester. A student
may intern only twice with a single office or agency. The internships will
not apply towards graduate credit.

ATSC 4590 Selected Topics
1-5 Semester Credit Hours (1-5 Lecture Hours, 5 Lab Hours)
This course includes special topics with variable content. May be
repeated for credit. Offered on sufficient demand.

Bilingual/ESL/Multicultural Ed (BIEM)

BIEM 4344 The Bilingual Child, Culture, & the Social Studies Curriculum
3 Semester Credit Hours (3 Lecture Hours)
Studies of the bilingual children, the effect of culture on psychological
development, and the challenges of the social studies curriculum.

BIEM 4345 Language Acquisition and Development
3 Semester Credit Hours (3 Lecture Hours)
A study of language acquisition and development with special reference
to implications for monolingual and bilingual learners.
BIEM 4349  Linguistics for Bilingual Teachers
3 Semester Credit Hours (3 Lecture Hours)
A study of the phonological, morphological, syntactical, lexical, and semantic characteristics of contemporary Spanish and English. The course focuses on Spanish-English bilingualism.

BIEM 4351  The Minority Child
3 Semester Credit Hours (3 Lecture Hours)
Introduces students to themes and issues associated with the education of the minority child; modes of learning in various curriculum subjects; relation of materials and methods to affective and cognitive aspects of learning; information concerning the learning strengths and needs of children from various minority groups. (May be used to satisfy COE multicultural requirement.)

BIEM 4355  Language Arts Studies in the Bilingual Curriculum
3 Semester Credit Hours (3 Lecture Hours)
Basic methodological strategies and assessment skills required to teach language arts in the elementary bilingual classroom are provided. Emphasis is on teaching in Spanish.

BIEM 4356  Content Area Studies in the Bilingual Curriculum
3 Semester Credit Hours (3 Lecture Hours)
The concepts and skills required to teach mathematics and science in the elementary bilingual classroom are provided.

BIEM 4357  Methods of Teaching English as a Second Language
3 Semester Credit Hours (3 Lecture Hours)
Studies in methodology and techniques available for teaching those whose native language is not English. Testing and assessment of English language learners will be integrated into the course.

BIEM 4360  Foundations in Bilingualism
3 Semester Credit Hours (3 Lecture Hours)
The philosophical and legal foundations of bilingual schooling in the United States through a sociohistorical approach. The rationale for bilingual education is examined, as are the basic program models. An overview of bilingual education in Texas is also provided.

BIEM 4393  Field Studies in Family Literacy
3 Semester Credit Hours (3 Lecture Hours)
Field experiences designed to develop skills regarding the orientation of the adult population to bilingual/ESL purposes and philosophy, improving parental involvement, and English literacy skills.

BIEM 4696  Directed Individual Study
1-6 Semester Credit Hours (1 Lecture Hour)
Programs will be designed for individual cases through special permission of the Department Chair and Dean. May be repeated for credit when the topic varies.

Biology (BIOL)

BIOL 1308  Science for Life I (Non-Majors Biology)
3 Semester Credit Hours (3 Lecture Hours)
A non-majors science course. Students will learn basic biological principles, identify the relevance of science in everyday life, and will understand the scientific method. This course does NOT substitute for BIOL 1406 - Biology I or BIOL 1407 - Biology II for science majors.
TCCNS: BIOL 1308

BIOL 1406  Biology I
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Presentation of basic biological concepts including scientific method, cytology, energetics, nucleic acids and genetics. This course is suitable for all majors.
Prerequisite: (MATH 1314, 1316, 2305, 2413, minimum score of 21 in 'ACT Math' or minimum score of 550 in 'SAT Math').
Co-requisite: SMTE 0091.
TCCNS: BIOL 1406

BIOL 1407  Biology II
4 Semester Credit Hours (4 Lecture Hours)
This course is an overview of the major concepts in biological diversity and plant and animal biology. Laboratory work will include individual/team activities as well as technology-related assignments.
Prerequisite: BIOL 1406.
Co-requisite: SMTE 0091.
TCCNS: BIOL 1407

BIOL 2300  Science Communication
3 Semester Credit Hours (3 Lecture Hours)
This course involves presentation and discussion of selected topics relating to the professional skills of practicing biological scientists, including basic software instruction, a review of library services pertinent to science, the application of scientific literature research skills, hypothesis generation and statistical tests, critical reviews of scientific articles, and an introduction to ethical issues in science.

BIOL 2371  Principles of Evolution
3 Semester Credit Hours (3 Lecture Hours)
An overview of the mechanisms by which heritable information changes, adaptations develop, and species diversify. Provides a foundation for molecular, cellular, and organismal studies in the biological sciences.
Prerequisite: BIOL 1407.

BIOL 2401  Anatomy and Physiology I
4 Semester Credit Hours (4 Lecture Hours)
Structure and function of the human body emphasizing biological chemistry, cell biology, tissues, and the integumentary, skeletal, muscular, and nervous systems. Not recommended for majors in the College of Science and Engineering. To count this course toward a major in the Department of Life Sciences, a student must demonstrate that it is required by professional schools in his or her career track and obtain approval for a substitution from his or her faculty mentor. Students may not receive credit for both this course and either BIOL 3425 - Functional Anatomy or BIOL 3430 - Physiology.
Co-requisite: SMTE 0091.
TCCNS: BIOL 2401

BIOL 2402  Anatomy and Physiology II
4 Semester Credit Hours (4 Lecture Hours)
Structure and function of the human body emphasizing blood, growth, development, genetics, and the endocrine, digestive, respiratory, cardiovascular, lymphatic, immune and urogenital systems. Not recommended for majors in the College of Science and Engineering. To count this course toward a major in the Department of Life Sciences, a student must demonstrate that it is required by professional schools in his or her career track and obtain approval for a substitution from his or her faculty mentor. Students may not receive credit for both this course and either BIOL 3425 - Functional Anatomy or BIOL 3430 - Physiology.
Prerequisite: BIOL 2401.
Co-requisite: SMTE 0091.
TCCNS: BIOL 2402
Biol 2416 - Genetics
4 Semester Credit Hours (3 Lecture Hours)
Principles of genetic transmissions and molecular basis of heredity and variation. Weekly recitation periods will involve team assignments, problem solving activities, and seminars.
Prerequisite: BIOL 1406 and 1407.
TCCNS: BIOL 2416

Biol 2420 - Principles of Microbiology
4 Semester Credit Hours (4 Lecture Hours)
Introduction to microorganisms with emphasis on those of importance in patient care. Principles of disinfection, sterilization, immunity. This class is intended for nursing majors; it cannot substitute for BIOL 2421 - Microbiology.
Co-requisite: SMTE 0092.
TCCNS: BIOL 2420

Biol 2421 - Microbiology
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
An introduction to microorganisms including the bacteria, fungi, and viruses. Laboratory involves microbiological techniques and development of basic laboratory skills.
Prerequisite: BIOL 1406, 1407, CHEM 1411 and 1412.
Co-requisite: SMTE 0092.
TCCNS: BIOL 2421

Biol 2472 - Principles of Botany
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
Introduction to the structure, function, diversity and application of plants. Laboratory focus on anatomical features, physiological adaptations, classification, and life cycles.
Prerequisite: BIOL 1407 and CHEM 1411.
Co-requisite: SMTE 0091.

Biol 3300 - Animal Nutrition
3 Semester Credit Hours (3 Lecture Hours)
Examines the dietary requirements of both companion animals and livestock. Includes the anatomy, physiology and biochemistry of the gastrointestinal system, nutrient procurement and use, feed additives, growth stimulants, metabolic diseases, and diet therapy. Cross listed with BIMS 3300.
Prerequisite: BIOL 1407 and CHEM 3411 and (CHEM 3412 or 3412*).
May be taken concurrently.

Biol 3325 - Biostatistics
3 Semester Credit Hours (3 Lecture Hours)
The application of statistical analyses to biological data. Students will gain an understanding of how to apply statistical analyses to biological data through study of the principles of experimental design including how to frame informative research questions. At a fundamental level, these concepts are linked to the philosophy of science and our understanding of the way the world works.

Biol 3345 - Cell Physiology
3 Semester Credit Hours (3 Lecture Hours)
Emphasis on cellular functions that underlie physiological processes, transport across membranes, membrane potential and excitability, the cell nucleus, and organelles and their relationship to energy, metabolism, and transport mechanisms within the cell. Offered during Spring semester of odd-numbered years.
Prerequisite: BIMS 2200 and BIOL 3410.

Biol 3403 - Molecular Biology
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
Principles of molecular biology including advanced concepts of gene structure, expression and regulation, chromatin structure, recombination, and current molecular biology techniques. Laboratory emphasis is on basic skills for nucleic acid analyses, including extraction, PCR amplification, quantification, restriction, and electrophoresis. DNA sequencing-based approaches are covered including bioinformatics for sequence comparisons, morphologies, and molecular identification. Cross listed with BIMS 3403.
Prerequisite: BIOL 2416 and 2421.
Co-requisite: SMTE 0092.

Biol 3410 - Cell Biology
4 Semester Credit Hours (4 Lecture Hours)
Study of cellular architecture and function. Topics include membranes, transport, organelles, cytoskeleton, and signaling mechanisms. Interrelationships of structure, function, energy and metabolism are explored. Laboratory will emphasize basic techniques of cell biology.
Prerequisite: BIOL 2416 and CHEM 3411.
Co-requisite: SMTE 0092.

Biol 3413 - Invertebrate Zoology
4 Semester Credit Hours (3 Lecture Hours, 1 Lab Hour)
Structure, life history, and evolution of the invertebrates with special emphasis on the phylogeny and ecological relationships of the major phyla. Laboratory will involve field trips and survey collections. Offered fall semester every year.
Prerequisite: BIOL 1407.
Co-requisite: SMTE 0091.

Biol 3414 - Vertebrate Zoology
4 Semester Credit Hours (4 Lecture Hours)
Structure, life history, and evolution of the vertebrates with special emphasis on the phylogeny and ecological relationships of the classes. Laboratory will involve field trips and survey collections. Offered only in Spring semester.
Prerequisite: BIOL 1407.
Co-requisite: SMTE 0091.

Biol 3425 - Functional Anatomy
4 Semester Credit Hours (4 Lecture Hours)
General trends in morphological development and adaptation as demonstrated by the anatomy and embryology of living and extinct chordates. Students may not receive credit for both this course and either BIOL 2401 - Anatomy and Physiology I or BIOL 2402 - Anatomy and Physiology II.
Prerequisite: BIOL 1407.
Co-requisite: SMTE 0091.

Biol 3428 - Principles of Ecology
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
Introduction to the interrelationships of organisms and their environment. Population structure, community classification and regulation, and energy flow in ecosystems will also be covered. Laboratory sections will focus on experimental design and field techniques in ecology.
Prerequisite: BIOL 1407 and (BIOL 2200, 2300, BIMS 2200 or UNIV 1101 and UNIV 1102) and CHEM 1411 and (MATH 2413 or 2413*).
May be taken concurrently.
Co-requisite: SMTE 0091.
BIOL 3430  Physiology
4 Semester Credit Hours (4 Lecture Hours)
The study of physiological processes that are the product of complex interactions between tissues, organs and organ systems, with emphasis on the circulatory, respiratory, endocrine, muscular, digestive, and urogenital systems. Particular focus on homeostasis, and the role of the environment and evolution on organ systems. Students may not receive credit for both this course and either BIOL 2401 - Anatomy and Physiology I, or BIOL 2402 - Anatomy and Physiology II.
Prerequisite: BIOL 1407.
Co-requisite: SMTE 0091.

BIOL 3455  Plant form and Function
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
Anatomy of vegetative and reproductive organs of plants, unique cellular features, development and differentiation of cell and tissue types. Emphasis on physiological mechanisms of response and adaptation to the environment.
Prerequisite: BIOL 1407.
Co-requisite: SMTE 0091.

BIOL 3479  Plant Ecology
4 Semester Credit Hours (4 Lecture Hours)
Structure, physiology, life cycles, and economic impact of plants. Factors influencing diversity, succession and ecological distribution of plants.
Prerequisite: BIOL 1407.
Co-requisite: SMTE 0091.

BIOL 4100  Research Ethics and Professionalism
1 Semester Credit Hour (1 Lecture Hour)
A course designed to enhance the professionalism of undergraduate researchers. This course discusses the codified aspects of research ethics, including fabrication, falsification and plagiarism of data; assigning authorship, submitting manuscripts to more than one journal and management of lab teams. It also addresses careers in science, resume writing, producing the successful application and interviewing skills.

BIOL 4301  Embryology
3 Semester Credit Hours (3 Lecture Hours)
Studies the events that occur just prior to and during gestation. Includes gametogenesis, chromosomal and single gene aberrations, teratology, and the development of the body systems.
Prerequisite: BIOL 2416.

BIOL 4302  Coral Reef Conservation
3 Semester Credit Hours (3 Lecture Hours)
Survey of challenges and threats facing coral reef ecosystems in the 21st century and discussion of conservation and management strategies. Topics include biology and ecology of reef ecosystems, climate change impacts, coral bleaching, over-fishing and the effectiveness and design of marine protected areas.

BIOL 4304  Biology of Viruses
3 Semester Credit Hours (3 Lecture Hours)
Introduction to the study of viruses, including viral life cycles, replication schemes and Baltimore classification of representative bacteriophages, plant and animal viruses. Emphasis on analysis and review of primary literature on viruses.
Prerequisite: BIOL 2416, 2421 and CHEM 1411.

BIOL 4308  Biogeography
3 Semester Credit Hours (3 Lecture Hours)
This course offers an overview of the theories, methods, and current directions in modern biogeography, emphasizing marine and terrestrial plant and animal species and communities.

BIOL 4309  Biological Systematics and Phylogenetics
3 Semester Credit Hours (3 Lecture Hours)
Introduction to the theories of biological systematics and phylogenetics. Including species concepts, biological classification, nomenclature, and phylogenetic methods including ancestral state reconstruction and divergence time estimation. Offered in the spring semester of odd years. Stacked with BIOL 5309
Prerequisite: BIOL 1407.

BIOL 4311  Biological Bases of Behavior
3 Semester Credit Hours (3 Lecture Hours)
This lecture-based course examines the processes by which neuronal circuits generate behaviors and the mechanisms by which experience modulates the activity of these circuits.
Prerequisite: BIMS 4323.

BIOL 4312  Mariculture Techniques
3 Semester Credit Hours (2 Lecture Hours, 2 Lab Hours)
The study and hands-on application of biological, mechanical, and other concepts required to develop the skills and techniques necessary for efficient operation and management of public and private aquaculture facilities. Offered in Fall of odd-numbered years.
Prerequisite: BIOL 4370.

BIOL 4315  Animal Behavior
3 Semester Credit Hours (3 Lecture Hours)
What mechanisms cause behavior? How does behavior develop? How does behavior affect survival and reproduction? How does behavior evolve? These questions will be explored in vertebrate and invertebrate species. Offered in the fall semester Stacked with BIOL 5315

BIOL 4319  Biology of Marine Mammals
3 Semester Credit Hours (3 Lecture Hours)
Introduction to marine mammals, with a focus on their interactions with their biotic and abiotic environment
Prerequisite: BIOL 1407.

BIOL 4323  Global Change Ecology
3 Semester Credit Hours (3 Lecture Hours)
An introduction to the effects of climatic and anthropogenic change on terrestrial and aquatic structure and function. Includes readings from the current literature and discussion of controversial articles.
Prerequisite: BIOL 3428.

BIOL 4328  Fisheries
3 Semester Credit Hours (3 Lecture Hours)
A study of theory and techniques in fisheries science, including practical fisheries sampling designs and techniques, behavior of fisheries populations and application to resource management with emphasis in tide-influenced waters. Includes readings in the current literature.
Prerequisite: BIOL 1407.

BIOL 4329  Fisheries Techniques
3 Semester Credit Hours (2 Lecture Hours)
This class is designed to provide practical experience in the theory and application of traditional and modern fisheries sampling and analytical techniques used in Fisheries Science and Management. This is a hands-on field- and laboratory-based course that will develop skills that are most commonly used by fisheries biologists and technicians. Offered in Fall of even-numbered years.
Prerequisite: BIOL 4328.
BIOL 4330 Conservation Biology
3 Semester Credit Hours (3 Lecture Hours)
Principles and theories relating to the conservation of biological diversity, including patterns and processes creating biological diversity, estimates of extinction rates, consequences of losses of biodiversity and causes of diversity loss.

BIOL 4334 Biology and Ecology of Coral Reefs
3 Semester Credit Hours (3 Lecture Hours)
This course will introduce the biology of corals, describe the abiotic and biotic interactions among coral reef ecosystem inhabitants, identify the threats of climate change, and discuss the conservation and management of reefs for the future. Offered every spring.
Prerequisite: BIOL 3428.

BIOL 4336 Marine Ecology
3 Semester Credit Hours (3 Lecture Hours)
Habitats and community structure in marine environments; biotic and abiotic factors governing the distribution of marine organisms. (Offered every Spring)
Prerequisite: BIOL 3428.

BIOL 4340 Genomics, Proteomics and Bioinformatics
3 Semester Credit Hours (3 Lecture Hours)
An introduction to integrative biological study using genome-wide approaches and bioinformatics. The “omics” technologies (Genomics, Proteomics, Metabolomics, etc.) will be surveyed for current and potential contributions to understanding biological function at molecular, organismal and ecosystem levels.
Prerequisite: BIOL 2416 and 3410 or CHEM 4401.

BIOL 4343 Oceans and Human Health
3 Semester Credit Hours (3 Lecture Hours)
Healthy oceans are essential to the habitability of our planet – for humans and all other forms of life. Students will explore links between oceans, pollution, human well-being, ecosystem services, resource management, and the science and legislation governing the enforcement of water quality standards.

BIOL 4350 Research and Design
1-3 Semester Credit Hours (1-3 Lecture Hours)
Course will include experimental design, literature review of a research topic and laboratory work on the research topic.

BIOL 4353 Down the River: Biology of Gulf Coast Fishes
3 Semester Credit Hours (3 Lecture Hours)
This course covers aspects of ecology and biogeography of riverine and estuarine fishes while exposing students to field sampling techniques and museum preparation of specimens. This will be a unique opportunity for students to gain an in-depth understanding of the biological complexity of Texas Gulf Coast river systems while gaining hands-on experience in field and museum ichthyological techniques that are employed by state, federal and academic researchers alike.
Co-requisite: SMTE 0091.

BIOL 4355 Public Aquarium and Animal Care Operations
3 Semester Credit Hours (3 Lecture Hours)
This course examines the unique requirements needed for public aquariums and zoos to balance animal care and health with public display for general education and conservation research.
Co-requisite: SMTE 0091.

BIOL 4360 Computation for 21st Century Biologists
3 Semester Credit Hours (3 Lecture Hours)
This course is designed to prepare and enable students to use computational tools for bioinformatic applications in advanced courses and independent research projects. Students will be introduced to powerful open-source computing tools used in biological research for creation, organization, manipulation, processing, analysis, and archiving of big data. While not a formal requirement, it is assumed that students have a firm command of basic algebra. Offered every Fall semester
Stacked with BIOL 5360

BIOL 4370 Mariculture
3 Semester Credit Hours (3 Lecture Hours)
Survey of the physiological, behavioral, environmental, and economic parameters governing the culture of selected aquatic species. Included are techniques employed worldwide to produce aquatic products.
Prerequisite: BIOL 1407.

BIOL 4371 Population Genetics
3 Semester Credit Hours (3 Lecture Hours)
An introduction to evolutionary processes and their genetic basis, this course focuses on theoretical and experimental approaches to the study of population genetics, quantitative genetics, evolutionary ecology, and molecular evolution.
Prerequisite: BIOL 2416 and MATH 2413.

BIOL 4396 Directed Independent Study
1-3 Semester Credit Hours (1-3 Lecture Hours)
Research in areas of current interest. Written report required. May be repeated for a maximum of 6 semester hours.
Prerequisite: BIOL 1407 and CHEM 1412.

BIOL 4399 Directed Independent Research
3-6 Semester Credit Hours (3-6 Lecture Hours)
Independent laboratory- or field-based research project on topic of current interest. Project developed in conjunction with a faculty advisor. Written report required. May be repeated once for a total of 6 semester credit hours

BIOL 4405 Limnology
4 Semester Credit Hours (4 Lecture Hours)
The study of the functional relationships and productivity of aquatic communities as they are affected by their physical, chemical, and biotic environment. The influence of man's activities on these systems will be the focus of the course.
Prerequisite: BIOL 3428.
Co-requisite: SMTE 0091.

BIOL 4406 Immunology
4 Semester Credit Hours (4 Lecture Hours)
An overview of immunology with emphasis on current knowledge of the immune system. Detailed examination of the specific cells, cytokines, antibodies, and molecules that comprise the immune system. Laboratory exercises demonstrate the basic principles and techniques used in immunologic studies. Cross listed with BIMS 4406.
Prerequisite: BIOL 2421.
Co-requisite: SMTE 0092.

BIOL 4407 BIOLOGY OF THE FUNGI
4 Semester Credit Hours (3 Lecture Hours, 1 Lab Hour)
Overview of the fungi, including their characteristics, diversity, and ecology. Interactions between fungi and other organisms are explored along with the role and importance of the fungi.
Prerequisite: BIOL 2421.
Co-requisite: SMTE 0092.
BIOL 4408 | Microbial Diversity and Ecology
4 Semester Credit Hours (4 Lecture Hours)
Biodiversity and roles of microorganisms in natural environments. Interactions with other micro- and macro-organisms (humans, animals and plants) and with abiotic factors. Unique abilities of microorganisms such as nitrogen fixation and adaptation to extreme environments. 
Prerequisite: (BIOL 2421 or 4328).
Co-requisite: SMTE 0092.

BIOL 4410 | Mammalogy
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
Systematics and ecology of mammals. Offered in even Fall semesters. 
Prerequisite: BIOL 1407.
Co-requisite: SMTE 0091.

BIOL 4413 | Entomology
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
A broad overview of the natural history, classification, phylogeny, ecology, behavior, development and physiology of insects and their kin. The lab will involve field work, collection and curation. Offered in spring semester of even years. Stacked with BIOL 5413.
Prerequisite: BIOL 3413.
Co-requisite: SMTE 0091.

BIOL 4417 | Field Biology
4 Semester Credit Hours (1 Lecture Hour, 6 Lab Hours)
is a hands-on course designed to teach students key concepts by immersing them in nature. Topics include adaptations of plants and animals in different habitats, food web interactions, and how biotic and abiotic forces interact to structure natural communities including spatial and temporal variation in communities.
Prerequisite: BIOL 3428.
Co-requisite: SMTE 0091.

BIOL 4422 | Plant Taxonomy
4 Semester Credit Hours (4 Lecture Hours)
Principles and practice in the classification of flowering plants. Field trips are required.
Prerequisite: BIOL 1407.
Co-requisite: SMTE 0091.

BIOL 4425 | Ornithology
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
Systematics, anatomy, physiology, ecology, behavior, and field identification of birds. Offered in odd Fall semester.
Prerequisite: BIOL 1407.
Co-requisite: SMTE 0091.

BIOL 4429 | Marine Botany
4 Semester Credit Hours (4 Lecture Hours)
The ecology of marine plants with emphasis on identification, life histories, and environmental factors of distribution.
Prerequisite: BIOL 1407.
Co-requisite: SMTE 0091.

BIOL 4430 | Marine Plankton
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
In this class we will investigate the systematics, distribution, and ecology of major marine plankton groups and introduce major concepts in biological oceanography. Offered in Spring of odd-numbered years.

BIOL 4432 | Ichthyology
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
Systematics, evolution, biology, and ecology of fishes. Laboratory identification of marine and freshwater fishes collected during field excursions.
Prerequisite: BIOL 1407.
Co-requisite: SMTE 0091.

BIOL 4433 | Parasitology
4 Semester Credit Hours (4 Lecture Hours)
An introduction to parasitology with emphasis on internal parasites and appropriate references to human endoparasites and parasites of veterinary importance.
Prerequisite: BIOL 2421.
Co-requisite: SMTE 0092.

BIOL 4435 | Biological Microtechniques
4 Semester Credit Hours (4 Lecture Hours)
Theory and techniques of processing specimens for histochemistry and microscopic examination. Laboratory includes preparation of tissues and small specimens for analysis and display.
Prerequisite: BIOL 1407 and CHEM 3411.
Co-requisite: SMTE 0092.

BIOL 4439 | Case Work Methods in Forensic Anthropology
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
This course combines the study of human bones (osteology) and skeletal anatomy with established and validated forensic anthropological methods to solve theoretical and actual forensic cases involving human remains. Offered during the spring semester. Stacked with BIOL 5439. Cross-listed with BIMS 4439.
Prerequisite: BIOL 2401.

BIOL 4442 | Herpetology
4 Semester Credit Hours (4 Lecture Hours)
Systematics, ecology, and behavior of amphibians and reptiles.
Prerequisite: BIOL 1407.
Co-requisite: SMTE 0091.

BIOL 4444 | Estuarine Organisms
4 Semester Credit Hours (4 Lecture Hours)
Systematics, distribution, and ecology of estuarine macrofauna and macroflora. Weekend field trips and individual study required.
Prerequisite: BIOL 3413.
Co-requisite: SMTE 0091.

BIOL 4446 | Tropical Ecosystems & Conservation
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
Survey of the ecology and conservation issues of the major ecosystems in the tropics and field techniques used to study tropical forest ecology.
Prerequisite: BIOL 3428.
Co-requisite: SMTE 0091.

BIOL 4452 | Ecology and Evolution of Fishes
4 Semester Credit Hours (3 Lecture Hours, 4 Lab Hours)
This course covers aspects of fish ecology from individual, population, community, and ecosystem levels. We discuss the role of the environment on fish physiology and behavior, food-web dynamics, community assembly and diversity, ecosystem interactions, and anthropogenic impacts on fishes with a focus on conservation.
Prerequisite: BIOL 4432.
Co-requisite: SMTE 0091.
**Biomedical Sciences (BIMS)**

**BIMS 2171 Medical Terminology**
1 Semester Credit Hour (2 Lecture Hours)
This course stresses familiarity with and facility in scientific terminology. Areas of focus include: an introduction to scientific terminology; word analysis, etymologies, spelling and pronunciation. Offered fall and spring semesters every year.

**BIMS 2200 Professional Skills**
2 Semester Credit Hours (2 Lecture Hours)
Presentation and discussion of selected topics relating to the professional skills of practicing scientists including literature searches, reviews, paper presentation, professional opportunities and job requirements. Biomedical Sciences and Biology majors only.

**BIMS 3100 Essentials for Applied Forensics Laboratory Sciences**
1 Semester Credit Hour (1 Lecture Hour)
Introduction to general laboratory procedures related to the criminal investigation system and regulations (especially related to Texas), lab safety, quality assurance and quality control, professional ethics, specimen acquisition and maintenance and chain of custody.

**BIMS 3103 Essentials Laboratory for Forensic Science**
1 Semester Credit Hour (1 Lab Hour)
Application of essential practices for forensic science. Offered fall semester every year.

**BIMS 3200 Essentials for App Lab Science**
2 Semester Credit Hours (1 Lecture Hour)
ESSENTIALS FOR LAB SCIENCE Introduction to general laboratory procedures, laboratory safety and regulations, quality assurance, professional ethics, specimen acquisition, sample maintenance and microscopy. Includes an introduction to the health care, public health and criminal investigation system.

**BIMS 3201 Introduction to Animal Science**
3 Semester Credit Hours (3 Lecture Hours)
This course is an orientation into animal science as it relates to agriculture and veterinary medicine. Students will also be guided on issues to ensure successful veterinary school matriculation.

**BIMS 3300 Animal Nutrition**
3 Semester Credit Hours (3 Lecture Hours)
Examines the dietary requirements of both companion animals and livestock. Includes the anatomy, physiology and biochemistry of the gastrointestinal system, nutrient procurement and use, feed additives, growth stimulants, metabolic diseases, and diet therapy. Cross listed with BIOL 3300. Offered spring semester every year.

**BIMS 3301 Pathophysiology**
4 Semester Credit Hours (4 Lecture Hours)
This course is a study of the biological basis of human disease. It includes an investigation of inflammation, immunity, and neoplasia, as well as the more common presenting dysfunctions of body systems. Offered every fall. Offered fall semester every year.

**BIMS 3320 Professional Practice in Forensic Science**
3 Semester Credit Hours (3 Lecture Hours)
An introduction to industry standards and ethics for professional forensic scientists. This course analyzes cognitive processes, scientific methods and quality control/quality assurance issues in forensic investigations. It also stresses maintaining credibility in an adversarial legal system through the development of technical/scientific speaking and writing skills. Offered spring semester every year.

**BIMS 3325 Marine Science Field Camp**
5 Semester Credit Hours (3 Lecture Hours, 6 Lab Hours)
Students learn techniques required to properly conduct marine science field research. Practical, hands-on experience is gained in a variety of topics including biotic and abiotic sample collection and processing, quantitative analysis of field data, evaluation of environmental factors, survival and distribution of living organisms, and the structure of biotic communities.

**BIMS 3326 Survey of Forensic Science**
2 Semester Credit Hours (1 Lecture Hour)
ESSENTIALS FOR LAB SCIENCE Introduction to general laboratory procedures, laboratory safety and regulations, quality assurance, professional ethics, specimen acquisition, sample maintenance and microscopy. Includes an introduction to the health care, public health and criminal investigation system.

**BIMS 3327 Introduction to Forensic Anthropology**
4 Semester Credit Hours (3 Lecture Hours)
This course introduces the student to the osteological examination of the human skeletal system as practiced by professional forensic anthropologists. It is designed to equip the student with introductory understanding of the anatomy and normal appearance of the human skeleton as well as some of its variations, including pathological conditions, traumatic injury, and postmortem damage.
BIMS 3403 Molecular Biology
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
Principles of molecular biology including advanced concepts of gene structure, expression and regulation, chromatin structure, recombination, and current molecular biology techniques. Laboratory emphasis is on basic skills for nucleic acid analyses, including extraction, PCR amplification, quantification, restriction, and electrophoresis. DNA sequencing-based approaches are covered including bioinformatics for sequence comparisons, polymorphisms, and molecular identification. Cross listed with BIOL 3403. Offered spring semester every year.
Prerequisite: BIOL 2416, 2421 and SMTE 0092.
Co-requisite: SMTE 0092.

BIMS 4085 Major Field Test in Biology
0 Semester Credit Hours
The Major Field Test (MFT) in Biology is a national examination given in the Fall and Spring semesters only. It is a graduation requirement for all Biology and some Biomedical Sciences students. Students enroll in this course during the semester that they plan to take the MFT. There is no cost to the student for either this course or for the MFT. Admission is limited to students who have completed 90 or more semester credit hours.

BIMS 4111 Contemporary Scientific Readings
1 Semester Credit Hour (1 Lecture Hour)
Students read one non-fiction book per month addressing some aspect of medicine, science or history (four books per semester), then meet once per month to discuss, analyze and defend their perceptions about the book. Only open to students accepted into the Partnership for Primary Care and the Joint Admissions Medical Program (JAMP), those who are seeking admission into JAMP by participating in the pre-JAMP and students in other sponsored programs. This course may be repeated once for full credit in subsequent semesters.
Prerequisite: BIOL 1407.

BIMS 4170 Biomedical Seminar
1 Semester Credit Hour (1 Lecture Hour)
A series of seminars on current topics of biomedical research. This course may be repeated once for full credit in subsequent semesters.
Prerequisite: BIOL 1407.

BIMS 4295 Biomedical Practicum
2 Semester Credit Hours
Supervised learning experience with a community professional in health care (e.g., physician, dentist, veterinarian, chiropractor, pharmacist, physician assistant or physical therapist). On-campus meetings, oral and written reports are required. (Cannot be taken by Clinical Laboratory Science students in lieu of CLSC 4297 - Professional Practicum I.) This course may be repeated once for full credit in subsequent semesters.
Requires permission of instructor. Offered fall and spring semesters every year.
Prerequisite: BIOL 1407.
Co-requisite: SMTE 0092.

BIMS 4296 Clinical Research
2 Semester Credit Hours
Students will actively perform clinical research and learn from and interact with health care professionals such as physicians, nurses, physical therapists, pharmacists, etc. The student will be a functioning member of a research team with specific, measurable responsibilities in clinical studies.
Prerequisite: BIOL 1407.
Co-requisite: SMTE 0092.

BIMS 4297 Professional Practicum I
2 Semester Credit Hours (2 Lecture Hours)
PROFESSIONAL PRACTICUM I Supervised learning experience in selected departments of the clinical laboratories. Clinical Laboratory Science students only. Requires permission of instructor and application.

BIMS 4299 Directed Independent Research
1-2 Semester Credit Hours (1-2 Lab Hours)
Independent laboratory- or field-based research project on topic of current interest. Project developed and funded in conjunction with a faculty advisor. Written report required. May be repeated for a maximum of 4 semester credit hours. Offered any semester upon request by a student and consent of the instructor.
Prerequisite: BIOL 1407 and CHEM 1412.
Co-requisite: SMTE 0092.

BIMS 4311 Biology of Cancer
3 Semester Credit Hours (3 Lecture Hours)
This course is a study of the profile of a cancer cell, and the various causes of human cancer. Contribution of heredity, environmental factors, and infectious agents to oncogenesis will be studied. Cancer screening, diagnosis, and treatment will be discussed. Various types of cancer will be presented. Offered fall semester of even-numbered years.
Prerequisite: BIOL 2416.

BIMS 4323 Neurobiology
3 Semester Credit Hours (3 Lecture Hours)
Studies the anatomy and physiology of the nervous system. Includes an examination of evolutionary trends in nervous system development, neural function, nerve impulse transmission, sensory and motor systems, behavior, emotional states, learning and memory. Particular emphasis is placed on human functioning. Offered spring semester every year.
Prerequisite: BIOL 2416.

BIMS 4327 Introduction to Toxicology
3 Semester Credit Hours (3 Lecture Hours)
Principles of toxicology including absorption and excretion, biotransformation, chemical carcinogenesis, developmental toxicology and toxic agents.
Prerequisite: BIOL 1407 and CHEM 1412.

BIMS 4330 Biological Basis of Aging
3 Semester Credit Hours (3 Lecture Hours)
Molecular aspects of aging and disease, including biological mechanisms and theories involving cells, tissues, and organ systems.
Prerequisite: BIOL 1407 and CHEM 3411.

BIMS 4333 Medical Entomology
3 Semester Credit Hours (3 Lecture Hours)
An introduction to arthropods of medical and veterinary importance with particular emphasis on the critical roles that they play in their host group's health and well-being.
Prerequisite: BIOL 1407.

BIMS 4334 Human Genetics
3 Semester Credit Hours (3 Lecture Hours)
Introduction to the genetic aspects of health and disease. Classic Mendelian and chromosomal disorders are examined as well as the relationship of genetic predisposition to the healthy state and to diseases/conditions.
Prerequisite: BIOL 2416 and CHEM 3412.
BIMS 4335  Endocrinology
3 Semester Credit Hours (3 Lecture Hours)
Basic biochemical and molecular aspects of hormone physiology, basic endocrine function and hormone action, immune-endocrine interactions, and clinical examples of the outcomes of abnormal function in human disease.
Prerequisite: BIMS 2200, BIOL 2416 and CHEM 3412.

BIMS 4340  Forensic Science in Criminal Law
3 Semester Credit Hours (3 Lecture Hours)
Students will learn legal procedures, rules of evidence, and applications of forensic science in the area of criminal law. Students will also develop skills in report writing and testifying in court.
Prerequisite: BIMS 3320.

BIMS 4341  Health Disparities
3 Semester Credit Hours (3 Lecture Hours)
This course will examine the social/societal, physical/environmental, biological, and genetic/epigenetic factors that are fundamental in creating disparities in health in America. This course will also focus on the formulation and implementation of public policy objectives to reduce and ultimately eliminate health disparities. Students may not take both this course and BIMS 4350 Global Health Disparities for credit. Offered fall semester every year.
Prerequisite: BIOL 1407.

BIMS 4350  Global Health Disparities
3 Semester Credit Hours (3 Lecture Hours)
Provides students with an historical perspective on global health issues and leads to an understanding of current and future concerns. Emphasis is on the global burden of disease and determinants of health as well as health disparities. Provides students with an introduction to the study of health disparities in the United States, examining how health disparities are defined and measured and exploring issues such as how the structure of American society affects who gets sick and who gets care. Case studies expose students to a variety of real-life scenarios and explore a range of issues. This is an intensive writing course. This course is cross-listed with HCAD 4350. Students cannot take this course and BIMS 4331 Health Disparities in the US for credit.

BIMS 4374  Medical Microbiology
3 Semester Credit Hours (3 Lecture Hours)
Study of common human pathogenic organisms. Includes bacterial, parasitic, viral and fungal infections with emphasis on pathogenesis and treatment.
Prerequisite: BIOL 2421.

BIMS 4375  Mechanisms of Microbial Pathogenesis
3 Semester Credit Hours (3 Lecture Hours)
Studies of how microorganisms invade the host and produce pathological symptoms associated with diseases. Emphasis is on the interaction between various host cells and pathogens, especially molecular mechanisms of pathogenesis and host immune responses.
Prerequisite: BIOL 2421.

BIMS 4395  Forensic Science Internship
3 Semester Credit Hours (3 Lecture Hours, 5 Lab Hours)
This course is designed to bridge the gap between academic instructions and the forensic science industry by providing real world experience in forensic investigations. Students attend lectures on campus, plus spend five hours/week at a crime laboratory. Students will accompany crime scene investigators to actual crime scenes and participate in several hands on forensic exercises involving mock as well as real investigations. Some activities may result in students spending more that five hours of laboratory or practicum time.
Prerequisite: BIMS 3320.
Co-requisite: SMTE 0092.

BIMS 4396  Directed Independent Study
1-3 Semester Credit Hours (1-3 Lecture Hours)
Research in areas of current interest. Written report required.
Prerequisite: BIOL 1407 and CHEM 1412.
Co-requisite: SMTE 0092.

BIMS 4406  Immunology
4 Semester Credit Hours (4 Lecture Hours)
An overview of immunology with emphasis on current knowledge of the immune system. Detailed examination of the specific cells, cytokines, antibodies, and molecules that comprise the immune system. Laboratory exercises demonstrate the basic principles and techniques used in immunologic studies. Cross listed with BIOL 4406.
Prerequisite: BIOL 2421.
Co-requisite: SMTE 0092.

BIMS 4410  Histology
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
The study of cells and tissues, especially the manner in which they are organized to form organs and systems. Laboratories involve intensive use of the microscope to identify cells, tissues and organs.
Prerequisite: BIOL 2402 or 3425.
Co-requisite: SMTE 0092.

BIMS 4428  Medicolegal Death Investigations
4 Semester Credit Hours (3 Lecture Hours, 1 Lab Hour)
This course is designed to provide an introduction to the essential procedures of forensic death investigation. Students are instructed in the process of investigating all aspects of a death case falling under the jurisdiction of medical examiners in Texas. The importance of scene management and documentation, case file management, review of physical and psychological evidence, autopsy procedures, and consultation with other forensic science experts leading to the correct classification of cause and manner of death are emphasized. Course may be repeated only once with permission of instructor.

BIMS 4439  Case Work Methods in Forensic Anthropology
4 Semester Credit Hours (3 Lecture Hours, 1 Lab Hour)
This course combines the study of human bones (osteology) and skeletal anatomy with established and validated forensic anthropological methods to solve theoretical and actual forensic cases involving human remains. Cross listed with BIMS 5439, BIOL 4439, and BIOL 5439.
Prerequisite: BIOL 2401.
Co-requisite: SMTE 0092.

BIMS 4590  Selected Topics
1-5 Semester Credit Hours (1-5 Lecture Hours)
Variable content. May be repeated for credit.
Business Law (BLAW)

BLAW 3310 Legal Environment of Business
3 Semester Credit Hours (3 Lecture Hours)
An introduction to the legal systems of government, business and society. Includes coverage of ethics, the judicial process, basics of contracts law, constitutional issues, business torts and crimes, creditor/debtor relationships, business organizations, international law, environmental law, and various aspects of regulation of business.
Prerequisite: BUSI 0011.

BLAW 3320 Law for Personal Business
3 Semester Credit Hours (3 Lecture Hours)
A study of the laws that influence each individual in the conduct of personal life and business affairs. Includes such topics as the court and legal system, family law, torts, property law, insurance, wills and trusts, contracts, and other areas of current interest.

BLAW 4342 Law for Professional Certification
3 Semester Credit Hours (3 Lecture Hours)
Designed as a second course in business law for students who desire a more in-depth knowledge. Individuals planning to take professional certification exams that contain a business law component are encouraged to enroll in this course.
Prerequisite: (BLAW 3310).

BLAW 4350 Human Resource Law
3 Semester Credit Hours (3 Lecture Hours)
A study of the laws relating to human resource management in today's business environment. Covers discrimination, labor law, retirement regulations, safety issues and employee/management topics. Emphasis on current issues, cases and legislation. May be used as a management major elective or business elective.

BLAW 4390 Current Topics in Business Law
1-3 Semester Credit Hours (1-3 Lecture Hours)
Selected topics for special study related to laws impacting business, organizations and human resources. May be repeated for credit when topics vary.

BLAW 4396 Directed Individual Study
1-3 Semester Credit Hours
Individual supervised study and a final report.

Chemistry (CHEM)

CHEM 1305 Introductory Chemistry
3 Semester Credit Hours (3 Lecture Hours)
A one-semester principles course for students in non-science related majors covering the major concepts of chemistry (atomic structure, bonding, stoichiometry, elementary thermodynamics) and the role of chemistry in contemporary society (polymers, energy, pollution, etc.). Will not substitute for CHEM 1411.
TCCNS: CHEM 1305

CHEM 1411 General Chemistry I
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
The foundation course in chemistry. Stoichiometry, chemical equilibria, atomic structure, chemical bonding, periodic properties, thermodynamics, chemical kinetics, and descriptive chemistry of the elements. Laboratory involves development of basic skills. This course counts toward the natural science component of the University Core Curriculum. Either CHEM 1305 - Introductory Chemistry or CHEM 1411, but not both, may be applied towards the core requirement. This course is offered in Fall, Spring and typically during both Summer sessions.
Co-requisite: SMTE 0093.
TCCNS: CHEM 1411

CHEM 1412 General Chemistry II
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
The continuation of CHEM 1411 - General Chemistry I*, the foundation course in chemistry with emphasis on quantitative aspects. Laboratory involves development of basic skills. This course counts toward the natural science component of the University Core Curriculum.
Prerequisite: CHEM 1411 and MATH 1314.
Co-requisite: SMTE 0093.
TCCNS: CHEM 1412

CHEM 2490 Special Topics
4 Semester Credit Hours (1-4 Lecture Hours, 3 Lab Hours)
May be repeated for credit. Subject materials variable. Offered on sufficient demand.

CHEM 3411 Organic Chemistry I
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
The structure, nomenclature, synthesis, reactions, and reaction mechanisms of the principal classes of organic compounds. Stereochemistry and spectroscopy of organic compounds. Laboratory involves separation and synthetic techniques and development of basic skills. This course is offered in Fall, Spring and typically during the Summer I session.
Prerequisite: CHEM 1411.
Co-requisite: SMTE 0093.

CHEM 3412 Organic Chemistry II
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
A continuation of CHEM 3411. The course concludes with a survey of the structures of biomolecules. Laboratory involves spectroscopy and qualitative analysis techniques. This course is offered in Fall, Spring and typically during the Summer II session.
Prerequisite: CHEM 3411.
Co-requisite: SMTE 0093.

CHEM 3417 Quantitative Analysis
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
A course in quantitative analysis, which includes chemical statistics and the use of acid-base, complexation, precipitation, and redox reactions to perform analyses and separations. Laboratory includes standard volumetric and gravimetric methods and development of basic quantitative techniques. This course is typically offered in Spring.
Prerequisite: CHEM 1412.
Co-requisite: SMTE 0093.
CHEM 3418 Instrumental Analysis
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
An introduction to instrumental methods of analysis: spectroscopy, chromatography, and electrochemical methods. Laboratory involves use of instrumentation in chemical analysis. This course is typically offered in Fall and Spring.
Prerequisite: CHEM 1412.
Co-requisite: SMTE 0093.

CHEM 4085 Major Field Test in Chemistry
0 Semester Credit Hours
The Major Field Test (MFT) in Chemistry is a national examination given in the Fall and Spring semesters only. It is a graduation requirement for all Chemistry students. Students enroll in this course during the semester that they plan to take the MFT. There is no cost to the student for either this course or for the MFT.

CHEM 4292 Senior Chemistry Seminar
2 Semester Credit Hours (2 Lecture Hours)
Presentation and discussion of selected topics in chemistry. Includes literature searches and reviews, paper presentations, survey of professional opportunities and requirements, career guidance and job searching skills.

CHEM 4309 Advanced Instrumental Analysis
3 Semester Credit Hours (3 Lecture Hours)
An advanced course in analytical chemistry covering the underlying theories of instrumental methods. This course is typically offered on an irregular basis.
Prerequisite: (CHEM 3411, 3412 and 3418).

CHEM 4320 Drugs, Toxins and Natural Products Chemistry
3 Semester Credit Hours (3 Lecture Hours)
The chemistry and biological activity of pharmaceuticals, toxins and selected natural products. Examines how chemical structure relates to biological activity. Also examines action of antibiotics, chemotherapy agents, analgesics, steroids, and compounds targeting the central and peripheral nervous system. This course is typically offered in Fall and Spring.
Prerequisite: CHEM 4401.

CHEM 4341 Advanced Organic Chemistry
3 Semester Credit Hours (3 Lecture Hours)
This three-credit hour course will entail a detailed description of structure, synthesis, and reactions and mechanisms in organic chemistry including important named reactions. This course will also introduce them to the art of writing reaction mechanisms and retrosynthetic analysis. Moreover, they will be learning about separation, purification and characterization of organic compounds followed by scientific abstract writing. Designed only for science majors. There is NO laboratory associated with the course.
Prerequisite: CHEM 3412.

CHEM 4344 Chemical Oceanography
3 Semester Credit Hours (3 Lecture Hours)
The study of the oceans and seas as a chemical system, including interactions with both the biota and the solid earth. This course is typically offered in Spring.
Prerequisite: CHEM 1412.

CHEM 4350 Polymer Chemistry
3 Semester Credit Hours (3 Lecture Hours)
An advanced lecture course in organic chemistry. Characterization of polymers. Polymerization mechanisms. Current research directions such as biomedical applications and electroactive polymers. This course is offered on an irregular basis.
Prerequisite: CHEM 3412.

CHEM 4360 Molecular Spectroscopy
3 Semester Credit Hours (3 Lecture Hours)
Spectroscopy and Structure of Organic Compounds is a three-credit course that introduces you to concepts used in the identification of organic compounds with methods based on NMR, mass spectrometry, UV and IR.
Prerequisite: CHEM 3412.

CHEM 4401 Biochemistry I
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
The structure and function of carbohydrates, lipids, proteins, and nucleic acids. An introduction to enzyme kinetics, cell membrane structure and biochemical signaling. Laboratory exercises demonstrate the basic principles and techniques used in Biochemistry. This course is typically offered in Fall, Spring and Summer.
Prerequisite: CHEM 3412 and (BIOL 1406 and 1407).
Co-requisite: SMTE 0093.

CHEM 4402 Biochemistry II
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
A continuation of CHEM 4401. Biochemical energetics, including glycolysis, fatty acid oxidation, amino acid oxidation, citric acid cycle, oxidative phosphorylation, photophosphorylation and photosynthesis. Carbohydrate, fatty acid and amino acid biosynthesis. Laboratory is a continuation of biochemical techniques. This course is typically offered in Fall and Spring.
Prerequisite: CHEM 4401.
Co-requisite: SMTE 0093.

CHEM 4407 Advanced Inorganic Chemistry
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
A survey of inorganic chemistry. Theories of atomic structure, covalent bonding, ionic solids, metallic solids, and coordination compounds. Modern acid/base concepts. Laboratory involves the synthesis of inorganic compounds.
Prerequisite: CHEM 3412.
Co-requisite: SMTE 0093.

CHEM 4420 Physical Biochemistry
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
A fundamental approach to the study of physical and chemical phenomena, including the study of thermodynamics, gases and phase equilibria. This course is typically offered on an irregular basis.
Prerequisite: CHEM 1412 and (PHYS 1402 or 2426) and MATH 2414.
Co-requisite: SMTE 0093.

CHEM 4423 Physical Chemistry I
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
A fundamental approach to the study of physical and chemical phenomena, including the study of thermodynamics, gases and phase equilibria. This course is typically offered in Fall.
Prerequisite: CHEM 1412 and (PHYS 1402 or 2426) and MATH 2414.
Co-requisite: SMTE 0093.

CHEM 4424 Physical Chemistry II
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
A continuation of CHEM 4423, including the study of chemical kinetics, electrochemistry, molecular structure, and quantum mechanics. This course is typically offered in Spring.
Prerequisite: CHEM 4423.
Co-requisite: SMTE 0093.
CHEM 4443  Environmental Chemistry
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
A study of the impact of chemistry on the environment, including topics of air pollution, water pollution, and beneficial chemical modifications of the environment. Laboratory devoted to field techniques of sampling, sample preservation, and analytical techniques applied to the environment. This course is typically offered in Spring.
Prerequisite: CHEM 1412 and 3411.
Co-requisite: SMTE 0093.

CHEM 4490  Special Topics
4 Semester Credit Hours (1 Lecture Hour, 1 Lab Hour)
May be repeated for credit. Subject materials variable.

CHEM 4696  Directed Independent Study
1-6 Semester Credit Hours
Requires a formal proposal of study to be completed in advance of registration, to be approved by the supervising faculty, the chairperson and the dean of the College.

Chinese (CHIN)

CHIN 1311  Chinese I
3 Semester Credit Hours (3 Lecture Hours)
Introduction to listening, speaking, reading and writing skills within a Chinese cultural framework. For students without previous knowledge of Mandarin Chinese. (Language Laboratory required. One hour per week.) A lab fee is required for this course.

CHIN 1312  Chinese II
3 Semester Credit Hours (3 Lecture Hours)
Continued practice in listening, speaking, reading and writing skills within a Chinese cultural framework. For students without previous knowledge of Mandarin Chinese. CHIN 1311 - Chinese I or equivalent is required. (Language Laboratory required. One hour per week.) A lab fee is required for this course.

Civil Engineering (CEEN)

CEEN 2315  Geomatics and Surveying Engineering
3 Semester Credit Hours (3 Lecture Hours)
(3:0) Concepts, principles, and applications of surveying methods and technology for planar measurement, geo-positioning and mapping, and civil engineering project design and management are introduced. Topics include: land surveying methods for field measurement; principles of distances, elevation and angles; geodetic datums and coordinate systems; topographic mapping; basic error theory in measurement and computational adjustments; traverse calculations; introduction to Global Positioning System (GPS). Computational exercises to process, analyze, and adjust survey data will provide practical experience in civil survey design and assessment.
Prerequisite: MATH 1316 or 2413.

CEEN 3320  Geotechnical Engineering I
3 Semester Credit Hours (3 Lecture Hours)
(3:0) Geotechnical engineering focuses on how soil supports and affects the performance of structures built on or below the earth's surface. This course will introduce the terminology used in geotechnical engineering and provide a basic understanding of important geotechnical principles and analytic methods. The topics to be covered in this class includes: index soil properties and soil classification; soil permeability and pore water movement; soil stresses; soil compressibility, consolidation and settlement; shear strength of soil; engineering soil properties and measurement.
Prerequisite: ENGR 3315 and 3320.

CEEN 3330  GIS for Civil and Environmental Engineering
3 Semester Credit Hours (3 Lecture Hours)
(3:0) Introductory design principles presented on the use of geographic information system (GIS) technology for modeling and analysis of civil and environmental engineering systems. Introduction to the integration of geospatial data and analysis for decision making and management for site selection, mitigation, change analysis, modeling and assessment. Topics covered include map projections and georeferencing, vector and raster data models, acquisition and manipulation of data, cartography, current topics, data quality, and basic spatial analysis. The course integrates commercial GIS software (ESRI ArcGIS) for performing engineering analysis and problem solving. Students will participate in both individual software labs and team projects.
Prerequisite: COSC 1330 and CEEN 2315.

CEEN 4302  Remote Sensing
3 Semester Credit Hours (3 Lecture Hours)
Provides the foundations to interpret, process, and apply remotely sensed data acquired by satellites and sub-orbital platforms (aircraft, UAVs) for mapping and analysis of our natural and built environment. Principles of electromagnetic energy-matter interaction, remote sensing systems and data characteristics, digital image processing, and information extraction methods will be covered. Included is treatment of: aerial photogrammetry; multispectral, thermal, and hyperspectral sensing; earth observation satellites; radar and lidar; emergent topics. Emphasis will be on their use for geospatial and environmental applications. Offered Fall.
Prerequisite: PHYS 2425 and GISC 3300.

CEEN 4304  Civil and Construction Materials
3 Semester Credit Hours (3 Lecture Hours)
(3:0) The course provides instruction on civil and construction engineering materials used in the construction of highway structures such as pavements, bridges, retaining walls, box culverts, etc. In particular, the course concentrates on the engineering properties of aggregates, metals, portland cement concrete (PCC) and hot-mix asphalt (HMA) as well as the mixture design of PCC and HMA. The course targets those interested in civil engineering or construction engineering and management.
Prerequisite: ENGR 3320.

CEEN 4306  Transportation Engineering
3 Semester Credit Hours (3 Lecture Hours)
(3:0) This course will give an introduction to the basic concepts, theory, and practice of transportation engineering as related to planning, design, and operations of the transportation system. The topics to be covered in this class includes: fundamental principles in planning, design and operation of transportation systems; issues and challenges in transportation; driver and vehicle performance capabilities; highway geometric and pavement design principles; traffic analysis and transportation planning.
Prerequisite: CEEN 2315.
CEEN 4310 Water Resources Engineering  
3 Semester Credit Hours (3 Lecture Hours)  
(3:0) This course will give an overview of the basic concepts, analysis methods, and design procedure. The topics to be covered includes: hydraulic processes, hydrological cycle, streamflow prediction, uncertainty analysis, water demands, water distribution systems, reservoir and dams, urban stormwater drainage, and water resources planning and management.  
Prerequisite: ENGR 3315.

CEEN 4312 Principles of Hydraulics and Hydrology  
3 Semester Credit Hours (3 Lecture Hours)  
(3:0) This course will give an introduction to the basic concepts, theory, and analytic methods of hydraulics and hydrology. The topics to be covered in this class includes: water flow through pipes and pumping systems, water flow through open channels and hydraulic structures, watershed hydrology, and urban sewer systems.  
Prerequisite: ENGR 3315.

CEEN 4322 Geotechnical Engineering II – Coastal Environment  
3 Semester Credit Hours (3 Lecture Hours)  
(3:0) This course introduces key concepts and basic analysis and design techniques in geotechnical engineering for coastal environments. Emphasis is on the interaction between oceanic dynamic processes (waves, currents, tides, and sediment transport) and coastal regions (harbors, structures, beaches and estuaries) and on the engineering approaches necessary to prevent adverse effects caused by this interaction. Geotechnical aspects of coastal engineering projects will include design of traditional structures and exposure to softer coastal engineering techniques.  
Prerequisite: CEEN 3320.

CEEN 4324 Structural Engineering  
3 Semester Credit Hours (3 Lecture Hours)  
(3:0) This class will provide students with a solid background on principles of structural engineering. Students will be exposed to the theories and concepts of both concrete and steel design and analysis both at the element and system levels. Hands-on design experience and skills will be gained and learned through problem sets and a comprehensive design project. An understanding of real-world open-ended design issues will be developed.  
Prerequisite: ENGR 3320 and MATH 3315.

CEEN 4330 Introduction to Bridge and Pavement Engineering  
3 Semester Credit Hours (3 Lecture Hours)  
(3:0) This course focuses on the materials, technology and procedures used to design and manage road pavements, with reference to the National Roads Authority (NRA) Design Manual for roads and bridges, and guidelines issued by the Department of Transport, Tourism and Sport (DTTS).  
Prerequisite: CEEN 4304.

CEEN 4332 Traffic Engineering  
3 Semester Credit Hours (3 Lecture Hours)  
(3:0) The purpose of this course is to introduce fundamentals of traffic engineering including data collection, analysis, and design. Emphasis is on the safe and efficient operations of roadway intersections. Traffic engineering studies traffic control devices, capacity and level of service analysis of freeways and urban roads. Applications of traffic operations include computer simulation models to the design of isolated intersection and coordinated traffic signal control systems.  
Prerequisite: CEEN 4306.

CEEN 4342 Construction Management  
3 Semester Credit Hours (3 Lecture Hours)  
The course focuses on management techniques to solve the unique problems associated with a construction project. Study of Construction Management functions including Project Management, Cost Management, Time Management, Quality Management, Contract Administration, and Safety Management will be covered. Emphasis is put on the application of each function throughout the project phases.  
Prerequisite: CEEN 4304.

CEEN 4396 Directed Independent Study  
1-3 Semester Credit Hours  
(1-3) Requires a formal proposal of study to be completed in advance of registration, approval of supervising faculty and department chairperson.

Clinical Lab Science (CLSC)

CLSC 3102 Essentials Laboratory for Clinical Laboratory Science  
1 Semester Credit Hour (1 Lab Hour)  
Application of essential practices for clinical laboratory science. Offered fall semester every year.  
Co-requisite: SMTE 0092.

CLSC 3200 Essentials for Applied Laboratory Sciences  
2 Semester Credit Hours (1 Lecture Hour)  
Introduction to general laboratory procedures, laboratory safety and regulations, quality assurance, professional ethics, specimen acquisition, sample maintenance and microscopy. Includes an introduction to the health care, public health and criminal investigation system. Offered fall, spring and summer semesters every year.  
Prerequisite: BIOL 1407 and CHEM 1412.

CLSC 4120 Hemostasis  
1 Semester Credit Hour (1 Lecture Hour)  
Studies of blood coagulation with an emphasis on the interaction of blood vessels, platelets, and certain plasma proteins. Disorders of hemostasis will be discussed along with diagnostic testing.  
Prerequisite: ENGR 3315.

CLSC 4182 Seminar – Clinical Correlations  
1 Semester Credit Hour (1 Lecture Hour)  
Informal lectures covering the newest developments in laboratory medicine. Includes discussion of the patient's clinical laboratory results, selection and interpretation of laboratory tests, and presentation of research. Requires permission of instructor and application. Offered summer semester (summer II only) every year.

CLSC 4200 Professional Skills for Clinical Laboratory Scientists  
2 Semester Credit Hours (2 Lecture Hours)  
Study of the role of the medical laboratory professional in the health care system. Includes professional ethics, legal responsibility, medical laboratory management, instructional methods, evaluation of clinical laboratory methods, medical laboratory instrument selection, clinical research and current professional topics. Requires permission of instructor and application. Offered summer semester (summer II only) every year.

CLSC 4280 Introduction to the Clinical Laboratory Profession  
2 Semester Credit Hours (2 Lecture Hours)  
Studies of the latest instrumentation, instrument selection, basic research, quality assurance and statistics used in the clinical laboratory.  
Prerequisite: (CLSC 3200, CHEM 4401 and MATH 1442).

CLSC 4297 Professional Practicum I  
2 Semester Credit Hours (2 Lecture Hours)  
Supervised learning experience in selected departments of the clinical laboratories.
CLSC 4325  Clinical Chemistry I
3 Semester Credit Hours (3 Lecture Hours)
Principles and practice of procedures found in general clinical chemistry. Includes the methodology of diagnostic tests and normal and abnormal human physiology as applied to diagnosis of pathological conditions.
Prerequisite: CHEM 4401.
Co-requisite: SMTE 0092.

CLSC 4326  Clinical Chemistry II
3 Semester Credit Hours (3 Lecture Hours)
Continuation of CLSC 4325 - Clinical Chemistry I. Emphasis on advanced clinical chemistry topics and procedures.
Prerequisite: CLSC 4325.

CLSC 4370  Clinical Microbiology I
3 Semester Credit Hours (3 Lecture Hours)
Lecture and laboratory studies of common pathogenic bacteria. Emphasis is on staining, cultural, and differential biochemical characteristics, methods of isolation from body fluids and susceptibility to therapeutic agents.
Prerequisite: BIOL 2421.
Co-requisite: SMTE 0092.

CLSC 4371  Clinical Microbiology II
3 Semester Credit Hours (2 Lecture Hours, 3 Lab Hours)
Lecture and laboratory studies of parasitic, viral, mycological and unusual bacterial human pathogens. Emphasis on methods of isolation from body fluids, identification methods and correlation with pathology.
Prerequisite: CLSC 4370.

CLSC 4382  Advanced Medical Laboratory Procedures
3 Semester Credit Hours (3 Lecture Hours)
Lecture and laboratory studies of the newest development in laboratory diagnostic medicine. Includes advanced clinical chemistry, immunology and molecular diagnostic procedures.
Prerequisite: CLSC 4325 and BIMS 4406 or BIOL 4406 and CHEM 4401.

CLSC 4420  Hematology
4 Semester Credit Hours (4 Lecture Hours)
Studies of the formation, function and identifying characteristics of the cellular elements of human blood and other body fluids in health and diseased states and laboratory studies on blood coagulation. Lecture and laboratory emphasize the enumeration, morphology and staining characteristics of normal and abnormal cells and hemostasis.
Prerequisite: BIOL 2416 and CHEM 4401.
Co-requisite: SMTE 0092.

CLSC 4430  Clinical Immunology
4 Semester Credit Hours (4 Lecture Hours)
Theoretical aspects of the immune response and its relationship to the diagnosis of disease and clinical immunohematology. Lecture and laboratory stress the detection, identification and characterization of antibodies, blood grouping and typing, compatibility testing, blood component therapy, HLA testing and diagnosis of pathological conditions.
Prerequisite: BIMS 4406 or BIOL 4406.
Co-requisite: SMTE 0092.

CLSC 4598  Professional Practicum II
5 Semester Credit Hours (5 Lecture Hours)
Continuation of CLSC 4597 - Professional Practicum I. Supervised learning experience in selected departments of the clinical laboratories.
Prerequisite: CLSC 4297.
COMM 2335 Presentational Communication  
3 Semester Credit Hours (3 Lecture Hours)  
Advanced study of the principles and methods of formal presentations for various purposes and audiences to further develop students into effective communicators. Course assignments will include various special occasion speeches, dynamic instructional speeches, extemporaneous speaking, creation of effective visual aids, and a group community action presentation.

COMM 3310 Communication Theory  
3 Semester Credit Hours (3 Lecture Hours)  
The foundations, processes, and effects of human communication. A survey of contemporary theory and research, including language theory, nonverbal and small group communication, persuasion, and mass communication.

COMM 3311 Nonverbal Communication  
3 Semester Credit Hours (3 Lecture Hours)  
The study of body movement, touch, paralanguage, space, environment, and other nonverbal factors in the communication process.

COMM 3325 Relational Communication  
3 Semester Credit Hours (3 Lecture Hours)  
This course is an advanced interpersonal communication course that focuses on communication within relationships, such as family, romantic, friendship, and workplace relationships.  
Prerequisite: COMM 1318.

COMM 3326 Research Methods  
3 Semester Credit Hours (3 Lecture Hours)  
The purpose of this course is to increase student's knowledge of the research process used in the Communication Studies discipline. Specifically, the course will allow students the opportunity to learn the goals of communication research and scrutinize various techniques for creating academic research and assessing academic knowledge.

COMM 3330 Persuasion  
3 Semester Credit Hours (3 Lecture Hours)  
Various theories and forms of rhetorical persuasion. Topics include practical reasoning skills, psychological theories of persuasion, and critical responses to persuasive messages.

COMM 3331 Public Relations Writing and Design  
3 Semester Credit Hours (3 Lecture Hours)  
This course will introduce students to the basic principles and formatting requirements for public relations writing. Students will gain theoretical and practical experience in developing content for specific audiences.

COMM 3335 UIL Debate and Speech  
3 Semester Credit Hours (3 Lecture Hours)  
Understanding the University Interscholastic League debate and speech events. Students explore approaches to analytical reasoning, research delivery, and the conceptual basis for debate and gain practical experience in understanding and judging UIL in the high school setting.

COMM 3350 Leadership  
3 Semester Credit Hours (3 Lecture Hours)  
focuses on the communication of influence that takes place to achieve goals or encourage change. Specific attention will be devoted to a variety of approaches, processes, and theories that will provide students general knowledge of leadership.

COMM 3351 Public Relations Writing and Design  
3 Semester Credit Hours (3 Lecture Hours)  
An application of the public relations process (including primary and secondary research, goals and objective development, the selection of proper strategies and tactics for implementation, and an evaluation of campaign effectiveness) through the production and presentation of a public relations campaign for a local organization.  
Prerequisite: COMM 2330.

COMM 3355 Crisis Communication  
3 Semester Credit Hours (3 Lecture Hours)  
An application of crisis communication (including organizational research, risk and vulnerability assessment, strategic communication, and performance and damage evaluation) through the development and presentation of a crisis communication plan for a local organization.

COMM 3350 Organizational Communication  
3 Semester Credit Hours (3 Lecture Hours)  
Examines and explores realistic applications of communication theories within the framework of an organization. Particular attention will be given to techniques for diagnosing communication problems, as well as strategies for effecting change in communication.

COMM 3356 International Leadership  
3 Semester Credit Hours (3 Lecture Hours)  
Study of international leadership in the context of communication and in multi-cultural and diverse settings. Influence of global economy, politics, social values in international leadership.

COMM 3380 Senior Seminar in Communication Studies  
3 Semester Credit Hours (3 Lecture Hours)  
This course serves as the capstone for the Communication Studies degree. It offers students opportunities to synthesize information learned in other Communication courses and demonstrate abilities to think critically, conduct independent research linked to appropriate communication theories, create individual and collaborative projects that demonstrate effective use of communication strategies, and present written and oral work at an advanced level.  
Prerequisite: (COMM 2335, 3310 and 3326).

COMM 4314 Gender Communication  
3 Semester Credit Hours (3 Lecture Hours)  
Examination of communication about women and men, as well as communication between them. Special course emphasis on explanations of gender, sexist language, media depiction of the sexes, and gender communication in the formation of social and work relationships.

COMM 4315 Communication and Sexuality  
3 Semester Credit Hours (3 Lecture Hours)  
This course will focus on communication and sexuality, specifically exploring sex and gender identity development and expression, intersections of race/ethnicity and sex/gender, how communication impacts various types of relationships, the role of communication in sexual activity, and power abuses related to sexual activity, with specific focus on consent and sexual safety.

COMM 4331 Public Relations Campaigns  
3 Semester Credit Hours (3 Lecture Hours)  
An application of the public relations process (including primary and secondary research, goals and objective development, the selection of proper strategies and tactics for implementation, and an evaluation of campaign effectiveness) through the production and presentation of a public relations campaign for a local organization.

COMM 4335 Crisis Communication  
3 Semester Credit Hours (3 Lecture Hours)  
An application of crisis communication (including organizational research, risk and vulnerability assessment, strategic communication, and performance and damage evaluation) through the development and presentation of a crisis communication plan for a local organization.

COMM 4345 Intercultural Communication  
3 Semester Credit Hours (3 Lecture Hours)  
An investigation of the process by which persons and groups of different cultural backgrounds create understanding. Types of knowledge, skills, and sensitivity necessary for intercultural communication are developed.

COMM 4350 Organizational Communication  
3 Semester Credit Hours (3 Lecture Hours)  
Examines and explores realistic applications of communication theories within the framework of an organization. Particular attention will be given to techniques for diagnosing communication problems, as well as strategies for effecting change in communication.

COMM 4360 International Leadership  
3 Semester Credit Hours (3 Lecture Hours)  
Study of international leadership in the context of communication and in multi-cultural and diverse settings. Influence of global economy, politics, social values in international leadership.

COMM 4380 Senior Seminar in Communication Studies  
3 Semester Credit Hours (3 Lecture Hours)  
This course serves as the capstone for the Communication Studies degree. It offers students opportunities to synthesize information learned in other Communication courses and demonstrate abilities to think critically, conduct independent research linked to appropriate communication theories, create individual and collaborative projects that demonstrate effective use of communication strategies, and present written and oral work at an advanced level.  
Prerequisite: (COMM 2335, 3310 and 3326).

COMM 4390 Topics in Communication Studies  
3 Semester Credit Hours (3 Lecture Hours)  
Study of specialized topics and themes in communication studies. May be repeated when topics vary.
COMM 4394 Professional PR Portfolio  
3 Semester Credit Hours (3 Lecture Hours)  
Students prepare documents, explore strategies for enhancing their marketability, and assemble a professional portfolio of public relations work.  
Prerequisite: COMM 2330, MEDA 2350, COMM 4331 and 4335.

COMM 4396 Directed Individual Study  
1-3 Semester Credit Hours  
See College description. By application. Only 3 semester hours of Directed Individual Study credit may be counted toward the major.

COMM 4399 Communication Internship  
3 Semester Credit Hours  
Practical experience in the field through placement in a communication internship position. Students interested in applying for the internship course must have a minimum cumulative GPA of 3.0; have at least junior standing at the university; be a communication studies major or minor; or public relations minor; have completed at least 12 hours of coursework in the major or minor at TAMU-CC. Preferred applicants will have a minimum communication or public relations GPA of 3.25. All applicants must solicit a recommendation from a Department of Communication and Media faculty member. Course may be taken three times for credit; however only 3 semester hours of internship credit may be counted toward the major. A second internship may apply to the communication studies minor or public relations minor; a third internship may be used as a free elective. Authorization to repeat the internship course is contingent on the students’ successful completion of the previous internship experience.  
This course is graded Credit/No Credit.

Computer Science (COSC)

COSC 1315 Computer Literacy  
3 Semester Credit Hours (3 Lecture Hours)  
A balanced introduction to the use and application of computers in modern society involving both descriptive information and hands-on laboratory participation. Includes a discussion of the general principles of operation of a computer and a brief history of the development of computing. The use of a personal computer operating system, common application software, and simple computer programming concepts are introduced. Satisfies university computer literacy requirement.  
TCCNS: COSC 1301

COSC 1320 C Programming  
3 Semester Credit Hours (3 Lecture Hours)  
Introduces the fundamental concepts of structured programming in the C language. Topics include data types; control structures; functions, structures, arrays, pointers, pointer arithmetic, unions, and files; the mechanics of running, testing, and debugging programs; introduction to programming; and introduction to the historical and social context of computing.  
Prerequisite: (MATH 1314).

COSC 1330 Programming for Scientists, Engineers, and Mathematicians  
3 Semester Credit Hours (3 Lecture Hours)  
Introduction to computer programming for solving discipline specific problems using computers. Emphasis on the fundamentals of structured design, development, testing, implementation, and documentation. Includes coverage of language syntax, data and file structures, input/output devices, and disks/files.  
TCCNS: ENGR 2304

COSC 1335 Introduction to Problem Solving with Computers I  
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)  
This course introduces the fundamental concepts of problem solving and algorithms. A brief introduction to computers and the programming life cycle is covered. The C++ programming language is used to develop basic computer programs demonstrating data types, fundamental control structures, functions, and arrays. MATH 1314 or placement beyond MATH 1314. Offered Fall, Spring, Summer.  
Prerequisite: MATH 1314.  
TCCNS: COSC 1436

COSC 1436 Introduction to Problem Solving with Computers II  
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)  
This course is a continuation of COSC 1335. An introduction to abstract data types and object-oriented programming is covered. Topics include basic searching and sorting algorithms, dynamic allocation, linked lists, inheritance, polymorphism, and recursion.  
Prerequisite: COSC 1435.  
TCCNS: COSC 1437

COSC 2325 Game Design  
3 Semester Credit Hours (2 Lecture Hours, 2 Lab Hours)  
This course will teach students the techniques for computer game design and how to work as part of a game development team from initial conception through release, including the game design process, game concepts, how and why we play games, character development, storytelling, user experience, game play, and core mechanics of games.  

COSC 2334 Computer Architecture  
3 Semester Credit Hours (3 Lecture Hours)  
A concentrated study of internal computer concepts. Computer organization, machine and assembly language are emphasized.  
Prerequisite: (COSC 1435 and MATH 2305).

COSC 2348 Introduction to Scripting  
3 Semester Credit Hours (3 Lecture Hours)  
This course introduces students to Windows and Unix/Linux shell scripting. The course covers basic scripting concepts including decision statements, control statements, functions and files manipulation. Advanced scripting tools such as grep, awk and sed are covered in this course.  
Prerequisite: (COSC 1435).

COSC 2390 Selected Topics I  
1,3 Semester Credit Hours (1,3 Lecture Hours)  
Variable content. May be repeated for credit depending on topic. Offered on sufficient demand. Does not count toward total hours required for BS in Computer Science.

COSC 2391 Selected Topics II  
1-3 Semester Credit Hours (1-3 Lecture Hours)  
This is a selected topics course with no lab component. Variable content. May be repeated for credit depending on topic. Offered on sufficient demand. Does not count toward total hours required for BS in Computer Science.
COSC 2437 Data Structures
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
This course provides a thorough study of standard structures used in
the storing and retrieving of data and the processes by which these
structures are created and manipulated. Topics include: object oriented
design, linked lists, classes, trees, graphs, hashing, stacks, queues,
sorting, searching, and recursion. A grade of C or better is required in
the course to receive credit towards the Computer Science BS program.
Prerequisite: (COSC 1436) and (MATH 2305 or 2305*).
* May be taken concurrently.
TCCNS: COSC 2436

COSC 2465 Linux Systems
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
This course focuses on providing students with essential knowledge
and skills to implement, administer, and troubleshoot servers in a
networked environment. Operating system concepts, such as installing
a standalone system, file systems authentication, and user support
services are explored. Topics will include security issues, user and
group administration, active directory services, DHCP, DNS, SSH, backup
and restoration strategies and techniques, integrated mass storage
technologies and alternative client technologies.
Prerequisite: COSC 1435.

COSC 2466 Network Systems
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
This course focuses on the standards and technologies used to establish
inter-network structures that will support a TCP/IP data stream for higher-
level services to operate over. This course introduces local area networks
(LAN) and wide area networks (WAN). Topics include the TCP/IP and
open system interconnection (OSI) models, cabling, switches, routers,
protocols, subnetting, and networking hardware and software. Initial
switch and router configuration will be examined and evaluated.
Prerequisite: (COSC 1435 and 2465).

COSC 2470 COBOL Programming
4 Semester Credit Hours (4 Lecture Hours)
A concentrated study of the COBOL language as applied to fundamental
business computing problems and other data management applications.
Prerequisite: COSC 1435.

COSC 3100 Skills for Computing Professionals I
1 Semester Credit Hour (1 Lecture Hour)
This course focuses on beginning to develop professional skills
that computer scientists will need to be successful in their careers
and lives. Communication skills will include writing and giving oral
presentations. Ethical issues will be explored. This is a class for
computing professionals. As such, professional decorum will be required
at all times.

COSC 3301 Cyber Security
3 Semester Credit Hours (3 Lecture Hours)
This course introduces students to cyber security. A broad range of cyber
security issues will be covered, including social engineering attacks,
secure coding, computer security, Internet of Things (IoT) security,
mobile security, data security, network security, physical security and
forensics. This course will cover the concepts of prevention, detection,
and response to cyber security threats.
Prerequisite: COSC 1435.

COSC 3324 Object-oriented Programming
3 Semester Credit Hours (3 Lecture Hours)
A study of concepts, terminology, and methodologies used in object-
oriented systems, languages, and applications. Students will design and
implement software systems using object-oriented analysis and design
techniques.
Prerequisite: COSC 2437.

COSC 3325 Game Programming
3 Semester Credit Hours (3 Lecture Hours)
This course will introduce the student to techniques and tools used for
all aspects of programming games. Topics will include game graphics,
game physics, game AI, and sound. The course will contain lectures and
hands-on labs. Students will work independently and in teams.
Prerequisite: COSC 2437.

COSC 3335 Programming for Unmanned Aircraft Systems
3 Semester Credit Hours (3 Lecture Hours)
This course introduces software development for Unmanned Systems
(US). Students will be introduced to a variety of relevant topics including
the different US platforms, design and implementation of algorithms for
US, user interface for US, and state-of-the-art US applications, challenges
& solutions.
Prerequisite: (COSC 1435 or 1330) and (MEEN 3335).

COSC 3336 Introduction to Database Systems
3 Semester Credit Hours (3 Lecture Hours)
A study of contemporary database management system concepts,
terminology, and methodology for use and implementation. Commercially
available systems are discussed and used with emphasis upon the
relational model.
Prerequisite: COSC 2437.

COSC 3346 Operating Systems
3 Semester Credit Hours (3 Lecture Hours)
Introduction to operating systems concepts, principles, and design.
Topics include: processes and threads, CPU scheduling, mutual exclusion
and synchronization, deadlock, memory management, file systems,
security and protection, networking, and distributed systems. Selected
existing operating systems are discussed, compared, and contrasted.
Prerequisite: (COSC 2437 and 2334).

COSC 3351 Internet Programming
3 Semester Credit Hours (3 Lecture Hours)
Study of prominent web technologies with a focus on creating interactive
web applications. Both client-side and server-side programming will be
covered. Students will design and implement a web based project using
technologies covered in class.
Prerequisite: COSC 3336 or 3336*.
* May be taken concurrently.

COSC 3352 Mobile Programming
3 Semester Credit Hours (3 Lecture Hours)
This course introduces software development for mobile platforms.
Students will learn skills for creating and deploying mobile applications.
Includes software engineering topics as related to mobile programming,
primarily in how software design differs on mobile platforms.
Prerequisite: COSC 2437.

COSC 3353 Survey of Programming Languages
3 Semester Credit Hours (3 Lecture Hours)
A study of selected programming languages for students familiar with
programming. Students will write programs in a variety of languages.
Prerequisite: COSC 2437.
COSC 3360 Human-computer Interaction
3 Semester Credit Hours (3 Lecture Hours)
This course introduces concepts and techniques for Human Computer Interaction. Particular emphasis will be placed on vision, audio, and language solutions for use in human-computer interactive systems. In addition, the students will learn how to apply the methods to solve simple HCI problems.
Prerequisite: COSC 1436.

COSC 3370 Software Engineering
3 Semester Credit Hours (3 Lecture Hours)
This course introduces students to software engineering principles for the development and maintenance of high quality large software systems. Topics include: software life cycle, delivering on time and within budget, and the development and application of processes and tools for managing the complexities inherent in creating these systems.
Prerequisite: COSC 2437.

COSC 3371 Computer Information Systems Economics
3 Semester Credit Hours (3 Lecture Hours)
An introduction to concepts in information technology and software engineering with a focus on economics and managerial issues. Topics include: cost benefit analysis, software and effort estimation, feasibility analysis, information systems proposals, software team coordination, and project management. May not be used as a CS elective for CS majors.

COSC 3372 Network Security
3 Semester Credit Hours (3 Lecture Hours)
This course provides an introduction to the fundamentals of computer and network security and security laws and ethics, topics include: identification of vulnerabilities, forms of attack, appropriate countermeasures, and the detection and defense of the same. Techniques for the securing of hardware, software and data, including physical security are covered.
Prerequisite: COSC 2465.

COSC 3373 Software Project Management
3 Semester Credit Hours (3 Lecture Hours)
This course introduces students to the principles for software project management for small and medium-size projects. Many aspects of software project management, including management process, scope definition, time and cost estimation, quality control, human resources, communication, risks and project procurement management will be discussed. A number of applications and tools will be used to implement a class project.
Prerequisite: (COSC 3370).

COSC 3385 Numerical Methods
3 Semester Credit Hours (3 Lecture Hours)
This course introduces concepts for solving problems numerically using computers. Students will learn about number systems, errors of finite representation, and iteration. A survey of basic numerical methods including: solutions to nonlinear equations, solutions to linear systems, approximation, interpolation, zeros of functions, numerical differentiation and integration, and Monte-Carlo methods.
Prerequisite: MATH 2413 and (COSC 1330 or 1435).

COSC 3400 Skills for Computing Professionals
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
This course focuses on the professional skills that computer scientists will need to be successful in their careers. There are two key areas of study, communication skills needed by computer scientists and their ethical responsibilities. Communication skills will include: technical writing from a computer science perspective, presentation skills, client interviewing, and reading technical articles. Ethical issues will be explored from a computer science perspective.
Prerequisite: ENGL 1302.

COSC 3474 Cyber Defense I
4 Semester Credit Hours (2 Lecture Hours, 2 Lab Hours)
This course covers cryptographic tools, cryptographic algorithms, types of malicious software, forms of attacks and software security. Strengths and weaknesses of cryptographic systems are covered as well as the types of attacks on cryptographic systems. Malicious activity signatures, analysis as well as detection will be covered. This course will also cover secure coding principles and types of software issues.
Prerequisite: COSC 3372.

COSC 4100 Skills for Computing Professionals II
1 Semester Credit Hour (2 Lab Hours)
This course focuses on technical writing, workplace scenarios and professional skills that computer scientists will need to be successful in their careers and lives. This is a class for computing professionals. As such, professional decorum will be required at all times.
Prerequisite: COSC 1100 and ENGL 3310.

COSC 4310 Digital Forensics
3 Semester Credit Hours (3 Lecture Hours)
This course will introduce undergraduate students to the fundamentals of computer forensics and cyber-crime scene analysis. The various laws and regulations dealing with computer forensic analysis will be discussed. Students will be introduced to the emerging international standards for computer forensic analysis, as well as a formal methodology for conducting computer forensic investigations. Several Forensics tools such as Encase and FTK will be used to conduct digital forensics investigations.
Prerequisite: COSC 2437.

COSC 4324 Image Processing
3 Semester Credit Hours (3 Lecture Hours)
This course introduces concepts and techniques for image processing. The objective of this course is to introduce the fundamental techniques and algorithms used for processing and extracting useful information from digital images. The students will learn how to apply the image processing methods to solve real-world problems.
Prerequisite: COSC 2437.

COSC 4325 Advanced Game Programming
3 Semester Credit Hours (3 Lecture Hours)
This course will introduce advanced concepts for game programming to the student. Topics will include game physics, game AI, advanced shaders, 3D techniques, multiplayer techniques, and networking. The course will contain lectures and hands-on labs.
Prerequisite: COSC 3325.

COSC 4328 Computer Graphics
3 Semester Credit Hours (3 Lecture Hours)
Basic principles and techniques for computer graphics on modern graphics hardware. Students will gain experience in interactive computer graphics using the OpenGL API. Topics include: 2D viewing, 3D viewing, perspective, lighting, and geometry.
Prerequisite: COSC 2437 and MATH 2413.
COSC 4330 Introduction to Artificial Intelligence
3 Semester Credit Hours (3 Lecture Hours)
Foundations, directions, and applications of artificial intelligence including search algorithms, knowledge acquisition, representation, and processing. Students will gain practical experience by implementing many of the basic algorithms.
Prerequisite: COSC 2437.

COSC 4342 Computer Networks
3 Semester Credit Hours (3 Lecture Hours)
Computer-based communication systems. Topics include: advanced computer network architectures, protocols, and programming.
Prerequisite: (COSC 2437 and MATH 2413).

COSC 4343 Algorithms
3 Semester Credit Hours (3 Lecture Hours)
Advanced programming techniques for algorithmic and heuristic solutions of problems. Topics include: analysis and design of algorithms, testing of algorithms, optimum and exhaustive solutions, and recursion.
Prerequisite: (COSC 2437 and MATH 2413).

COSC 4345 Introduction to Machine Learning
3 Semester Credit Hours (3 Lecture Hours)
This course gives a broad introduction to machine learning with more emphasis on intelligent system design. Topics to be covered include linear and logistic regression, neural networks, clustering, classification, decision tree, evolutionary computation, feature selection, and reinforcement learning. The courses will explore various applications of machine learning to computer science, process modeling, pattern and speech recognition, data mining, and bioinformatics.

COSC 4348 Systems Programming
3 Semester Credit Hours (3 Lecture Hours)
The design and implementation of system software such as device drivers, application support libraries, and interprocess communication. Students will study and use systems programming tools.
Prerequisite: COSC 3346 and (COSC 3353 or 3324).

COSC 4353 Compiler Construction
3 Semester Credit Hours (3 Lecture Hours)
This course introduces the basic concepts and mechanisms traditionally employed in language translators, with emphasis on compilers. Topics include: strategies for syntactic and semantic analysis, techniques of code optimization and approaches toward code generation.
Prerequisite: COSC 3353.

COSC 4354 Senior Capstone Project
3 Semester Credit Hours (3 Lecture Hours)
Teamwork and formal methods of systems analysis and design are emphasized. Students will complete a large team project. Fall, Spring.
Prerequisite: (COSC 3370, 3336 and ENGL 3310).

COSC 4360 Theory of Programming Languages
3 Semester Credit Hours (3 Lecture Hours)
The study of programming language design including syntax, semantics, behavior, and implementation issues in imperative, functional, logic, and object-oriented languages. Other topics include type theory, concurrency, data dependency, and nondeterminism.
Prerequisite: COSC 2437.

COSC 4365 Windows Security
3 Semester Credit Hours (3 Lecture Hours)
This course focuses on advanced system administration topics. An in depth understanding of various concepts such as operating systems, servers, file systems authentication, and user support services are explored. Topics include security issues, user and group administration, server and work-station integration, central repositories for updates, Active directory, DMZ, web servers, email servers, electronic system update and maintenance, backup and restoration strategies and techniques, integrated mass storage technologies and alternative client technologies.
Prerequisite: (COSC 2348) and (COSC 2465).

COSC 4367 Firewall and Intrusion Detection Systems
3 Semester Credit Hours (3 Lecture Hours)
This is an applied course which focuses on the standards and technologies used to establish inter-network structures that will support a TCP/IP data stream for higher-level services to operate over. This course introduces firewalls, Intrusion Prevention Systems (IPS), and Intrusion Detection Systems (IDS) technology. Topics include Windows, Linux, Check Point and Cisco firewalls, TCP/IP and open system interconnection (OSI) models, attack traffic analysis, and network based and host based hardware and software. Device configuration will be examined and evaluated with appropriate exercises.
Prerequisite: (COSC 4365) and COSC 3372.

COSC 4368 Penetration Testing
3 Semester Credit Hours (3 Lecture Hours)
This course focuses to increase the students understanding of how to recognize a potential cyber attacker and identify vulnerabilities through the use of vulnerability analysis tools. Students will audit, monitor, and revise system security to ensure appropriate levels of protection are achieved. Incident response and handling, security log analysis, attacker identification, system recovery and postmortem procedures will be addressed.
Prerequisite: (COSC 3474) and (COSC 4365).

COSC 4369 Incident Response
3 Semester Credit Hours (3 Lecture Hours)
This course focuses on advanced system administration topics. An in depth understanding of various concepts such as operating systems, servers, file systems authentication, and user support services are explored. Topics include security issues, user and group administration, server and work-station integration, central repositories for updates, Active directory, DMZ, web servers, email servers, electronic system update and maintenance, backup and restoration strategies and techniques, integrated mass storage technologies and alternative client technologies.
Prerequisite: (COSC 2348) and (COSC 2465).

COSC 4370 Models of Computation
3 Semester Credit Hours (3 Lecture Hours)
A study of formal languages, grammars, and associated abstract machine models. Topics include regular and context-free languages and grammars, finite state automata, Turing machines, and the Chomsky hierarchy.
Prerequisite: MATH 2305.

COSC 4396 Directed Independent Study
3 Semester Credit Hours
See College description. Offered on sufficient demand.
COSC 4590  Selected Topics
1-5 Semester Credit Hours (1-5 Lecture Hours)
Variable content. May be repeated for credit depending on topic. Offered on sufficient demand.
Prerequisite: COSC 4365.

COSC 4690  Contracted Field Experience in Computer Science
1-6 Semester Credit Hours (6 Lecture Hours)
Individual contract agreement involving student, faculty, and cooperating agency to gain practical experience in off-campus setting.

Criminal Justice (CRIJ)

CRIJ 1301  Introduction to Criminal Justice
3 Semester Credit Hours (3 Lecture Hours)
History and philosophy of criminal justice. Overview of criminal justice system: police, prosecution and defense, courts, trial process, and corrections as they affect the individual, as well as their impact on society. The definition, nature, and impact of crime. The functions of criminal justice agencies will be examined in relation to common analytical themes such as ethics and discretion.
TCCNS: CRIJ 1301

CRIJ 1306  Court Systems and Processes
3 Semester Credit Hours (3 Lecture Hours)
Examination of the civil and criminal legal systems and the roles played by political, social and economic factors in the administration of justice. Consideration of the roles and interests of litigants, defendants, police, attorneys, and the judiciary in the process.
TCCNS: CRIJ 1306

CRIJ 1310  Fundamentals of Criminal Law
3 Semester Credit Hours (3 Lecture Hours)
The course will introduce students to the study of criminal law. Major topics include the sources of criminal law, the operation of the criminal courts, constitutional limitations on criminal law, the elements of criminal liability, and the classification of and punishments for different types of criminal offenses. Defenses to criminal liability will also be explored.
TCCNS: CRIJ 1310

CRIJ 2313  Correctional Systems & Practices
3 Semester Credit Hours (3 Lecture Hours)
This course is a survey of institutional and non-institutional corrections. Emphasis will be placed on the organization and operation of correctional systems; treatment and rehabilitation; populations served; Constitutional issues; and current and future issues.
TCCNS: CRIJ 2313

CRIJ 2328  Police Systems and Practices
3 Semester Credit Hours (3 Lecture Hours)
The history and development of police in America. Topics examined include: the police profession, organization of law enforcement systems, the policing role, police discretion, ethics, police-community interaction, current and future issues, and research findings.
TCCNS: CRIJ 2328

CRIJ 3302  Police and Society
3 Semester Credit Hours (3 Lecture Hours)
Examination of policing in a democratic society. A critical review of various professional and community influences on police behavior, together with a consideration of social problems created by such forces, and potential remedial actions.

CRIJ 3310  The Judicial Process
3 Semester Credit Hours (3 Lecture Hours)
THE JUDICIAL PROCESS Examination of the civil and criminal legal systems and the roles played by political, social and economic factors in the administration of justice. Consideration of the roles and interests of litigants, defendants, police, attorneys, and the judiciary in the process.

CRIJ 3313  The Juvenile Justice System
3 Semester Credit Hours (3 Lecture Hours)
The administration of the juvenile justice process. Historical and philosophical origins of the juvenile justice system. A systematic analysis of problems and procedures at each stage of the process.

CRIJ 3315  Crime Prevention
3 Semester Credit Hours (3 Lecture Hours)

CRIJ 3320  Issues in Corrections
3 Semester Credit Hours (3 Lecture Hours)
Analysis of contemporary developments, controversies and management concerns in the field of corrections. Includes examination of theoretical foundations of correctional policy.

CRIJ 3325  Community-Based Corrections
3 Semester Credit Hours (3 Lecture Hours)
Examination of the correctional strategies and facilities available in community settings including diversion programs, probation, parole, half-way houses, boot camps, and restitution centers.

CRIJ 3340  Comparative Criminal Justice
3 Semester Credit Hours (3 Lecture Hours)
Comparison of the police in selected countries with the U.S. criminal justice system. Particular emphasis on social, political, and economic factors in the development and change in law enforcement.

CRIJ 3341  Terrorism
3 Semester Credit Hours (3 Lecture Hours)
An examination of political violence from criminological, legal, and political perspectives. Application to contemporary events is emphasized. The sociology, psychology, and organization of terrorist groups are also explored as well as counter-terrorism strategies, methods, and dilemmas.

CRIJ 3360  Organized Crime
3 Semester Credit Hours (3 Lecture Hours)
The course analyzes and discusses how criminal organizations carry out their illegal activities while laundering money through legal enterprises. It discusses why people belong to organized crime syndicates despite the risks of death and imprisonment. The linkages of poverty, lack of education, social and economic inequalities, and the glorification of capitalist ideology by the phenomenon of organized crime are examined.

CRIJ 3361  Drugs, the Drug War, and Criminal Justice
3 Semester Credit Hours (3 Lecture Hours)
This course is an analysis and discussion of drugs, the war on drugs, and how these two phenomena impact the criminal justice system in American society. There is a review of the common assumptions about drugs and its social implications. An examination of the sociocultural interconnections of the nature of drugs, drug use, drug trafficking, and drug policy from a justice perspective is presented.
CRIJ 3365  Sex Crimes  
3 Semester Credit Hours (3 Lecture Hours)  
This course analyzes the nature, etiology, and theories related to sex offenses and sex offenders. It explores the history and current practices employed by the criminal justice systems to deal with sex offending. The course also examines multiple types of sexual offenses, perpetrators and victims, as well as the legal consequences of sexual offenses and its sociocultural ramifications to grasp the complexity of these crimes.

CRIJ 3370 Crime in the Media  
3 Semester Credit Hours (3 Lecture Hours)  
This course will cover the portrayal of crime, criminals, the criminal justice system, and criminal justice practitioners in the media. Specifically, the course will address the goals of the media and how those affect their coverage of crime and the CJ system.

CRIJ 3375 Applied Statistics in Criminal Justice  
3 Semester Credit Hours (3 Lecture Hours)  
This course will teach students the step-by-step process for using statistical techniques that are most applicable in the field of criminal justice. It will teach them when, where, and why each statistical analysis is necessary and/or useful, and it will help students learn those skills by applying them to an actual project.

CRIJ 3380 Victimology  
3 Semester Credit Hours (3 Lecture Hours)  
is the scientific study of crime victims and focuses on the physical, emotional, and financial harm victims suffer due to crime. The purpose of this course is to examine victim-offender relationships, the interactions between victims and the criminal justice system, and the connections between victims and other institutions (such as the media, advocacy groups, and government). In exploring these connections, students will address the theory, research, legislation, and policy implications related to victimization.  
Prerequisite: CRIJ 1301.

CRIJ 4310 Constitutional Law  
3 Semester Credit Hours (3 Lecture Hours)  
A case study of American constitutional law based on the leading decisions of the U.S. Supreme Court. Examination of the evolution of judicial review and the development of due process and the protection of individual rights.

CRIJ 4312 Law and Evidence  
3 Semester Credit Hours (3 Lecture Hours)  
A detailed examination of the use, admissibility, and presentation of evidence. Issues and problems dealing with the rules of evidence and the theories on which those rules are based.

CRIJ 4313 Criminal Procedure  
3 Semester Credit Hours (3 Lecture Hours)  
A detailed examination of the legal constraints on investigation and prosecution of criminal offenses. Analysis of the Texas Code of Criminal Procedure and of Search and Seizure Law under the Fourth Amendment, as well as other due process issues arising under the Fifth and Sixth Amendments.

CRIJ 4320 Offender Rehabilitation  
3 Semester Credit Hours (3 Lecture Hours)  
Theories of rehabilitation, treatment, and correction of criminal offenders. Includes analysis of the historical development of the rehabilitative ideal and contemporary controversies surrounding it, and a survey of therapeutic models and methods.

CRIJ 4321 American Prisons and Prisoners  
3 Semester Credit Hours (3 Lecture Hours)  
Analysis of the history, philosophy, and function of prisons. Examination of control and treatment of offenders in institutional settings. Focus is upon current developments, controversies and management problems.

CRIJ 4322 Crime and Punishment in Literature  
3 Semester Credit Hours (3 Lecture Hours)  
A study of selected literary classics that treat of crime and punishment. The works of literary artists from various cultures which describe experience with crime and the criminal justice system will be placed in historical and theoretical perspective.

CRIJ 4324 Women and Criminal Justice  
3 Semester Credit Hours (3 Lecture Hours)  
An historical and ideological analysis of the role of women in the criminal justice system as offenders, reformers, and professionals.

CRIJ 4325 Diversity in Criminal Justice  
3 Semester Credit Hours (3 Lecture Hours)  
This course is an investigation into the impact of social diversity (race, ethnicity, gender, sexual orientation, disability, and more) on crime and the criminal justice system. Students will examine the impact of these factors on both offenders and criminal justice system employees, and will discuss and critically examine historical trends, contemporary events, and criminal justice system policies and laws.

CRIJ 4330 Understanding Criminal Behavior  
3 Semester Credit Hours (3 Lecture Hours)  
This course examines various aspects of human behavior from a criminal justice perspective and is designed to give students a basic understanding of criminal behavior and psychological disorders which are encountered by criminal justice professionals.

CRIJ 4331 Juvenile Delinquency  
3 Semester Credit Hours (3 Lecture Hours)  
Examination of the nature and extent of juvenile crime today. Analysis of the history and theory of delinquency and society’s response to it. (Credit may not be given for both this course and SOCI 4331.) Cross listed with SOCI 4331.

CRIJ 4335 Criminology  
3 Semester Credit Hours (3 Lecture Hours)  
An examination of the major sociological explanations for crime, criminal behavior, and the social responses to crime. (Credit may not be given for both this course and SOCI 4335.) Cross listed with SOCI 4335.

CRIJ 4340 Criminal Investigation  
3 Semester Credit Hours (3 Lecture Hours)  
Critical examination of investigation methods and comparison of these to research methods. Advanced examination of investigative procedures, theory, supervision, and evaluative research. Some practical applications.

CRIJ 4345 Research Methods in Criminal Justice  
3 Semester Credit Hours (3 Lecture Hours)  
This course is designed to help students gain a working understanding of the research process with direct application to criminal justice research. Attention will focus on various aspects of the research process including quantitative and qualitative methods. Students will complete literature reviews, create research proposals, conduct observations/interviews, and construct surveys in addition to various assignments and activities.  
Prerequisite: CRIJ 1301 or 1313.
CRIJ 4351 Police Supervision and Management
3 Semester Credit Hours (3 Lecture Hours)
Study of contemporary theories of management and supervision as they relate to law enforcement. Management concerns considered include planning, motivation, organizational communication, discipline, productivity, ethics, conflict, and job stress.

CRIJ 4360 Intimate Relationship Violence
3 Semester Credit Hours (3 Lecture Hours)
Violence involving acquaintance, spouse, child, and elder abuse is examined within a theoretical construct relating violence to social responses. Alternative causal theories, prevention, counseling, administration, innovative programs, and inter-agency coordination are addressed.

CRIJ 4365 White Collar Crime
3 Semester Credit Hours (3 Lecture Hours)
Critical examination of widespread forms of offending and offenders typically omitted from traditional criminology and criminal justice courses. Critical exploration of white collar, corporate, environmental and governmental crimes/criminals.

CRIJ 4390 Topics in Criminal Justice
3 Semester Credit Hours (3 Lecture Hours)
May be repeated for credit when topics vary.

CRIJ 4396 Directed Individual Study
1-3 Semester Credit Hours
See College description.

CRIJ 4398 Applied Experience
3 Semester Credit Hours
See College description.

Dance (DANC)

DANC 1141 Ballet I
1 Semester Credit Hour (3 Lab Hours)
A beginning ballet dance course aligned with the Theatre, Dance, and Musical Theatre disciplines. The student will learn fundamentals of classical ballet; terminology, alignment, barre and floor technique, as well as genres of the contemporary styles.

Co-requisite: SMTE 0098.

DANC 1147 Jazz Dance I
1 Semester Credit Hour (3 Lab Hours)
A beginning jazz dance course aligned with the Theatre, Dance, and Musical Theatre disciplines. Students will be introduced to genres of the jazz dance from primitive ritual through contemporary musical theatre compositions.

Co-requisite: SMTE 0098.

DANC 1148 Modern Dance I
1 Semester Credit Hour (3 Lab Hours)
A beginning modern dance course aligned with the Theatre, Dance, and Musical Theatre disciplines. Students will be introduced to the fundamentals of Modern Dance using a variety of modern dance styles, including technique, progressive movement and dance performance.

Co-requisite: SMTE 0098.

DANC 1304 Dance in Performance
3 Semester Credit Hours (3 Lecture Hours)
Students will be introduced to the fundamentals of choreography using a variety of dance styles and, using those skills, create dance intended for public performance. May be repeated for credit.

Co-requisite: SMTE 0098.

DANC 2141 Ballet II
1 Semester Credit Hour (3 Lab Hours)
This course focuses on further development of classical ballet as an art form with an emphasis on intermediate to advanced level technique, musicality and performance.

Co-requisite: SMTE 0098.

DANC 2147 Jazz Dance II
1 Semester Credit Hour (3 Lab Hours)
This course is for the student with previous jazz dance training. Jazz Dance II emphasizes technique and terminology. The course will focus on improving quality of movement and developing complex rhythms and patterns through the understanding and flexibility of the variety of jazz styles taught.

Co-requisite: SMTE 0098.

DANC 2148 Modern Dance II
1 Semester Credit Hour (3 Lab Hours)
This course is geared toward the student with previous modern dance training. The student will continue to develop physical, conceptual and aesthetic skills and explore the principles of movement and language common with variety of modern dance techniques.

Co-requisite: SMTE 0098.

DANC 3141 Ballet III
1 Semester Credit Hour (1 Lab Hour)
This course focuses on further development of classical ballet, based on previous training in Ballet I and II, as an art form with an emphasis on intermediate/advanced level technique, musicality and performance.

Prerequisite: (DANC 1141 and 2141).

Co-requisite: SMTE 0098.

DANC 3147 Jazz Dance III
1 Semester Credit Hour (1 Lab Hour)
This course focuses on the student who has taken Jazz I and II and executes the movement at an intermediate/advanced level. The course will focus on improving artistic expression within the quality of movement and developing complex technique and style through the understanding on rhythms and patterns of a variety of jazz styles.

Prerequisite: (DANC 1147 and 2147).

Co-requisite: SMTE 0098.

DANC 3148 Modern Dance III
1 Semester Credit Hour (1 Lab Hour)
This course focuses on the student who has taken Modern Dance I and II. The student will continue to develop physical, conceptual and aesthetic skills and explore principles of movement and language common with the variety of modern dance techniques.

Prerequisite: (DANC 1148 and 2148).

Co-requisite: SMTE 0098.

DANC 3303 World Dance and Culture
3 Semester Credit Hours (3 Lecture Hours)
Offers a cross cultural and historical view of a variety of theatrical, vernacular and sacred dance forms and investigates ways that dance functions across societies. No background in dance is necessary to successfully complete this course.

Co-requisite: SMTE 0098.

DANC 3306 Dance Choreography I
3 Semester Credit Hours (3 Lecture Hours)
Introduction to techniques and principles of the craft and art of choreography. Solo and group choreography is expected. May be repeated for credit.

Co-requisite: SMTE 0098.
DANC 3310 History of Dance
3 Semester Credit Hours (3 Lecture Hours)
In this course, the student will explore the history of dance from an interactive arts approach, examining and investigating dance from ancient civilizations throughout the world to the emerging times of dance in the U.S.

DANC 4141 Ballet IV
1 Semester Credit Hour (1 Lab Hour)
This course focuses on further development of classical ballet, based on previous training in Ballet I, II and III as an art form with an emphasis on advanced level technique, musicality and performance. Can be repeated for credit.
Prerequisite: (DANC 1141, 2141 and 3141).
Co-requisite: SMTE 0098.

DANC 4147 Jazz Dance IV
1 Semester Credit Hour (1 Lab Hour)
This course focuses on the student who has taken Jazz Dance I, II and III and executes the movement at an advanced level. The course will focus on improving artistic expression within the quality of movement from Jazz Dance III and developing complex technique and jazz styles. Can be repeated for credit.
Prerequisite: (DANC 1147, 2147 and 3147).
Co-requisite: SMTE 0098.

DANC 4148 Modern Dance IV
1 Semester Credit Hour (1 Lab Hour)
This course focuses on the student who has taken Modern Dance I, II and III. The student will continue to develop physical, conceptual and aesthetic skills and explore the principles of movement and language common with a variety of modern and contemporary modern dance techniques. Can be repeated for credit.
Prerequisite: (DANC 1148, 2148 and 3148).
Co-requisite: SMTE 0098.

DANC 4306 Dance Choreography II
3 Semester Credit Hours (3 Lecture Hours)
Demonstrate choreographic tools in the dance making process as it relates to group work; explore and create movement studies in groups as it pertains to art. May be repeated for credit.
Prerequisite: DANC 3306.
Co-requisite: SMTE 0098.

DANC 4310 Dance Instruction
3 Semester Credit Hours (3 Lecture Hours)
In this course, the student will research and explore the various modern philosophies of instruction and learn to apply those that are congruous with instructing dance as an art in a variety of settings and to different age levels. Observation and instruction, combined with research satisfies the practical application portion of the course, while critiques from professionals in the field will serve as encouragement and confidence building for the future instructor in dance. May be repeated for credit.
Co-requisite: SMTE 0098.

DANC 4390 Topics in Dance
1-3 Semester Credit Hours
This course will explore aspects of various dance techniques (ballet, jazz, contemporary, and hip hop infused) at the intermediate/advanced level, as well as repertory and yoga for dancers. Time allowing, we will delve into basic elements of choreographic composition.
Co-requisite: SMTE 0098.

DANC 4396 Directed Individual Study (DIS)
1-3 Semester Credit Hours (1-3 Lecture Hours)
See college description. Course is available by application.

DANC 4398 Applied Experience
3 Semester Credit Hours (3 Lecture Hours)
See college description. Course is available by application.

**Early Childhood Education (ECED)**

ECED 3324 Child Development
3 Semester Credit Hours (3 Lecture Hours)
Provides the student with an overview of the physical, social, emotional, and psychological development of children from infancy through early childhood.

ECED 3380 Developmentally Appropriate Practice in Early Childhood Education
3 Semester Credit Hours (3 Lecture Hours)
An intensive study of developmentally appropriate practice in early childhood education. Students will learn the components of lesson plans and create several lesson plans. Emphasis will be placed on selecting, defining, developing strategies and techniques, and assessing practices which support developmentally appropriate practices.
Prerequisite: ECED 3324.

ECED 4310 Socialization of the Young Child
3 Semester Credit Hours (3 Lecture Hours)
An intensive study of the social development, the agents of socialization, and the socialization process in early childhood.
Prerequisite: ECED 2310 or 3324.

ECED 4320 The Young Child, Family and Community Resources
3 Semester Credit Hours (3 Lecture Hours)
A study of current family structures, their relationship to the young child, society, and the community. Emphasis will be placed on an inclusive model which addresses the needs of the global community as it relates to the young child.
Prerequisite: ECED 2310 or 3324.

ECED 4330 Health, Nutrition, and Locomotor Concepts for the Young Child
3 Semester Credit Hours (3 Lecture Hours)
The relationship between health, nutrition, and locomotor development in the young child is investigated.

ECED 4340 Communication and Aesthetics
3 Semester Credit Hours (3 Lecture Hours)
A study of language development; early literacy, language arts, and aesthetics. Students will develop an integrated thematic unit plan. Strategies and curriculum materials that are developmentally appropriate for young children will be emphasized to support the Texas Essential Knowledge and Skills (TEKS).
Prerequisite: ECED 3324.

ECED 4345 EC-6 Assessment and Evaluation
3 Semester Credit Hours (3 Lecture Hours)
A study of assessment for children EC-6 utilizing both formal and informal instruments will be addressed. A knowledge of choosing, administering, and reporting developmental assessment will be explored with an emphasis on assessment tools that can be used by teachers of young children. Principles of designing and using assessment and evaluation techniques that are culturally fair, intellectually sound, reliable, and content-valid for young children. Differentiation among criterion-referenced, norm-referenced, individual, informal, authentic, and group assessments will be emphasized. Students will review strategies for using assessment data to design instruction, and match assessment techniques to individual children and learning situations.
ECON 4350 EC-6 Social Studies Curriculum
3 Semester Credit Hours (3 Lecture Hours)
This course will expose students to skills and concepts taught in the Social Studies curriculum in the elementary school. Developmentally appropriate strategies, concepts, and curricular materials used in teaching the Social Studies will be emphasized.
Prerequisite: ECED 3324.

Economics (ECON)

ECON 1301 Introduction to Economics
3 Semester Credit Hours (3 Lecture Hours)
Non-technical introduction to the structure and functioning of the aggregate economy and selected specific markets. Basic concepts regarding how markets function, regulation, monetary and fiscal policy in a macroeconomic context and some special topics of contemporary relevance are studied. Students are introduced to the basic concepts used in the social and behavioral sciences for measuring and interpreting economic and business conditions. This course cannot be taken to fulfill the Business Core or any Business Major requirements. It is recommended that students who might be interested in majoring in business or economics, take either ECON 2301 or ECON 2302 instead.
TCCNS: ECON 1301

ECON 2301 Macroeconomics Principles
3 Semester Credit Hours (3 Lecture Hours)
An overview of how the economy of the United States is organized and functions in a market price system. Market processes are used to show how resources and incomes are allocated by households and businesses. Determination of national income, employment, price level, interest rates, and growth are the focus of simple analysis techniques. Monetary and fiscal policies are examined including their international dimensions. Satisfies the social and behavioral sciences component of the University core curriculum. A student taking remedial courses in Basic English (ENGL 0399) and/or Mathematics (MATH 0300) is not recommended to take this course concurrently.
TCCNS: ECON 2301

ECON 2302 Microeconomics Principles
3 Semester Credit Hours (3 Lecture Hours)
Demand and supply, consumer behavior, elasticity, production costs, perfect and imperfect market structures and models of the modern market price system are analyzed. Emphasis is on use of marginal analysis to determine prices, output, income and economic welfare in a market price system. Satisfies the social and behavioral sciences component of the university core curriculum. A student taking remedial courses in Basic English (ENGL 0399) and/or Mathematics (MATH 0300) is not recommended to take this course concurrently.
TCCNS: ECON 2302

ECON 3310 Intermediate Macroeconomics
3 Semester Credit Hours (3 Lecture Hours)
Theory of the determination of aggregate income, employment and prices is examined. Focus is on the microeconomic foundations of aggregate demand: consumption, investment, foreign trade, and government. Macroeconomic models from the basic through the complete model are examined for the U.S. and global economies.
Prerequisite: (ECON 2301 and 2302).

ECON 3311 Intermediate Microeconomics
3 Semester Credit Hours (3 Lecture Hours)
Examines supply and demand analysis, consumption theory, production theory, structure and performance of firms, efficiency of markets, and determination of general welfare in a market price system.
Prerequisite: (ECON 2301 and 2302).

ECON 3312 Money and Banking
3 Semester Credit Hours (3 Lecture Hours)
Description of the operations of banking and other financial institutions, examination of the basic tenets of monetary theory, analysis of monetary policy and its contribution to economic policy.
Prerequisite: (ECON 2301 and 2302).

ECON 3315 International Economic Issues
3 Semester Credit Hours (3 Lecture Hours)
Evaluates and analyzes various contemporary issues in international economics, using elementary economic theory and recent economic and financial data. The course includes issues such as economic integration, regionalization and globalization, international trade issues, the structure and role of international economic organizations, the foreign exchange market, and economic issues in developing countries.
Prerequisite: (ECON 2301).

ECON 3316 Environmental Economics
3 Semester Credit Hours (3 Lecture Hours)
Uses economic analysis to examine the underlying causes of environmental and natural resource problems, as well as alternative policy issues. The choice of environmental protection goals and the means of achieving them are analyzed and applied to the cases of air pollution (local and global), water pollution, and toxic pollution. The environmental policies of various countries are compared and studied from an economic perspective.
Prerequisite: (ECON 2301 or 2302).

ECON 3320 Public Finance
3 Semester Credit Hours
This course examines the role that government plays in the economy. The course discusses the conditions for economic efficiency to be achieved and circumstances where a market fails. It also presents the concepts of public goods and the aggregation of individual preferences into collective priorities as expressed by the general public through the political process. Topics include taxation, welfare economics, environmental and health externalities, cost-benefit analysis, and government budget.
Prerequisite: (ECON 2301 or 2302).

ECON 3322 Managerial Economics
3 Semester Credit Hours (3 Lecture Hours)
Emphasis is on the use of economic principles to make sound business decisions. Students will use economic analysis, knowledge of markets and organizations to address real-world problems. The course emphasizes the role of the business economist as a member of the management team trying to find ways to improve the use of resources available to an organization.
Prerequisite: (ECON 2302).
ECON 3335 Labor Economics
3 Semester Credit Hours (3 Lecture Hours)
The study of labor theory and labor market processes to explain how household labor decisions are made and how household incomes are determined. The effects of labor market imperfections, and the effects of business decisions and labor unions on labor market outcomes are also evaluated. Provides an overview of the U.S. labor movement, including its impact on federal legislation; labor theory; and contemporary labor issues. The effects of federal legislation are examined, including those on the competitiveness of U.S. labor in a global economy.
Prerequisite: (ECON 2301 and 2302).

ECON 3340 Healthcare Economics
3 Semester Credit Hours (3 Lecture Hours)
The supply and demand for health services. Markets for health professionals and healthcare provider firms. Discusses the roles of insurance, managed care and HMO's, professional licensure, for-profit and not-for-profit provider firms, and information problems in health care markets; regulation, government financing of healthcare and health care reform issues in the U.S.
Prerequisite: (ECON 2301 and 2302).

ECON 4085 Economics Exit Exam
0 Semester Credit Hours
The Economics Exit Exam (EEE) is an exam given in the Fall and Spring semesters only. It is a graduation requirement for all students with a BBA degree in Economics. Students enroll in this course during the semester that they plan to take the EEE. Admission is limited to students who have completed 90 or more semester credit hours.

ECON 4310 Introduction to Econometrics
3 Semester Credit Hours (3 Lecture Hours)
A study of the analysis of quantitative data, with special emphasis on the application of statistical methods to economic problems. The course covers the theory and practice of ordinary least squares regression; application to economics and finance, and selected special topics. Topics include heteroskedasticity, multicollinearity and autocorrelation, qualitative independent and dependent variables, and simple time-series analysis.
Prerequisite: (ECON 2301, 2302 and ORMS 3310 or MATH 1342).

ECON 4325 Economics of European Integration
3 Semester Credit Hours (3 Lecture Hours)
An introduction to the economics of Western Europe, and by implication, the economic functions of the institutions of the European Union (EU). Students are introduced to economic policy issues which are currently of concern in the European Union, and the analysis of economic problems which are of particular relevance to European Union member states. These include (but are not limited to) the theory of customs unions, optimal currency area theory, the single market, competition policy, and the external trade and development policies of the EU.
Prerequisite: (ECON 2301 and 2302).

ECON 4340 Topics in Health Economics and Healthcare Policy
3 Semester Credit Hours (3 Lecture Hours)
Examines some aspects of U.S. healthcare decision making and delivery system from an applied and behavioral economics perspective. Topics selected will show students how to apply the principles of economics to analyze healthcare outcomes and institutional effectiveness, as well as government decision making in healthcare. The scope of this course may include analysis of current trends and topics in the U.S. healthcare industry; the utilization and application quantitative skills required to understand and evaluate performance of healthcare organizations, health outcomes, and current healthcare issues.
Prerequisite: (ECON 3340).

ECON 4388 History of Economic Thought
3 Semester Credit Hours (3 Lecture Hours)
A consideration of the philosophical basis, historical context, and development of economic thinking. Focuses on pre-20th-century economists-the Mercantilists, the Physiocrats, Adam Smith, David Ricardo, Karl Marx, and early neoclassical economists. Attention is also given to later economists and schools of thought as continuations and modifications of earlier ideas in economics.
Prerequisite: (ECON 3310 and 3311).

ECON 4390 Current Topics in Economics
1-3 Semester Credit Hours (1-3 Lecture Hours)
Selected topics for special study related to economics, the functioning of the economy or economic issues. May be repeated for credit when topics vary.
Prerequisite: (ECON 2301).

ECON 4396 Directed Individual Study
1-3 Semester Credit Hours
Individual supervised study and a final report.

ECON 4398 Internship in Economics
3 Semester Credit Hours
Supervised full-time or part-time, off-campus training in a service, manufacturing, or public sector position. Oral and written reports required.

Economic Exit Exam (ECON 4085)

Investigating Student Learning in Middle Level Mathematics
3 Semester Credit Hours (3 Lecture Hours)
This course is designed to investigate how students learn mathematics in the context of the middle level mathematics curriculum to include a survey of technologies and educational software to develop mathematical thinking.

STEM Mathematics
3 Semester Credit Hours (3 Lecture Hours)
This course provides the conceptual framework for exploring EC-6 mathematics integrated with engineering for deeper understanding, connections, and communication. Formal and informal geometry and measurement concepts and skills will be developed through problem-solving scenarios in collaborative groups. Manipulatives and technology will support the problem-solving approach. This course is designed to emphasize in-depth basic understandings of geometry and measurement, which is a core idea in the EC-6 mathematics curriculum. Communicating concepts, processes or solutions effectively, in oral and written forms, will be emphasized.

STEM Science EC-6
3 Semester Credit Hours (3 Lecture Hours)
This course provides the conceptual framework for exploring EC-6 science with deeper understanding, connections, and communication. It is designed to provide preservice teachers with a global understanding of teaching science in the EC-6 school setting. The major goal is to prepare teachers who can educate students to become scientifically literate. This aim requires preservice teachers to learn about the nature of science, to engage in science investigations, and to construct understanding of natural phenomena, forming an elaborate cognitive framework of scientific concepts. Students’ prior knowledge from previous courses will be essential to their performance in this course, namely, technology in the classroom, lesson planning, curriculum organization, and student assessment.
EDCI 4350  Assessment in Middle Level Mathematics  
3 Semester Credit Hours (3 Lecture Hours)  
This course is designed to help students identify and explore some of the key issues in assessing middle level mathematics. Students will develop assessment practices and a greater awareness of the implications of assessment practice on mathematics learning.

Electrical Engineering (EEEN)

EEEN 3310  Electromagnetic Theory  
3 Semester Credit Hours (3 Lecture Hours)  
An introduction to the theory of static and dynamic electromagnetic fields with a focus on engineering applications. Principles will be illustrated with applications in various areas. Topics include computational electromagnetics, transmission lines, antennas, electromagnetic interference, and signal propagation in high speed circuits.  
Prerequisite: PHYS 2426, MATH 2415, 3315 and EEEN 3315.

EEEN 3315  Electrical Circuits II  
3 Semester Credit Hours (3 Lecture Hours)  
AC circuit analysis principles: AC generation, periodic functions, complex numbers, phasors, impedance and admittance, network theorems, power, frequency response, filters, transformers, and balanced three-phase systems; and use of analysis software.  
Prerequisite: (ENGR 2305) or (ENGR 2460).

EEEN 3320  Introduction to Communication Theory and Systems  
3 Semester Credit Hours (3 Lecture Hours)  
Frequency domain and time domain response of linear systems; analog modulation methods including amplitude modulation, frequency modulation and phase modulation; signal and noise modeling using probabilistic descriptions; narrowband random processes and the performance of analog modulation techniques in the presence of noise; design of communication links.  
Prerequisite: (ENGR 2305 and 2105 or ENGR 2460) and MATH 3345.

EEEN 3330  Control Systems I  
3 Semester Credit Hours (3 Lecture Hours)  
Introduction to control systems; open and feedback; Laplace transform and frequency response; control valves; electric motors; P, PI, and PID modes of control; analog and digital controllers Process characteristics; analysis of control systems; gain and phase margin; stability.  
Prerequisite: (ENGR 2305 or 2460).

EEEN 3345  Electronic Devices and Circuits  
3 Semester Credit Hours (3 Lecture Hours)  
The applications of electronic devices, including linear and non-linear Op-Amp circuits, oscillators, wave-shaping circuits, active filters, rectifiers, voltage regulators, and power supplies; industrial electronics. Offered Fall and Spring.  
Prerequisite: EEEN 3315.

EEEN 3350  Electronic Systems Design  
3 Semester Credit Hours (3 Lecture Hours)  
Principles of engineering design of electronic circuits and systems; time and frequency responses; network analysis; systems specifications; evaluation, testing, and verification; use of electronic design automation tools. Offered Fall and Spring.  
Prerequisite: (ENGR 2305 or 2460) and (ENGR 2306 and EEEN 3315).

EEEN 3418  Microprocessors and Microcontrollers  
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)  
Introduction to microprocessor/microcontroller architecture, assembly language programming, and interfacing. Topics include computer organization, addressing modes, instruction set, interrupts, timing, memory, and interfacing.  
Prerequisite: COSC 1320 and (ENGR 2306 and 2106).  
Co-requisite: SMTE 0099.

EEEN 4310  Signal Processing  
3 Semester Credit Hours (3 Lecture Hours)  
Discrete time signals & systems, z-transform, discrete Fourier transform, flow graph and matrix representation of digital filters; digital filter design techniques and computation of the fast Fourier transform (FFT). MATLAB software package is heavily utilized in this course.  
Prerequisite: (EEEN 3320) and (EEEN 3330).

EEEN 4330  Introduction to Plasma Engineering and Applications  
3 Semester Credit Hours (3 Lecture Hours)  
Physical, electrical, chemical properties of plasmas; differences in properties of thermal and non-thermal plasmas, direct and alternating current plasma sources, inductive and capacitive coupled plasma sources, diagnostics and applications of plasmas.  
Prerequisite: (ENGR 3322 and 2460 or ENGR 2305 or PHYS 2426).

EEEN 4331  Power Transmission and Distribution  
3 Semester Credit Hours (3 Lecture Hours)  
This course covers principles of power transmission and distribution. Topics include unbalanced distribution; point to point measurements, operation control of systems; power systems; transmission lines; fault analysis; line modeling and unit analysis. Offered Fall or Spring.  
Prerequisite: EEEN 3315.

EEEN 4332  Power Protection Systems  
3 Semester Credit Hours (3 Lecture Hours)  
Course topics include safety, reliability and availability in power systems; breaker operation; relay operation and relay circuit design; fault tolerance; cost analysis; control systems and system surveillance. Offered in Fall.  
Prerequisite: EEEN 3315.

EEEN 4333  Machine Vision and Image Processing  
3 Semester Credit Hours (3 Lecture Hours)  
Introduces students to automated vision systems and components, camera models, testing and measurement, and fundamentals of image processing. Topics include image analysis and processing in binary, gray scale and color images in spatial- and frequency-domain. Texture and shape analysis, hyperspectral imaging, other transforms, and filters are discussed and applied.  
Prerequisite: (COSC 1320, 1435, ENGR 2460 or 2305) and MATH 2414 and (EEEN 4310).

EEEN 4334  Control Systems II  
3 Semester Credit Hours (3 Lecture Hours, 1 Lab Hour)  
Model identification and parameter estimation (least-square identification of an auto-regressive model; nonparametric identification in the time domain; and nonparametric identification in the frequency domain); Robust Control (Nyquist-plots, small-gain, and passivity); Optimal control (LQR/LQG for state-space systems and time-optimal controller for the positioning of a mass using force actuation); Nonlinear control (Lyapunov’s stability method; feedback linearization controller for a fully actuated 2nd order mechanical system; backstepping for triangular nonlinear systems; actuator limitations); writing and presenting reports and analysis.  
Prerequisite: (EEEN 3330 or ENTC 4446).
ENGR 4345 Sensors and Systems
3 Semester Credit Hours (3 Lecture Hours)
(3:0) This course introduces sensors and sensing systems, and the acquisition, processing, and interpretation of signals obtained with selected sensors and systems. The course will also cover sensing modalities, signal transmission and reception. Measurement and uncertainty in sensors and systems will be discussed as applied to signal noise and interference. Filtering and estimation will be introduced. Sensing systems for vision, monitoring, and control applications will be surveyed. Sensor interfacing, signal conditioning and transforms will be applied. Other topics include multidimensional signal and image processing, object tracking, multisensor data fusion, applications in environmental monitoring, remote sensing and surveillance. Offered in alternating Fall semesters.
Prerequisite: (MATH 2414 and ENGR 2460).

EEEN 4396 Directed Independent Study
1-3 Semester Credit Hours
(1-3) Requires a formal proposal of study to be completed in advance of registration, approval of supervising faculty and department chairperson.

EEEN 4453 Mechatronics
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
This course introduces a multidisciplinary field that combines electrical engineering, mechanical engineering, control systems and computer science. It presents key aspects in the design of systems, devices and products and it aims at the analysis of the behavior and control of the systems. Topics covered in this course bring together different areas of technology involving actuation systems, computer-aided design, sensors, signal conditioning, data acquisition, and programming. Course includes lab sessions related to acquiring experience with electronics, computer-aided design, programming, and control systems.

Elementary Education (ELEM)

ELEM 4350 Social Studies
3 Semester Credit Hours (3 Lecture Hours)
This course will expose students to skills and concepts taught in the Social Studies curriculum in the elementary school. Developmentally appropriate strategies, concepts, and curricular materials used in teaching the Social Studies will be emphasized.
Prerequisite: ECED 3324.

Engineering (ENGR)

ENGR 1201 Introduction to Engineering
2 Semester Credit Hours (1 Lecture Hour, 2 Lab Hours)
Introduction to the engineering profession, ethics, and disciplines; development of skills in teamwork, problem solving and design; other topics include computer applications and programming; visualization, orthographic drawings and CAD tools; introduction to electrical circuits, semiconductor devices, digital logic, communications and their application in systems; Newton’s laws, unit conversions, statistics, Excel; basic graphics skills. Offering: Fall and Spring.
Prerequisite: MATH 1314.

ENGR 1312 Engineering Graphics I
3 Semester Credit Hours (2 Lecture Hours, 2 Lab Hours)
Topics include, depending on the major: emphasis on computer applications and programming and solids modeling using CAD tools or other software; fundamentals of engineering science; advanced graphic skills. Pre-req: MATH 1314 - College Algebra or equivalent academic preparation. Offered Fall and Spring.
Prerequisite: MATH 1314.
TCCNS: ENGR 1304

ENGR 2105 Electrical Circuits Laboratory
1 Semester Credit Hour (3 Lab Hours)
Laboratory experiments supporting theoretical principles presented in ENGR 2305 involving DC and AC circuit theory, network theorems, time, and frequency domain circuit analysis. Introduction to principles and operation of basic laboratory equipment; laboratory report preparation.
Prerequisite: ENGR 2305.
* May be taken concurrently.
Co-require: ENGR 2305, SMTE 0099.

ENGR 2106 Digital Systems Laboratory
1 Semester Credit Hour (1 Lab Hour)
Basic laboratory experiments supporting theoretical principles presented in ENGR 2306 involving design, construction, and analysis of combinational and sequential digital circuits and systems, including logic gates, adders, multiplexers, encoders, decoders, arithmetic logic units, latches, flip-flops, registers, and counters; preparation of laboratory reports.
Prerequisite: MATH 1314.
Co-require: ENGR 2306, SMTE 0099.

ENGR 2305 Electrical Circuits
3 Semester Credit Hours (3 Lecture Hours)
Principles of electrical circuits and systems. Basic circuit elements (resistance, inductance, mutual inductance, capacitance, independent and dependent controlled voltage, and current sources). Topology of electrical networks; Kirchhoff’s laws; node and mesh analysis; DC circuit analysis; operational amplifiers; transient and sinusoidal steady-state analysis; AC circuit analysis; first- and second-order circuits; Bode plots; and use of computer simulation software to solve circuit problems.
Prerequisite: PHYS 2426 and MATH 2414.
Co-require: ENGR 2105.

ENGR 2306 Digital Systems
3 Semester Credit Hours (3 Lecture Hours)
Introduction to theory and design of digital logic, circuits, and systems. Number systems, operations and codes; logic gates; Boolean Algebra and logic simplification; Karnaugh maps; combinational logic; functions of combinational Logic; flip-flops and related devices; counters; shift registers; sequential logic; memory and storage.
Prerequisite: MATH 1314 and 2305.
* May be taken concurrently.
Co-require: ENGR 2106.

ENGR 2325 Statics
3 Semester Credit Hours (3 Lecture Hours)
Theory of engineering mechanics involving forces, moments, and couples on stationary structures; equilibrium in two and three dimensions; free body diagrams; truss analysis; friction; centroids; centers of gravity and moments of inertia.
Prerequisite: PHYS 2425 and MATH 2414.
* May be taken concurrently.
TCCNS: ENGR 2301
ENGR 2326  Dynamics
3 Semester Credit Hours (3 Lecture Hours)
Theory of engineering mechanics involving the motion of particles, rigid bodies and systems of particles; Newton's Laws; work and energy relationships; principles of impulse and momentum; application of kinetics and kinematics to the solution of engineering problems.
Prerequisite: ENGR 2325.
TCCNS: ENGR 2302

ENGR 2460  Circuit Analysis
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
This course covers principles of electronics: charge, voltage, resistance, current, and power; Ohm's Law; Kirchhoff's voltage and current laws; RC and LC circuits; periodic functions, average and RMS measurements; transformers, electrical measurement instruments. The laboratory provides hands-on experience with devices and circuits discussed in the classroom.
Prerequisite: (PHYS 2426, MATH 2414 and 3315*).
* May be taken concurrently.
Co-requisite: SMTE 0099.
TCCNS: ENGR 2305

ENGR 3315  Fluid Mechanics
3 Semester Credit Hours (3 Lecture Hours)
Fluid properties, fluid statics, dynamics, and kinematics, conservation of energy and momentum incompressible, laminar and turbulent flow. Similitude and dimensional analysis, and viscous flow. Prerequisite or
Prerequisite: (MATH 3315) and ENGR 2326 and MATH 2415.

ENGR 3316  Thermodynamics
3 Semester Credit Hours (3 Lecture Hours)
Theory and application of energy methods in engineering; conservation of mass and energy; energy transfer by heat, work and mass; thermodynamic properties; analysis of open and closed systems; the second law of thermodynamics and entropy; gas, vapor and refrigeration cycles.
Prerequisite: (PHYS 2425 and MATH 2414).

ENGR 3320  Strength of Materials
3 Semester Credit Hours (3 Lecture Hours)
Concepts in strength of materials, stress, strain; deformation under load, direct, shear, and combined stresses; stress concentrations, bending stresses and torsional shear stresses, deflection in beams and shafts; columns, and pressure vessels.
Prerequisite: ENGR 2325 and 3322 or ENGR 2322.

ENGR 3322  Materials Science
3 Semester Credit Hours (3 Lecture Hours)
Structure and properties of metallic and nonmetallic materials; microstructure, mechanical testing, phase diagrams, heat treatment, testing, ceramics, polymers, composites, construction materials, failure analysis, nondestructive evaluation, corrosion and thermal properties of materials.
Prerequisite: (CHEM 1411) and (PHYS 2425).
Co-requisite: SMTE 0099.

ENGR 3350  Manufacturing Processes
3 Semester Credit Hours (2 Lecture Hours, 3 Lab Hours)
Introduction to metal and non-metallic manufacturing processes; casting, forging, rolling, extrusion, sheet metal forming, cutting tools turning and milling operations, abrasive machining, welding and joining, powder compaction, molding, forming of plastics, surface treatment, human factors and safety.
Prerequisite: ENGR 1312 and 3322.
Co-requisite: SMTE 0099.

ENGR 4240  Project Management
2 Semester Credit Hours (2 Lecture Hours, 2 Lab Hours)
Foundations of engineering economy, cash flow and equivalence, and project justification. Introduction to project management, planning, scheduling, and control, use of project management software, GANTT charts, PERT charts, and critical path. Students prepare proposals, including specifications, timelines, schedule, and budget, for projects to be implemented in ENGR 4370 - Capstone Projects. This course should be taken the semester preceding ENGR 4370 - Capstone Projects.
Prerequisite: (MEEN 3330) and (MEEN 3345) or (EEEN 3330) or (EEEN 3310) and (EEEN 3350).
Co-requisite: SMTE 0099.

ENGR 4350  Machine Vision and Image Processing Applications
3 Semester Credit Hours (3 Lecture Hours)
Introduces students to automated vision systems and components, camera models, testing and measurement, and fundamentals of image processing. Topics include image analysis and processing in binary, gray scale and color images in spatial- and frequency-domain. Texture and shape analysis, hyperspectral imaging, other transforms, and filters are discussed and applied.
Prerequisite: (COSC 1330 or 1435) and ENGR 2460 and MATH 2414.

ENGR 4370  Capstone Projects
3 Semester Credit Hours (1 Lecture Hour, 5 Lab Hours)
This course allows students to employ the knowledge attained in other courses to implement (including building, testing, and documenting) an approved project, within budget and on schedule. Course requirements include a written report and oral presentations.
Prerequisite: (ENGR 4240) and (MEEN 4360*) and (MEEN 4365*) or (EEEN 4333*, CEEN 4304* or IEEEN 4310*).
* May be taken concurrently.

ENGR 4390  Special Topics in Engineering
1-3 Semester Credit Hours (1 Lecture Hour)
Subject material variable. May be repeated for credit when topics are different.

ENGR 4420  Engineering Lab Measurements
2 Semester Credit Hours (2 Lecture Hours, 2 Lab Hours)
Principles of physical measurements; standards, calibration, error estimation; static and dynamic performance of measuring systems; laboratory experience, experiment planning, report writing. The purpose of this course is for students to gain proficiency in designing, assembling, and operating an experiment; and analyzing and presenting experimental results. This encompasses skills such as an understanding control and data acquisition electronics, operation and limitation of modern sensors, calibration and error analysis, assessing applicability of theory and the impact of secondary experimental variables, and writing and presenting reports and analysis.
Prerequisite: ENGR 2460.
Co-requisite: SMTE 0099.
**Engineering Technology (ENTC)**

**ENTC 2414  Circuit Analysis I**
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
Fundamental aspects of DC circuit analysis: charge, voltage, resistance, current, and power; Ohm's Law; methods of analysis; series and parallel circuits; Kirchhoff's voltage and current laws; Thevenin and Norton Theorems; electrical measurement instruments; and use of analysis software. Offered: Fall/Spring.
Prerequisite: MATH 2413.
Co-requisite: PHYS 2426, SMTE 0099.
TCCNS: ENGT 1401

**ENTC 2490 Special Topics**
1-4 Semester Credit Hours (1-4 Lecture Hours, 3 Lab Hours)
Subject matter variable. May be repeated for different topics.

**ENTC 3320 Thermal-Fluids Laboratory**
2 Semester Credit Hours (4 Lab Hours)
Application of measurement instrumentation and experimental techniques utilized in thermodynamics and fluid mechanics. Experiments and project in hydrostatics, hydrodynamics, and thermodynamics. Offered in Spring.
Prerequisite: (ENTC 3306 and 3320*).
* May be taken concurrently.
Co-requisite: SMTE 0099.

**ENTC 3302 Manufacturing Processes**
3 Semester Credit Hours (2 Lecture Hours, 3 Lab Hours)
Introduction to metal and non-metallic manufacturing processes; casting, forging, rolling, extrusion, sheet metal forming, cutting tools turning and milling operations, abrasive machining, welding and joining, powder compaction, molding, forming of plastics, surface treatment, human factors and safety. Offered: Fall/Spring.
Prerequisite: ENGR 1312 and 3322.
Co-requisite: SMTE 0099.

**ENTC 3306 Fluid Mechanics**
3 Semester Credit Hours (3 Lecture Hours)
Fluid properties, fluid statics, dynamics, and kinematics, conservation of energy and momentum incompressible, laminar and turbulent flow. Similitude and dimensional analysis, and viscous flow. Offered: Fall (Spring as needed).
Prerequisite: (ENTC 2326 or ENGR 2326).

**ENTC 3308 Strength of Materials**
3 Semester Credit Hours (3 Lecture Hours)
Concepts in strength of materials, stress, strain; torsion; deformation under load; direct, shear, and combined stresses; shear and moment diagrams; Mohr's circle; stress concentrations, bending stresses and torsional shear stresses, deflection in beams and shafts; columns, connections, and pressure vessels. Offered: Fall (Spring as needed).
Prerequisite: (ENTC 2325 or ENGR 2325) and (ENTC 3410).

**ENTC 3320 Thermodynamics**
3 Semester Credit Hours (3 Lecture Hours)
Theory and application of energy methods in engineering; conservation of mass and energy; energy transfer by heat, work and mass; thermodynamic properties; analysis of open and closed systems; the second law of thermodynamics and entropy; gas, vapor and refrigeration cycles. Offered: Fall/Spring.
Prerequisite: PHYS 2425 and MATH 2414.

**ENTC 3323 Robotics and Automation**
3 Semester Credit Hours (2 Lecture Hours, 3 Lab Hours)
Automation in a manufacturing and assembly setting, material handling systems, remote guided vehicles, automated storage and retrieval systems, computer numerical machine tools, robotics. Offered: Spring.
Prerequisite: ENTC 3415.
Co-requisite: SMTE 0099.

**ENTC 3350 Human Factors Engineering**
3 Semester Credit Hours (3 Lecture Hours)
Application of human factors engineering principles utilized in mechanical system and product design. Overview of human characteristics and research and design techniques.
Prerequisite: (ENTC 3302 or 3302*).
* May be taken concurrently.

**ENTC 3455 Solid Modeling and Finite Elements**
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
Use of computer aided design and solid modeling tools in engineering design and manufacturing including: solid modeling, stress, flow and heat transfer analysis using finite element methods, and rapid prototyping. Offered: Spring.
Prerequisite: ENTC 3308.

**ENTC 4210 Solid Mechanics Laboratory**
2 Semester Credit Hours (4 Lab Hours)
Prerequisite: (ENTC 4330*).
* May be taken concurrently.
Co-requisite: SMTE 0099.

**ENTC 4320 Heat Transfer**
3 Semester Credit Hours (3 Lecture Hours)
Fundamental study of convection, conduction and radiation as applied to heat transfer, heat exchangers, boilers, other heat transfer equipment. Offered: Spring.
Prerequisite: ENTC 3306 and 3320.

**ENTC 4322 Programmable Logic Controllers**
3 Semester Credit Hours (2 Lecture Hours, 3 Lab Hours)
Introduction to PLCs and their use in industrial automation. Topics include programming, counters, timers, interrupts, and process control applications. Offered: As needed.
Prerequisite: ENTC 3416.
Co-requisite: SMTE 0099.

**ENTC 4330 Design of Machine Elements**
3 Semester Credit Hours (3 Lecture Hours)
Stress analysis of deformable bodies and mechanical elements; stress transformation; combined loading; material failure theories; fracture and fatigue; deflections and instabilities; thick cylinders; curved beams; design of structural/mechanical members; design processes for shafts, bearings, springs, fasteners, and mechanical joints.
Prerequisite: ENTC 3308.

**ENTC 4331 Unit Processes**
3 Semester Credit Hours (3 Lecture Hours)
Principles and methods for staged separation processes including distillation, absorption and stripping, extraction, and adsorption systems. Offered in Fall and Spring.
Prerequisite: ENTC 4320.
ENTC 4332 Process Modeling and Control
3 Semester Credit Hours (3 Lecture Hours)
Prerequisite: ENTC 3306.

ENTC 4333 Chemical Reaction Engineering
3 Semester Credit Hours (3 Lecture Hours)
Fundamental principles of chemical reaction engineering and application to design and analysis of basic chemical reactors containing both homogeneous and heterogeneous reactions. Offered Fall and Spring.
Prerequisite: ENTC 4331 and 4332.

ENTC 4335 Energy Conversion
3 Semester Credit Hours (2 Lecture Hours, 3 Lab Hours)
Installation, design characteristics, operational performance, and maintenance of motors, turbines, pumps and compressors. Introduction to global energy concerns; fossil and nuclear fuels; energy consumption analysis; energy management and conservation techniques; renewable and alternative energy sources. Modern energy conversion devices such as fuel cells, photovoltaic cells, and micro-power turbines.
Prerequisite: ENTC 3320.

ENTC 4350 Capstone Projects
3 Semester Credit Hours (1 Lecture Hour, 5 Lab Hours)
This course allows students to employ the knowledge attained in other courses to implement (including building, testing, and documenting) the project approved in ENTC 4415 - Project Justification and Management , within budget and on schedule. Course requirements include a written report and oral presentations. Normally taken in the student's last semester.
Prerequisite: ENTC 4415.
Co-requisite: SMTE 0099.

ENTC 4360 Mechanical System Design
3 Semester Credit Hours (3 Lecture Hours)
Analysis, management and cost, team work, optimal design, and computer simulation of mechanical systems and components; Applications in fluid flow and heat transfer, machine elements, and stress analysis. Selected course topics are assigned as projects.
Prerequisite: ENTC 4330.

ENTC 43415 Project Justification and Management
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Foundations of engineering economy, cash flow and equivalence, and project justification. Introduction to project management, planning, scheduling, and control, use of project management software, GANTT charts, PERT charts, critical path. Students prepare proposals, including specifications, timelines, schedule, and budget, for projects to be implemented in ENTC 4350 - Capstone Projects .
Co-requisite: SMTE 0099.

ENTC 4446 Control Systems I
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
Introduction to control systems; open and feedback; Laplace transform and frequency response; control valves; electric motors; P, PI, and PID modes of control; analog and digital controllers Process characteristics; analysis of control systems; gain and phase margin; stability.
Prerequisite: ENTC 2414.

ENTC 4490 Selected Topics
1-4 Semester Credit Hours (1-4 Lecture Hours)
Subject material variable. May be repeated for different topics.

ENTC 4496 Directed Independent Study
1-4 Semester Credit Hours
Requires a formal proposal of study to be completed in advance of registration, approval of supervising faculty and chairperson.

English (ENGL)

ENGL 0099 Integrated Reading and Writing Non-Course Based Development
0 Semester Credit Hours
ENGL 0099 is designed to develop student’s critical reading and academic writing skills on an individualized basis through tutoring. The course fulfills TSI requirements for reading and writing. TSI compliance staff will approve each student for this course. Approval is based on test score and/or by academic standing.

ENGL 0399 Integrated Reading and Writing
3 Semester Credit Hours (3 Lecture Hours)
A portfolio-based course with required tutoring (lab) time focused on the writing and reading processes, including strategies for invention, revision, and editing, and techniques of active reading, such as analysis, inference, summary, and evaluating texts. Students will enter ENGL 0399 through Texas Success Initiative (TSI) mandated remediation. (Not counted toward graduation)

ENGL 1301 Writing and Rhetoric I
3 Semester Credit Hours (3 Lecture Hours)
English 1301 introduces students to writing studies, rhetoric, academic research, and information literacy. Students will critically read and reflect on threshold concepts in writing studies. They will practice recursive writing and research processes for various situations. Sections will be offered both online and in person each semester.
TCCNS: ENGL 1301

ENGL 1302 Writing and Rhetoric II
3 Semester Credit Hours (3 Lecture Hours)
English 1302 builds on the foundation in writing studies, rhetoric, academic research, and information literacy introduced in ENGL 1301. Students will read, apply, and reflect on the current research and scholarship in writing studies and rhetoric. Students will practice transferring, deepening, and extending their ability to use writing into discipline-specific, workplace, and civic contexts. Sections will be offered both online and in person each semester.
Prerequisite: ENGL 1301.
TCCNS: ENGL 1302

ENGL 2303 Introduction to Writing Studies
3 Semester Credit Hours (3 Lecture Hours)
This course will review current scholarship on writing studies, including threshold concepts, activity theory, and genre studies. It will consider various perspectives on the uses of writing to provide students with an intellectual and practical understanding of writing. This course provides a starting point for the more specific studies of writing that occur in other writing studies courses.
ENGL 2316 Literature and Culture
3 Semester Credit Hours (3 Lecture Hours)
Introduction to literatures that raise aesthetic, cultural, social, and/or political issues that affect and reflect the human condition across regions, cultures, and nations. Sample topics: Crossing Borders, The City in Literature, Islands and Islanders, Science and Fiction.
TCCNS: ENGL 2331

ENGL 2332 Literature of the Western World: From the Classics to the Renaissance
3 Semester Credit Hours (3 Lecture Hours)
Study of important literary texts from the Ancient World to the Renaissance.
TCCNS: ENGL 2332

ENGL 2333 Literature of the Western World: From the Enlightenment to the Present
3 Semester Credit Hours (3 Lecture Hours)
Study of important literary texts from the Enlightenment to the present.
TCCNS: ENGL 2333

ENGL 2360 Language and Gender
3 Semester Credit Hours (3 Lecture Hours)
In this class, we explore how language reflects, and is reflected upon, one facet of our identities: gender. We will explore the complex relationships between gender and aspects of language such as conversation, narrative, pronunciation, grammar, and pragmatic norms. We will also discuss the intersection of gender and other social factors, such as race or culture, as manifested in the language use. Students will also have an opportunity to discuss how gender is represented in the media and online, as well as how gender is situated in institutional contexts, such as school, work, and law. There is no prior knowledge of linguistics or social theory required for this class. Course activities include lectures, class discussions, in-class article presentation, language observations, hands-on data analysis, and a final project.

ENGL 2370 Introduction to Literary Studies
3 Semester Credit Hours
An introduction to literary analysis and scholarship for the intermediate writer. Emphasis placed on genres of literature, literary research, and expository and analytical composition. Familiarizes students with the various disciplines and related conversations within English Studies. Should be taken by sophomore-level English majors in the Literary Studies emphasis, and by Literary Studies and Creative Writing minors.
Prerequisite: ENGL 1302.

ENGL 2371 Exploring Social Media
3 Semester Credit Hours (3 Lecture Hours)
In this course we will examine and discuss current issues related to social media within a rhetorical framework. We will use different social media platforms to share and discuss in order to provide hands-on experience in these environments. Social media will be explored at the micro level as students will review their online social media presence to better understand how readers view them online. From the macro level we will identify current topics that affect the design and use of social media platforms and applications.

ENGL 3167 English as a Second/Foreign Language Tutoring
1 Semester Credit Hour
Students pursuing the Advanced TESOL Certificate will supplement ENGL 3367 (TESOL Seminar: Methods) with practical experience tutoring English learners. Students will write reflectively about those experiences. As needed, students will undergo site-specific training.
Co-requisite: ENGL 3367.

ENGL 3301 Technical and Professional Writing
3 Semester Credit Hours
A course designed to help students gain practical experience in finding and interpreting information and writing reports and documents for specialized audiences in the technical and professional world. ENGL 3301 will be held in a computer-assisted classroom.

ENGL 3302 Techniques of Creative Writing
3 Semester Credit Hours (3 Lecture Hours)
Introduces students to the theoretical knowledge and practical experience used in creative writing. Focuses on poetry, creative nonfiction, and short fiction. For all majors.

ENGL 3310 Technical and Professional Writing for Computer Science
3 Semester Credit Hours (3 Lecture Hours)
Designed specifically for computer science majors, this course focuses on developing students ability to (1) use writing to communicate effectively with a range of audiences about technology; (2) identify, analyze, and appropriately integrate relevant information in their writing; (3) make informed judgments about their uses of writing based on ACM's and IEEE's code of ethics; and (4) develop their ability to function effectively individually and as members of a team to establish goals, plan tasks, meet deadlines, manage risk, and produce deliverables.

ENGL 3321 Film and Literature
3 Semester Credit Hours (3 Lecture Hours)
3 sem. hrs. Studies the connections between the formal elements of literature and of film, with emphasis on theme, narrative style, and genre. By viewing films based on literary sources, students will analyze how literature is adapted into film as well as identify strategies to view and read critically. For all majors.

ENGL 3323 Young Adult Fiction
3 Semester Credit Hours (3 Lecture Hours)
Literary study of young adult literature through analysis, discussion, and interpretation. The course emphasizes literary issues connected with society, culture, history, and genre.

ENGL 3325 Interdisciplinary Approaches to Literature
3 Semester Credit Hours (3 Lecture Hours)
In recent decades, it has become common to study literature in light of other disciplinary perspectives—and to study other disciplines as they are depicted in literature. From these interdisciplinary approaches has emerged a distinct mode of analysis that examines texts within their broader social and cultural milieu. In this course students will earn to use cross-disciplinary methods to interpret literature and culture. Topics will vary, but may include Religion, Medicine, and American Literature, Disability Narratives in the Eighteenth Century, Trauma and the City in Twentieth-Century Literature.

ENGL 3330 Current Events and Literature
3 Semester Credit Hours (3 Lecture Hours)
This course examines literature in the context of current issues and events. Students will place literature in conversation with social, political, and cultural trends as a means of engaging with and understanding these trends and the debates associated with them. Using reading, writing, and discussion as modes of critical inquiry, students will discover the critical role that literature plays in representing, responding to, and shaping current events.

ENGL 3333 Technical and Professional Writing
3 Semester Credit Hours (3 Lecture Hours)
Introductory survey course covering phonetics, morphology, syntax, semantics, sociolinguistics, neurolinguistics, and language acquisition.
ENGL 3340 Grammar  
3 Semester Credit Hours (3 Lecture Hours)  
Provides a general descriptive overview of English grammar and provides a structural framework for analyzing English sentences.

ENGL 3341 British Literature before 1800  
3 Semester Credit Hours (3 Lecture Hours)  
Study of significant works of poetry, drama, and prose before 1800 with emphasis on historical context and the exploration of literary and cultural values through written texts.  
Prerequisite: (ENGL 2370) or (ENGL 3303) or (ENGL 2303).  
* May be taken concurrently.

ENGL 3345 British Literature since 1800  
3 Semester Credit Hours (3 Lecture Hours)  
Study of significant works of British poetry, drama, and prose since 1800 with emphasis on historical context and the exploration of literary and cultural values through written texts.  
Prerequisite: (ENGL 2370) or (ENGL 3303) or (ENGL 2303).  
* May be taken concurrently.

ENGL 3348 Drama  
3 Semester Credit Hours (3 Lecture Hours)  
A genre-oriented study of dramatic literature, using a wide range of texts. Variable content.

ENGL 3349 Poetry  
3 Semester Credit Hours (3 Lecture Hours)  
A genre-oriented study of poetry using a wide range of texts. Variable content.

ENGL 3354 American Literatures before 1900  
3 Semester Credit Hours (3 Lecture Hours)  
Study of significant works of American poetry, drama, and prose from the country’s pre-European beginnings to 1900 with emphasis on historical context and the exploration of literary and cultural values through written texts.  
Prerequisite: (ENGL 2370) or (ENGL 2303) or (ENGL 3303).  
* May be taken concurrently.

ENGL 3355 American Literatures since 1900  
3 Semester Credit Hours (3 Lecture Hours)  
Study of significant works of American poetry, drama, and prose from 1900 to the present with emphasis on historical context and the exploration of literary and cultural values through written texts.  
Prerequisite: (ENGL 2370) or (ENGL 2303) or (ENGL 3303).  
* May be taken concurrently.

ENGL 3360 Current Approaches to Composition and Literature  
3 Semester Credit Hours (3 Lecture Hours)  
Prepares prospective teachers to create developmentally appropriate learning environments and tasks that enable student success in writing and the study of literature in Language Arts and English courses. Prepares students to meet the increased writing and reading expectations in all subject areas, including their own writing.

ENGL 3361 Strategies and Genres of Advanced Writing  
3 Semester Credit Hours (3 Lecture Hours)  
Students will practice-writing in situated contexts (such as their majors, careers, and/or other professional interests) and across genres to develop more advanced and reflective writing strategies. By studying theories of writing; engaging in writing as a craft; and drafting, revising, and editing texts; students will refine and become more reflective in their writing processes.

ENGL 3362 Creative Writing Workshop: Survey and Practice of Genres  
3 Semester Credit Hours (3 Lecture Hours)  
Develops students’ skills as critics and writers of fiction, poetry, and creative nonfiction in a workshop setting. For all majors.

ENGL 3363 Foundations of Rhetoric  
3 Semester Credit Hours (3 Lecture Hours)  
This course will study the historical and theoretical development of rhetoric through the works of principal thinkers. Students will analyze rhetorical concepts in their relation to civic, cultural, political, and pedagogical developments and the construction of knowledge and will use rhetorical concepts to produce logical, ethical, and moral arguments.

ENGL 3364 Strategies of Writing Creative Nonfiction  
3 Semester Credit Hours (3 Lecture Hours)  
Explores the uses of creative nonfiction through reading and writing published works of experienced writers and scholars in the field and practicing a variety of creative nonfiction techniques and genres (e.g. literary journalism, memoir, and the personal narrative).

ENGL 3365 Second Language Acquisition  
3 Semester Credit Hours (3 Lecture Hours)  
This course is an introduction to second language acquisition. The course is designed to be accessible to students from a wide variety of backgrounds and no basic knowledge of the linguistic structure of English will be assumed. This course will address issues related to how second language is learned by both children and adults.

ENGL 3366 Language in Society  
3 Semester Credit Hours (3 Lecture Hours)  
An introduction to the study of language as a function of several societal variables. Introduces basic concepts of language such as linguistic varieties, dialect, speech communities, and linguistic attitudes.

ENGL 3367 TESOL Seminar  
3 Semester Credit Hours (3 Lecture Hours)  
This course presents an introduction to and a critique of current and traditional methodologies of teaching English to speakers of other languages, with emphasis on aural comprehension; speaking, reading, and writing skills; testing and assessment; and linguistic-cultural differences. This course is open to all majors, but is required for students seeking the Certificate in TESOL.  
Prerequisite: ENGL 3365.

ENGL 3369 Topics in Linguistics  
3 Semester Credit Hours (3 Lecture Hours)  
Exploration of topics such as second language acquisition, language assessment, history of English, and contrastive analysis. May be repeated when topics vary.

ENGL 3378 Document Design and Publishing  
3 Semester Credit Hours (3 Lecture Hours)  
Focuses on the integration of text and visual rhetoric, such as graphics, for all kinds of professional publications including technical documents, media, public relations pieces, and advertisements.

ENGL 3379 Writing for the Web  
3 Semester Credit Hours (3 Lecture Hours)  
Emphasizes practical concepts related to writing and communication on the internet and the World Wide Web. Attention is given to finding and analyzing information; analyzing and designing WWW sites and other digital, hypertextual environments; and analyzing and composing hypertext-hypermedia materials for digital, networked environments. For all majors.
ENGL 3380 Visual Rhetoric
3 Semester Credit Hours (3 Lecture Hours)
Focuses on the analysis, design, and production of visual representations and multi-modal texts that integrate visual elements.

ENGL 4123 Nonprofit Writing Project
1 Semester Credit Hour
Students will gain practical experience with a nonprofit agency by developing a significant project that meets an agency identified need. Students should take this course in the last semester of their nonprofit certificate program in conjunction with one of the following: ENGL 3378, ENGL 3379, ENGL 4322, or ENGL 4321. The students’ professor in the regular course will be the instructor of record for the projects course.

ENGL 4300 Technologies and Cultures of the Book
3 Semester Credit Hours (3 Lecture Hours)
Working with a range of print media, students will learn to analyze the interplay between the text’s content and its formal features. Students will build the skills to think and write analytically about the materiality of texts.

ENGL 4305 Major Authors
3 Semester Credit Hours (3 Lecture Hours)
This course studies the significant works of a major literary author. Texts are viewed through a variety of critical perspectives and placed in the context of the writer’s life and of the society, culture, and history of the times. May be repeated once for credit when authors vary.

ENGL 4320 Professional Writing Workshop
3 Semester Credit Hours (3 Lecture Hours)
This course is tailored for individual students’ writing and publishing projects in their disciplines.

ENGL 4321 Grants and Proposals
3 Semester Credit Hours (3 Lecture Hours)
This course will teach students the grant proposal writing process, including identifying sources of funding, conducting research to support funding applications, and tailoring each proposal to a specific funding agency. Students will receive experience writing actual proposals on behalf of local organizations and agencies.

ENGL 4322 Writing in the Nonprofit Agencies
3 Semester Credit Hours (3 Lecture Hours)
Focuses on the specific kinds of writing of professionals in the nonprofit world do, including internal communication in an agency, writing for the public, document creation, fund raising, board relations, and other relevant topics.

ENGL 4324 Editing & Style
3 Semester Credit Hours (3 Lecture Hours)
Practice in methods, tools, and principles of editing for nonfiction and technical publications. Emphasis on a rhetorical understanding of levels of editing, managing the editorial process, and grammar and style.

ENGL 4325 Writing Across Cultures and Contexts
3 Semester Credit Hours (3 Lecture Hours)
Through writing, students will study how groups perceive, understand, and communicate with and about each other. The course may focus on a specific type of writing (cross cultural expository writing, travel writing, cross cultural writing in industry), or on the linguistic and rhetorical practices of a cross-cultural community (latino/a rhetoric, African-American rhetorics, etc).

ENGL 4335 Creative Writing Studio: Development of Craft
3 Semester Credit Hours (3 Lecture Hours)
Develops students’ skills as critics and writers of fiction, poetry, and creative nonfiction in a studio setting. Guides students to focus on a major project in one genre with sustained practice of techniques and revision. Open to students of all levels, from the novice to the advanced. For all majors.

ENGL 4340 The Novel
3 Semester Credit Hours (3 Lecture Hours)

ENGL 4345 Rhetorics, Literacies, and Writing
3 Semester Credit Hours (3 Lecture Hours)
This course examines the history and major theories of rhetoric, literacy, and composition, and explores how they influence contemporary cultural productions.

ENGL 4350 Studies in Poetics: Theory, Form, and Practice
3 Semester Credit Hours (3 Lecture Hours)
Develops students’ theoretical knowledge of poetics and practical experience of writing in traditional forms, from the Anglo-American tradition to the culturally diverse movements and innovation of form. Focusing on works written by poets about poetry and poetics primarily from the 19th to the 21st centuries. For all majors.

ENGL 4351 Senior Capstone: Literature and Writing
3 Semester Credit Hours (3 Lecture Hours)
A study of literature in English for graduating seniors in the Literary Studies Emphasis. Emphasis is placed on genre, research, and analytical expository writing.
Prerequisite: ENGL 2370, 3303 or 2303.

ENGL 4352 Capstone in Writing Studies
3 Semester Credit Hours (3 Lecture Hours)
This course is the culminating experience for the Writing Studies emphasis in English. Students review, reflect on, integrate, and apply their learning from previous courses and experiences. Students create digital portfolios for career and publishing opportunities, emphasizing selection, revision, reflection, and presentation. In addition, students identify, evaluate, and annotate texts and resources to include in a curated digital collection/publication that will be available for students in future Writing Studies courses.

ENGL 4360 Gender, Sexuality and Literature
3 Semester Credit Hours (3 Lecture Hours)
This course introduces students to literature that explores issues of gender and sexuality. It focuses on relevant literary periods and conventions, as well as on the historical, social, and cultural contexts of artistic productions. Sample topics: women’s literature, queer literature, literature and masculinity.

ENGL 4361 Race and Ethnicity in Literature
3 Semester Credit Hours (3 Lecture Hours)
Topics focus on a variety of cross-cultural issues in historical and/or contemporary texts by Caribbean, British Indian, Native American, African American, Chicano/a, and/or other underrepresented authors.

ENGL 4362 Texts and Contexts
3 Semester Credit Hours (3 Lecture Hours)
Study of literary and cultural texts that raise issues of community and social relations, diversity, multiculturality, and/or globalization. Sample topics: Medicine and Religion in American Literature, Traveling Histories, the Global City, and Literary Regionalism in Transnational Context. May be repeated once for credit when topics vary.
ENGL 4370  Oral Interpretation of Children's Literature
3 Semester Credit Hours (3 Lecture Hours)
A study, primarily through the medium of performance, of various types
and forms of literature for children. Strongly oriented toward teaching
literature in the elementary school classroom. (Credit may not be given
for both this course or THEA 4323.)

ENGL 4380  Critical Approaches to Literature and Culture
3 Semester Credit Hours (3 Lecture Hours)
A study of selected perspectives and critical approaches to literature and
culture, including an examination of some of the theoretical assumptions
upon which they are based, as well as their implications for the way we
think about literature, human identity, and the power of language.
Prerequisite: ENGL 2370.

ENGL 4385  Studies in Creative Writing
3 Semester Credit Hours (3 Lecture Hours)
Students will focus on the craft of a specific genre or type of writing
through reading experts' advice, reading and analyzing examples
written by practitioners, and engaging in peer-response workshops with
classmates. Attention will be paid to publication opportunities available
for writers in that genre.

ENGL 4390  Topics in Literary Studies
3 Semester Credit Hours (3 Lecture Hours)
May be repeated when topics vary—see S.A.I.L. or advisor for further
information.

ENGL 4391  Topics in Writing Studies
3 Semester Credit Hours (3 Lecture Hours)
May be repeated when topics vary—see S.A.I.L. or advisor for further
information.

ENGL 4396  Directed Individual Study
1-3 Semester Credit Hours (1-3 Lecture Hours)
See College description.

ENGL 4398  Applied Experience
3 Semester Credit Hours (3 Lecture Hours)
See College description.

ENGL 4399  TESOL Practicum
3 Semester Credit Hours
Practical experience teaching English to second language learners.
Students will observe, plan, and teach ESL lessons. Instructional support
provides opportunities to discuss and reflect upon teaching experiences
and help students connect theory, methods, and practice. This course
enhances the TESOL Certification, but is not required for it. Cannot be
repeated for credit.

Environmental Science (ESCI)

ESCI 1401  Environmental Science I: Intro to Environmental Science
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Principles of the scientific method and critical thinking provide a
foundation for subsequent consideration of environmental issues
through a multidisciplinary approach. Laboratory exercises and local field
experiences reinforce concepts introduced in the lectures. Fall, Spring.
Co-requisite: SMTE 0096.
TCCNS: ENVR 1401

ESCI 1490  Selected Topics
1-4 Semester Credit Hours (1-4 Lecture Hours)
Subject materials variable. May be repeated for credit when topics are
significantly different. Faculty approval required. Offered on sufficient
demand.

ESCI 3202  Professional Skills
2 Semester Credit Hours (2 Lecture Hours)
Presentation and discussion of selected topics relating to the
professional skills of practicing environmental scientists including
literature searches, reviews, paper presentation, professional and career
opportunities, professional ethics. Fall, Spring.

ESCI 3351  Oceanography
3 Semester Credit Hours (3 Lecture Hours)
Methods and principles of oceanography. A survey of oceanography with
emphasis placed on the physical processes affecting water and water
masses of the world oceans. Fall (on sufficient demand), Spring.
Prerequisite: CHEM 1412, ESCI 1401 or GEOL 1403.

ESCI 3403  Introduction to Meteorology
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
This course is an introduction to meteorology and the dynamics
of planetary atmospheres. Emphasis on atmospheric accretion,
composition, evolution, structure, and dynamics. Lab exercises cover
basic measurement techniques, weather maps, and forecasting. Fall,
Spring (on sufficient demand).
Co-requisite: SMTE 0096.

ESCI 3443  Environmental Biology
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Historical, contemporary, and projected concerns of human activities on
biological aspects of ecosystem functioning.
Prerequisite: BIOL 1407.

ESCI 4130  Oil Spill Prevention and Response Lab
1 Semester Credit Hour (2 Lab Hours)
Practical techniques for control, containment, countermeasures, removal,
and disposal of oil spills in an environmentally safe manner. Field
exercises will include use of boats, booms and skimmers. Fall, Spring,
Summer (on sufficient demand).
Prerequisite: ESCI 4230
* May be taken concurrently.
Co-requisite: SMTE 0096.

ESCI 4170  Hazardous Waste Operations and Emergency Response Lab
1 Semester Credit Hour (2 Lab Hours)
Practical techniques for handling, reducing, and disposing of hazardous
wastes in an environmentally safe manner. Lab exercises in use of
personal protective gear and safe handling of hazardous substances. Fall,
Spring, Summer (on sufficient demand).
Prerequisite: ESCI 4270
* May be taken concurrently.
Co-requisite: SMTE 0096.

ESCI 4201  Scientific Diving Techniques
2 Semester Credit Hours (2 Lecture Hours)
Theory, science, and art of underwater diving technology and its
application to scientific objectives. Course helps fulfill some training
requirements of the Texas A&M University-Corpus Christi Guidelines for
scientific diving.

ESCI 4202  Issues in Environmental Science
2 Semester Credit Hours (2 Lecture Hours)
Exploration of major issues in environmental science posing past, present
and future challenges. Selected readings, student presentations and
papers.
Prerequisite: ESCI 1401.
ESCI 4230 Oil Spill Prevention and Response Theory  
2 Semester Credit Hours (2 Lecture Hours)  
Historical perspective of laws and regulations governing oil spill prevention and response. Current methods for control, containment, countermeasures, removal, and disposal of oil spills in an environmentally safe manner. Fall, Spring, Summer (on sufficient demand).  

ESCI 4270 Hazardous Waste Operations and Emergency Response Theory  
2 Semester Credit Hours (2 Lecture Hours)  
Study of the laws and regulations of hazardous waste management from an historical perspective followed by current techniques for handling, reducing, and disposing of hazardous wastes in an environmentally safe manner. Fall, Spring, Summer (on sufficient demand).  

ESCI 4301 Environmental Regulations  
3 Semester Credit Hours (3 Lecture Hours)  
A survey of state and federal environmental laws and regulations, and their impact on the environment. Case studies of environmental issues and legislated regulations.  
Prerequisite: POLS 2305 and 2306.  

ESCI 4320 Environmental Health  
3 Semester Credit Hours (3 Lecture Hours)  
Overview of the toxicology and epidemiology of pollutants in the air, water and soil. Associations of environmental exposure with adverse health effects such as cancer, cardiovascular disease, and reproductive outcomes; also chemical markers and symptoms of disease. Pollutants studied include lead, asbestos, radiation, radon, noise, metals, halogenated hydrocarbons, aromatic hydrocarbons, silica, indoor air quality, formaldehyde, and outdoor air pollutants. Offered on sufficient demand.  

ESCI 4321 Introduction to Soil and Groundwater Restoration  
3 Semester Credit Hours (3 Lecture Hours)  
Introduction to methods for restoring contaminated soil and groundwater by examining the factors and processes influencing the efficacy of remediation systems. An emphasis will be placed on the scientific principles upon which soil and groundwater remediation is based. Cross listed with GEOL 4321.  

ESCI 4322 Introduction to Industrial Hygiene  
3 Semester Credit Hours (3 Lecture Hours)  
Introduction to health protection practices in the industrial environment. Health basis for OSHA laws, regulations. Sampling and testing procedures.  

ESCI 4324 Introduction to Industrial Toxicology  
3 Semester Credit Hours (3 Lecture Hours)  
Review of human physiology, general concepts of toxicology: dose-response relationship, interactions between the host and the agents, risk assessment, to provide an introductory understanding of toxicology related to the chemicals in the workplace.  

ESCI 4330 Wetlands and Water Quality  
3 Semester Credit Hours (3 Lecture Hours)  
Introduction to wetland ecosystems (natural, constructed and restored) with an emphasis on the role of wetlands in water quality. Topics include wetland systems, their history and role in society, relationships between biology, geology, ecology, hydrology and chemistry in wetland environments. Offered on sufficient demand.  
Prerequisite: CHEM 1412 and BIOL 1406.  

ESCI 4335 Climate and Climate Variability  
3 Semester Credit Hours (3 Lecture Hours)  
Course intended to guide environmental science majors in developing a conceptual understanding of Earth's global climate and its variability. Review of past climates, present mean state of the climate system, climate variability from seasonal to multidecadal time scales, and climate change. Special attention given to climates of the Gulf of Mexico, Caribbean Sea and surrounding land regions. Plausible climate-change scenarios, as well as mitigation and adaptation strategies are also discussed. Cross listed with ATSC 4335. Spring.  
Prerequisite: (ESCI 3351 or 3403) and (PHYS 1401 or 2425).  

ESCI 4340 Severe Weather  
3 Semester Credit Hours (3 Lecture Hours)  
Introduction to mesoscale weather systems including thunderstorms, squall lines and hurricanes, as well as the mechanisms of tornado and lighting. Methods of observing, analyzing, and predicting these severe weather systems with the interpretation of satellite and radar images will also be introduced in this class.  
Prerequisite: ESCI 3403.  

ESCI 4344 Air Pollution and the Clean Air Act  
3 Semester Credit Hours (3 Lecture Hours)  
Introduction to the chemistry and physics of air pollution and regulations. Topics include photochemistry, acid rain, air pollution meteorology and dispersion, global change, and the Clean Air Act.  

ESCI 4360 Physical Oceanography  
3 Semester Credit Hours (3 Lecture Hours)  
Physical description of the sea, physical properties of seawater and sea ice, methods and measurements, wind-driven ocean circulation, thermohaline ocean circulation, boundary processes, waves, tides and mixing. Seasonal and interannual variability such as El Niño/Southern Oscillation phenomena. Implications for marine biology, marine geology, human impacts, other topics. Fall.  
Prerequisite: PHYS 1401 or 2425.  

ESCI 4365 Occupational Safety and Accident Prevention  
3 Semester Credit Hours (3 Lecture Hours)  
This course provides students with fundamental knowledge of regulatory requirements on occupational safety and practical techniques on accident prevention in the work environment. Offered on sufficient demand.  

ESCI 4408 Environmental Microbiology  
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)  
Relationships between microorganisms and their biotic and abiotic environment. Current topics such as air quality (i.e., molds), water quality and bioremediation will be discussed. Laboratory will include techniques for sampling from soil, air and water. Offered on sufficient demand.  
Prerequisite: BIOL 2421.  
Co-requisite: SMTE 0096.  

ESCI 4480 Environmental Site Assessment  
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)  
Interdisciplinary application of environmental regulations, risk assessment to specific examples. Knowledge of United States environmental regulations assumed; ESCI 4301 Environmental Regulations recommended.  

ESCI 4490 Selected Topics  
4 Semester Credit Hours (4 Lecture Hours, 4 Lab Hours)  
Subject materials variable. May be repeated for credit when topics are significantly different. Faculty approval required. Offered on sufficient demand.
Finance (FINA)

FINA 1307 Personal Finance
3 Semester Credit Hours (3 Lecture Hours)
Covers the foundations of financial planning, managing basic assets, managing credit, managing insurance needs, managing investments, and retirement and estate planning. This course is designed for nonbusiness as well as business majors to give them a basic understanding of the aspects of personal financial planning.
Prerequisite: ACCT 2301, MATH 1325 and BUSI 0011.

FINA 3310 Financial Management
3 Semester Credit Hours (3 Lecture Hours)
A survey of financial management issues emphasizing planning and decision making. Specific topics covered include discounted cash flow analysis, stock and bond valuation, financial intermediation, organizing, raising and managing capital, capital investment, risk analysis, and financial statement analysis.
Prerequisite: ECON 2301 and 2302.

FINA 3312 Financial Markets and Institutions
3 Semester Credit Hours (3 Lecture Hours)
Course coverage includes an analysis of financial markets and institutions; regulation, money market operations, global impact of central banking principles and monetary policy, and determinants of interest rates with financial asset pricing.
Prerequisite: (ECON 2301 and 2302).

FINA 3320 Intermediate Corporate Finance
3 Semester Credit Hours (3 Lecture Hours)
An in-depth study of financial planning and management with emphasis on capital structure and cost of capital, capital budgeting, and other topics in corporate financial management. The course serves as a framework for understanding a broad range of corporate financial decisions.
Prerequisite: (FINA 3310).

FINA 3331 Investments
3 Semester Credit Hours (3 Lecture Hours)
Framework of financial markets, valuation of the firm, security analysis, investment equity versus debt, efficiency of market evaluation, diversification efforts, investment goals, and portfolio selection.
Prerequisite: (ACCT 2301 and MATH 1325).

FINA 3335 Financial Modeling
3 Semester Credit Hours (3 Lecture Hours)
This course will cover the use of spreadsheet analysis in financial applications and introduce students to spreadsheet tools and functions to conduct business and personal financial analysis, valuation of bonds and stocks, and financial forecasting.

FINA 3350 Cash Management
3 Semester Credit Hours (3 Lecture Hours)
An examination of the principles and methods of cash and liquidity management with particular attention to funds transfer procedures and requirements. Specific topics include the role of cash management in corporate financial management, a review of relevant accounting concepts, the structure of the financial environment, the system of disbursements and collections, accounts receivable management, accounts payable management, information technology and electronic commerce, cash flow forecasting, short-term investing and borrowing, financial risk management, international treasury management, and management of relationships.
Prerequisite: (FINA 3310).

FINA 3351 Insurance Principles
3 Semester Credit Hours (3 Lecture Hours)
Fundamentals of risk management as practiced in the commercial life, health, property, and casualty insurance industries.

FINA 3354 Real Estate Principles
3 Semester Credit Hours (3 Lecture Hours)
Fundamental real estate covering the basic principles of real estate, providing the background necessary for advanced study in specialized real estate courses.

FINA 3355 Employee Benefits and Retirement Planning
3 Semester Credit Hours (3 Lecture Hours)
This course examines the financial aspects of retirement planning as well as employee benefit planning including group insurance plans and the characteristics of the various types of employee benefit plans: life insurance, medical expense, disability, and retirement income.

FINA 4310 Advanced Financial Management
3 Semester Credit Hours (3 Lecture Hours)
Application of financial management tools, examination and interpretation of financial statements, and integration of financial policy and structure on overall management of the enterprise. Students will present cases on the material covered in this and earlier courses to demonstrate they are able to collect and analyze data and present recommendations.
Prerequisite: (FINA 3320).

FINA 4315 International Finance
3 Semester Credit Hours (3 Lecture Hours)
A study of the institutions and relationships of the international financial system as it relates to the balance of payments, foreign exchange risk, arbitrage and the Eurocurrency market. The emphasis is on methods of arbitrage, forecasting exchange rates, and hedging against foreign exchange risk.
Prerequisite: (ECON 2301, 2302 and FINA 3310).

FINA 4321 Financial Institutions Management
3 Semester Credit Hours (3 Lecture Hours)
A study of major financial institutions and the markets in which they operate, with emphasis on financial decision making and risk management. Topics include financial intermediation theory; measurement and management of interest rate risk, credit risk, off-balance-sheet risk, foreign exchange risk, country risk, and liquidity risk; capital adequacy; and product/market diversification.
Prerequisite: (FINA 3310 and ECON 2302).
FINA 4330 Introduction to Derivative Securities
3 Semester Credit Hours (3 Lecture Hours)
Course coverage includes an analysis of financial derivative contracts. The class includes options, futures and forward contracts; in particular commodity trading and hedging strategies will be covered in detail. Swaps and Interest Rate Options will be included in the presentation if time permits.
Prerequisite: (MATH 1324).

FINA 4332 Security Analysis and Portfolio Management
3 Semester Credit Hours (3 Lecture Hours)
Evaluation of investment securities of both private and public institutions through external analysis of financial statements and economic conditions, portfolio selection, expected return and risk selection, and conditions of market efficiency.
Prerequisite: (FINA 3310, 3331 and ORMS 3310).

FINA 4334 Financial Statement Analysis
3 Semester Credit Hours (3 Lecture Hours)
A detailed study of financial reporting with emphasis upon practical interpretations. Attention will be given to financial statement analysis using financial accounting information and its finance implications. Assignments may differ depending on major.
Prerequisite: (ACCT 2301, 2302 and FINA 3310).

FINA 4390 Current Topics in Finance
3 Semester Credit Hours (3 Lecture Hours)
Selected topics for special study related to finance functions, processes or issues. May be repeated for credit when topics vary.

FINA 4396 Directed Individual Study
1-3 Semester Credit Hours
Individual supervised study and completion of a final report.

FINA 4398 Internship in Finance
3 Semester Credit Hours
Supervised full-time or part-time, off-campus training in business or government finance office. Oral and written reports required.

Foreign Language (LANG)

LANG 1311 Beginning Language Instruction I
3 Semester Credit Hours (3 Lecture Hours)
This course offers beginning instruction in foreign languages not taught on a regular basis. It is an introduction to listening, speaking, reading and writing skills within a cultural framework. Languages will vary but may include Korean, Hindi, or Russian. For students without previous knowledge of the language. Can be repeated once for up to 6 hours credit for two separate languages.
TCCNS: LANG 1311

LANG 1312 Beginning Language Instruction II
3 Semester Credit Hours (3 Lecture Hours)
This course is a continuation of LANG 1311 Beginning Language Instruction I. Continued practice in listening, speaking, reading and writing skills within a cultural framework. Languages will vary but may include Korean, Hindi, or Russian. LANG 1311 or equivalent in the same language or instructor permission required. Can be repeated once for up to 6 hours credit for two separate languages.
Prerequisite: LANG 1311.
TCCNS: LANG 1312

French (FREN)

FREN 1311 French I
3 Semester Credit Hours (3 Lecture Hours)
Introduction to listening, speaking, reading, and writing skills within a French cultural framework. For students without previous knowledge of the language. (Language laboratory required. One hour per week minimum.) A lab fee is required for this course.

FREN 1312 French II
3 Semester Credit Hours (3 Lecture Hours)
Continued practice in listening, speaking, reading and writing skills within a French cultural framework. French 1311 or equivalent required. (Language laboratory required. One hour per week minimum.) A lab fee is required for this course.

FREN 2311 French III
3 Semester Credit Hours (3 Lecture Hours)
Reviews French grammar through oral and written practice with emphasis on language proficiency. Utilizes cultural readings in French to expand vocabulary and knowledge of the French culture.
TCCNS: FREN 2311

FREN 2312 French IV
3 Semester Credit Hours (3 Lecture Hours)
Continued advanced development and review of all language skills within a French framework with an emphasis in the linguistic perspective.
Prerequisite: FREN 2311.
TCCNS: FREN 2312

FREN 3306 French Lit 1800 to Present
3 Semester Credit Hours (3 Lecture Hours)
This course will deal with a short story, a novel, a film script and a play written by three of the big names from the nineteenth and twentieth centuries, two men and a woman. Each work deals in its way with the relationships between men and women, loneliness and alienation, faith and other modern considerations. (Teleconference course)

General Business (BUSI)

BUSI 0010 Orientation to Online Learning
0 Semester Credit Hours
This non-credit, no-cost, self-paced web-based course introduces new online MBA and new online Master of Accountancy students to successful online learning practices and the Blackboard Learn environment.

BUSI 0011 Cob Student Code of Ethics and Plagiarism
0 Semester Credit Hours
The emphasis of this non-credit, web-based course is educational. It covers the provisions in the COB Student Code of Ethics and covers information related to the issue of plagiarism. It prepares business majors to successfully complete an online test to meet a requirement for graduation.

BUSI 0088 Graduation Requirements Review
0 Semester Credit Hours
The purpose of this non-credit, web-based course is educational. This no cost course provides important information to prepare students for a successful progression toward graduation.
Prerequisite: MGMT 3312.
Co-requisite: MGMT 3310.
Bcsi 1310 Introduction to the Business Environment
3 Semester Credit Hours (3 Lecture Hours)
An overview of the nature of business and its environment. Emphasizes the dynamic role of business in everyday life and its importance to society. Not open to Juniors or Seniors majoring in business.
Tccns: Busi 1301

Busi 4310 International Business
3 Semester Credit Hours (3 Lecture Hours)
An understanding of international business including its importance in today’s world, the evolution of international institutions and the monetary system, the differences and similarities among nations and cultures, and the special characteristics of the business functions in a global setting.

Geographic Information Science (Gisc)
Gisc 1301 Physical Geography
3 Semester Credit Hours (3 Lecture Hours)
The goal of this course is to encourage you to think geographically, examining the interactions between physical systems and human activities. Introduction to topics covered include elements of Physical Geography (studies of atmosphere, ocean and land surface environments), Geographic Information Systems (computer systems that capture, analysis, and display of geographic information), and human environmental interactions. Cross listed with Geog 1301.
Tccns: Geog 1301

Gisc 1336 Digital Drafting and Design
3 Semester Credit Hours (2 Lecture Hours, 2 Lab Hours)
An introduction to graphic and drafting principles and practices in surveying and mapping science. This course includes the development of the basic drafting skills needed to produce surveying plats and graphical presentations. The elements of descriptive geometry are addressed. A major component of the course is an introduction to the fundamentals of computer-aided drafting and design (CADD). Spring.

Gisc 1470 Geospatial Systems I
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
Introduction to geographic information systems (GIS) and its theoretical foundations. Topics covered include vector and raster data models, acquisition and manipulation of data, cartography, current topics, data quality, and basic spatial analysis. Principles and uses of GIS software also covered. Fall and Spring.

Gisc 2250 Field Camp I
2 Semester Credit Hours (6 Lab Hours)
A one-week field camp with intensive field data collection and computations. Traversing between control points. Digital contour data and leveling control. Detail spatial data by total station. Construction set out using total station and steel band. Taken during the sophomore or junior year. Spring.
Prerequisite: Gisc 2470.

Gisc 2301 Geospatial Systems II
3 Semester Credit Hours (2 Lecture Hours, 3 Lab Hours)
An intermediate level course in the concepts and applications of geographic information systems (GIS). Topics covered include spatial database design and management, raster analysis, terrain mapping, analysis, and applications. Spring.
Prerequisite: (Gisc 1470).

Gisc 2302 Geospatial Systems III
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Advanced course in the design of spatial database management systems. Topics covered include database design, database management systems, spatial data models, and GIS application development. Spring.
Prerequisite: Gisc 2301.

Gisc 2303 Geospatial Systems IV
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Advanced course in the design of spatial database management systems. Topics covered include database design, database management systems, spatial data models, and GIS application development. Spring.
Prerequisite: Gisc 2301.

Gisc 2438 Geospatial Software Systems I
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Introduction to the design and development of GIS software to solve spatial problems. Topics covered include programming basics, design and implementation common tasks in GIS applications. Fall.
Prerequisite: Gisc 1470 and Cosc 1435 or Cosc 1330.

Gisc 2470 Geospatial Plane Measurement I
4 Semester Credit Hours (2 Lecture Hours, 3 Lab Hours)
Historical introduction to field measurement and mapping; distance measurement using electronic distance meters; calibration and reduction. Leveling instruments; principles, construction, testing and adjustment; ancillary equipment. Optical and electronic theodolites. Traverse computations and adjustment. Coordinate systems. Map projections. Fall.
Prerequisite: Math 1316 or 2413.

Gisc 3300 Geospatial Mathematical Techniques
3 Semester Credit Hours (3 Lecture Hours)
Characteristics of geographic/spatial information; overview of relevant sections of numbers, algebra and geometry, plane and spherical trigonometry, matrices, determinants and vectors, curves and surfaces, integral and differential calculus, partial derivatives, with an emphasis on geospatial applications. Concepts of geospatial coordinate systems and geospatial coordinate transformations; overview of spatial statistics and best-fit solutions with geospatial applications.
Prerequisite: Math 2413 and 3342.

Gisc 3325 Geodetic Science
3 Semester Credit Hours (2 Lecture Hours, 2 Lab Hours)
Prerequisite: Gisc 2470.

Gisc 3412 Geospatial Plane Measurement II
4 Semester Credit Hours (2 Lecture Hours, 3 Lab Hours)
Principles and reduction of observations and errors in spatial measurement. Techniques of horizontal and vertical angle measurement for precise positioning. Trigonometric heighting and vertical staff tacheometry. Setting out of structures. Design and computation of horizontal and vertical curves. Spring.
Prerequisite: (Gisc 2470 and 1336).
* May be taken concurrently.

Gisc 3420 Geospatial Software Systems II
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Advanced programming course focusing on the design and implementation of GIS scripts and GIS web applications. Topics covered include GIS web applications, web mashups, GIS scripts, GIS tool creation, and advanced user interface design and implementation. Spring.
Prerequisite: Gisc 2438.

Gisc 3421 Visualization for GIS
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
Basic elements of thematic cartography, cartographic theory, and cartographic projections. Integration of cartographic principles with GIS visualization. Principles of map design with GIS data. Spring.
Prerequisite: Gisc 2301.
GISC 4180 Geospatial Systems Internship
1 Semester Credit Hour (1 Lecture Hour)
Internship education requires work with approved Geospatial Systems related industry employer. Students provide weekly written reports and final presentation to program at the end of internship. Must have completed 60 semester hours before attempting. Fall, Spring, and Summer.

GISC 4305 Legal Aspects of Spatial Information
3 Semester Credit Hours (3 Lecture Hours)
Legal ownership of spatial data and information collected in the public sector. Public access to large digital databases. Copyright law as applied to spatial data. Legal issues related to property boundaries, statutory boundaries, voter district boundaries, and jurisdictional boundaries. Government fees and charges for access to spatial data. Social and economic value of spatial data. Spring.
Prerequisite: GISC 2470.

GISC 4315 Satellite Positioning
3 Semester Credit Hours (2 Lecture Hours, 2 Lab Hours)
Prerequisite: GISC 2470 and MATH 2413.

GISC 4318 Cadastral Systems
3 Semester Credit Hours (3 Lecture Hours)
Land ownership recording systems used in Texas and U.S. Investigation and research for artificial and natural boundaries. Title searches at the county courthouse, title plants, and other sources for cadastral research. Riparian and littoral boundaries. Boundary marking and preparation of cadastral plans. Metes and bounds descriptions. Writing field notes. Urban and rural cadastral issues. Use of coordinate systems in cadastral mapping. Fall.
Prerequisite: GISC 2470.

GISC 4320 Hydrography
3 Semester Credit Hours (2 Lecture Hours, 2 Lab Hours)
Introduction to offshore and inshore hydrographic mapping. Tidal datums and their computation. Review of hydrographic and nautical charts. Electronic position finding and bathymetric data collection. Echo sounding, side scan sonar. Seafloor mapping and underwater locating. Beach (combined land and hydrographic) mapping. Spring even years.
Prerequisite: GISC 2470 and MATH 2413.

GISC 4326 Geomatics Professional Practice
3 Semester Credit Hours (3 Lecture Hours)
An intensive one-week summer course presented by practicing geomatics professionals covering many of the aspects of operating a professional surveying practice in the State of Texas. Topics cover surveyor responsibility and liability, the surveyor in court, standards of practice, surveying mathematics, Texas coordinate system, celestial observations, and project control. Spring.
Prerequisite: GISC 2250.

GISC 4335 Geospatial Systems III
3 Semester Credit Hours (2 Lecture Hours, 2 Lab Hours)
Advanced spatial analysis and modeling in GIS. Topics covered include exploratory analysis of spatial data, network analysis, spatial point patterns, area objects and spatial autocorrelation, and spatial interpolation. Also covers new approaches to spatial analysis. Fall.
Prerequisite: GISC 2301 and MATH 3342.

GISC 4340 Geospatial Computations and Adjustment
3 Semester Credit Hours (3 Lecture Hours)
Prerequisite: GISC 2470, MATH 3342 and GISC 3300.

GISC 4350 Field Camp II
3 Semester Credit Hours (6 Lab Hours)
A one-week field camp undertaking projects in cadastral, engineering, hydrographic, and geodetic positioning. Reduction of digital field data to produce final plans and reports. Taken during the senior year. Spring.
Prerequisite: GISC 3412, 4318 and 2250.

GISC 4351 Geospatial Systems Project
3 Semester Credit Hours
This course allows students to employ knowledge attained in other courses to create a project to spatially analyze information of interest to you and your field of study. Students will either undertake a GIS project to manage, analyze, and visualize spatial data, or a survey project in cadastral, topographic, engineering, hydrographic, or geodetic positioning survey. Spring. Students who enroll in the project course will need permission from the instructor.
Prerequisite: GISC 4350 or (GISC 4321 and 4335).

GISC 4371 History of Land Ownership
3 Semester Credit Hours (3 Lecture Hours)
This course prepares students by providing proper knowledge of how land transferred throughout history and techniques for researching land ownership in the present. Students receive an overview of legal aspects and other topics relative to land issues applicable for Land Surveyors, Civil Engineers, and GIS professionals, among others. Spring.
Prerequisite: GISC 3412.

GISC 4431 Remote Sensing and Photogrammetry
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
Provides the foundations to interpret, process, and apply remotely sensed data acquired by satellites and sub-orbital platforms (aircraft, UAVs) for mapping and analysis of our natural and built environment. Principles of electromagnetic energy-matter interaction, remote sensing systems and data characteristics, digital image processing, and information extraction methods will be covered. Included is treatment of: aerial photogrammetry; multispectral, thermal, and hyperspectral sensing; earth observation satellites; radar and lidar; emergent topics. Emphasis will be on their use for geospatial and environmental applications. Fall.
Prerequisite: (PHYS 2425, MATH 3342 and GISC 3300) or (MEEN 3310 and PHYS 2425).

GISC 4590 Selected Topics
1-5 Semester Credit Hours (1-5 Lecture Hours)
May be repeated for credit depending on topic. Variable content.

GISC 4596 Directed Independent Study
1-5 Semester Credit Hours
See College description. Offered on request. May be repeated for credit.
GISC 4690 Co-operative Education
1 Semester Credit Hour (1 Lecture Hour)
Co-op education allows students to take time off their full-time studies to gain valuable experience-based learning with employers willing to put on students for a semester (14 weeks), six months, or over the summer. The Co-op program allows students to maintain their full-time status as a student (continue health insurance coverage with parents, not effect student loan repayment, access to college activities, etc.) while undertaking work in their field of interest. The Co-op program is a partnership between the employer, the student, and the university.

Geography (GEOG)

GEOG 1300 World Geography
3 Semester Credit Hours (3 Lecture Hours)
This is a survey course of the major regions of the world. The significant physical and cultural aspects of each region will be covered.
TCCNS: GEOG 1303

GEOG 3331 Geography of North America
3 Semester Credit Hours (3 Lecture Hours)
This course introduces the five themes in geography and uses these themes to analyze the relationships between the physical and cultural aspects of the United States. The textbook information will be supplemented with satellite images and visual materials to enhance the learning experience of the student.

Geology (GEOL)

GEOL 1303 Essentials of Geology
3 Semester Credit Hours (3 Lecture Hours)
One-semester introductory Earth science course for students majoring in a non-science subject area. Covers basic geologic material and concepts, such as minerals, rocks, the rock cycle, and plate tectonics theory. Origin, composition, and evolution of our planet, as well as the importance of geology in everyday life, including geologic resources, global change, earthquakes, and volcanism are examined. This course is not recommended for students majoring in Geology or Environmental Sciences. Course counts toward the natural science component of the Core Curriculum Program.
TCCNS: GEOL 1303

GEOL 1403 Physical Geology
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Introduction to the origin, classification, and composition of Earth materials. Study of internal and surface processes which shape and modify Earth. Laboratory studies of minerals and rocks, as well as topographic maps, geologic maps and geologic cross-sections.
Co-requisite: SMTE 0094.
TCCNS: GEOL 1403

GEOL 1404 Historical Geology
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Introduction to the origin and evolution of Earth and other planets. Changes in the form and distribution of Earth's continents and oceans, and succession of plants and animals through geologic time. Laboratory studies of fossils, geological maps, and the interpretation of ancient environments of rock formation.
Prerequisite: GEOL 1403 or 1303.
Co-requisite: SMTE 0094.
TCCNS: GEOL 1404

GEOL 2102 Undergraduate Seminar in Geology-Careers in the Geosciences
1 Semester Credit Hour (1 Lecture Hour)
Introductory level seminar featuring diverse topics and speakers. Focus on careers in the geosciences as well as on how to successfully plan a college career. In-house as well as external speakers. May not be repeated for credit but attendance in subsequent semesters is encouraged.

GEOL 2103 Undergraduate Seminar in Geology-Research in the Geosciences
1 Semester Credit Hour (1 Lecture Hour)
Introductory level seminar featuring diverse topics and speakers. Focus on current geologic research. In-house as well as external speakers. May not be repeated for credit but attendance in subsequent semesters is highly encouraged. Credit/no credit

GEOL 2222 Karst Geology and Paleoclimatology
2 Semester Credit Hours (1 Lecture Hour)
This course describes the different types of caves and karst rocks, the water rock interactions in carbonate rock systems, and it explains cave formation via hydrological and geochemical processes. It also deals with how speleothem proxies such as oxygen and carbon stable isotope, trace elements, carbonate petrography are used to decipher past changes in climate.

GEOL 2490 Selected Topics
1-4 Semester Credit Hours (1-4 Lecture Hours, 6 Lab Hours)
May be repeated for credit if topics are significantly different. Subject material variable. Faculty approval required.

GEOL 3326 Introduction to Geological Field Methods
3 Semester Credit Hours (2 Lecture Hours, 3 Lab Hours)
Introduction to the basic techniques of geological fieldwork. Note taking in the field, proper use of geological field equipment, measurement and description of rock sections by several methods and degrees of detail, plus small area mapping of several types of terrain with topographic maps. Reports, sections, and maps will be produced from the field notes. Field trips required.
Prerequisite: GEOL 1403 and 1404 and (GEOL 3411 or 34111).
* May be taken concurrently.
Co-requisite: SMTE 0094.

GEOL 3329 Geology of National Parks
3 Semester Credit Hours (3 Lecture Hours)
Introduction to the regional geology of the United States using selected U.S. National Parks representing a wide variety of geologic settings as examples. Application of major geologic principles and basic geologic concepts such as plate tectonics, rock cycle, stratigraphy, and geologic time.
Prerequisite: GEOL 1303, 1403 or 1404.

GEOL 3411 Mineralogy
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Study of the physical and chemical properties of minerals. Introduction to the crystallography of minerals, optical mineralogy, and the use of the polarized light microscope. Laboratory study of mineral identification in hand specimens and thin sections.
Prerequisite: GEOL 1403 and CHEM 1411 and (CHEM 1412 or 1412*).  
* May be taken concurrently.
Co-requisite: SMTE 0094.
Prerequisite:
focus on the Gulf of Mexico.

GEOL 4316  Marine Geoscience
3 Semester Credit Hours (3 Lecture Hours)
Introduction to the geology of the marine environment. Review of plate tectonic processes relevant to the evolution of continental margins and plate boundaries; geophysics and ocean morphology; geology of ocean crust; controls on the types, origin, and distribution of marine sediments; marine geochemistry; nearshore geological processes and the continental shelf; introduction to paleoceanography; global paleoceanographic evolution; critical events in ocean history. Special focus on the Gulf of Mexico.
Prerequisite: GEOL 1403, 1404, CHEM 1411 and 1412.

GEOL 4321  Introduction to Soil and Groundwater Restoration
3 Semester Credit Hours (3 Lecture Hours)
Introduction to methods for restoring contaminated soil and groundwater by examining the factors and processes influencing the efficacy of remediation systems. An emphasis will be placed on the scientific principles upon which soil and groundwater remediation is based.
Prerequisite: (GEOL 1403, CHEM 1411, 1412 and GEOL 3443).

GEOL 4326  Field Seminar in Geology
3 Semester Credit Hours (4 Lecture Hours, 1 Lab Hour)
Designed to prepare students for summer field camp. Basic techniques of geologic mapping in the field, data analysis and interpretation, and report writing.
Prerequisite: GEOL 4411 and 4421.
Co-requisite: SMTE 0094.

GEOL 4411  Sedimentation and Stratigraphy
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Composition and origin of sediments and sedimentary rocks. Description and classification of rocks in hand specimen. Principles of stratigraphy, including stratigraphic units and correlation. Facies models for major depositional systems. Field trips.
Prerequisite: (GEOL 1403 and GEOL 1404) and (GEOL 3411). May be taken concurrently.
Co-requisite: SMTE 0094.

GEOL 4415  Economic Geology
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Study of geologic and tectonic parameters of mineral and metals formation. Ore geology and geochemistry. Mining, processing, fabrication, and marketing of natural resources. Field trip to mining operations.
Prerequisite: GEOL 1403 and 3411.
Co-requisite: SMTE 0094.

GEOL 4421  Structural Geology
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
PHYS 1401 Geometric and quantitative description of deformation of the Earth's crust, mechanics of brittle and crystal-plastic deformation processes of Earth materials, introduction to continuum mechanics of geologic systems, crustal deformation from micro-scale to global tectonics. Laboratory introduces principles of three-dimensional data representation and analysis, geologic map interpretation, cross-section techniques, and problems in stress and strain analysis.
Prerequisite: GEOL 3411 and MATH 2413 and CHEM 1411.
Co-requisite: SMTE 0094.

GEOL 4422  Geophysics
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Introduction to quantitative techniques to assess physical properties and processes of the Earth. Topics include earthquake seismology, refraction and reflection seismology, gravimetry, magnetism, electrical methods, and radioactivity of Earth materials. Application of geophysical methods to the study of the Earth, in oil and gas exploration, and in economic and environmental geology.
Prerequisite: (GEOL 4411, PHYS 1401 or 2425) and (PHYS 1402 or 2426) and (MATH 2413).
GEOL 4423 Seismic Methods
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Introduction to the acquisition, processing, and interpretation of 2D and 3D seismic data. Lectures and field exercises are covered. Topics include conceptual and historical foundations of modern reflection seismology; an overview of seismic wave phenomena in acoustic, elastic, and porous media; acquisition principles for land and marine seismic surveys; methods used to create 2D and 3D seismic images from field data; concepts of dip moveout, prestack migration, and depth migration; concepts and limitations of 3D seismic interpretation for structure, stratigraphy, and rock property estimation; and the interpretation role of attributes, impedance estimation, and AVO.
Prerequisite: GEOL 4422.

GEOL 4424 Environmental and Engineering Geophysics
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Geophysical techniques for exploring the shallow subsurface for environmental and engineering purposes. Topics include seismic, resistivity, ground penetrating radar, electromagnetic, gravity, and magnetic methods. This course includes both lectures and labs (field exercises) components.
Prerequisite: (PHYS 1401 or 2425) and (PHYS 1402 or 2426) and (MATH 2413).

GEOL 4430 Internship in Geology
1-4 Semester Credit Hours
One to four semester hours of credit may be earned by working in an internship position in industry, with local government, a private firm, or an independent geologist.

GEOL 4436 Introduction to Petroleum Geology
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Basic concepts of petroleum geology and techniques used in the exploration and production of hydrocarbon systems. Lectures and lab exercises will cover principles of stratigraphy, sedimentology, hydrocarbon generation, hydrocarbon-trapping mechanisms, reservoir characterization, seismic interpretation, well-log interpretation, and geologic risk analysis.
Prerequisite: GEOL 4411 or 4411∗.
∗May be taken concurrently.
Co-requisite: SMTE 0094.

GEOL 4444 Hydrogeology
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Introduction to the fundamentals of groundwater and surface water flow; well hydraulics and evaluation of groundwater as a resource; chemical properties of groundwater and groundwater contamination; groundwater and the environment; and groundwater modeling. This course also examines some of the techniques associated with field hydrogeology and laboratory methods in hydrogeology.
Prerequisite: GEOL 1403 and MATH 2413 and (PHYS 1401 or 2425).
Co-requisite: SMTE 0094.

GEOL 4490 Selected Topics
4 Semester Credit Hours (1-4 Lecture Hours, 1-4 Lab Hours)
May be repeated for credit if topics are significantly different. Subject materials variable.

GEOL 4496 Directed Independent Study
1-4 Semester Credit Hours
DIRECTED INDEPENDENT STUDY Requires a formal proposal of study to be completed in advance of registration and to be approved by the supervising faculty, the chairperson, and the Dean of the College.

GEOL 4649 Karst of the Yucatan Peninsula
6 Semester Credit Hours (3 Lecture Hours, 6 Lab Hours)
This course describes the different types of caves and karst rocks, the water rock interactions in carbonate rock systems, and it explains cave formation via hydrogeological and geochemical processes. It offers field work experience such as sample collection, determining field parameters, karst and cave surveys, measuring spring discharges in the Yucatán Peninsula of Mexico and laboratory experience on the Texas A&M University-Corpus Christi campus.
Prerequisite: (GEOL 1403 and 4411) or GEOL 4444, 4416 or 4311.

GEOL 4650 Field Geology
6 Semester Credit Hours (12 Lab Hours)
Field course involving practical application of geologic principles to field problems. Locations visited and material covered depends on hosting institution. Generally should include: mapping and outcrop data collection; measurement of stratigraphic sections; mapping and preparation of geologic cross-sections; preparation of geologic reports.
Prerequisite: GEOL 3326, 3414, 3441, 4411 and 4421.
Co-requisite: SMTE 0094.

German (GERM)

GERM 1311 German I
3 Semester Credit Hours (3 Lecture Hours)
Introduction to listening, speaking, reading, and writing skills within a German cultural framework. For students without previous knowledge of the language. (Language laboratory required. One hour per week.) A lab fee is required for this course.

GERM 1312 German II
3 Semester Credit Hours (3 Lecture Hours)
Continued practice in listening, speaking, reading, and writing skills within a German cultural framework. German 1311 or equivalent required. (Language laboratory required. One hour per week.) A lab fee is required for this course.

GERM 2311 German III
3 Semester Credit Hours (3 Lecture Hours)
Reviews German grammar through oral and written practice with emphasis on language proficiency. Utilizes cultural readings in German to expand vocabulary and knowledge of the German culture.
TCCNS: GERM 2311

GERM 2312 German IV
3 Semester Credit Hours (3 Lecture Hours)
Continued advanced development and review of all language skills within a German framework with an emphasis in the linguistic and cultural perspective.
Prerequisite: GERM 2311.
TCCNS: GERM 2312

Graphic Design (GRDS)

GRDS 1301 Foundations of Graphic Design
3 Semester Credit Hours
This course explores fundamental components of design theory, concept, and composition. Students will explore presentation techniques, printing processes, technical tactile skills associated with the field, defining and exploring a targeted audience, and appropriate software introductions. Students will create printed works utilizing these skill sets.
GRDS 1301 Typography I
3 Semester Credit Hours
Through the use of lectures, demonstrations and studio work students are introduced to the art of typography. Cultural and aesthetic histories of familiar typefaces are reviewed. An emphasis is placed on the rules of type, best practices in type-setting, anatomy of letter forms, and appropriate uses of prescribed type faces. Hand rendering and digital media are used to give students a robust foundation in the study of typography.
Prerequisite: (GRDS 1301).

GRDS 2301 Historical Perspectives of Graphic Design
3 Semester Credit Hours
This studio course examines the history of graphic design from the invention of writing to present day composition. Students will explore various movements in graphic design history and create design works that reflect these periods.
Prerequisite: GRDS 1301 and 1302.

GRDS 2302 Design Studio I
3 Semester Credit Hours
This course introduces the fundamental principles of the graphic design industry. Students strengthen their vocabularies in design, theory, and visual communication. Exploring various two-dimensional projects, students will conduct research, form opinions, foster ideas, solve communication problems, learn to analyze and discuss graphic design work, and continue to develop their own creative process.
Prerequisite: GRDS 1301 and 1302.

GRDS 3301 Typography II
3 Semester Credit Hours
Through readings, writing assignments, lectures, and studio projects, students explore the relationship of type to cultural, political, and psychological dynamics of information exchange. The ideas of intellectual impact, complex hierarchy, active/passive readership, and emotional expression are all explored with the emphasis on user experience in typographic design.
Prerequisite: GRDS 2302.

GRDS 3302 Design Studio II
3 Semester Credit Hours
This course encourages students to further develop their design process by reflecting on their own personal and artistic identities, while identifying and communicating to a specific audience. Through a series of print and three-dimensional projects, students work to balance their own voice and develop strong conceptual thinking and formal experimentation methods.
Prerequisite: GRDS 1301, 1302, 2301 and 2302.

GRDS 3303 Design Experience & Awareness
3 Semester Credit Hours
This studio course examines the role of design in society. Students will learn how to use empathy and a human-centered design approach to develop appropriate design solutions. Additionally, students will examine the role of environmental graphics to create works that reflect an enhanced impact in experience for the user. The topics in this course are explored through lectures, research and the creative development of a body of work.
Prerequisite: GRDS 2302.

GRDS 3304 Publication Design
3 Semester Credit Hours
This studio course explores the foundations of publication and editorial design to expand students’ design vocabulary. Students will explore the role of a graphic designer/art director in developing effective and innovative communication for editorial design.
Prerequisite: GRDS 2302.

GRDS 3305 Packaging Design
3 Semester Credit Hours
This studio course will teach students how to develop creative strategies for problem solving in a client-based environment. Focusing on three-dimensional packaging, students will learn how design applies to various surfaces, products, and audiences.
Prerequisite: GRDS 1301, 1302, 2301 and 2302.

GRDS 3306 User Interface/User Experience
3 Semester Credit Hours
This hands-on course examines how content is organized and structured to create a digital experience for a user, and what role the designer plays in creating and shaping user experience. Students will learn the roadmap process for developing robust User Interface/User Experience designs, from research, ideation and site mapping, to the design of engaging layouts for screens and the creation of dynamic prototypes.
Prerequisite: GRDS 2302.

GRDS 3307 Copywriting
3 Semester Credit Hours
This studio course explores copywriting for design, advertising, and media. Students will create writing and messaging for a variety of media including print design, web design, and advertising design within a consumer-driven context.
Prerequisite: (GRDS 1301) and (GRDS 1302) and (GRDS 2301) and (GRDS 2302).

GRDS 3309 Building Websites
3 Semester Credit Hours
This studio course will cover designing and maintaining a scalable and functional website utilizing contemporary building platforms. The processes and techniques demonstrated will allow students to plan the project scope, to generate website content, and to adopt the tools and expansive functionality available while learning best practices for the platform.
Prerequisite: GRDS 2303.

GRDS 3310 Client Solutions
3 Semester Credit Hours
In this studio course, students will define client needs, explore the designer-client relationship and investigate research strategies and methods for developing effective print and digital deliverables to meet established business goals. The conceptual and visual standards pertinent to creating a brand are explored and applied across a variety of client-driven projects.
Prerequisite: GRDS 2302.
GRDS 4304 Emerging Technologies  
3 Semester Credit Hours (6 Lab Hours)  
This studio explores the use of evolving current and emerging technology in the field to enhance storytelling and the user experience in a variety of interactive media.  
Prerequisite: GRDS 3306.

GRDS 4309 Design in Advertising  
3 Semester Credit Hours  
This studio course will teach students how to develop creative strategies for problem solving in a client-based environment. This studio focuses on advertising design as it applies to print, multimedia, outdoor, and direct mail design for a chosen audience.  
Prerequisite: GRDS 3310.

GRDS 4310 Portfolio and Professional Practices  
3 Semester Credit Hours  
In this capstone course, the student prepares for a professional career in the graphic design field by developing self-promotional materials, including a printed and digital portfolio, while focusing on professional practices and job-seeking strategies. Guest speakers will typically join the class for discussion, critique, lecture and hiring scenarios such as mock interviews. Students will display their work in an organized portfolio showcase gallery exhibition. Note: May be taken three times for credit.  
Prerequisite: GRDS 3301, 3310 and 4304.

GRDS 4391 Topics in Graphic Design  
1,3 Semester Credit Hours  
Study of specialized topics and themes in Graphic Design. May be repeated when topics vary.

GRDS 4396 Directed Independent Study  
1,3 Semester Credit Hours  
See College description. Offered on application.

GRDS 4399 Internship  
3 Semester Credit Hours  
This course allows students to complete a semester long design-centric internship within their area of interest. Through the use of reflective journals, a project portfolio, and employer feedback, the student will report their experience to the supervising professor throughout the internship placement. May be repeated three times at a maximum of nine semester credit hours.  
Prerequisite: GRDS 2302.

Health Care Administration (HCAD)

HCAD 3300 The Health Care System  
3 Semester Credit Hours (3 Lecture Hours)  
Addresses how the U.S. Health Services System is organized, how health services are delivered, and the mechanisms by which health services are financed in the United States. Provides an undergraduate level overview of the U.S. health services system and its key components, including health system resources, health system foundations, health system resources, health system processes, and health system outcomes. Should be taken during first semester of Health Sciences courses. Cross listed with HLSC 3300.

HCAD 3310 Epidemiology  
3 Semester Credit Hours (3 Lecture Hours)  
Applies epidemiologic methods and procedures to the study of the distribution and determinants of health and diseases, morbidity, injuries, disability, and mortality in populations. Epidemiologic methods for the control of conditions such as infectious and chronic health hazards, and unintentional injuries are discussed. Other topics include quantitative aspects of epidemiology, for example, data sources, measures of morbidity and mortality, evaluation of association and causality, and study design. Cross listed with HLSC 3310.  
Prerequisite: HCAD 3300* or HLSC 3300*.  
* May be taken concurrently.

HCAD 3320 Health Care Marketing  
3 Semester Credit Hours (3 Lecture Hours)  
Provides an introductory study of the essentials of marketing within the dynamically evolving health care system. The marketing framework is provided as a basis for decisions related to marketing mix variables. Content includes buyer behavior, marketing research, market segmentation, and marketing strategy. Cross listed with HLSC 3320.  
Prerequisite: HCAD 3300*.  
* May be taken concurrently.

HCAD 3330 Financial Management in Health Care  
3 Semester Credit Hours (3 Lecture Hours)  
Provides an introduction to health care financial management including selected topics from financial accounting, management accounting, finance, internal audit and personal finance. Health care payment and classification systems are studied and practical applications are emphasized. Cross listed with HLSC 3330.  
Prerequisite: HCAD 3300*.  
* May be taken concurrently.

HCAD 3340 Health Program Planning and Evaluation  
3 Semester Credit Hours (3 Lecture Hours)  
Introduces the skills and techniques required to research and develop culturally competent health programs. Students create new data and utilize existing data to assess community needs, implement community health programs, and evaluate program effectiveness, exploring the concepts, processes and techniques used in health program planning, implementation, and evaluation. The course emphasizes the importance of teams and partnerships in successful community health programs. This is an intensive writing course. Cross listed with HLSC 3340.  
Prerequisite: (MATH 1442 or 1342) or (MATH 2342) and (HCAD 3300*).  
* May be taken concurrently.

HCAD 3350 Information Systems and Technology in Health Care  
3 Semester Credit Hours (3 Lecture Hours)  
Provides an overview of the role technology plays in management of health care information. Emphasis is placed on system analysis, techniques, and skills used in information management. Covers determining what information is needed by whom; designing information flows, procurement of computer/telecommunication resources, assuring information security, and continuing management of information systems supporting healthcare delivery. Satisfies university computer literacy requirement. Cross listed with HLSC 3350.  
Prerequisite: HCAD 3300*.  
* May be taken concurrently.
HCAD 3360  Health Education and Promotion  
3 Semester Credit Hours (3 Lecture Hours)  
Provides an introduction to the discipline and profession of health education and promotion. It examines the concepts of health and wellness, national and global health status, theories of behavior change, and the implementation and assessment of health promotion interventions. It provides an introduction to medical terminology for health educators. This is a writing intense course. Cross listed with HLSC 3360.  
**Prerequisite:** HCAD 3300* or HLSC 3300*.  
*May be taken concurrently.

HCAD 3370  Complementary and Alternative Medicine  
3 Semester Credit Hours (3 Lecture Hours)  
Provides an introduction to complementary and alternative medicine with an emphasis on related economic, political, legal, and social issues. The course identifies the processes, interventions, and funding agencies available for providing alternative care; reviews the various professions within alternative and complementary medicine; and addresses the holistic approach to health and well-being. Cross listed with HLSC 3370.

HCAD 4100  Assessment of Accumulated Knowledge  
1 Semester Credit Hour (1 Lecture Hour)  
Provides an assessment of student knowledge garnered from Health Science program course work. Allows creation of a business resume and mock interview experience. Prepares students for the capstone Practicum course. Cross listed with HLSC 4100.

HCAD 4300  Management and Organizational Behavior in Health Care  
3 Semester Credit Hours (3 Lecture Hours)  
Introduces students to principles of management and organization behavior in healthcare. Topics include management, planning, organizing, staffing, leading, controlling, decision making, communicating, and professionalism, as well as the connective processes of decision making, coordinating, and communicating in healthcare organizations. This is an intensive writing course. Cross listed with HLSC 4300.

HCAD 4310  Health Law, Policy and Ethics  
3 Semester Credit Hours (3 Lecture Hours)  
Introduces law and the legal system with special emphasis on health-related topics and policies, and key health law issues. Includes the study of the legal and regulatory environment of health care and the administration of health services with a review of the laws pertaining to healthcare institutions, physicians, and other healthcare workers who contribute to patient care. Tort and contract law are emphasized. The course addresses policy issues and ethics through topics like patient rights, reproduction, and end of life decisions. Cross listed with HLSC 4310.

HCAD 4320  Project Management in Health Care  
3 Semester Credit Hours (3 Lecture Hours)  
Introduces the fundamental project management concepts required to design, develop and deploy project plans successfully within the healthcare industry. The management of resources, schedules, risks, and scope of a project are examined for successful project implementation. Students are exposed to the role of healthcare project managers and the project management process as they provide structure and oversight to the constantly growing and changing healthcare industry. Cross listed with HLSC 4320.

HCAD 4330  Human Resource Management in Health Care  
3 Semester Credit Hours (3 Lecture Hours)  
Presents the foundational concepts of healthcare human resource management. Students are introduced to fundamental human resource management techniques needed within health organizations including leadership, workforce planning, recruitment, employee selection, compensation, employee development, workload management, human resource law, and ethics. Future healthcare management and leadership professionals must understand these concepts to comply with human resource department policies and support the strategic plan. Cross listed with HLSC 4330.

HCAD 4340  Quality Management and Evaluation in Health Care  
3 Semester Credit Hours (3 Lecture Hours)  
Introduces the principles of quality assessment and outcome management in healthcare organizations. This course is an introduction of integrated delivery systems and their operations. It includes an examination of patient care management and the patient experience. A framework for understanding healthcare quality efforts is also an integral part of the course. Cross listed with HLSC 4340.

HCAD 4350  Global Health/Health Disparities  
3 Semester Credit Hours (3 Lecture Hours)  
Provides students with an historical perspective on global health issues and leads to an understanding of current and future concerns. Emphasis is on the global burden of disease and determinants of health as well as health disparities. Provides students with an introduction to the study of health disparities in the United States, examining how health disparities are defined and measured and exploring issues such as how the structure of American society affects who gets sick and who gets care. Case studies expose students to a variety of real-life scenarios and explore a range of issues. This is an intensive writing course.

HCAD 4680  Practicum  
6 Semester Credit Hours (1 Lecture Hour, 15 Lab Hours)  
The Health Science Practicum is an institution-based project course requiring the student to complete on-site practicum hours. It provides a structured and guided learning environment to help students make the most of their practicum experience. Course components facilitate students’ professional development, focusing on the transition from the role of a student to the role of a healthcare professional. Cross listed with HLSC 4680.  
**Prerequisite:** HCAD 4100.

Health Education (HLTH)

HLTH 3342  Sexuality in Health Education  
3 Semester Credit Hours (3 Lecture Hours)  
Many aspects of human sexuality; physiology and function of human reproductive system, factors involved in learning sex roles, biological and emotional motivations associated with the sexual aspects of life and their relationship to marriage and family planning.

HLTH 3353  Substance Abuse and Health  
3 Semester Credit Hours (3 Lecture Hours)  
A basic knowledge and understanding of the physiological, psychological, social, environmental and behavioral aspects of drug use and abuse in this country to prepare students to make mature and responsible decisions regarding drug use and to assist others in making similar decisions affecting drug-taking behavior.
**HLTH 4310 Exercise and Health**  
3 Semester Credit Hours (3 Lecture Hours)  
Interdisciplinary planning and implementation of exercise programs in school, community and worksite settings; applied exercise physiology, nonclinical exercise assessment; exercise-education strategies to promote adherence in health related exercise programs.

**HLTH 4350 Creative Life Styles for Wellness**  
3 Semester Credit Hours (3 Lecture Hours)  
A course supporting knowledge, attitudes, skills, and behaviors in the five wellness dimensions physical, social, emotional, intellectual, and environmental. Special emphasis will be placed on personal enrichment.

### Health Sciences (HLSC)

**HLSC 3300 The Health Care System**  
3 Semester Credit Hours (3 Lecture Hours)  
Addresses how the U.S. Health Services System is organized, how health services are delivered, and the mechanisms by which health services are financed in the United States. Provides an undergraduate level overview of the U.S. health services system and its key components, including health system resources, health system foundations, health system resources, health system processes, and health system outcomes. Should be taken during first semester of Health Sciences courses. Cross listed with HCAD 3300.

**HLSC 3310 Epidemiology**  
3 Semester Credit Hours (3 Lecture Hours)  
Application of epidemiologic methods and procedures to the study of the distribution and determinants of health and diseases, morbidity, injuries, disability, and mortality in populations. Epidemiologic methods for the control of conditions such as infectious and chronic health hazards, and unintentional injuries are discussed. Other topics include quantitative aspects of epidemiology, for example, data sources, measures of morbidity and mortality, evaluation of association and causality, and study design. Cross listed with HCAD 3310.

**HLSC 3320 Health Care Marketing**  
3 Semester Credit Hours (3 Lecture Hours)  
An introductory study of the essentials of marketing within the dynamically evolving health care system Cross listed with HCAD 3320.

**HLSC 3330 Financial Management in Health Care**  
3 Semester Credit Hours (3 Lecture Hours)  
Introduction to health care financial management including selected topics from financial accounting, management accounting, finance, internal audit and personal finance. Health care payment and classification systems will be studied and practical applications will be emphasized. Cross listed with HCAD 3330.

**HLSC 3340 Health Program Planning and Evaluation**  
3 Semester Credit Hours (3 Lecture Hours)  
Introduction to the skills and techniques required to research and develop culturally competent health programs. Students will gain a basic understanding of how to utilize existing data to assess community needs, implement community health programs, and evaluate program effectiveness, exploring the concepts, processes and techniques used in health program planning, implementation, and evaluation. The course will emphasize the importance of teams and partnerships in successful community health programs. Cross listed with HCAD 3340.  
Prerequisite: MATH 1442, 1342 or 2342.

**HLSC 3350 Information Systems and Technology in Health Care**  
3 Semester Credit Hours (3 Lecture Hours)  
Provides an overview of the role technology plays in management of health care information. Emphasis is placed on system analysis, techniques, and skills used in information management. Cross listed with HCAD 3350.

**HLSC 3360 Health Education and Promotion**  
3 Semester Credit Hours (3 Lecture Hours)  
This course provides an introduction to the discipline and profession of health education and promotion. It examines the concepts of health and wellness, the national and global health status, theories of behavior change, and the implementation and assessment of health promotion interventions. Cross listed with HCAD 3360.

**HLSC 3370 Complementary and Alternative Medicine**  
3 Semester Credit Hours (3 Lecture Hours)  
Introduction to complementary and alternative medicine with an emphasis on related economic, political, legal, and social issues. Cross listed with HCAD 3370.

**HLSC 4300 Management and Organization Behavior in Health Care**  
3 Semester Credit Hours (3 Lecture Hours)  
Introduction to principles of management and organization behavior in healthcare with emphasis on human resource management topics and issues. Cross listed with HCAD 4300.

**HLSC 4310 Health Law**  
3 Semester Credit Hours (3 Lecture Hours)  
Introduction to law and the legal system with special emphasis on health law issues. Cross listed with HCAD 4310.

**HLSC 4320 Project Management in Healthcare**  
3 Semester Credit Hours (3 Lecture Hours)  
This course introduces the fundamental project management concepts required to design, develop and deploy project plans successfully within the healthcare industry. The management of resources, schedules, risks, and scope of a project are examined for successful project implementation. Students are exposed to the role of healthcare project managers and the project management process as they provide structure and oversight to the constantly growing and changing healthcare industry. Cross listed with HCAD 4320.

**HLSC 4330 Human Resource Management in Healthcare**  
3 Semester Credit Hours (3 Lecture Hours)  
This course presents the foundational concepts of healthcare human resource management. Students are introduced to fundamental human resource management techniques needed within health organizations including leadership, workforce planning, recruitment, employee selection, compensation, employee development, workload management, human resource law, and ethics. Future healthcare management and leadership professionals must understand these concepts to comply with human resource department policies and support the strategic plan. Cross listed with HCAD 4330.

**HLSC 4340 Quality Management and Evaluation in Health Care**  
3 Semester Credit Hours (3 Lecture Hours)  
Introduction to principles of quality assessment and outcome management in healthcare organizations. Cross listed with HCAD 4340.
HIST 1301  U.S. History to 1865
3 Semester Credit Hours (3 Lecture Hours)
A survey of the political, social, economic, military, cultural, and intellectual history of the United States from 1492 to 1865.
TCCNS: HIST 1301

HIST 1302  U.S. History Since 1865
3 Semester Credit Hours (3 Lecture Hours)
A survey of the political, social, economic, military, cultural, and intellectual history of the United States from 1865 to the present.
TCCNS: HIST 1302

HIST 2301  Texas History
3 Semester Credit Hours (3 Lecture Hours)
Spanish colonial period, Mexican statehood, independence, the development of the Republic, annexation and growth as a state.
TCCNS: HIST 2301

HIST 2311  Western Civilization I
3 Semester Credit Hours (3 Lecture Hours)
Survey of the cultures and civilizations of the Ancient Mediterranean world and the political, social, economic, military, cultural, and intellectual influences shaping the emergence and development of Europe to 1500.
TCCNS: HIST 2311

HIST 2312  Western Civilization II
3 Semester Credit Hours (3 Lecture Hours)
A survey of the political, social, economic, military, cultural, and intellectual development of Europe from 1500 to the present.
TCCNS: HIST 2312

HIST 2322  World History Since 1500
3 Semester Credit Hours (3 Lecture Hours)
examines major global issues over the past 500 years. Topics may include European expansion and colonialism, the integration of the Americans into world economic systems, changes in science and technology, decolonization, and modern environmental problems. This course will help students understand historical events within a global framework.

HIST 3301  History of World Religions
3 Semester Credit Hours (3 Lecture Hours)
Surveys the key beliefs, practices, rituals, figures, and historical developments of the world's major religious traditions, including Hinduism, Buddhism, Confucianism, Judaism, Christianity, Islam, and New Age religions. Gives particular attention to their encounter with modernity and their complicated place in today's global, diverse, post-modern world.

HIST 3303  Colonial Latin America
3 Semester Credit Hours (3 Lecture Hours)
An overview of Latin American history from pre-Columbian times until Independence.

HIST 3304  Modern Latin America
3 Semester Credit Hours (3 Lecture Hours)
A study of the major political, economic and cultural processes that marked the development of modern Latin America.

HIST 3307  The Ancient World
3 Semester Credit Hours (3 Lecture Hours)
This course examines the ancient history of the human race. It begins with the evolution of Homo sapiens in Africa and continues through approximately the 4th century CE. Topics examined include the formation of cultures, societies, states, and empires around the world including those in Egypt, Southwest Asia, India, China, and the Mediterranean.

HIST 3315  Europe 1750-1815
3 Semester Credit Hours (3 Lecture Hours)
Explores the processes which contributed to the establishment of a new political, economic, and social order in Europe. The course includes an in-depth focus upon the causes and consequences of the French Revolution as well as an examination of the European response to Napoleon.

HIST 3316  Colonial North America
3 Semester Credit Hours (3 Lecture Hours)
Covers early North American history from pre-contact through 1763, with a focus on the territory that would eventually become the United States. Examines the varieties of colonial worlds created by Europeans and native peoples, the nature and impact of European colonization, the development of slave societies, the emergence of regional economies and modern culture, the consolidation of European empires in the early and mid-18th century, and the imperial wars that finally set the stage for the coming of the American Revolution.

HIST 3317  Europe 1815-1914
3 Semester Credit Hours (3 Lecture Hours)
The evolution of European industrial society from the Congress of Vienna to the outbreak of World War I. Themes include changes in the nature of work and family life, urbanization, and the emergence and growth of liberalism, socialism, nationalism, and romanticism as competing ideologies.

HIST 3318  The American Revolution
3 Semester Credit Hours (3 Lecture Hours)
Covers the history of the American Revolution from the end of the Seven Years' War in 1763 to the ratification of the new federal constitution in 1789. Covers the political and social history of the independence movement, the Declaration of Independence, the military, social, and indigenous history of the Revolutionary War, and the making of the Constitution.
HIST 3319  Europe 1914 to the Present
3 Semester Credit Hours (3 Lecture Hours)
Political, social, economic and cultural developments since 1914:
includes the impact of World War I, the Russian Revolution, Fascism, the
origins of the Cold War, the tension between European unification and
growing ethnic tensions and the dissolution of the Soviet empire.

HIST 3320  Colonial and Revolutionary U.S.
3 Semester Credit Hours (3 Lecture Hours)
Traces regional economic, social, and political change in the Americas
from 1607 to the end of the Revolution.

HIST 3321  The Early American Republic
3 Semester Credit Hours (3 Lecture Hours)
This course examines American history from the end of the revolutionary
war to 1850. Political, economic, and social issues including, but not
limited to, the creation of the Constitution, the development of the first
and second party systems, the market revolution, antebellum reform, the
Old South, and westward expansion.

HIST 3323  Civil War and Reconstruction
3 Semester Credit Hours (3 Lecture Hours)
Background and causes of the Civil War; military, political, diplomatic, and
economic developments during the War; Reconstruction and post-war
adjustments.

HIST 3324  U.S. Gilded Age and Progressive Era
3 Semester Credit Hours (3 Lecture Hours)
An examination of the dramatic period when the United States definitively
settled the remaining portions of the continent and decisively moved
towards becoming an industrial, urban nation with world-wide economic
and political influence.

HIST 3325  Emergence of Modern U.S.
3 Semester Credit Hours (3 Lecture Hours)
Study of American life from World War I through World War II. Topics
include America’s rise to a world power, the social, cultural, and political
effects of corporate enterprise, urbanization, and immigration, women’s
suffrage, the Twenties, and the New Deal.

HIST 3326  U.S. Since 2nd World War
3 Semester Credit Hours (3 Lecture Hours)
A study of American life and development as a world power since World
War II.

HIST 3335  The U.S. Urban Experience
3 Semester Credit Hours (3 Lecture Hours)
A general survey of the social, cultural, and political history of the
American city, with particular emphasis on Corpus Christi and the ways
our city illustrates these larger trends.

HIST 3340  Modern Asia
3 Semester Credit Hours (3 Lecture Hours)
This course will examine Asia from 1600 to the present. Topics include
politics, the nation state, colonialism, empire, war, nationalism, the Cold
War and revolution, all in a historical context.

HIST 3345  America by Nature
3 Semester Credit Hours (3 Lecture Hours)
Examines the role of nature in the nation’s past, looking beyond more
traditional historical topics to discover how the environment has shaped
society and the ways in which humans, in turn, have shaped nature
throughout American history. Community-engaged learning component.

HIST 3350  Dictators and Dirty Wars in Latin America
3 Semester Credit Hours (3 Lecture Hours)
Explores the rise of dictatorships and military regimes in twentieth
century Latin America. Focuses on human rights struggles and popular
movements in Mexico, Central America and the Southern Cone.

HIST 3360  Introduction to Museum Studies
3 Semester Credit Hours (1.5 Lecture Hours)
In this cross-disciplinary class, students of history, sciences, the arts, and
more will be introduced to the different departments of a museum and
gain experience in programming, exhibits, research, public engagement,
and other various aspects of museum management through their
participation in a real working museum (Corpus Christi Museum of
Science and History).

HIST 3370  Introduction to Public History
3 Semester Credit Hours (3 Lecture Hours)
A Project-centered class that examines public history practices and
debates, including the changing field over time, the relationship between
history and memory, and the interpretive and sometimes controversial
nature of historical sites and exhibits. Students will also learn methods
and practices of museums, archives, oral history, digital history, and more.
Includes community-engaged learning, workshops, local field trips.

HIST 3373  Oral History and Podcasting
3 Semester Credit Hours (3 Lecture Hours)
A project-based course designed to teach students oral history, audio
recording, and editing. Topics include oral history theory and methods,
the role of testimony and memory in constructing historical narratives,
interview techniques, archival practices, and the technical aspects of
audio production, audio storytelling, and podcasting.

HIST 3385  The Art and Practice of History
3 Semester Credit Hours (3 Lecture Hours)
Introduces students to the most significant historiographical problems
that face historians, focusing on recent and current controversies that
have shaken the profession and been the subject of public and political
debate. Provides examples of how historians think about and do history.
Prerequisite: (HIST 1301, 1302 and 2311) or (HIST 2312).

HIST 4320  U.S. Cultural Experience
3 Semester Credit Hours (3 Lecture Hours)
Explores ways that the myriad groups who have made up American
society from the colonial period to the “information age” understood
and expressed themselves and related to each other. (The chronological
scope of this course may vary.)

HIST 4327  U.S. Modern Popular Culture
3 Semester Credit Hours (3 Lecture Hours)
The historical development of modern popular culture—including
television, movies, fiction, newspapers, music and consumption—and its
effect on the structure and experience of U.S. society and work from the
nineteenth century to the present.

HIST 4335  The Military and United States History
3 Semester Credit Hours (3 Lecture Hours)
The development of U.S. military strategy and policy from the Colonial
Wars through Vietnam.

HIST 4336  Mexican American History
3 Semester Credit Hours (3 Lecture Hours)
Spanish and Mesoamerican backgrounds, conquest and mestizaje,
settlement of Aztlan, interaction with Anglo-Americans, 20th century
immigration, urbanization, identity, the Chicano Movement, and Mexican
American organizational/political development.
HIST 4337 United States Women's History
3 Semester Credit Hours (3 Lecture Hours)
Themes include transformations in the notion of womanhood and of sexual differences, changes in the structure, function, and concept of "family" and "household," and historical factors that have shaped women's role in the work force and public life.

HIST 4340 European Women's History
3 Semester Credit Hours (3 Lecture Hours)
Study of the experiences of European women from the 18th to the 20th centuries. Also addresses the role that gender has played in the development of modern European societies. Some topics covered are women and the French Revolution, gender and class in industrial Europe, feminism and suffrage, and women and fashion.

HIST 4342 The Holocaust
3 Semester Credit Hours (3 Lecture Hours)
Examines the Holocaust by exploring the role of racism and anti-Semitism, the rise of Nazi policies, Jewish responses and resistance to them, deportation and genocide, the role of war, and the aftermath and memory of an event "beyond human imagination."

HIST 4345 European Thought and Culture, 1750-present
3 Semester Credit Hours (3 Lecture Hours)
Survey of the major European intellectual and cultural movements from the Enlightenment to the present. Broader than a traditional course in intellectual history, special attention will be given to the emergence and development of the concepts of "modernity" and the challenges of "postmodernity."

HIST 4346 The Search for Modern China: From 1600 to the Present
3 Semester Credit Hours (3 Lecture Hours)
This course surveys modern Chinese history from the late Ming dynasty to the present, with an emphasis on the late 19th and 20th centuries. Topics include empire, colonialism, nationalism, the nation state, modernization, revolution and the Cold War, all in a historical context.

HIST 4347 The History of Sexuality in the West
3 Semester Credit Hours
This course will examine how ideas about sexuality as well as sexual practices and identities have evolved over time and in different places; how the categories of homosexuality and heterosexuality were created and how they have been perceived. The course will focus on the 19th and 20th centuries in Europe and the United States, and address the themes of gender, body, race, class, image, representation, and the law.

HIST 4349 Transnational Histories of Asia and the Pacific
3 Semester Credit Hours (3 Lecture Hours)
Explores the transnational relations of Asia and the Pacific with the West from the 19th century to the present day. Themes include colonialism and imperialism, diaspora and migration, labor and economy, war and displacement. Topics include the Opium Wars, Immigration and Exclusion, Atomic Bombing of Hiroshima, Military War Brides, Third World Radicalism, Transnational Adoption Complex, and Environmentalism and Globalization.

HIST 4350 Narratives of World War II in the Pacific
3 Semester Credit Hours (3 Lecture Hours)
Examines how the relations between history, memory, and contemporary politics in post-WWII U.S. and Asia-Pacific have shaped the meaning of various contentious issues related to the Pacific War-such as war origins and responsibility, atrocities, racism, reparations, and nationalism-in textbooks, monuments, literature, art, films, political debates, exhibits, commemorative events, and scholarly works in different social and temporal contexts.

HIST 4352 Mexican American Women's History
3 Semester Credit Hours (3 Lecture Hours)
Examines the broad political, economic, social, and cultural trends in the lives of Mexican American women since 1848.

HIST 4342 The Holocaust
3 Semester Credit Hours (3 Lecture Hours)
Examines the Holocaust by exploring the role of racism and anti-Semitism, the rise of Nazi policies, Jewish responses and resistance to them, deportation and genocide, the role of war, and the aftermath and memory of an event "beyond human imagination."

HIST 4374 Mexico: the National Period
3 Semester Credit Hours (3 Lecture Hours)
Traces economic, social, and political change in Mexico from independence to the present.

HIST 4375 Cold War Kids: Youth in Modern Latin America
3 Semester Credit Hours (3 Lecture Hours)
An examination of the experiences of Latin American youth in modern Latin America. Special emphasis on the role of young people in the revolutions and rebellions that marked the Cold War period.

HIST 4385 Historical Research and Writing
3 Semester Credit Hours (3 Lecture Hours)
The study and writing of history, with emphasis on historical analysis, research, and writing. Designed as the capstone course for history majors and prospective social science teachers. This course will feature a senior research paper, and should be taken during the student's final year of undergraduate study.

Prerequisite: HIST 3385 or READ 3353.

HIST 4390 Topics in History
3 Semester Credit Hours (3 Lecture Hours)
Study of significant periods, countries, regions, or themes in history. May be repeated when topics vary.

HIST 4396 Directed Individual Study
1-3 Semester Credit Hours
See College description.

HIST 4398 Applied Experience
3 Semester Credit Hours
See College description.

HIST 4399 Internship
3 Semester Credit Hours
Best practices and methods in digital archives, museums, and /or public history through field work at a local organization or museum. Offered on application. Repeatable up to 6 hours.

Honors (HONR)

HONR 1101 Honors Campus Leadership Seminar
1 Semester Credit Hour (1 Lecture Hour)
This course is intended to serve as an introduction to the Honors Program, its requirements and the Program's commitment to service, as well as the Honors Student Association. In an effort to prepare students to be campus and community leaders, students learn the organizational structure of the campus and engage in various events to become familiar with the campus and our surrounding community, its traditions and its needs. Students take this course in addition to UNIV 1101.

HONR 1102 Honors Community Leadership Seminar
1 Semester Credit Hour (1 Lecture Hour)
This course provides a framework and guidance for leadership and service. Students will make connections with campus and community leaders in order to begin charting their path toward service. Students take this course in addition to UNIV 1102.
HONR 2101 Honors Experience Seminar
1 Semester Credit Hour (2 Lecture Hours)
In the Honors Experience Seminar students begin the exploration process for their Project of Excellence. This includes honing information literacy skills, discovering ways to make connections with potential faculty mentors, and connecting the Project of Excellence to personal career and life goals. In addition, students will investigate possibilities for travel, service and research that will help them achieve academic, personal and professional goals. Students will also create a plan for earning their Honors elective credits.

HONR 3101 Project of Excellence Seminar I
1 Semester Credit Hour (2 Lecture Hours)
This seminar culminates in the completion of a Preliminary Proposal for the Project of Excellence with the guidance and approval of the course instructor and the student’s faculty mentor. As part of the Preliminary Proposal, the student will complete a timeline that sets a course for project completion in time for graduation. In addition, students will be introduced to TAMUCC’s Research Compliance process and will complete any training necessary for his/her project. Students must successfully complete HONR 3101 in order to register for HONR 4101.

HONR 3340 Academic and Field Research
3 Semester Credit Hours (3 Lecture Hours)
Examination of the assumptions and questions underlying research methods across disciplines, with special emphasis on how methodologies from different fields (such as science and humanities) can complement each other. The course will address issues such as 1) the distinct qualities of quantitative and qualitative research, 2) current uses of surveys, interviews, and market research, 3) the construction of new knowledge in various disciplines, from problem to publication, 4) the critical use and evaluation of electronic and print resources, archival materials, government documents, and scholarly list serves.

HONR 3390 Topics in the Humanities
1-4 Semester Credit Hours (1-4 Lecture Hours)
A course that deals with significant contemporary issues in the arts, humanities, and/or education. May be repeated when topics vary.

HONR 3490 Topics in the Sciences
1-4 Semester Credit Hours (1-3 Lecture Hours, 1 Lab Hour)
A course that deals with significant contemporary issues in the disciplines of the natural sciences, health sciences, social sciences, and/or business. May be repeated when topics vary.

HONR 3491 Science and Technology for Decision Makers
4 Semester Credit Hours (4 Lecture Hours)
A course in the natural sciences concerned with the interdisciplinary nature of science, the formal tools and techniques of critically evaluating scientific research, and the use of qualitative and quantitative data in the application of science and technology.

HONR 4101 Project of Excellence Seminar II
1 Semester Credit Hour (2 Lecture Hours)
This seminar culminates in the completion of full proposal for the Project of Excellence. The proposal is completed with the guidance and approval of both the course instructor and the faculty mentor. Students must successfully complete HONR 4101 in order to register for HONR 4102.

HONR 4102 Project of Excellence Seminar III
1 Semester Credit Hour
A seminar devoted to the completion of the Project of Excellence.

HONR 4103 Honors Peer Leadership Training
1 Semester Credit Hour (2 Lecture Hours)
Training of upper-class students for Honors First-Year Peer Mentors. Includes cognitive and developmental theories of the college-aged student, facilitation skills practice, discussion and listening techniques, and mentoring and advising skills.

HONR 4304 Honors Peer Leadership Practicum
1-3 Semester Credit Hours (1 Lecture Hour)
This course assists student leaders in further developing their own self-awareness, learning skills and strategies, and explores methods for facilitating these in others. Provides a forum for reflection on and processing of the Peer Mentor experience and to allow peer leaders to develop and practice important leadership skills that are transferable to other settings. Emphasizes building relationships with students, teaching life skills and learning strategies, and guiding students through the college experience. Mentors grow their own capacity as future leaders, managers, networkers and community change makers.

HONR 4390 Seminar in the Humanities
1-4 Semester Credit Hours (1-4 Lecture Hours)
Study of specialized topics and themes in arts, humanities, and education. May be repeated when topics vary.

HONR 4396 Honors Directed Independent Study
1,3 Semester Credit Hours
Individual supervised study / research. Requires a formal proposal of study to be completed in advance of registration to be approved by a supervising faculty member and the Honors Director and Program Coordinator. Only 3 semester hours of Honors independent study credit may be counted toward the Honors graduation requirement.

HONR 4397 Honors Internship
3 Semester Credit Hours
Practical experience related to the student’s major field. Internships require approval by the Honors Director and Program Coordinator. At the close of the internship, a written report and self-assessment must be submitted to a supervising faculty member. Internship is offered on a pass/fail basis and students must volunteer a minimum of 120 hours and meet the course objectives in order to receive course credit. Can be repeated for credit with approval by the Honors Director and Program Coordinator.

HONR 4398 Honors Applied Experience
3 Semester Credit Hours
Practical experience connected to the student’s field of study, usually with a service or leadership component. Applied experience requires approval by the Honors Director and Program Coordinator. Students must volunteer a minimum of 120 hours and meet the course objectives in order to receive course credit. Can be repeated for credit with approval by the Honors Director and Program Coordinator.

HONR 4399 Honors Undergraduate Research and Creative Works
3 Semester Credit Hours
Undergraduate research and creative works is designed to provide students with the opportunity to develop and practice advanced discipline-specific projects in collaboration with faculty members. A student electing to enroll in an Undergraduate Research and Creative Works course must contract with a faculty member to work on an existing research project or to develop a new project, and a specific list of responsibilities and a work schedule of at least 120 hours must be developed prior to approval. Can be repeated for credit with approval by the Honors Director and Program Coordinator.
Industrial Engineering (IEEN)

IEEN 2302 Engineering Economics
3 Semester Credit Hours (3 Lecture Hours)
(3:0) Engineering management relies on the knowledge of engineering economics to be able to evaluate projects from a financial perspective. Optimizing financial performance of a project is a key responsibility of the engineer in the decision-making process. Examples of engineering projects would include but not limited to equipment replacement analysis, planning a new product line, and waste management. This course is designed to present engineering students the major concepts and techniques of engineering economic analysis that are needed in the decision-making process. The emphasis of this course is on the analytical analysis of money and its impact on decision making.
Prerequisite: MATH 2413.

IEEN 3302 Operations Research
3 Semester Credit Hours (3 Lecture Hours)
Introduction to operations research, linear programming, duality, other algorithms for linear programming, the transportation and assignment problems, dynamic programming, integer programming; offered: Fall and Spring.
Prerequisite: MATH 2414 and (MATH 3311 or MEEN 3310).

IEEN 3320 Human Factors
3 Semester Credit Hours (3 Lecture Hours)
The principles of the life sciences, engineering, and mathematics are applied to the investigation of existing and proposed socio-technical systems. Methods for the reduction of fatigue and human error are taught. Various fields of human factors and the fundamental concepts of the discipline are introduced. This course provides the basics of human perceptual, cognitive, and motor abilities relevant to human factors. This course also offers class project opportunities gain experience using human factors knowledge in actual applied settings. Offered: Fall and Spring.
Prerequisite: ENGR 1312.
Co-requisite: MATH 3342.

IEEN 3324 Human Computer Interface
3 Semester Credit Hours (3 Lecture Hours)
The emphasis of this course is the design of the human-computer interface. The fundamental concepts of human-computer interaction and user centered design thinking are taught, through working in teams on an interaction design project, supported by lectures, readings, and discussions. The variety of evaluation methods and design principles of usable and appropriate computer interfaces are introduced based on psychological, social, and technical analysis. Topics will include usability and affordances, direct manipulation, systematic design methods, user conceptual models and interface metaphors, design languages and genres, human cognitive models, physical ergonomics, information and interactivity structures, and design tools and environments. Offered: Fall and Spring.
Prerequisite: ENGR 1312.
Co-requisite: IEEN 3320.

IEEN 3330 Robotics and Automation
3 Semester Credit Hours (3 Lecture Hours)
This course covers topics of concepts, principles, and relationships of automated assembly devices, computer aided drafting/design (CADD), computer-aided manufacturing (CAM), industrial robots, numerical control (NC), industrial lasers, programmable logic controllers (PLCs), automated guided vehicles (AGVs), flexible manufacturing systems (FMS), and computer-integrated manufacturing (CIM). Offered: Fall and Spring.
Prerequisite: ENGR 2460.

IEEN 4310 Process Engineering
3 Semester Credit Hours (3 Lecture Hours)
This course covers introduction to software design paradigms, system and software requirements, computer aided software engineering, and software design fundamentals using existing documentation for a proposed system. Relevant topics include in-depth survey of data flow-oriented, object-oriented, data-oriented, and real-time design. Team project involving the implementation of the proposed system using structured programming, information hiding, and strength and coupling measures is required. Each student will be required to make an oral presentation as part of the team project. Offered: Fall.
Prerequisite: IEEN 3330.

IEEN 4312 Experimental Design and Analysis
3 Semester Credit Hours (3 Lecture Hours)
Main coverage: Basic principles of experimental design; Randomization; Completely randomized design; Paired design; Randomized blocks, Latin Squares, Greco-Latin Squares and related designs; Factorial design; Blocking in factorial design; 2k factorial design; Extension of 2k factorials; Blocking and confounding in 2k factorials; Partial confounding; Fractional factorial designs; Blocking in fractional factorials; Nested and split-plot designs; Replicated and un-replicated designs; Regression, ANOVA, and follow-up analysis; Sample size determination; Response surface model. Offered: Fall and Spring
Prerequisite: IEEN 3302 and 3320.

IEEN 4322 Cognitive Ergonomics
3 Semester Credit Hours (3 Lecture Hours)
This course is concerned with mental processes, such as perception, decision making, memory, reasoning, and response execution, as they affect interactions among humans and other elements of a work system. Relevant topics include skilled performance, attention, distraction, human error, work stress, risk perception, and Kansai engineering as these may relate to human-system design, safety and productivity. Assessment methodologies include hierarchical task analysis, cognitive task analysis, mental workload, human error identification/accident investigation, and situation awareness assessment. Offered: Fall.
Prerequisite: IEEN 3320.

IEEN 4324 Human Factors and Autonomous Systems
3 Semester Credit Hours (3 Lecture Hours)
This course introduces the survey of human factors and ergonomics with particular reference to human functions in human-machine systems and principles of human factors to demonstrate and apply a broad knowledge of various modern industrial engineering methods and tools associated with designing autonomous systems in manufacturing and other related fields. Applications of engineering design methods to represent, integrate and solve problems, including the ability to recognize problem context and integrate knowledge and skills appropriate sources are provided. Knowledge of basic human capabilities and the ways that these capabilities are taken into account in the design of human-machine systems and work environments. Offered: Fall.
Prerequisite: IEEN 3320.
IEEN 4326 Airborne Design of Experiments
3 Semester Credit Hours (3 Lecture Hours)
Definitions, concepts, and history, Aviation Human Factors, management, and the organization, Human performance in aviation operations, Human information processing and operational decision-making, Human error and threat management, Threat and Error Management (TEM) in flight operations, air traffic control and cabin operations, Resource management training on the flight deck and in air traffic control, Automation in the workplace, The design of Standard Operating Procedures (SOPs) and checklists. Offered: Fall and Spring.
Prerequisite: IEEN 3302.

IEEN 4330 Digital Systems Simulation
3 Semester Credit Hours (2 Lecture Hours, 2 Lab Hours)
Introduction (definitions and types of simulations), Mechanism of discrete event simulation, Random number/variate generation, Input data analysis (input distribution modeling), Simulation modeling using Arena package, Review of probability and statistics, Simulation output analysis, Monte Carlo simulation, Modeling continuous processes, Verification and validation of simulation models, Read/write simulation data from/to external files. Offered: Fall and Spring.
Prerequisite: IEEN 3302.

IEEN 4332 Distribution Center Design and Operation
3 Semester Credit Hours (3 Lecture Hours)
Introduction (issues, equipment, processes), layout, order-picking, automation, special topics: crossdocking, warehouse performance. Offered: Fall and Spring.
Prerequisite: IEEN 3330.

IEEN 4334 Scheduling and Sequencing
3 Semester Credit Hours (3 Lecture Hours)
Introduction and overview, EOQ Models, MRP, job shop scheduling rules & Gantt chart, algorithms for one machine problems, implicit enumerations & dynamic program, branch and bound, heuristics approaches, project Scheduling, parallel Machine Scheduling, relaxation of Assumptions, batch processing, sequence dependence, project presentations. Offered: Fall and Spring.
Prerequisite: IEEN 3330.

IEEN 4342 Construction Management
3 Semester Credit Hours (3 Lecture Hours)
The course focuses on management techniques to solve the unique problems associated with a construction project. Study of Construction Management functions including Project Management, Cost Management, Time Management, Quality Management, Contract Administration, and Safety Management will be covered. Emphasis is put on the application of each function throughout the project phases. Offered: Spring.
Prerequisite: IEEN 2302 and 3320.

IEEN 4396 Directed Independent Study
1-3 Semester Credit Hours
Requires a formal proposal of study to be completed in advance of registration, approval of supervising faculty and department chairperson. Offered Fall, Spring, and Summer.

Kinesiology (KINE)

KINE 1106 Weight Training
1 Semester Credit Hour (1 Lab Hour)
The study and practice of physiological principles related to training programs for the development of muscular strength and endurance.

KINE 1108 Strength Conditioning for Women
1 Semester Credit Hour (1 Lab Hour)
The study and practice of physiological principles relating to training programs for the development of muscular strength and endurance for women.

KINE 1110 Individual/Dual/Lifetime Sports
1 Semester Credit Hour (1 Lab Hour)
Instruction, participation, and practice in a variety of individual, dual, and lifetime sports.

KINE 1112 Personal Self Defense
1 Semester Credit Hour (1 Lab Hour)
Instruction and practice of contemporary techniques of self protection.

KINE 1116 Ranger Leadership Laboratory
1 Semester Credit Hour (1 Lab Hour)
Practical leadership and teamwork training in rappelling, rope bridges, weapons firing, map reading and land navigation, water safety, patrolling, and other ranger skills. Includes a weekend field trip where the techniques learned will be applied in competitive events. Cross listed with MSCI 1172.

KINE 1131 Yoga
1 Semester Credit Hour (1 Lecture Hour)
Instruction and practice of Yoga postures, breathing, meditation and relaxation.
KINE 1133 Tai Chi
1 Semester Credit Hour (1 Lab Hour)

KINE 1135 Army Physical Fitness Training
1 Semester Credit Hour (3 Lab Hours)
Instruction and practice of the skills, techniques and fitness activities that are germane to typical Army training.

KINE 1136 Pilates
1 Semester Credit Hour (3 Lab Hours)
Instruction and practice in the skills, techniques, and principles of Pilates with emphasis on the Classical Pilates matwork.

KINE 2215 First Aid and Safety
2 Semester Credit Hours (2 Lecture Hours)
Basic CPR and first aid instruction leading to American Red Cross certification.

KINE 2225 Sports Conditioning
2 Semester Credit Hours (2 Lecture Hours)
This course addresses the principles and practice of sports conditioning from a coaching perspective. Topics will include athletic needs evaluation, exercise programming, and program implementation. Issues regarding resistance exercise, speed, endurance, explosiveness training, and agility will be addressed.

KINE 2313 Foundations of Kinesiology
3 Semester Credit Hours (3 Lecture Hours)
An overview of the field of physical education which includes the history, philosophy, principles, current concepts of physical education and career options. For kinesiology majors this course must be taken prior to any senior level (4000) kinesiology courses.

TCCNS: PHED 1301

KINE 2317 Re-inventing Games
3 Semester Credit Hours (3 Lecture Hours)
This course is designed to introduce a framework for the development of games, sports, and activities through an inclusive and developmentally appropriate process of change, challenge, and choice. A wide array of sports, sports-related games and activities are introduced, deconstructed for their current exclusivity and then reconstructed through a framework which seeks to change the existing exclusivity of the rules, to challenge participating students of all cognitive and physical abilities, and then build in a choice component into the activity. This course is recommended prior to enrolling in KINE 3339 and KINE 3341.

KINE 2325 Physiological Aspects of Kinesiology
3 Semester Credit Hours (3 Lecture Hours)
An introduction to the fundamental principles of human physiology and their application to kinesiology.

KINE 2326 Essentials of Professional Fitness Training
3 Semester Credit Hours (3 Lecture Hours)
This course is designed to provide theoretical knowledge and practical skills in preparation for a national certification exam in personal training. Topics include guidelines for instructing safe, effective, and purposeful exercise, essentials of the client-trainer relationship, conducting health and fitness assessments, and designing and implementing appropriate exercise programming.

KINE 2375 Nutrition for Human Performance
3 Semester Credit Hours (3 Lecture Hours)
This course is an introduction to the physiological, anatomical, and psychological aspects of nutrition in relation to human performance and optimal health. Special emphasis is placed on sport and fitness enhancement and achievement of peak training levels, through proper nutrient ingestion.

KINE 3112 Physiology of Exercise Lab
1 Semester Credit Hour (1 Lab Hour)
The required laboratory course with KINE 3312. Demonstration and hands-on learning will introduce students to the scientific basis, techniques, and methods used in exercise physiology. Lab activities will complement lecture materials from KINE 3312. KINE 3112 must be taken concurrently with KINE 3312.

KINE 3301 Outdoor Adventure Programs
3 Semester Credit Hours (3 Lecture Hours)
An introduction to a variety of outdoor adventure activities and basic outdoor skills. In addition to skill acquisition and assessment, this course covers such topics as: history and philosophy of outdoor adventure programs, risk and legal liability and trip planning.

KINE 3312 Physiology of Exercise
3 Semester Credit Hours (3 Lecture Hours)
This course is an application of anatomy and physiology that allows for the understanding of the effects of various forms of exercise and the environment on the body systems and performance. Lab activities will complement lecture materials.

Prerequisite: (KINE 2325 or BIOL 2401) and KINE 2313.
Co-requisite: KINE 3112.

KINE 3318 Prevention and Care of Athletic Injuries
3 Semester Credit Hours (3 Lecture Hours)
Provides the general knowledge and general application of theory, principles, and skills used in the prevention, care, and rehabilitation of athletic injuries.

KINE 3320 Introduction to Therapeutic Interventions
3 Semester Credit Hours (3 Lecture Hours)
Provides the student with the general knowledge of current theory and application of various therapeutic interventions used in the treatment of musculoskeletal injuries, including thermal therapy, cryotherapy, manual therapy, and therapeutic exercises.

Prerequisite: KINE 3318.

KINE 3337 Sport and Exercise Psychology
3 Semester Credit Hours (3 Lecture Hours)
This course provides general knowledge of the psychological factors that are associated with participation and performance in sport, exercise, and other types of physical activity with emphasis on motivational techniques, personality dynamics, and mental health serving as focal points.

KINE 3338 Motor Development/Motor Learning
3 Semester Credit Hours (3 Lecture Hours)
A study of the fundamental principles related to human motor development and the scientific principles related to motor learning.

KINE 3339 Elementary Physical Education Programs
3 Semester Credit Hours (3 Lecture Hours)
The application of the fundamental principles related to human motor development, physical fitness, locomotor skills, non-locomotor skills, manipulative skills, and rhythmical activities with children at the elementary school level. Recommended

Prerequisite: KINE 2317 and 3338.
KINE 3341  Secondary Physical Education Programs  
3 Semester Credit Hours (3 Lecture Hours)  
The application of the fundamental principles related to human motor development, physical fitness, sports related activities and dance with children at the secondary school level. Recommended  
Prerequisite: KINE 3338 and 3339.

KINE 4127  Biomechanics Lab  
1 Semester Credit Hour (1 Lab Hour)  
The required laboratory course with KINE 4327. The demonstration and application of mechanical factors and principles affecting human motion. Qualitative and quantitative analysis of human motion with emphasis on sport and fitness activities. KINE 4127 must be taken concurrently with KINE 4327.  
Prerequisite: KINE 4327 .  
* May be taken concurrently.

KINE 4311  Measurement and Evaluation  
3 Semester Credit Hours (3 Lecture Hours)  
Use and function of the various tests used in kinesiology together with the purpose, scope and techniques of test construction. Development of statistical techniques necessary for manipulation and interpretation of physical performance data. 
Prerequisite: KINE 2313.

KINE 4325  Kinetic Anatomy  
3 Semester Credit Hours (3 Lecture Hours)  
An analysis of the skeletal, muscular, and neurological structure and functional aspects of human movement with emphasis on sport and fitness activities. 
Prerequisite: (KINE 2325 or BIOL 2401) and KINE 2313.

KINE 4327  Biomechanics  
3 Semester Credit Hours (3 Lecture Hours)  
An analysis of the mechanical factors and principles influencing human motion with emphasis on sport and fitness activities. Recommended  
Prerequisite: (KINE 2325 or BIOL 2401) and KINE 2313. 
Co-requisite: KINE 4127.

KINE 4329  Essentials of Strength and Conditioning  
3 Semester Credit Hours (3 Lecture Hours)  
This course is designed to provide a comprehensive overview of strength and conditioning. Emphasis is placed on the exercise sciences (including anatomy, exercise physiology, and biomechanics) and nutrition, exercise technique, program design, organization and administration, and testing and evaluation. Additionally, this course is designed to prepare students for either the nationally accredited Certified Strength and Conditioning Specialist (CSCS) or the NSCA Certified Personal Trainer (CPT) exams. 
Prerequisite: (BIOL 2401, 2402, KINE 4312 and 4327).

KINE 4338  Special Populations in Kinesiology  
3 Semester Credit Hours (3 Lecture Hours)  
A course designed to direct kinesiology educators toward meeting the program needs of the exceptional individual in physical education or kinesiology professional setting. Practical teaching application with exceptional individuals is stressed. 
Prerequisite: KINE 2313.

KINE 4340  Exercise Testing and Prescription  
3 Semester Credit Hours (3 Lecture Hours)  
This course provides classroom and hands on experience addressing all facets of exercise testing and prescription ranging from health appraisal, physical fitness testing, principles of exercise prescription, clinical exercise physiology, and special populations. 
Prerequisite: (KINE 2325 or BIOL 2401) and KINE 2313 and 3312.

KINE 4390  Seminar in Exercise and Sport  
1-3 Semester Credit Hours (1-3 Lecture Hours)  
Contemporary issues in Exercise and Sport; topics vary with the individual. May be repeated for credit when topic varies.

KINE 4693  Professional Field Experience I  
6 Semester Credit Hours (6 Lecture Hours)  
This course is a field-based experience (minimum of 150 hours) to provide the student the opportunity to apply knowledge and theory related to the student’s specialization in kinesiology (e.g. Exercise Science and Pre-Allied Health Professional). Students must enroll in both KINE 4693 and KINE 4694 at the same time. To enroll students must have departmental approval as well as a kinesiology GPA of 2.75. The field experience is for seniors only and they should enroll during their last semester. Students are allowed to enroll in other coursework but not to exceed the 18-hour university limit.

KINE 4694  Professional Field Experience II  
6 Semester Credit Hours (6 Lecture Hours)  
This course is in conjunction with Professional Field Experience I. A minimum of 150 hours is required for this portion of the internship for a total of 300 hours. Students must enroll in both KINE 4693 and KINE 4694 at the same time. All of the requisites and limitations of KINE 4693 apply to this course as well.

KINE 4696  Directed Individual Study  
1-6 Semester Credit Hours  
Investigative study on selected problems by students with particular needs through special permission of the Department Chair and Dean. May be repeated for credit when topic varies.

Management (MGMT)

MGMT 3310  Principles of Management  
3 Semester Credit Hours (3 Lecture Hours)  
Explores fundamental management principles and theories of organizations. Emphasis is placed on the basic functions of management: planning, organizing, directing, and controlling. Topics include the external environment, ethics, international management, decision making, organizational structure, human resource management and diversity, motivation, group dynamics, and control mechanisms. 
Prerequisite: BUSI 0011.

MGMT 3315  Business Communications  
3 Semester Credit Hours (3 Lecture Hours)  
Introduces the fundamentals of effective communication in business and administration. Emphasis is placed on the application of modern techniques to business writing, professional presentations, group communications, verbal communications, nonverbal communications, and listening. 
Prerequisite: BUSI 0011.

MGMT 3318  Organizational Behavior  
3 Semester Credit Hours (3 Lecture Hours)  
Introduces factors that influence interactions between individuals and groups in work environments. Topics include individual differences and diversity, motivation, leadership, power and influence, conflict, organizational culture, stress, and teams. 
Prerequisite: MGMT 3310.
MGMT 3320  Human Resource Management  
3 Semester Credit Hours (3 Lecture Hours)  
Explores the comprehensive set of managerial activities carried out in organizations to develop and maintain a qualified workforce. Topics include the legal environment, recruitment, selection, training, employee appraisals, compensation systems, and employer relations.  
Prerequisite: MGMT 3310.

MGMT 3350  Business Ethics and Decision Making  
3 Semester Credit Hours (3 Lecture Hours)  
Historical and contemporary views of business as a social institution; focus is on the nature of ethics and the utilization of codes of ethics, decision-making processes, critical thinking, and creative problem solving.  
Prerequisite: MGMT 3310.

MGMT 3355  Organization Change  
3 Semester Credit Hours (3 Lecture Hours)  
An in-depth study of group and organization-wide interventions designed to improve the group and organization's ability to cope with change and manage continuous improvement. Emphasis is on developing processes to improve group dynamics, organization-wide health and effectiveness, and on a systems approach to diagnosing and solving problems.  
Prerequisite: MGMT 3310.

MGMT 3360  Social Entrepreneurship  
3 Semester Credit Hours (3 Lecture Hours)  
Introduces the theory and practice of mission-driven organizations. Emphasis is on understanding unmet social needs and opportunities and creating a viable sustainable social venture.  
Prerequisite: MGMT 3310.

MGMT 3370  Entrepreneurship, Creativity, & Innovation  
3 Semester Credit Hours (3 Lecture Hours)  
The student will learn the description and analysis of the characteristics that produce creative opportunities and commercially sustainable innovations. This will include learning about the personal and organizational characteristics, business and societal planning tools, and practices of entrepreneurs. Factors inside and outside the entrepreneurial firm that influence creativity and innovation are also considered as they affect successful business decisions.  
Prerequisite: MGMT 3310.

MGMT 4320  Leadership Development  
3 Semester Credit Hours (3 Lecture Hours)  
A study of traditional and contemporary leadership models, styles, and practices. Focuses on self-assessment and the characteristics of leaders important to effective leadership outcomes.  
Prerequisite: MGMT 3310.

MGMT 4350  Small and Family Business  
3 Semester Credit Hours (3 Lecture Hours)  
Examines the entrepreneurial aspects and the ongoing management of a small and family business enterprises, with a focus on achieving and sustaining competitive advantage. Additional topics include the unique aspects of family business, leadership, decision-making, management, marketing, financial controls and other mission-critical processes.  
Prerequisite: MGMT 3310.

MGMT 4370  New Venture Creation  
3 Semester Credit Hours (3 Lecture Hours)  
New venture creation teaches students how to analyze the feasibility of a new product, service or innovation within the entrepreneurial organization. Students learn to develop business plans necessary for the creation of start-up enterprise to include specific business practices, finances, and obligations of the firms created and maintained by entrepreneurs. Factors inside and outside the entrepreneurial enterprise are researched and analyzed as they affect successful new venture business decisions.

MGMT 4385  Strategic Human Resource Management  
3 Semester Credit Hours (3 Lecture Hours)  
An examination of the issues important to human resource planning. Emphasis is on the processes and activities used to develop human resource objectives, practices, and policies to meet the needs and opportunities of an organization and improve organizational effectiveness.  
Prerequisite: MGMT 3320.

MGMT 4388  Business Strategy  
3 Semester Credit Hours (3 Lecture Hours)  
Analytical process and methodology for policy-strategy formulation, approached as a multi-level, integrative process. Analysis focused on integration of skills and competencies acquired through the BBA program.

MGMT 4390  Current Topics in Management  
1-3 Semester Credit Hours (3 Lecture Hours)  
Selected topics for special study related to management functions, processes or issues. May be repeated for credit when topics vary.

MGMT 4396  Directed Individual Study  
1-3 Semester Credit Hours (3 Lecture Hours)  
Individual supervised study and a final report.

MGMT 4398  Internship in Management  
3 Semester Credit Hours (3 Lecture Hours)  
Supervised full-time or part-time, off-campus training in business or government organization. Oral and written reports required.
MISY 2305 Computer Applications in Business
3 Semester Credit Hours (3 Lecture Hours)
Survey of modern business computer hardware, software, and applications. Opportunities to create programs and use existing application software to solve various management information technology-oriented problems. Emphasizes the end-user's perspective, and interactions with management information technology.

MISY 3310 Management Information Systems Concepts
3 Semester Credit Hours (3 Lecture Hours)
Provides an understanding of the importance of computer-based information in the success of the firm. Illustrates ways in which companies utilize computer systems to strategically compete within certain industries. Emphasis is on the role of information systems within each of the functional areas of business. Major concepts include data management, decision support, and management information systems. **Prerequisite:** BUSI 0011 and MISY 2305.

MISY 3320 Business Data Communication and Networking I
3 Semester Credit Hours (3 Lecture Hours)
Characteristics of contemporary business data communication components, their configurations, and their impact on management information systems design. Topics include designing, managing, securing, and implementing business data communication networks, and their integration into management information systems. Exercises and assignments use various computer packages.

MISY 3330 Database Management
3 Semester Credit Hours (3 Lecture Hours)
Concepts and methodology of data base planning, design, development, and management of the computerized data base of a management information system. The emphasis is on logical data base design and a study of hierarchical, network, and relational implementations. Normalization exercises are completed relative to the logical design of relational data bases. Exercises and assignments use a relational DBMS package.

MISY 3340 Systems Analysis and Design
3 Semester Credit Hours (3 Lecture Hours)
Develops ability to analyze an existing information system within an organization, to identify information requirements, and to specify the functions of a new information system. Includes cost/benefit analysis of proposed information systems. Exercises and assignments use a Computer Aided Software Engineering (CASE) tool.

MISY 3350 Business Applications Development
3 Semester Credit Hours (3 Lecture Hours)
This course introduces students to the fundamental techniques used in the development and programming of software applications. This course is designed for students who have little or no previous computer programming experience. This course will use a scripting and/or visual development programming language.

MISY 4310 Business Data Communications and Networking II
3 Semester Credit Hours (3 Lecture Hours)
Design, implementation, and operation of client-server network systems for organizational Intranets and Internet presence. Exercises and assignments use selected data communications facilities. **Prerequisite:** MISY 3320.

MISY 4325 Business Decision Support Systems and Expert Systems
3 Semester Credit Hours (3 Lecture Hours)
A survey of decision support systems and expert systems used in business. Topics include artificial intelligence (AI), knowledge engineering, knowledge acquisition, expert system shells, modeling, simulation, and selection of appropriate computer package support. Exercises and assignments use various computer packages such as neural network systems and expert system shells.

MISY 4330 Website Development for Business
3 Semester Credit Hours (3 Lecture Hours)
This course provides an understanding of the principles and techniques for client-side web development using HTML and CSS. Text editors and the website development software will be used to create and maintain websites. This course includes designing to meet web standards, including accessibility, usability, and workflow for web design.

MISY 4340 Electronic Commerce Management
3 Semester Credit Hours (3 Lecture Hours)
A broad overview of electronic commerce topics as they relate to various users. General coverage includes electronic commerce history, opportunities, limitations, and risks. Technical discussions include the internet, intranets, extranets, firewalls, security, protocols, servers, and browsers.

MISY 4341 Management of Healthcare Information Systems
3 Semester Credit Hours (3 Lecture Hours)
This course provides an overview of the knowledge and skills required to manage information for organizations related to healthcare. The course specifically focuses on the practice of acquiring, analyzing and protecting digital and traditional medical information vital to providing quality patient care. Some of the topics that are covered include: evolution of health care information systems (HCIS), components and basic HCIS functions, technology infrastructure for healthcare organizations, basic concepts such as electronic health records (HER), health information exchange (HIE), computerized physician order entry (CPOE), clinical decision support systems (CDSS), hospital incident command systems (HICS) and standards such as HIPPA, HL7, and digital imaging and communications in medicine (DICOM). Other topics include strategic information systems planning for healthcare organizations, systems analysis and project management, information security and privacy issues, and the roles of HCIS professionals in health organizations. **Prerequisite:** (MISY 3310).

MISY 4345 Information Security and Privacy in Healthcare
3 Semester Credit Hours (3 Lecture Hours)
This course provides an overview of the knowledge and skills required to manage information privacy and security for organizations related to healthcare. It focuses on best practices for healthcare information security and privacy with detailed coverage of essential topics such as information governance, roles and occupations, risk assessment and management, incident response, patient rights, healthcare responsibilities, cyberattacks and cybersecurity. Topics also include relevant laws and regulations and other aspects of information security and privacy, with emphasis on real-life scenarios in clinical practices and business operations in healthcare. Course **Prerequisite:** (MISY 3310).
MISY 4350 Business Intelligence and Analytics
3 Semester Credit Hours (3 Lecture Hours)
Overview of important concepts of business intelligence, and the use of analytics, technologies, applications and processes used by organizations to gain data-driven insights. These insights and predictions can be used to aid decision-making and performance management across functional areas, including marketing, operations, and finance. Students will learn to extract and manipulate data, and create reports, scorecards and dashboards, including mobile apps. ONLY Juniors or Post-Baccalaureate or Seniors for MISY 4350

MISY 4365 Data Warehousing and Data Mining for Business Intelligence
3 Semester Credit Hours (3 Lecture Hours)
In the information age, organizations can and do collect massive amounts of data. Yet organizations are often "data rich" but "information and knowledge poor". This course is designed to prepare business professionals who, by using analytical methods and data mining and data visualization tools will be able to harness the potential of data by extracting business intelligence that can be used to improve decisions and operations at various points in the value chain.
Prerequisite: MISY 2305, 3330 and ORMS 3310.

MISY 4366 Data Analytics for Healthcare Management
3 Semester Credit Hours (3 Lecture Hours)
The goal of this course is to prepare business professionals to extract business intelligence to improve decisions and operations in organizations, especially in the healthcare industry, at various points in the value chain. Data mining methods covered include multiple linear regression, k-nearest neighbor, classification and regression trees, logistic regression, discriminant analysis, artificial neural networks, association rules, cluster analysis and text mining. Areas in healthcare include healthcare market basket analysis, churn analysis for hospitals and insurance companies, health insurance fraud detection, readmission assessment, personalization of treatment regimen, patient risk management and performance-based payment analysis. Students should have a background in database and statistics. The focus will be less on statistical mathematics and more on the application of data mining methods using software tools.
Prerequisite: (MISY 2305, 3330, ORMS 3310 and MISY 4341).

MISY 4375 IT Project Management
3 Semester Credit Hours (3 Lecture Hours)
This course covers issues related to managing projects in organizations. The course focuses on the management of projects and working as a team. Students are expected to draw on materials from other management information system courses, especially the System Analysis and Design, and Database Management courses.
Prerequisite: MISY 3330.

MISY 4390 Current Topics in Management Information Systems
1-3 Semester Credit Hours (1-3 Lecture Hours)
Selected topics for special study related to management information systems.

MISY 4396 Directed Individual Study
1-3 Semester Credit Hours
Individual supervised study and a final report.

MISY 4398 Internship in Management Information Systems
1-3 Semester Credit Hours
Supervised practical experience in business computer systems.

Marketing (MKTG)

MKTG 3310 Principles of Marketing
3 Semester Credit Hours (3 Lecture Hours)
The initial course in Marketing. Description and analysis of the flow of goods, services and ideas to consumers and industrial users. Factors outside the firm are also considered as they affect marketing decisions.
Prerequisite: BUSI 0011.

MKTG 3311 Professional Selling: Concepts and Practices
3 Semester Credit Hours (3 Lecture Hours)
An introduction to professional selling as a marketing tool. Emphasis is placed on the theory and application of the professional selling process.

MKTG 3315 Advertising and Promotional Strategy
3 Semester Credit Hours (3 Lecture Hours)
The student will learn about the development and implementation of a coordinated and integrated advertising and promotions strategy. Emphasis is placed on the interrelationships among advertising, sales management, and sales promotion activities.
Prerequisite: MKTG 3310.

MKTG 3320 Basic Advertising
3 Semester Credit Hours (3 Lecture Hours)
Advertising concepts and a critical analysis of commercial advertising practices. Students apply advertising concepts in projects such as case studies, campaign evaluations, and simulation exercises.

MKTG 3325 Entrepreneurial Marketing
3 Semester Credit Hours (3 Lecture Hours)
Entrepreneurial marketing provides entrepreneurs and small business owners with the knowledge needed to successfully perform marketing activities (primarily promotion) on a very low budget. Students will learn the utilization of techniques and the analysis of market characteristics that impact the small entrepreneurial organization, its products and services. Additionally, students will learn how to develop specific yet flexible marketing plans and activities, and the effective management of practices, finances, and obligations associated with the marketing of smaller entrepreneurial firms. Factors inside and outside the firm are researched and analyzed as they affect successful small business marketing decisions.

MKTG 3330 Consumer Behavior
3 Semester Credit Hours (3 Lecture Hours)
An examination of the psychological and social influences that affect consumer decision making. Emphasizes the development of marketing programs designed with behavioral considerations in mind.
Prerequisite: MKTG 3310.

MKTG 3333 Digital Marketing
3 Semester Credit Hours (3 Lecture Hours)
This course introduces students to the theories, strategies, tools, and techniques of effective online marketing. The course emphasizes the essential concepts, methods, technologies, and decision making criteria for business-to-business and business-to-consumer internet marketing. The broad concepts of ethics, social responsibilities, sustainability, and globalization are integrated through the course. Topics include online marketing research, business intelligence, Web site design, and Internet marketing strategy.

MKTG 3340 Retail Management
3 Semester Credit Hours (3 Lecture Hours)
A managerial approach to retailing. Topics such as trade area evaluation, buying, layout, pricing, cost and expense analysis are considered.
Prerequisite: MKTG 3310.
MKTG 3345 Sales Management
3 Semester Credit Hours (3 Lecture Hours)
An exploration of the problems and practices of sales and sales management. Organizational structure and development of programs to assure a competent and effective sales force are stressed.
Prerequisite: MKTG 3310.

MKTG 4310 Distribution Systems in Marketing
3 Semester Credit Hours (3 Lecture Hours)
An analysis of the development of integrated distribution systems. Topics include retail and wholesale institutions, channel conflict and cooperation, channel control, franchising and emerging developments in distribution channels.
Prerequisite: MKTG 3310.

MKTG 4320 Marketing Research and Analytics
3 Semester Credit Hours (3 Lecture Hours)
The study of research in marketing with emphasis on the collection and interpretation of data and its application to the solution of marketing problems.
Prerequisite: ORMS 3310 and MKTG 3310.

MKTG 4340 International Marketing
3 Semester Credit Hours (3 Lecture Hours)
A study of the economic, social and cultural environment of international marketing. The course focuses on marketing decision making in this environment.
Prerequisite: MKTG 3310.

MKTG 4350 Marketing Strategy
3 Semester Credit Hours (3 Lecture Hours)
The study and application of the strategic marketing planning process to realistic business situations. Topics include: strategies for growth and competitive advantage; market segmentation, targeting and positioning; marketing mix strategies and tactics; customer satisfaction and relationship building; and evaluation and control of marketing strategies. Attention to ethical considerations in marketing and a triple bottom line (TBL) evaluation of marketing outcomes.
Prerequisite: MKTG 3310.

MKTG 4360 Social Media Marketing
3 Semester Credit Hours (3 Lecture Hours)
A comprehensive study of Social Marketing strategy and implementation. The course explores the tools, techniques, and strategic logic used in the development and implementation of social media marketing strategy. The course also describes and defines the logic models used for specific plans and programs that affect and are affected by the technology and competitive environments.
Prerequisite: MKTG 3310.

MKTG 4390 Special Topics in Marketing
1-3 Semester Credit Hours (3 Lecture Hours)
Selected topics for special study related to marketing functions, processes, or issues. May be repeated for credit when topics vary.

MKTG 4396 Directed Individual Study
1-3 Semester Credit Hours
Individual supervised study and a final report.

MKTG 4398 Internship in Marketing
3 Semester Credit Hours
Supervised full-time or part-time, off-campus training in business or government organization. Oral and written reports required.

Mathematics (MATH)

MATH 0099 Math Non-Course Based Development
0 Semester Credit Hours
Preparation workshop to help students achieve College Readiness in mathematics under the Texas Success Initiative. Topics include five general areas: fundamental mathematics, algebra, geometry, statistics, and problem solving.

MATH 0200 Brief Developmental Mathematics
1-2 Semester Credit Hours (1-2 Lecture Hours)
Topics as in MATH 0300. For students who have completed most topics in MATH 0300. Requires permission of MATH department. (Not counted toward graduation) Fall, Spring, Maymester, Summer.
Co-requisite: MATH 1314, MATH 1442.

MATH 0214 Brief Developmental Mathematics-Algebra
2 Semester Credit Hours (2 Lecture Hours)
This course is co-requisite course supporting for MATH 1314. Support will focus on essential skills required for success in College Algebra (Math 1314). Supporting topics include review of intermediate algebra, polynomial equations, graphing techniques, and applications. Course provides the necessary academic support for TSI liable students concurrently enrolled in MATH 1314 as the co-requisite with MATH 0214.
Students who register for MATH 0214 must co-register in MATH 1314. Math 0214 is not counted toward graduation. Fall, Spring, Summer.
Co-requisite: MATH 1314, UNIV 1102.

MATH 0224 Brief Developmental Mathematics-Business Mathematics
2 Semester Credit Hours (2 Lecture Hours)
This course is the co-requisite course supporting for MATH 1324. Support will focus on essential skills required for success in Business Math (Math 1324). Supporting topics include the use of calculators and technology. Topics focus on basic review of mathematical skills, elementary algebra, mathematical and logical reasoning, probability, and financial management, while providing the necessary academic support for TSI liable students concurrently enrolled in MATH 1324 as the co-requisite with MATH 0224.
Students who register for MATH 0224 must co-register in MATH 1324. Math 0224 is not counted toward graduation. Fall, Spring, Summer.
Co-requisite: MATH 1324.

MATH 0232 Brief Developmental Mathematics-Contemporary Mathematics
2 Semester Credit Hours (2 Lecture Hours)
This course is co-requisite course supporting for MATH 1332. Support will focus on essential skills required for success in Contemporary Mathematics (Math 1332). Supporting topics include a basic review of mathematical skills, elementary algebra, mathematical and logical reasoning, probability, and descriptive statistics, while providing the necessary academic support for TSI liable students concurrently enrolled in MATH 1332 as the co-requisite with MATH 0232. Students who register for MATH 0232 must co-register in MATH 1332. Math 0232 is not counted toward graduation. Fall, Spring, Summer.
Co-requisite: MATH 1332.
MATH 0242  Brief Developmental Mathematics-Statistics
2 Semester Credit Hours (2 Lecture Hours)
This course is co-requisite course supporting for MATH 1442. Support will focus on essential skills required for success in Statistics for Life (Math 1442). Supporting topics include the use of calculators and technology. Topics focus on descriptive and inferential statistics, probabilities including notation, while providing the necessary academic support for TSI liable students concurrently enrolled in MATH 1442 as the co-requisite with MATH 0242. Students who register for MATH 0242 must co-register in MATH 1442. Math 0242 is not counted toward graduation. Fall, Spring, Summer.
Co-requisite: MATH 1442.

MATH 0300  Developmental Mathematics
3 Semester Credit Hours (3 Lecture Hours)
Topics include number concepts, computation, elementary algebra, geometry, and mathematical reasoning. Also, linear equations and inequalities, rational expressions, exponents and radicals, quadratics and word problems. May be repeated for credit as needed to complete mastery of all topics. (Not counted toward graduation.) Fall, Spring, Summer.

MATH 0310  Developmental Mathematics-Algebra
3 Semester Credit Hours (2 Lecture Hours, 2 Lab Hours)
3 sem. hrs. (2:2) Topics include number concepts, computation, elementary algebra, and geometry. Also, linear equations and inequalities, rational expressions, exponents and radicals, quadratics and word problems. May be repeated for credit as needed to complete mastery of all topics. (Not counted toward graduation.) Fall, Spring, Summer.

MATH 0398  Introduction to Algebra
3 Semester Credit Hours (3 Lecture Hours)
Number concepts, computation, elementary algebra, geometry, and mathematical reasoning.

MATH 0399  Intermediate Algebra
3 Semester Credit Hours (3 Lecture Hours)
Topics include linear equations and inequalities, rational expressions, exponents and radicals, quadratics and word problems.
Prerequisite: MATH 0398.

MATH 1314  College Algebra
3 Semester Credit Hours (3 Lecture Hours)
Quadratic equations, inequalities, graphs, logarithms and exponentials; theory of polynomial equations, systems of equations.
Prerequisite: MATH 0300, minimum score of 530 in 'SAT MATH SECTION', minimum score of 19 in 'ACT1 Math', MATH 0320, minimum score of 350 in 'TSI Math', minimum score of 910 in 'TSIA2 Math' or minimum score of 6 in 'TSIA2 Math Diagnostic'.
TCCNS: MATH 1314

MATH 1316  Trigonometry
3 Semester Credit Hours (3 Lecture Hours)
Trigonometric functions, identities, equations involving trigonometric functions, solutions of right and oblique triangles.
Prerequisite: (MATH 1314, minimum score of 550 in 'SAT MATH SECTION' or minimum score of 21 in 'ACT1 Math') or minimum score of 21 in 'ACT Math'.
TCCNS: MATH 1316

MATH 1324  Mathematics for Business and Social Sciences
3 Semester Credit Hours (3 Lecture Hours)
Students will learn how the properties and language of mathematics can be used in business and real-world problem solving and understand the techniques and applications of finance problems, basic matrix operation, basic counting principles, and probability analysis in modeling real-world scenarios. This course could be taught in 14-weeks 7-weeks semesters and in F2F or fully online formats
Prerequisite: minimum score of 550 in 'SAT MATH SECTION', minimum score of 21 in 'ACT Math' or minimum score of 21 in 'ACT1 Math'.
TCCNS: MATH 1324

MATH 1325  Calculus for Business & Social Sciences
3 Semester Credit Hours (3 Lecture Hours)
Students will develop and combine the concepts in and relationships between Mathematics and Business from the fundamentals of calculus and optimization in all Business fields. Students are expected to learn the materials algebraically with technology. Students will combine the concepts of limits, continuity, differentiation and integration techniques to solve problems in business, economics, and social sciences. This course could be taught in 14-weeks and 7-weeks semesters in F2F and fully online formats
Prerequisite: (MATH 1324 and 1314).
TCCNS: MATH 1325

MATH 1332  Contemporary Mathematics
3 Semester Credit Hours (3 Lecture Hours)
This course serves as a terminal course and supplies a brief overview of several topics in mathematics. Topics may include introductory treatments of sets, logic, number systems, number theory, relations, functions, probability and statistics. Appropriate applications are included. This course emphasizes using critical thinking to make decisions based on information.
TCCNS: MATH 1332

MATH 1390  Introduction to Mathematical Topics
1-3 Semester Credit Hours (1-3 Lab Hours)
A course to introduce students to mathematical topics in a formal setting. The course may support problem solving, or systematic investigations of topics outside the current mathematical catalog. May not be substituted for regularly scheduled offerings.

MATH 1442  Statistics for Life
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
An introduction to statistical concepts and methods used in all disciplines to enhance decision making based on data analysis, including: basic experimental design models, measurement and data collection through sampling; display and summary of information, and assessment of relationship through descriptive techniques; probability concepts leading to estimation and hypothesis testing of means, variance and proportions, regression analysis, one-factor ANOVA and chi-square test of independence; and applications through case studies. The laboratory component of the course offers applications of the theory presented during the classroom sessions.
Prerequisite: MATH 0300, minimum score of 530 in 'SAT MATH SECTION', minimum score of 19 in 'ACT1 Math', MATH 0310, 0320, minimum score of 350 in 'TSI Math' or minimum score of 19 in 'ACT Math'.
TCCNS: MATH 1442
MATH 2305 Discrete Mathematics I
3 Semester Credit Hours (3 Lecture Hours)
An introduction to topics in Discrete Mathematics with an emphasis on applications in Mathematics and Computer Science. Topics include formal logic, graphs, trees and related algorithms, and combinatorics and discrete probability.
Prerequisite: MATH 2413, minimum score of 620 in 'SAT Math', minimum score of 620 in 'SAT I Mathematics', minimum score of 640 in 'SAT MATH SECTION', minimum score of 27 in 'ACT Math' or minimum score of 27 in 'ACT 1 Math'.
TCCNS: MATH 2305

MATH 2312 Precalculus
3 Semester Credit Hours (3 Lecture Hours)
A more rapid treatment of the material in MATH 1314 and MATH 1316, this course is designed for students who wish a review of the above material, or who are very well prepared. Functions, graphs, trigonometry, and analytic geometry.
Prerequisite: MATH 1314, minimum score of 550 in 'SAT MATH SECTION', minimum score of 21 in 'ACT Math' or minimum score of 21 in 'ACT 1 Math'.
TCCNS: MATH 2312

MATH 2413 Calculus I
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Limits, continuity, derivatives, applications of the derivative, and an introduction to integrals. Contains a laboratory component.
Prerequisite: MATH 1316, 2312, minimum score of 640 in 'SAT MATH SECTION' or minimum score of 27 in 'ACT 1 Math'.
TCCNS: MATH 2413

MATH 2414 Calculus II
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Prerequisite: MATH 2413.
TCCNS: MATH 2414

MATH 2415 Calculus III
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Vectors and space curves, partial derivatives, multiple integrals, special coordinate systems, line and surface integrals, Green's, Stokes', and the Divergence Theorems. Contains a laboratory component. Vectors and space curves, partial derivatives, multiple integrals, special coordinate systems, line and surface integrals, Green's, Stokes', and the Divergence Theorems. Contains a laboratory component.
Prerequisite: MATH 2414.
TCCNS: MATH 2415

MATH 3301 Introduction to Complex Analysis
3 Semester Credit Hours (3 Lecture Hours)
This course introduces functions of a complex variable and their applications. Contents include differentiation and integration; zeros, poles and residues; conformal mappings.
Prerequisite: (MATH 2415) or (MATH 2414 and 3314).

MATH 3310 Mathematical Analysis for Mechanical Engineering
3 Semester Credit Hours (3 Lecture Hours)
Applications of fundamentals of linear algebra, vector analysis, numerical methods, computer programming and probability and statistics into mechanical engineering. May not count towards the MATH major. Students may not receive credit for both MATH 3310 and MEEN 3310.
Prerequisite: MATH 3315.

MATH 3311 Linear Algebra
3 Semester Credit Hours (3 Lecture Hours)
Fundamentals of linear algebra and matrix theory. Topics include vectors, matrix operations, linear transformations, fundamental properties of vector spaces, systems of linear equations, eigenvalues and eigenvectors. Applications.
Prerequisite: MATH 2413.

MATH 3312 College Geometry
3 Semester Credit Hours (2 Lecture Hours, 2 Lab Hours)
A careful study of the foundations of Euclidean geometry by synthetic methods with an introduction to non-Euclidean geometries. An introduction to transformational geometry.
Prerequisite: MATH 2413.

MATH 3313 Foundations of Number Theory
3 Semester Credit Hours (3 Lecture Hours)
This course assists a student’s transition to advanced mathematics. Fundamentals of logic and proof are reviewed and applied to topics from elementary number theory.
Prerequisite: MATH 2414.

MATH 3314 Foundations of Real Numbers
3 Semester Credit Hours (3 Lecture Hours)
This course assists a student’s transition to advanced mathematics. Fundamentals of logic and proof are reviewed and applied to development of the real number line.
Prerequisite: MATH 2414.

MATH 3315 Differential Equations
3 Semester Credit Hours (3 Lecture Hours)
An introduction to both theoretical and applied aspects of ordinary differential equations. Topics include: first order equations, linear second order equations, elementary numerical methods, and the Laplace transform.
Prerequisite: MATH 2414.

MATH 3342 Applied Probability and Statistics
3 Semester Credit Hours (3 Lecture Hours)
A calculus based introduction to probability and statistics. Emphasis will be on development of statistical thinking and working with data. Topics include probability theory, descriptive statistics, common distributions, and statistical inference.
Prerequisite: MATH 2413.
MATH 3345 Statistical Modeling and Data Analysis
3 Semester Credit Hours (3 Lecture Hours)
An introduction to probability/statistical modeling and data analysis techniques to investigate data. Topics include: exploratory data analysis, probability models and simulation, sampling distributions, statistical inference. Applications to real world problems. Students will be expected to present and justify results orally and in writing. Note: MATH 3342 and MATH 3345 cannot both be counted for credit.
Prerequisite: MATH 2413 and (COSC 1330 or 1435).

MATH 3347 Introduction to Probability
3 Semester Credit Hours (3 Lecture Hours)
This is an introduction to probability. In the course, key fundamental concepts of probability, random variables and their distributions, expectations, and conditional probabilities will be covered. Topics include counting rules, combinatorial analysis, sample spaces, axioms of probability, conditional probability and independence, discrete and continuous random variables, jointly distributed random variables, characteristics of random variables, law of large numbers and central limit theorem, random processes, Markov chains, Markov chain-Monte Carlo, Poisson Process and Entropy.
Prerequisite: MATH 2415.

MATH 3385 Linear Optimization and Decisions
3 Semester Credit Hours (3 Lecture Hours)
This course introduces the linear programming and optimization problems arising in many applications. Contents include linear programming models with solutions, the simplex method, duality theory and its use for management decision making, dual simplex method and sensitivity analysis.
Prerequisite: MATH 3311 and 2413.

MATH 3390 Problem Solving in Mathematics
1-3 Semester Credit Hours (1-3 Lecture Hours)
A problem solving course for students who want to participate in math problem solving competitions, train for the actuarial or other professional examinations, work on research aimed at conference presentations, or perform research projects at the junior level that are not at the level of directed independent study material.
Prerequisite: MATH 2414.

MATH 4185 Senior Mathematics Seminar
1 Semester Credit Hour (1 Lecture Hour)
This course introduces a weekly mathematics seminar. Students will generate a viable project for the capstone course.

MATH 4285 Mathematics Major Capstone
2 Semester Credit Hours (2 Lecture Hours)
Development of projects as proposed in MATH 4185, as well as mathematics communication skills. Students will present their projects, and take a national level assessment.
Prerequisite: MATH 4185.

MATH 4301 Introduction to Analysis
3 Semester Credit Hours (3 Lecture Hours)
An advanced treatment of the foundations of calculus stressing rigorous proofs of theorems. Topics include: elements of propositional and predicate logic, topology of the real numbers, sequences, limits, the derivative, and the Riemann integral.
Prerequisite: MATH 2415 and 3314.

MATH 4306 Modern Algebra
3 Semester Credit Hours (3 Lecture Hours)
Fundamentals of set operations, maps and relations, groups, rings and field theory. Topics include permutation groups, cosets, homomorphisms and isomorphisms, direct product of groups and rings, integral domains field of quotients, fundamental properties of integers, the ring of integers modulo n, and rings of polynomials. Applications.
Prerequisite: MATH 3311 and 3313.

MATH 4312 Differential Geometry
3 Semester Credit Hours (3 Lecture Hours)
Differential forms on R1, R2, R3, and Rn; Integration and differentiation of differential forms; Stokes’ Theorem; manifolds; Gaussian curvature and the Gauss-Bonnet Theorem.
Prerequisite: MATH 2415.

MATH 4315 Partial Differential Equations
3 Semester Credit Hours (3 Lecture Hours)
An introduction to partial differential equations emphasizing the wave, diffusion and potential (Laplace) equations. A focus on understanding the physical meaning and mathematical properties of solutions of partial differential equations. Methods include fundamental solutions and transform methods for problems on the line, and separation of variables using orthogonal series for problems in regions with boundary. Additional topics include higher dimensional problems and special topics like Harmonic functions, the maximum principle, Green’s functions etc.
Prerequisite: MATH 3315 and 2415.

MATH 4321 Applied Regression Analysis
3 Semester Credit Hours (3 Lecture Hours)
Introduction to the formulation of linear models and the estimation of the parameters of such models, with primary emphasis on least squares. Application of multiple regression and curve fitting and the design of experiments for fitting regression models.
Prerequisite: MATH 1342, 2342 or 1470.

MATH 4328 Discrete Mathematics II
3 Semester Credit Hours (3 Lecture Hours)
A continued study of topics from Discrete Mathematics I with additional topics from discrete mathematics that have strong application to the field of computer science. Additional topics include: recurrence relations, formal languages, and finite-state machines.
Prerequisite: MATH 2305 and COSC 2437.

MATH 4342 Introduction to Mathematical Statistics
3 Semester Credit Hours (3 Lecture Hours)
This is a first course in mathematical statistics, topics include: moment-generating functions, functions of random variables, sampling distributions, methods of estimation including Bayesian estimation, characteristics of estimators, interval estimation, hypothesis testing, Neyman-Pearson Lemma, likelihood ratio test, tests involving means and variances, regression and correlation, multiple linear regression, introduction to ANOVA, non-parametric tests.
Prerequisite: MATH 2415.

MATH 4385 Applied Modeling
3 Semester Credit Hours (3 Lecture Hours)
Capstone course for mathematics majors. The construction of mathematical models from areas such as economics, refining, biology and mariculture, etc. Where possible, local phenomena will be modeled with the assistance of outside consultants.
Prerequisite: MATH 3315 and 3342 or MATH 3345.

MATH 4390 Selected Topics
3 Semester Credit Hours (3 Lecture Hours)
Offered on sufficient demand.
MATH 4696 Directed Independent Study
1-6 Semester Credit Hours
See college description.

Mechanical Engineering (MEEN)

MEEN 3230 Solid Mechanics Laboratory
2 Semester Credit Hours (4 Lab Hours)
Experimental principles from Strength of Materials, and experiments
and computer-based analysis of machine elements and structures for
Strength of Material and Solid Mechanics.
Prerequisite: MEEN 3330 or 3330*.
Co-requisite: SMTE 0099.

MEEN 3310 Engineering Analysis for Mechanical Engineering
3 Semester Credit Hours (3 Lecture Hours)
Applications of fundamentals of linear algebra, vector analysis, numerical
methods, computer programming, and probability and statistics for
mechanical engineering. (Cross-listed with MATH 3310 - Mathematical
Analysis for Mechanical Engineering )
Prerequisite: MATH 3315.

MEEN 3330 Design of Machine Elements
3 Semester Credit Hours (3 Lecture Hours)
Stress analysis of deformable bodies and mechanical elements; stress
transformation; combined loading; failure modes; material failure
theories; fracture and fatigue; deflections and instabilities; thick
cylinders; curved beams; design of structural/mechanical members;
design processes for shafts, bearings, springs, fasteners, and mechanical
joints.
Prerequisite: ENGR 3320.

MEEN 3335 Introduction to Unmanned Aircraft Systems
3 Semester Credit Hours (3 Lecture Hours)
Overview of unmanned aerial systems: history, platforms, operations,
command and control, sensor systems, payloads, regulations, policy.
Current developments in unmanned aerial systems.

MEEN 3340 Solid Modeling and Finite Elements
3 Semester Credit Hours (2 Lecture Hours, 3 Lab Hours)
Use of computer aided design and solid modeling tools in engineering
design, and analysis, and manufacturing including: solid modeling, stress,
flow, and heat transfer analysis using finite element methods.
Prerequisite: MEEN 3310 and ENGR 3320.

MEEN 3345 Heat Transfer
3 Semester Credit Hours (3 Lecture Hours)
Steady and unsteady conduction in one- and two-dimensions; forced
convection, internal and external flows; heat exchangers; introduction to
radiation; elements of thermal system design.
Prerequisite: (ENGR 3316 and 3315).

MEEN 4325 Energy Conversion
3 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
Natural resources: fuels, solar, wind, geothermal, wave, and ocean
thermal; thermodynamics of power cycles and processes: Rankine,
Brayton, gas turbine, IC engines, fuel cell; nuclear power; direct
energy conversion: photovoltaic, thermolectric, thermionic,
magnetohydrodynamics; non-reactive processes: wind, wave/tidal, ocean
thermal energy, solar thermal; concept of life cycle assessments of
carbon foot print. Student teamwork of a class term paper is expected.
Prerequisite: ENGR 3316.

MEEN 4330 Introduction to Plasma Engineering and Applications
3 Semester Credit Hours (2 Lecture Hours, 2 Lab Hours)
Physical, electrical, chemical properties of plasmas; differences in
properties of thermal and non-thermal plasmas, direct and alternating
current plasma sources, inductive and capacitive coupled plasma
sources, diagnostics and applications of plasmas.
Prerequisite: ENGR 2322 and (ENGR 2460 or PHYS 2426).
Co-requisite: SMTE 0099.

MEEN 4331 Compressible Flow and Introduction to Jet Propulsion
3 Semester Credit Hours (3 Lecture Hours)
Introduction to compressible flows: isentropic flow, normal shocks,
oblique shocks, expansion fans, internal flows. Flows with friction and
heat addition. Introduction to gas turbine engine cycle and components.
Derivation of thrust equation for turbojet engines.
Prerequisite: (ENGR 3315 or ENTC 3306) and (ENGR 3316 or ENTC 3320).

MEEN 4335 Introduction to Aircraft Aerodynamics and Performance
3 Semester Credit Hours (3 Lecture Hours)
Forces on aircraft; standard atmosphere; steady-state cruise, climb, and
turn performance; performance optimization; introduction to aircraft
longitudinal stability.
Prerequisite: ENGR 2326 and COSC 1330.

MEEN 4336 Introduction to UAS for Agricultural Applications
3 Semester Credit Hours (3 Lecture Hours)
Provides the foundations to acquire remote sensing data using
Unmanned Aircraft Systems (UAS) and to interpret, process, and apply
remotely sensed data for agricultural applications. Principles of remote
sensing, digital image processing, and geospatial analysis will be
covered. Emphasis will be on the use of UAS remote sensing technology
for various disciplines in agricultural sciences including plant breeding,
plant physiology, crop scouting, pest management and entomology.
Offered Spring.
Prerequisite: MEEN 3335.

MEEN 4345 Sensors and Systems
3 Semester Credit Hours (3 Lecture Hours)
This course covers sensors and sensing systems where sensing
modalities, analysis of sensed data, data transmission and reception are
discussed. Filtering and estimation in sensing systems are considered.
The course covers sensors at component level to develop subsystems
and more complex sensing systems that monitor physical phenomena
in laboratory or marine/terrestrial environments. Other topics include
multidimensional signal and image processing, object tracking,
multisensory data fusion, applications in environmental monitoring,
remote sensing and surveillance.
Prerequisite: MATH 2414, PHYS 2426 and ENGR 2460.

MEEN 4350 Controls, Automation and Robotics
3 Semester Credit Hours (2 Lecture Hours, 3 Lab Hours)
Automation in a manufacturing and assembly setting for ocean and
marine environments, material handling systems, remote guided vehicles,
automated storage and retrieval systems, computer numerical machine
tools, robotics.
Prerequisite: MATH 3315, ENGR 2326 and 2460.
Co-requisite: SMTE 0099.
MEEN 4351 Dynamical Systems Analysis and Modeling
3 Semester Credit Hours (3 Lecture Hours)
Modeling and analysis of systems that have a time-based response. Transient as well as steady state solutions for SDOF and MDOF systems and computational solutions including time response, Bode plots, phase plots, and other plots relevant to the system. Linear and non-linear modeling of systems will be studied. Modeling of mechanical systems (vibrations), electrical circuits, and thermal/fluid systems will be covered.
Prerequisite: COSC 1330, ENGR 2460 and MEEN 3345.

MEEN 4355 Marine Fabrication
3 Semester Credit Hours (2 Lecture Hours, 3 Lab Hours)
Advanced topics in manufacturing and fabrication related to ships and offshore platforms and construction.
Prerequisite: ENGR 3350.
Co-requisite: SMTE 0099.

MEEN 4356 Micro-Electronical & Mechanical Manufacturing
3 Semester Credit Hours (3 Lecture Hours)
Basic principles and techniques in microelectronics manufacturing (semiconductor manufacturing and micro-electrical mechanical systems (MEMS). Emphasis will be on process descriptions, terminology, equipment requirements, and process controls. Basic micro-fabrication including semiconductor and MEMS physics and process chemistry will be combined with control schemes to arrive at overall systems descriptions.

MEEN 4360 Thermal Systems Design
3 Semester Credit Hours (3 Lecture Hours)
Analysis, management and cost, optimal design, and computer simulation of thermal systems and components; Applications in fluid flow and heat transfer, pumps, turbines and heat exchangers. Selected course topics are assigned as projects.
Prerequisite: MEEN 3345.

MEEN 4365 Mechanical Systems Design
3 Semester Credit Hours (3 Lecture Hours)
Analysis, management and cost, optimal design, and computer simulation of mechanical systems and components; machine elements, and stress analysis. Selected course topics are assigned as projects.
Prerequisite: (MEEN 3330 and ENGR 3350).

MEEN 4375 Fuel Cells
3 Semester Credit Hours (3 Lecture Hours)
Students will acquire an understanding of thermodynamics, transport phenomena and reaction fundamentals that are required to understand the processes and phenomena that pose limits on fuel cell performance.
Prerequisite: ENGR 3316, MEEN 3345 and CHEM 1411.

MEEN 4380 Renewable Energy
3 Semester Credit Hours (2 Lecture Hours, 2 Lab Hours)
Renewable and alternative energy sources and fuels; modern energy conversion devices, such as offshore wind farms, marine current turbines, fuel cells, photovoltaic cells, and micro-power turbines. Cost and environmental analysis of renewable sources. Installation, design characteristics, operational performance, and maintenance of motors, turbines, pumps and compressors. Introduction to global energy concerns; fossil and nuclear fuels; energy consumption analysis; energy management and conservation techniques.
Prerequisite: ENGR 3316, 2460 and MEEN 4325.
Co-requisite: SMTE 0099.

MEEN 4385 Offshore Energy Management
3 Semester Credit Hours (3 Lecture Hours)
Topics related to the design and energy management of ships and offshore platforms will be covered. Such topics may include oil and gas exploration, wind and marine energy systems, and environmental protection.
Prerequisite: MEEN 3345.

MEEN 4390 Introduction to Computational Fluid Dynamics
3 Semester Credit Hours (2 Lecture Hours, 3 Lab Hours)
Introduction to numerical, computational, modeling and simulation of thermo-fluid systems. Applications related to ships and offshore platforms and structures will be presented.
Prerequisite: MEEN 3345.

MEEN 4395 Offshore Water Exploration and Desalination Systems
3 Semester Credit Hours (2 Lecture Hours, 3 Lab Hours)
Advanced and future applications of sea floor mapping, under-water acoustics and GIS for fresh water exploration and mining. Renewable energy driven coastal, near-shore, and offshore desalination systems.
Prerequisite: ENGR 3316.

MEEN 4396 Directed Independent Study
3 Semester Credit Hours
Requires a formal proposal of study to be completed in advance of registration, approval of supervising faculty and chairperson.

Media (MEDA)

MEDA 1305 Film and Culture
3 Semester Credit Hours (3 Lecture Hours)
Introduction to film aesthetics, history, and criticism for non-communication majors. Establishes a vocabulary for examining films and their roles in American culture.

MEDA 1307 Media and Society
3 Semester Credit Hours (3 Lecture Hours)
History and development of mass media in the United States as well as the organizational, institutional, and cultural dynamics of today's major commercial media. Included are substantial components on print media, radio, television, cinema, and computer Internet communication systems. Course themes include media production and consumption, globalization, cultural imperialism, race, class, gender in media and popular culture.

MEDA 1315 Editing
3 Semester Credit Hours (3 Lecture Hours)
Intensive instruction in postproduction software, postproduction workflows, and editing techniques for moving images.

MEDA 1380 Introduction to Media Production
3 Semester Credit Hours (3 Lecture Hours)
Overview of tools and skills necessary to produce digital media content such as editing, cinematography, sound recording, producing and directing for film, television and new media.

MEDA 2311 Media Writing
3 Semester Credit Hours (3 Lecture Hours)
This course is designed to teach the fundamentals of writing for the mass media. It includes instruction in professional methods and techniques for gathering, processing and delivering content.

TCCNS: COMM 2311
MEDA 2313 Intermediate Production: Documentary
3 Semester Credit Hours (3 Lecture Hours)
Principles and techniques of media production with a focus on non-fiction filmmaking.
Prerequisite: (MEDA 1307).

MEDA 2315 News Reporting
3 Semester Credit Hours (3 Lecture Hours)
This course focuses on advanced news-gathering and writing skills. It concentrates on the three-part process of producing news and features, which include discovering the news, reporting the news and writing news in different formats. This course will incorporate all forms of news writing, including: press release, print news, web news and TV and radio broadcast news.
Prerequisite: MEDA 2311.

MEDA 2316 Intermediate Production: Narrative
3 Semester Credit Hours (3 Lecture Hours)
Principles and techniques of media production with a focus on fictional narrative filmmaking.
Prerequisite: (MEDA 1307 and 1380).

MEDA 2350 Media Performance
3 Semester Credit Hours (3 Lecture Hours)
This course is designed to teach students articulation, pronunciation, effective writing and on-air performance techniques for all kinds of media environments with videotaped and audio taped presentations.

MEDA 2366 Media Forms
3 Semester Credit Hours (3 Lecture Hours)
Examination of the formal elements of media texts, including cinematography/videography, sound, and editing, across a variety of media platforms and styles. Includes instruction in writing formal analysis.
TCCNS: COMM 2366

MEDA 2367 Media Industries
3 Semester Credit Hours (3 Lecture Hours)
Examination of the media industries, including how they have evolved and now operate, as well as broader theoretical and practical implications of changing media organizations and practices. Includes instruction in researching contemporary and historical modes of media production, distribution, and exhibition.

MEDA 3301 Television Criticism
3 Semester Credit Hours (3 Lecture Hours)
Exploration of how TV communicates through the study of programming content, production practices, and audiences. Includes a laboratory for screening assigned programs.
Prerequisite: MEDA 1307.

MEDA 3302 Film Criticism
3 Semester Credit Hours (3 Lecture Hours)
Exploration of the critical approaches to the study of film from a variety of historical and theoretical perspectives, with an emphasis on narrative film and some consideration of experimental cinema. Includes a laboratory for screening assigned films.
Prerequisite: MEDA 1307.

MEDA 3303 Documentary Studies
3 Semester Credit Hours (3 Lecture Hours)
Historical and critical study of the non-fictional film with attention to changing technologies, to varying uses and styles of documentary, and to contemporary critical and theoretical issues.
Prerequisite: MEDA 1307.

MEDA 3310 Media Theory and Research
3 Semester Credit Hours (3 Lecture Hours)
This course is intended to immerse students in the leading theoretical and methodological approaches employed within the field of media studies to gain understanding of media texts, popular culture, and audiences. Closely affiliated with cultural studies, qualitative research methods will be a primary focus. Readings and case studies will offer students insight into the way these methods are being used in the field, including their limitations and strengths. A series of assignments will allow them to propose, design, and conduct multiple sample research projects and analyze data in ways that engage with a variety of theories.

MEDA 3314 Multimedia Journalism
3 Semester Credit Hours (3 Lecture Hours)
This course is designed to strengthen students' digital journalism skills, including field-based news gathering and reporting, on-air performance, interviewing techniques, live reporting, and podcasting. The course will prepare students for modern-based multimedia journalism outside of the studio.

MEDA 3317 Advanced Postproduction
3 Semester Credit Hours (3 Lecture Hours)
Intensive instruction in advanced postproduction software, postproduction workflows and editing techniques for moving images.
Prerequisite: MEDA 1315.

MEDA 3318 Editing & Layout
3 Semester Credit Hours (3 Lecture Hours)
This course will teach the principles of copy editing, with an emphasis on accuracy and fairness, as well as the principles of layout and design for print and web publications.
Prerequisite: MEDA 2311.

MEDA 3340 Photojournalism
3 Semester Credit Hours (3 Lecture Hours)
This course will instruct on photojournalism skills and methods for use in visual communication. It will examine ethical and legal limitations to photography and in editing. Student work in this class will be eligible for possible publication in the student newspaper or its accompanying website.

MEDA 3351 Screen Comedy
3 Semester Credit Hours (3 Lecture Hours)
Examination of the varieties of screen comedy, from silent comedy to contemporary forms, with some attention to the history and theory of comic performance.
Prerequisite: MEDA 1307.

MEDA 3360 Screenplay Writing
3 Semester Credit Hours (3 Lecture Hours)
Writing and analysis of the screenplay for narrative fictional films. Writing projects include problem-solving exercises and work on an original screenplay. Course can be repeated for credit.

MEDA 3361 Sports Writing
3 Semester Credit Hours (3 Lecture Hours)
This course will teach the elements of sports writing and reporting to include interviewing and writing to cover different aspects of sports coverage. This course will address content for print, Internet, radio and television. Campus-related sports assignments will be eligible for publication in the student newspaper and its accompanying website.
MEDIA 3380  New Media and Communication
3 Semester Credit Hours (3 Lecture Hours)
Examines how new media technologies impact society and change communication practices. Particular emphasis placed on different modes of cultural expression and social interaction made possible through digital media and the Internet.

MEDIA 4035  Interpreting and Making the Visual Culture of Hollywood
3 Semester Credit Hours (3 Lecture Hours)
This course examines the visual culture of Hollywood media production in a focused context, such as during a particular decade, or in relation to a particular genre, star, or cultural topic. The visual culture studied will include not just primary media texts such as films or television programs, but also posters, trailers, and other promotional materials, as well as visual culture not produced directly by the media industries, such as contemporary art. Students will learn and utilize basic design techniques to create their own artwork related to these materials, including movie posters, album covers, and sequential art. As resources and equipment availability allow, these designs will be produced using techniques including print-making.

MEDIA 4038  Advanced Production: Commercial
3 Semester Credit Hours (3 Lecture Hours)
Advanced techniques in the creation of client based commercial media content with a focus on conceptualization, production, and delivery of a commercial, PSA, or corporate video project.
Prerequisite: (MEDIA 1315, 2313 and 2316).

MEDIA 4039  Advanced Production: Documentary
3 Semester Credit Hours (3 Lecture Hours)
Advanced techniques in the creation of documentary media content with a focus on conceptualization, production, and distribution of a short documentary film. Course can be repeated once for credit. This course serves as a capstone for the Media Production Track.
Prerequisite: MEDIA 2313.

MEDIA 4040  Advertising Criticism
3 Semester Credit Hours (3 Lecture Hours)
The examination of advertising history through critical and cultural approaches.

MEDIA 4041  First Amendment and Ethical Issues in the Media
3 Semester Credit Hours (3 Lecture Hours)
Study of legal and ethical issues in mediated communication, including the First Amendment and free speech, control, and regulation of broadcasting, obscenity in the media.
Prerequisite: MEDIA 1307.

MEDIA 4042  Global Media and International Communication
3 Semester Credit Hours (3 Lecture Hours)
Examines global media in the context of international communication, diversity of media and cultural production, styles of media practices abroad, including differences between U.S. news values and ethical and moral dimensions across differing societies of the world.

MEDIA 4043  News Publication
3 Semester Credit Hours (3 Lecture Hours)
This course will be a hands-on newsroom experience with the student newspaper the Island Waves and its accompanying website. Individual assignments will be assigned by editors of the student media. Assignments may include writing, advertising, photography, cartooning and video production and editing. Students are required to work on the staff of the official college publication during prescribed hours under faculty supervision.
Prerequisite: MEDIA 2311.

MEDIA 4045  Advanced New Media Project
3 Semester Credit Hours (3 Lecture Hours)
As the capstone course for the New Media Arts Certificate, this course guides students through the planning, development, and execution of new media-based project.
Prerequisite: ARTS 2356, MEDIA 2313 and 1315.

MEDIA 4048  Senior Seminar in Media Studies
3 Semester Credit Hours (3 Lecture Hours)
The capstone course for seniors in the Media Studies offers opportunities to synthesize information learned in other Media Studies courses through in-depth study of a particular topic. Students will demonstrate their abilities to think and write critically, and to conduct independent research or produce media projects at an advanced level. Topics vary by instructor.
Prerequisite: MEDIA 1307 and 3310.

MEDIA 4049  Topics in Media Arts
3 Semester Credit Hours (3 Lecture Hours)
Study of specialized topics and themes in media arts. May be repeated when topics vary.

MEDIA 4050  Directed Individual Study
1-3 Semester Credit Hours
See College description. By application. Only 3 semester hours of Directed Individual Study credit may be counted toward the major.

MEDIA 4051  Media Arts Internship
3 Semester Credit Hours
Practical experience in the field through placement in a media internship position. Students interested in applying for the internship course must have a minimum cumulative GPA of 3.0; have at least junior standing at the university; be a media arts (media studies or media production emphasis) major or digital journalism minor; have completed at least 12 hours of coursework in the major or minor at TAMU-CC. Preferred applicants will have a minimum media arts or digital journalism GPA of 3.25. All applicants must solicit a recommendation form from a Department of Communication and Media faculty member. Course may be taken three times for credit; however only 3 semester hours of internship credit may be counted toward the major. A second internship may apply to the digital journalism minor; a third internship may be used as a free elective. Authorization to repeat the internship course is contingent on the students' successful completion of the previous internship experience. This course is graded Credit/No Credit.
Mexican American Studies (MXAS)

MXAS 1305 Introduction to Mexican American Studies
3 Semester Credit Hours (3 Lecture Hours)
An introduction to the area of Chicano Studies including the cultural, historical, and linguistic approaches. This basic course includes the study of major authors, significant historical events, and important linguistic considerations.

MXAS 3307 Mexican American Folklore
3 Semester Credit Hours (3 Lecture Hours)
Studies folklore through selected examples of traditional Mexican and Mexican American culture. Possible topics include: folk songs, folk healing, folk art, foods, testimonials, tales, proverbs, riddles, or other cultural element characteristics of the Mexican American experience.

MXAS 3311 Mexican American Literature
3 Semester Credit Hours (3 Lecture Hours)
An analysis of Chicano literature. Special emphasis will be given to the new consciousness of the Chicano in the most current literature of the various genres.

MXAS 3315 Spotlight on Chicana Playwrights
3 Semester Credit Hours (3 Lecture Hours)
The course familiarizes students with Chicana playwrights and plays representative of Chicana feminist and queer thought, using an historical framework to establish distinctive periods in Chicana Theater from the 1980s to the present. Themes related to socio-political circumstances, as well as the construction and representation of race, class, gender, and sexuality and their relationship to identity will be explored through literary analysis and theory.

MXAS 4390 Topics in Mexican American Studies
3 Semester Credit Hours (3 Lecture Hours)
May be repeated when topics vary.

Military Science (MSCI)

MSCI 1170 Introduction to the Army
1 Semester Credit Hour (1 Lecture Hour)
MSCI 1170/MSL 101 Focuses on introduction to the Army and basic soldiers. It introduces Cadets to the Army and the Profession of Arms. Students will examine the Army Profession and what it means to be a professional in the U.S. Army. The overall focus is on developing basic knowledge and comprehension of the Army Leadership Requirements Model while gaining a complete understanding of the Reserve Officers’ Training Corps (ROTC) program, its purpose in the Army, and its advantages for the student. Cadets also begin learning map reading and land navigation, students will have initial classes on fieldcraft, first and individual/team movement techniques that will include a weekly lab facilitated by MS III Cadets and supervised by MSIV’s and ROTC Cadre.

MSCI 1171 Foundations of Leadership
1 Semester Credit Hour (1 Lecture Hour, 1 Lab Hour)
MSCI 1171/MSL 102 Introduces Cadets to the personal challenges and competencies are critical for effective leadership. Cadets learn the personal development of life skills such as critical thinking, time management, goal setting, and communication. Cadets learn the basics of the communications process and the importance for leaders to develop the essential skills to effectively communicate in the Army. Cadets will begin learning the basics of squad level tactics that will be reinforced during a weekly lab facilitated by MS III Cadets and supervised by ROTC Cadre.

MSCI 1172 Ranger Leadership Laboratory
1 Semester Credit Hour (1 Lab Hour)
RANGER LEADERSHIP LABORATORY Practical leadership and teamwork training in rappelling, rope bridges, weapons firing, map reading and land navigation, water safety, patrolling, and other ranger skills. Includes a weekend field trip where the techniques learned will be applied in competitive events. Cross listed with KINE 1116. May be repeated for credit.

MSCI 2270 Leadership and Ethics
2 Semester Credit Hours (2 Lecture Hours)
MSCI 2270/MSL 201 Focuses on leadership and ethics. The course adds depth to the cadets knowledge of the different leadership styles. Cadets will conduct a leadership analysis of famous leaders and self-assessment of their own leadership style. The Army Profession is also stressed through understanding values, ethics and how to apply both different situations they may encounter as a leader. Army values and ethics and their relationship to the law of the land warfare and philosophy of military service are also stressed. Students are then required to apply their knowledge outside the classroom in a hands-on performance-oriented environment during a weekly lab facilitated by MSL III Cadets and supervised by MSIV’s and ROTC Cadre.

MSCI 2271 Army Doctrine and Decision Making
2 Semester Credit Hours (1 Lecture Hour, 1 Lab Hour)
MSCI 2271/MSL 202 Focuses on Army doctrine and team development. The course begins the journey to understand and demonstrate competencies as they relate to Army doctrine. Army Values, Teamwork, and Warrior Ethos and their relationship to the Law of Land Warfare and philosophy of military service are also stressed. The ability to lead and follow is also covered through Team Building exercises at squad level. Students are then required to apply their knowledge outside the classroom in a hands-on performance-oriented environment during a weekly lab facilitated by MSL III Cadets and supervised by Cadre.

MSCI 3301 American Military History
3 Semester Credit Hours (3 Lecture Hours)
A comprehensive, but brief account of the U.S. Army from past to present. Integrates the basic knowledge of American military history into the future officer’s education. This is an Army standardized, mandatory course that is a part of pre-commissioning training for contracted U.S. Army ROTC cadets. Employs American military history as a tool for studying military professionalism and applying critical-thinking skills and decision-making skills to military problems. Analyzes the definition of Military History, the theory and practice of war, and the American Military System as an intellectual framework for applying critical-thinking skills and problem-solving skill to the study of historical, military problems. Prerequisite: (MSCI 1170, 1171, 2271 and 2270).

MSCI 3403 Training Management and the Warfighting Functions
4 Semester Credit Hours (4 Lecture Hours)
MSCI 3304/MSL 301 Focuses on training management and the warfighting functions. It is an academically challenging course where you will study, practice and apply the fundamental of Training Management and how the Army operates through the Warfighting functions. At the conclusion of this course, the Cadet will be capable of planning, preparing, and executing training for a squad, conducting small unit tactics. Includes a lab per week using peer facilitation overseen by MSL IV’s, supervised by ROTC Cadre.
MSCI 3404 Applied Leadership in Small Unit Operations
4 Semester Credit Hours (3 Lecture Hours, 1 Lab Hour)
MSCI 3404/MSL 302 Focuses on applied leadership in small unit operations. It is an academically challenging course where the cadet will study, practice, and apply the fundamentals of direct-level leadership and small unit tactics at the platoon level. At the conclusion of this course, the Cadet will be capable of planning, coordinating, navigating, motivating, and leading a platoon in the execution of a mission. Includes a lab per week using peer facilitation overseen by MSL IVs, supervised by ROTC cadre. Successful completion of this course will help prepare for the Cadet Summer Training Advance Camp to be attended in the summer at Fort Knox, KY.

MSCI 3499 Leadership Development Assessment Course (LDAC)
4 Semester Credit Hours (4 Lecture Hours)
Four weeks of instruction and practical application in field training, demonstration of leadership capabilities, and leadership opportunities of problem analysis, decision making, and troop-leading. CR/NC only.
Prerequisite: MSCI 3303 and 3304.

MSCI 4305 Advanced Problem Solving
3 Semester Credit Hours (3 Lecture Hours)
Military Science special problems course designed for individual study in modern day military structure and policies.

MSCI 4403 The Army Officer
4 Semester Credit Hours (3 Lecture Hours, 1 Lab Hour)
MSCI 4403/MSL 401 Focuses on development of the Army Officer. It is an academically challenging course where the Cadet will develop knowledge, skills, and abilities to plan, resource, and assess training at the small unit level. The Cadet will also learn about Army programs that support counseling subordinates and evaluating performance, values and ethics, career planning, and legal responsibilities. At the conclusion of this course, the Cadet will be familiar with how to plan, prepare, execute, and continuously assess the conduct of training at the company or field grade officer level. Includes a lab per week overseeing MSL III lesson facilitation and supervised by ROTC Cadre.

MSCI 4404 Company Grade Leadership
4 Semester Credit Hours (3 Lecture Hours, 1 Lab Hour)
MSCI 4404/MSL 402 An academically challenging course where the Cadet will develop knowledge, skills, and abilities required of junior officers pertaining to the Army in Unified Land Operations and Company Grade Officer roles and responsibilities. This course includes reading assignments, homework assignments, small group assignments, briefings, case studies, practical exercises, a mid-term exam, and an Oral Practicum as the final exam. The Oral Practicum explores the knowledge of how well the Cadet will be prepared for the 20 Army Warfighting Challenges (AWFC) covered throughout the ROTC Advanced Course. Successful completion of this course will assist in preparing for the BOLC B course and is a mandatory requirement for commissioning. Includes a lab per week overseeing MSL III lesson facilitation and supervised by ROTC Cadre.

MSCI 4696 Military Science Directed Individual Study
1-6 Semester Credit Hours
Programs will be designed for individual cases through special permission of the Department Chair and Dean. May be repeated for credit when the topic varies.

Music (MUSI)

MUSI 1116 Aural Training I
1 Semester Credit Hour (1 Lecture Hour)
A companion course to MUSI 1311, designed to strengthen the understanding of theoretical principles through the development of aural perception and skills; exercises in melodic, harmonic, and rhythmic dictation; and drill in sight singing.
TCCNS: MUSI 1116

MUSI 1117 Aural Training II
1 Semester Credit Hour (1 Lecture Hour)
Continuation of MUSI 1116; a companion course to MUSI 1312.
Prerequisite: MUSI 1116 and 1311.
TCCNS: MUSI 1117

MUSI 1181 Class Piano I
1 Semester Credit Hour (1 Lab Hour)
Group instruction in piano for music majors, covering piano technique and literature, major and minor scales, transposition, sight reading, and simple harmonization of melodies. In extraordinary circumstances, students may substitute one semester of secondary applied piano for this course. Keyboard majors accepted for degree-level study should substitute four semesters of Secondary Applied Studio.
TCCNS: MUSI 1181

MUSI 1182 Class Piano II
1 Semester Credit Hour (1 Lab Hour)
Group instruction in piano for music majors, covering piano technique and literature, major and minor scales, transposition, sight reading, and simple harmonization of melodies. In extraordinary circumstances, students may substitute one semester of secondary applied piano for this course. Keyboard majors accepted for degree-level study should substitute four semesters of Secondary Applied Studio.
TCCNS: MUSI 1182

MUSI 1301 Fundamentals of Music
3 Semester Credit Hours (3 Lecture Hours)
Designed to teach beginning music students the basic tenet of music theory, note reading, rhythm, scales, key signatures, basic intervals and triads, and solfeggio.

MUSI 1302 Non-major Class Piano I
3 Semester Credit Hours (3 Lecture Hours)
Group instruction in the elements of piano playing, designed for the non-major. No previous experience necessary.

MUSI 1303 Basic Guitar I
3 Semester Credit Hours (3 Lecture Hours)
Group instruction in the fundamentals of guitar playing, designed for the non-major. The student must furnish an acceptable instrument. No previous experience necessary.
TCCNS: MUSI 1303

MUSI 1306 Understanding and Enjoying Music
3 Semester Credit Hours (3 Lecture Hours)
A course for the non-music major. Study of selected music literature of contrasting styles and forms with emphasis on listening to music with understanding.
TCCNS: MUSI 1306
MUSI 1307  Elements of Musical Style
3 Semester Credit Hours (3 Lecture Hours)
A survey of selected western and non-western musical styles, based upon the analysis of the characteristic use of the elements of music. Required for music majors and recommended for non-majors with a significant high school music background.
TCCNS: MUSI 1307

MUSI 1310  History of Rock and Roll
3 Semester Credit Hours (3 Lecture Hours)
A general survey of composers, performers, and styles of rock and roll. Emphasis on understanding stylistic elements of music, including rhythm, texture, form, and harmony.
TCCNS: MUSI 1310

MUSI 1311  Musicianship I
3 Semester Credit Hours (3 Lecture Hours)
First principles of chord progression and phrase harmonization. Theory assessment required prior to enrollment.
TCCNS: MUSI 1311

MUSI 1312  Musicianship II
3 Semester Credit Hours (3 Lecture Hours)
Continuation of MUSI 1311, with a study of more advanced chord structures and their placement within the phrase through written exercises, analysis, and correlated keyboard projects.
Prerequisite: MUSI 1311 and 1116.
TCCNS: MUSI 1312

MUSI 2116  Aural Training III
1 Semester Credit Hour (1 Lecture Hour)
Continuation of MUSI 1117; a companion course to MUSI 2311. Designed to further the understanding of advanced theoretical principles and techniques through related aural exercises, dictation, and sight singing.
Prerequisite: MUSI 1117 and 1312.
TCCNS: MUSI 2116

MUSI 2117  Aural Training IV
1 Semester Credit Hour (1 Lecture Hour)
Continuation of MUSI 2116; a companion course to MUSI 2312.
Prerequisite: MUSI 2116 and 2311.
TCCNS: MUSI 2117

MUSI 2181  Class Piano III
1 Semester Credit Hour (2 Lecture Hours)
Group instruction in piano for music majors, covering piano technique and literature, major and minor scales, transposition, sight reading, and simple harmonization of melodies. In extraordinary circumstances, students may substitute one semester of secondary applied piano for this course. Keyboard majors accepted for degree-level study should substitute four semesters of Secondary Applied Studio.
Prerequisite: MUSI 1182.
TCCNS: MUSI 2181

MUSI 2182  Class Piano IV
1 Semester Credit Hour (1 Lab Hour)
Group instruction in piano for music majors, covering piano technique and literature, major and minor scales, transposition, sight reading, and simple harmonization of melodies. In extraordinary circumstances, students may substitute one semester of secondary applied piano for this course. Keyboard majors accepted for degree-level study should substitute four semesters of Secondary Applied Studio.
TCCNS: MUSI 2182

MUSI 2182  Non-major Class Piano II
3 Semester Credit Hours (3 Lecture Hours)
Extension of skill development begun in MUSI 1302 Non-Major Class Piano I.
Prerequisite: MUSI 1302.

MUSI 2303  Basic Guitar II
3 Semester Credit Hours (3 Lecture Hours)
Extension of skill development begun in MUSI 1303 - BASIC GUITAR I. The student must furnish an acceptable instrument.
Prerequisite: MUSI 1303.

MUSI 2311  Musicianship III
3 Semester Credit Hours (3 Lecture Hours)
Continuation of MUSI 1312. A broad summary of classical and chromatic harmony, explored through written exercises, analysis, and correlated keyboard drill.
Prerequisite: MUSI 1312 and 1117.
TCCNS: MUSI 2311

MUSI 2312  Musicianship IV
3 Semester Credit Hours (3 Lecture Hours)
Continuation of MUSI 2311. An exploration of 20th-century techniques through written exercises, analysis, and correlated keyboard drill.
Prerequisite: MUSI 2311 and 2116.
TCCNS: MUSI 2312

MUSI 3085  Junior Recital
0 Semester Credit Hours
Required for all students presenting a Junior Recital in partial fulfillment of the requirements for the Bachelor of Music in Performance Degree. Specific policies governing the presentation and evaluation of such recitals are given in the document, Preparing and Presenting Degree Recitals, available from the Music Department Chair.

MUSI 3162  Diction for Singers I
1 Semester Credit Hour (1 Lecture Hour)
Learning to use the International Phonetic Alphabet (IPA) with sufficient fluency to effectively teach and learn proper pronunciation of song texts in English and French.

MUSI 3165  Diction for Singers II
1 Semester Credit Hour (1 Lecture Hour)
Learning to use the International Phonetic Alphabet (IPA) with sufficient fluency to effectively teach and learn proper pronunciation of song texts in Italian and German.

MUSI 3166  Woodwind Techniques I
1 Semester Credit Hour (1 Lab Hour)
Basic techniques of playing and teaching the oboe, bassoon, and saxophone. Includes a survey of pedagogical materials and basic performance literature.

MUSI 3167  Woodwind Techniques II
1 Semester Credit Hour (1 Lab Hour)
Basic techniques of playing and teaching the flute and clarinet. Includes a survey of pedagogical materials and basic performance literature.

MUSI 3168  Brass Techniques I
1 Semester Credit Hour (1 Lab Hour)
Basic techniques of playing and teaching the trumpet and French horn. Includes a survey of pedagogical materials and basic performance literature.
MUSI 3169 Brass Techniques II
1 Semester Credit Hour (1 Lab Hour)
Basic techniques of playing and teaching the trombone, euphonium, and tuba. Includes a survey of pedagogical materials and basic performance literature.

MUSI 3170 Voice Techniques for Instrumentalists
1 Semester Credit Hour (1 Lab Hour)
Group instruction and practical experience in the fundamentals of voice production and song interpretation for the instrumental music educator. Includes a survey of pedagogical materials and basic performance literature.

MUSI 3188 Percussion Techniques
1 Semester Credit Hour (1 Lab Hour)
Basic techniques of playing and teaching the instruments of the percussion family. Includes a survey of pedagogical materials and basic performance literature.

MUSI 3189 String Techniques
1 Semester Credit Hour (1 Lab Hour)
Basic techniques of playing and teaching the violin, viola, 'cello, and string bass. Includes a survey of pedagogical materials and basic performance literature.

MUSI 3252 Foundations of Music Programs
2 Semester Credit Hours (2 Lecture Hours)
A survey of the historical, social, and philosophical bases of music education in the United States, psychological theories of learning and musical responsiveness, and studies of how these foundations have been applied in various types of music curricula.
Prerequisite: MUSI 2311 and 2116.

MUSI 3253 Basic Conducting
2 Semester Credit Hours (2 Lecture Hours)
A skills acquisition course designed to give students competence in basic baton techniques and musical control of an ensemble. Includes score study and musical terminology.
Prerequisite: MUSI 2311 and 2116.

MUSI 3310 History of Jazz
3 Semester Credit Hours (3 Lecture Hours)
A study of jazz styles, influences, trends, innovators, and literature. Readings include interviews and articles that discuss origins of jazz, definitions of jazz, and race politics of jazz. No previous experience is necessary.

MUSI 3317 Rap and Hip Hop: Music and Culture
3 Semester Credit Hours (3 Lecture Hours)
This course is recommended for non-music majors and music minors. Rap and Hip Hop Music and Culture traces the ideological, social, historical, and cultural influences of a musical genre that first came to prominence in the mid-1970s in one of New York's toughest neighborhoods, the South Bronx. This course describes how the arts of DJing, MCing, breakin' (b-boying), and graffiti developed as a way for this community's struggle to find its own voice. Addressed will be rap's early successes on the pop charts; its spread to mainstream culture; the growth of "gangsta rap" and mainstream society's reaction to it; and the commercial success of rap music from the '90s through today. Throughout, this course will highlight key performers, producers, and voices in the rap and hip hop movements, using their stories to illuminate the underlying issues of racism, poverty, prejudice, and artistic freedom that are part of rap and hip hop's ongoing legacy.

MUSI 3327 Music and Film
3 Semester Credit Hours (3 Lecture Hours)
The object of this course is to develop skills in analyzing the soundtrack, music's role in the soundtrack, and the relation of soundtrack and image track (especially relating to music) on small-scale and large-scale (narrative) levels. The course develops critical listening and viewing skills, but it also offers a particular kind of film-music history survey, one that focuses on the three nodal points in the history of film sound: the introduction of sound, the introduction of stereo, and the introduction of digital sound. We will explore the thesis that each of these technological advances alters the structural relationships among the three relatively autonomous components of the soundtrack—dialogue, music and effects.

MUSI 3334 Music Cultures of the World
3 Semester Credit Hours (3 Lecture Hours)
The course introduces the student to ethnomusicology and the cross-cultural study of music and society. It emphasizes the role of music in human life, and explores music and performance from around the world. The student will learn about classical, folk and popular styles found on all seven continents. This course is appropriate for any student of any musical background.

MUSI 3345 Composition
1-3 Semester Credit Hours
Creative writing with a view toward developing an individual style of musical composition. Variable credit, 1, 2, or 3 hrs. One private lesson per week.
Prerequisite: MUSI 2312 and 2117.

MUSI 3346 Form and Analysis of Tonal Music
3 Semester Credit Hours (3 Lecture Hours)
Analysis of the melodic and harmonic design of tonal music, including the aural and visual analysis of scores for piano, voice, chamber ensembles, and orchestra.
Prerequisite: MUSI 2312 and 2117.

MUSI 3354 Advanced Conducting
3 Semester Credit Hours (3 Lecture Hours)
A continuation of MUSI 3252. Advanced experiences with score preparation and effective ensemble rehearsal and management techniques.
Prerequisite: MUSI 3252.

MUSI 3370 Class Voice
3 Semester Credit Hours (3 Lecture Hours)
Group instruction and practical experience in the fundamentals of voice production, music reading, and song interpretation. Dramatic stage movement and singing will be explored using Classical and Broadway song literature. This course is designed for the non-major. No previous experience is necessary.

MUSI 4085 Senior Recital
0 Semester Credit Hours
Required for all students presenting a Senior Recital in partial fulfillment of the requirements for any music degree. Specific policies governing the presentation and evaluation of such recitals are given in the document, Preparing and Presenting Degree Recitals, available from the Music Program Coordinator.

MUSI 4334 History of Western Music I
3 Semester Credit Hours (3 Lecture Hours)
An in-depth study of the evolution of Western musical style from antiquity through the 18th-century.
Prerequisite: MUSI 1307, 2312 and 2117.
MUSI 4335 History of Western Music II
3 Semester Credit Hours (3 Lecture Hours)
Continuation of MUSI 4334, an in-depth study of the evolution of Western musical style from the age of Beethoven to the present.
Prerequisite: MUSI 4334.

MUSI 4340 Studies in Repertoire
3 Semester Credit Hours
Systematic examination of the history and literature of a specific performance medium.

MUSI 4346 Orchestration and Arranging
3 Semester Credit Hours (3 Lecture Hours)
The compass, timbre, and techniques of arranging and/or orchestration for instruments and/or voices. Practical experience in arranging for orchestra, band, and other instrumental and vocal combinations.
Prerequisite: MUSI 2312 and 2117.

MUSI 4355 Music for Young Children
3 Semester Credit Hours (3 Lecture Hours)
Study of musical development in children in grades K-6. Study of and practical experience with pedagogical approaches and materials appropriate for that age group.
Prerequisite: MUSI 3252.

MUSI 4357 Choral Literature and Techniques
3 Semester Credit Hours (3 Lecture Hours)
Advanced study of the literature, pedagogy, and management techniques required for successful vocal ensembles in secondary schools.
Prerequisite: MUSI 3253.

MUSI 4358 Instrumental Literature and Techniques
3 Semester Credit Hours (3 Lecture Hours)
Advanced study of the literature, pedagogy, and management techniques required for successful instrumental ensembles in secondary schools. Includes a segment pertaining to the development of marching band shows.
Prerequisite: MUSI 3253.

MUSI 4360 Studies in Pedagogy
3 Semester Credit Hours
Methods, materials and psychology of presenting musical materials to students at various ages. Evaluation of teaching materials and techniques. Classes are organized by specific performance areas.

MUSI 4385 Senior Capstone
3 Semester Credit Hours
The Senior Capstone is intended to provide students seeking the Bachelor of Arts in Music with an opportunity to demonstrate their musical scholarship through scholarly analysis and writing within a field of music of their choosing. May include a performance component, as in a lecture recital, but musical performance may comprise no more than 40% of the capstone project.

MUSI 4390 Topics in Music
1-3 Semester Credit Hours (1-3 Lecture Hours)
May be repeated for credit when topics vary.

MUSI 4396 Directed Individual Study
1-3 Semester Credit Hours
See College description.

MUSI 4398 Applied Experience
3 Semester Credit Hours
See College description.

---

Music Ensemble (MUEN)

MUEN 1122 Concert Band
1 Semester Credit Hour (1 Lab Hour)
Membership in music ensembles is open to all University students. Ensembles meet for periods of rehearsal ranging from two to five hours each week. All ensemble courses carry one semester hour of credit, and all may be repeated for credit. Some degree programs limit the amount of such credit that may be applied to the degree. In some instances, an audition with the ensemble director may be required for admission to the course. Every full-time music major must enroll, participate, and receive a passing grade in a major ensemble every semester except the student teaching semester.

MUEN 1123 Symphonic Winds
1 Semester Credit Hour (1 Lab Hour)
Membership in music ensembles is open to all University students. Ensembles meet for periods of rehearsal ranging from two to five hours each week. All ensemble courses carry one semester hour of credit, and all may be repeated for credit. Some degree programs limit the amount of such credit that may be applied to the degree. In some instances, an audition with the ensemble director may be required for admission to the course. Every full-time music major must enroll, participate, and receive a passing grade in a major ensemble every semester except the student teaching semester.

MUEN 1124 Concert Orchestra
1 Semester Credit Hour (1 Lab Hour)
Membership in music ensembles is open to all University students. Ensembles meet for periods of rehearsal ranging from two to five hours each week. All ensemble courses carry one semester hour of credit, and all may be repeated for credit. Some degree programs limit the amount of such credit that may be applied to the degree. In some instances, an audition with the ensemble director may be required for admission to the course. Every full-time music major must enroll, participate, and receive a passing grade in a major ensemble every semester except the student teaching semester.

MUEN 1127 Pep Band
1 Semester Credit Hour (1 Lab Hour)
Membership in music ensembles is open to all University students. Ensembles meet for periods of rehearsal ranging from two to five hours each week. All ensemble courses carry one semester hour of credit, and all may be repeated for credit. Some degree programs limit the amount of such credit that may be applied to the degree. In some instances, an audition with the ensemble director may be required for admission to the course. Every full-time music major must enroll, participate, and receive a passing grade in a major ensemble every semester except the student teaching semester.

MUEN 1128 Jazz Band
1 Semester Credit Hour (3 Labs Hours)
Membership in music ensembles is open to all University students. Ensembles meet for periods of rehearsal ranging from two to five hours each week. All ensemble courses carry one semester hour of credit, and all may be repeated for credit. Some degree programs limit the amount of such credit that may be applied to the degree. In some instances, an audition with the ensemble director may be required for admission to the course. Every full-time music major must enroll, participate, and receive a passing grade in a major ensemble every semester except the student teaching semester.
MUEN 1131 Piano Accompanying
1 Semester Credit Hour (1 Lab Hour)
Membership in music ensembles is open to all University students. Ensembles meet for periods of rehearsal ranging from two to five hours each week. All ensemble courses carry one semester hour of credit, and all may be repeated for credit. Some degree programs limit the amount of such credit that may be applied to the degree. In some instances, an audition with the ensemble director may be required for admission to the course. Every full-time music major must enroll, participate, and receive a passing grade in a major ensemble every semester except the student teaching semester.

MUEN 1132 Classical Guitar Ensemble
1 Semester Credit Hour (1 Lab Hour)
Membership in music ensembles is open to all University students. Ensembles meet for periods of rehearsal ranging from two to five hours each week. All ensemble courses carry one semester hour of credit, and all may be repeated for credit. Some degree programs limit the amount of such credit that may be applied to the degree. In some instances, an audition with the ensemble director may be required for admission to the course. Every full-time music major must enroll, participate, and receive a passing grade in a major ensemble every semester except the student teaching semester.

MUEN 1133 Percussion Ensemble
1 Semester Credit Hour (1 Lab Hour)
Membership in music ensembles is open to all University students. Ensembles meet for periods of rehearsal ranging from two to five hours each week. All ensemble courses carry one semester hour of credit, and all may be repeated for credit. Some degree programs limit the amount of such credit that may be applied to the degree. In some instances, an audition with the ensemble director may be required for admission to the course. Every full-time music major must enroll, participate, and receive a passing grade in a major ensemble every semester except the student teaching semester.

MUEN 1135 Brass Ensemble
1 Semester Credit Hour (1 Lab Hour)
Membership in music ensembles is open to all University students. Ensembles meet for periods of rehearsal ranging from two to five hours each week. All ensemble courses carry one semester hour of credit, and all may be repeated for credit. Some degree programs limit the amount of such credit that may be applied to the degree. In some instances, an audition with the ensemble director may be required for admission to the course. Every full-time music major must enroll, participate, and receive a passing grade in a major ensemble every semester except the student teaching semester.

MUEN 1136 Woodwind Choir
1 Semester Credit Hour (1 Lab Hour)
Membership in music ensembles is open to all University students. Ensembles meet for periods of rehearsal ranging from two to five hours each week. All ensemble courses carry one semester hour of credit, and all may be repeated for credit. Some degree programs limit the amount of such credit that may be applied to the degree. In some instances, an audition with the ensemble director may be required for admission to the course. Every full-time music major must enroll, participate, and receive a passing grade in a major ensemble every semester except the student teaching semester.

MUEN 1137 Clarinet/Sax Ensemble
1 Semester Credit Hour (1 Lab Hour)
Membership in music ensembles is open to all University students. Ensembles meet for periods of rehearsal ranging from two to five hours each week. All ensemble courses carry one semester hour of credit, and all may be repeated for credit. Some degree programs limit the amount of such credit that may be applied to the degree. In some instances, an audition with the ensemble director may be required for admission to the course. Every full-time music major must enroll, participate, and receive a passing grade in a major ensemble every semester except the student teaching semester.

MUEN 1138 Jazz Guitar Ensemble
1 Semester Credit Hour (1 Lab Hour)
Membership in music ensembles is open to all University students. Ensembles meet for periods of rehearsal ranging from two to five hours each week. All ensemble courses carry one semester hour of credit, and all may be repeated for credit. Some degree programs limit the amount of such credit that may be applied to the degree. In some instances, an audition with the ensemble director may be required for admission to the course. Every full-time music major must enroll, participate, and receive a passing grade in a major ensemble every semester except the student teaching semester.

MUEN 1139 Flute Ensemble
1 Semester Credit Hour (1 Lecture Hour, 1 Lab Hour)
Membership in music ensembles is open to all University students. Ensembles meet for periods of rehearsal ranging from two to five hours each week. All ensemble courses carry one semester hour of credit, and all may be repeated for credit. Some degree programs limit the amount of such credit that may be applied to the degree. In some instances, an audition with the ensemble director may be required for admission to the course. Every full-time music major must enroll, participate, and receive a passing grade in a major ensemble every semester except the student teaching semester.

MUEN 1140 String Ensemble
1 Semester Credit Hour (1 Lab Hour)
Membership in music ensembles is open to all University students. Ensembles meet for periods of rehearsal ranging from two to five hours each week. All ensemble courses carry one semester hour of credit, and all may be repeated for credit. Some degree programs limit the amount of such credit that may be applied to the degree. In some instances, an audition with the ensemble director may be required for admission to the course. Every full-time music major must enroll, participate, and receive a passing grade in a major ensemble every semester except the student teaching semester.

MUEN 1143 Chorale
1 Semester Credit Hour (1 Lecture Hour)
Membership in music ensembles is open to all University students. Ensembles meet for periods of rehearsal ranging from two to five hours each week. All ensemble courses carry one semester hour of credit, and all may be repeated for credit. Some degree programs limit the amount of such credit that may be applied to the degree. In some instances, an audition with the ensemble director may be required for admission to the course. Every full-time music major must enroll, participate, and receive a passing grade in a major ensemble every semester except the student teaching semester.
MUEN 1151 University Singers
1 Semester Credit Hour (1 Lab Hour)
Membership in music ensembles is open to all University students. Ensembles meet for periods of rehearsal ranging from two to five hours each week. All ensemble courses carry one semester hour of credit, and all may be repeated for credit. Some degree programs limit the amount of such credit that may be applied to the degree. In some instances, an audition with the ensemble director may be required for admission to the course. Every full-time music major must enroll, participate, and receive a passing grade in a major ensemble every semester except the student teaching semester.

MUEN 1153 Chamber Choir
1 Semester Credit Hour (1 Lecture Hour)
Membership in music ensembles is open to all University students. Ensembles meet for periods of rehearsal ranging from two to five hours each week. All ensemble courses carry one semester hour of credit, and all may be repeated for credit. Some degree programs limit the amount of such credit that may be applied to the degree. In some instances, an audition with the ensemble director may be required for admission to the course. Every full-time music major must enroll, participate, and receive a passing grade in a major ensemble every semester except the student teaching semester.

MUEN 1157 Opera Workshop
1 Semester Credit Hour (1 Lab Hour)
Membership in music ensembles is open to all University students. Ensembles meet for periods of rehearsal ranging from two to five hours each week. All ensemble courses carry one semester hour of credit, and all may be repeated for credit. Some degree programs limit the amount of such credit that may be applied to the degree. In some instances, an audition with the ensemble director may be required for admission to the course. Every full-time music major must enroll, participate, and receive a passing grade in a major ensemble every semester except the student teaching semester.

MUEN 1159 Mariachi Ensemble
1 Semester Credit Hour (1 Lab Hour)
This course is designed to assist the student in developing an increased proficiency in the art of Mariachi Performance. In accomplishing this goal, this course will allow each student to develop: 1.) performance skills on the instruments of the mariachi (including violin, trumpet, guitar, guitarron, vihuela, and harp), and 2.) knowledge of the repertoire and history of mariachi literature. Performance of an instrument in the mariachi also requires singing when the repertoire calls for it. The objective is to study the literature of Mexican Folk music; to engage in the technical study of mastering performance on the instruments of the mariachi; to represent TAMUCC in the immediate and global community through musical excellence.

MUEN 3122 Concert Band
1 Semester Credit Hour (1 Lab Hour)
Membership in music ensembles is open to all University students. Ensembles meet for periods of rehearsal ranging from two to five hours each week. All ensemble courses carry one semester hour of credit, and all may be repeated for credit. Some degree programs limit the amount of such credit that may be applied to the degree. In some instances, an audition with the ensemble director may be required for admission to the course. Every full-time music major must enroll, participate, and receive a passing grade in a major ensemble every semester except the student teaching semester.

MUEN 3123 Symphonic Winds
1 Semester Credit Hour (1 Lab Hour)
Membership in music ensembles is open to all University students. Ensembles meet for periods of rehearsal ranging from two to five hours each week. All ensemble courses carry one semester hour of credit, and all may be repeated for credit. Some degree programs limit the amount of such credit that may be applied to the degree. In some instances, an audition with the ensemble director may be required for admission to the course. Every full-time music major must enroll, participate, and receive a passing grade in a major ensemble every semester except the student teaching semester.

MUEN 3124 Concert Orchestra
1 Semester Credit Hour (35 Lab Hours)
Membership in music ensembles is open to all University students. Ensembles meet for periods of rehearsal ranging from two to five hours each week. All ensemble courses carry one semester hour of credit, and all may be repeated for credit. Some degree programs limit the amount of such credit that may be applied to the degree. In some instances, an audition with the ensemble director may be required for admission to the course. Every full-time music major must enroll, participate, and receive a passing grade in a major ensemble every semester except the student teaching semester.

MUEN 3127 Pep Band
1 Semester Credit Hour (1 Lab Hour)
Membership in music ensembles is open to all University students. Ensembles meet for periods of rehearsal ranging from two to five hours each week. All ensemble courses carry one semester hour of credit, and all may be repeated for credit. Some degree programs limit the amount of such credit that may be applied to the degree. In some instances, an audition with the ensemble director may be required for admission to the course. Every full-time music major must enroll, participate, and receive a passing grade in a major ensemble every semester except the student teaching semester.

MUEN 3128 Jazz Band
1 Semester Credit Hour (3 Lab Hours)
Membership in music ensembles is open to all University students. Ensembles meet for periods of rehearsal ranging from two to five hours each week. All ensemble courses carry one semester hour of credit, and all may be repeated for credit. Some degree programs limit the amount of such credit that may be applied to the degree. In some instances, an audition with the ensemble director may be required for admission to the course. Every full-time music major must enroll, participate, and receive a passing grade in a major ensemble every semester except the student teaching semester.

MUEN 3132 Classical Guitar Ensemble
1 Semester Credit Hour (1 Lab Hour)
Membership in music ensembles is open to all University students. Ensembles meet for periods of rehearsal ranging from two to five hours each week. All ensemble courses carry one semester hour of credit, and all may be repeated for credit. Some degree programs limit the amount of such credit that may be applied to the degree. In some instances, an audition with the ensemble director may be required for admission to the course. Every full-time music major must enroll, participate, and receive a passing grade in a major ensemble every semester except the student teaching semester.
MUEN 3133 Percussion Ensemble
1 Semester Credit Hour (1 Lab Hour)

Membership in music ensembles is open to all University students. Ensembles meet for periods of rehearsal ranging from two to five hours each week. All ensemble courses carry one semester hour of credit, and all may be repeated for credit. Some degree programs limit the amount of such credit that may be applied to the degree. In some instances, an audition with the ensemble director may be required for admission to the course. Every full-time music major must enroll, participate, and receive a passing grade in a major ensemble every semester except the student teaching semester.

MUEN 3135 Brass Ensemble
1 Semester Credit Hour (1 Lab Hour)

Membership in music ensembles is open to all University students. Ensembles meet for periods of rehearsal ranging from two to five hours each week. All ensemble courses carry one semester hour of credit, and all may be repeated for credit. Some degree programs limit the amount of such credit that may be applied to the degree. In some instances, an audition with the ensemble director may be required for admission to the course. Every full-time music major must enroll, participate, and receive a passing grade in a major ensemble every semester except the student teaching semester.

MUEN 3136 Woodwind Ensemble
1 Semester Credit Hour (2 Lab Hours)

Membership in music ensembles is open to all University students. Ensembles meet for periods of rehearsal ranging from two to five hours each week. All ensemble courses carry one semester hour of credit, and all may be repeated for credit. Some degree programs limit the amount of such credit that may be applied to the degree. In some instances, an audition with the ensemble director may be required for admission to the course. Every full-time music major must enroll, participate, and receive a passing grade in a major ensemble every semester except the student teaching semester.

MUEN 3139 Flute Ensemble
1 Semester Credit Hour (1 Lab Hour)

Membership in music ensembles is open to all University students. Ensembles meet for periods of rehearsal ranging from two to five hours each week. All ensemble courses carry one semester hour of credit, and all may be repeated for credit. Some degree programs limit the amount of such credit that may be applied to the degree. In some instances, an audition with the ensemble director may be required for admission to the course. Every full-time music major must enroll, participate, and receive a passing grade in a major ensemble every semester except the student teaching semester.

MUEN 3140 String Ensemble
1 Semester Credit Hour (1 Lab Hour)

Membership in music ensembles is open to all University students. Ensembles meet for periods of rehearsal ranging from two to five hours each week. All ensemble courses carry one semester hour of credit, and all may be repeated for credit. Some degree programs limit the amount of such credit that may be applied to the degree. In some instances, an audition with the ensemble director may be required for admission to the course. Every full-time music major must enroll, participate, and receive a passing grade in a major ensemble every semester except the student teaching semester.

MUEN 3143 Chorale
1 Semester Credit Hour (1 Lab Hour)

Membership in music ensembles is open to all University students. Ensembles meet for periods of rehearsal ranging from two to five hours each week. All ensemble courses carry one semester hour of credit, and all may be repeated for credit. Some degree programs limit the amount of such credit that may be applied to the degree. In some instances, an audition with the ensemble director may be required for admission to the course. Every full-time music major must enroll, participate, and receive a passing grade in a major ensemble every semester except the student teaching semester.

MUEN 3151 University Singers
1 Semester Credit Hour (1 Lab Hour)

Membership in music ensembles is open to all University students. Ensembles meet for periods of rehearsal ranging from two to five hours each week. All ensemble courses carry one semester hour of credit, and all may be repeated for credit. Some degree programs limit the amount of such credit that may be applied to the degree. In some instances, an audition with the ensemble director may be required for admission to the course. Every full-time music major must enroll, participate, and receive a passing grade in a major ensemble every semester except the student teaching semester.

MUEN 3153 Chamber Choir
1 Semester Credit Hour (1 Lab Hour)

Membership in music ensembles is open to all University students. Ensembles meet for periods of rehearsal ranging from two to five hours each week. All ensemble courses carry one semester hour of credit, and all may be repeated for credit. Some degree programs limit the amount of such credit that may be applied to the degree. In some instances, an audition with the ensemble director may be required for admission to the course. Every full-time music major must enroll, participate, and receive a passing grade in a major ensemble every semester except the student teaching semester.

MUEN 3157 Opera Workshop
1 Semester Credit Hour (1 Lab Hour)

Membership in music ensembles is open to all University students. Ensembles meet for periods of rehearsal ranging from two to five hours each week. All ensemble courses carry one semester hour of credit, and all may be repeated for credit. Some degree programs limit the amount of such credit that may be applied to the degree. In some instances, an audition with the ensemble director may be required for admission to the course. Every full-time music major must enroll, participate, and receive a passing grade in a major ensemble every semester except the student teaching semester.

MUEN 3159 Mariachi Ensemble
1 Semester Credit Hour (15 Lab Hours)

This course is designed to assist the student in developing an increased proficiency in the art of Mariachi Performance. In accomplishing this goal, this course will allow each student to develop: 1) performance skills on the instruments of the mariachi (including violin, trumpet, guitar, guitarron, vihuela, and harp), and 2) knowledge of the repertoire and history of mariachi literature. Performance of an instrument in the mariachi also requires singing when the repertoire calls for it. The objective is to study the literature of Mexican Folk music; to engage in the technical study of mastering performance on the instruments of the mariachi; to represent TAMUCC in the immediate and global community through musical excellence.
Music Industry (MIND)

MIND 3311 Applications of Music Technology
3 Semester Credit Hours (3 Lecture Hours)
Designed for both music majors and non-majors, this course will focus on hands-on learning in a workshop environment. Students will gain perspective on the people, procedures, data, software and hardware associated with the creation of music. Topics discussed include: computer proficiency, MIDI, computer based music notation, sequencing music evaluation, music and the Internet, and current trends in music technology.

MIND 3312 Recording Techniques I
3 Semester Credit Hours (3 Lecture Hours)
Designed for both music majors and non-majors, this course is an examination of the art of audio recording. The curriculum will cover signal flow of the mixing console as it applies to both recording and sound reinforcement; microphones and techniques of application; use of sonic effects; recording devices (Digital, and Hard Disk); synchronization formats; etc.

MIND 3313 Recording Techniques II
3 Semester Credit Hours (3 Lecture Hours)
A continuation of MIND 3312 Recording Techniques. The curriculum will cover advanced topics regarding digital console technology, power and ground related issues, studio acoustics and design, digital audio technology, multimedia and web applications, amplifiers, noise reduction, monitoring, surround sound, and mastering procedures.

MIND 3314 Live Sound Engineering
3 Semester Credit Hours (3 Lecture Hours)
Designed for both music majors and non-majors, an overview of the basic principles of sound and reinforcement and how audio can be manipulated utilizing current live sound technology. Topics will include signal flow, microphone selection and placement, signal processing, and mixing.

MIND 3315 Musical Acoustics
3 Semester Credit Hours (3 Lecture Hours)
Designed for both music majors and non-majors, an overview of acoustics with emphasis in the areas of scientific knowledge that are relevant to music: the physiological properties of sounds; the effect of acoustical environment; the acoustical behavior of musical instruments; and the various applications of electronics and computers to the production, reproduction, and composition of music.

MIND 3316 Introduction to MIDI Sound Synthesis and Control
3 Semester Credit Hours (3 Lecture Hours)
Designed for both music majors and non-majors, this course introduces students to the Musical Instrument Digital Interface (MIDI) sequencing using computer software and keyboard synthesizers. Students learn concepts, basic theory and techniques, and the application of MIDI techniques to the production of music. Hands-on projects are completed using MIDI keyboard synthesizers and sequencer software.

MIND 3320 Music Business Survey
3 Semester Credit Hours (3 Lecture Hours)
Designed for both music majors and non-majors, this course is an overview of the practices and procedures of the music industry, including such topics as career possibilities, publishing, labels, marketing, and copyrights. It also includes an overview of career options which will include performer, composer, record producer and engineer, artist manager, booking agent, concert promoter, sales, marketing, and entertainment attorney.

MIND 3321 Music Business II
3 Semester Credit Hours (3 Lecture Hours)
Designed for both music majors and non-majors, this course is an in-depth examination of the practices and procedures of the music industry that pertain to accounting, taxes, copyright, licensing, marketing and contracts. The primary objective of this course is to develop a working knowledge of the music industry and to remain in compliance with the U.S. legal system.

MIND 3322 Entertainment Law and the Music Industry
3 Semester Credit Hours (3 Lecture Hours)
Designed for both music majors and non-majors, an overview of the legal practices and ramifications of United States law and its influence on the music industry. Topics will include intellectual property, business structures, contracts, distribution regulations, and copyrights. Legal practices for entertainment mediums will include television, film, live stage performances, recording, and publishing.

Nursing (NURS)

NURS 0015 Nursing Lab Safety Seminar
0 Semester Credit Hours
Co-requisite: NURS 3435.

NURS 3150 Professional Nursing Issues I
1 Semester Credit Hour (1 Lecture Hour)
Concentrates on legal and ethical issues affecting the nurse as an individual and a professional, and health care delivery to clients, groups and aggregates. Consideration is given to self-discovery, personal assertiveness, role conflict, negotiation and collective bargaining. Students are encouraged to apply critical thinking strategies during classroom discussions and presentations.
Prerequisite: NURS 3318, 3342, 3435 and 3614.

NURS 3318 Nurse as therapeutic Communicator
3 Semester Credit Hours (3 Lecture Hours)
Emphasis is on caring communication as an essential dimension of professional nursing. Theories are presented to explain the dynamic relationship between human behavior, health, and illness, and the impact of interpersonal relationship skills to effect positive changes in individuals and their families. Nurse communication in the role of educator will be introduced as part of the teaching/learning course content.

NURS 3342 Use of Pharmacology Principles
3 Semester Credit Hours (3 Lecture Hours)
Focuses on the basic drug classifications, concepts and principles of pharmacology, with special consideration for the nursing role in developing a comprehensive approach to the clinical application of drug therapy through the use of the nursing process. Nursing implications relative to the utilization of drug therapy are examined. Dosage calculations are evaluated for competency. (Is a pre-requisite for admission into the nursing program.)
Prerequisite: BIOL 2401 and 2402.
NURS 3435 Health Assessment
4 Semester Credit Hours (3 Lecture Hours, 4 Lab Hours)
Focuses on health assessment skills and application of the nursing process in selected pathophysiological disorders through analysis and synthesis of information obtained from subjective and objective data collection methodologies. Specified frameworks are utilized for data categorization and processing. The data are used to make judgments about health status or determine care needs for a given individual. Students are assigned to a weekly two-hour lab to practice under supervision and demonstrate health assessment skills. 
Co-requisite: NURS 0015.

NURS 3548 Nursing Care of Children and their Families
5 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Applying a family-centered approach, this course focuses on health promotion, acute and chronic health conditions, and rehabilitative needs of children. Emphasis is placed on developmental, physiological, psychosocial, cultural, and spiritual care of the child within the family unit. Using the nursing process, strategies are formulated for promoting and maintaining optimal functioning of the child-family unit and for enhancing the strengths of the family unit. Clinical activities emphasize the application of theory to practice in a variety of acute care settings. 
Prerequisite: NURS 3318, 3342, 3435 and 3614.

NURS 3550 Nursing Care of Parents/newborns
5 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
A study of the theoretical and empirical basis for nursing care of childbearing families using both nursing and developmental theories. Biopsychosocial factors such as legal/ethical and cultural considerations related to pregnancy, birth and newborn periods are included. A historical overview of obstetrical advances and parent-child nursing will be presented. Practice in providing nursing care to families during each phase of the childbearing cycle will occur in selected local hospitals and clinics. The nursing process is used with emphasis on the theoretical and empirical basis of practice. 
Prerequisite: NURS 3318, 3614, 3342 and 3435.

NURS 3614 Fundamentals of Nursing Care
6 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
is developed for the incoming nursing student and introduces them to nursing practice and philosophies that underpin clinical practice. Fundamental nursing skills are an integral part of the nursing experience and include, but are not limited to, patient safety, with a focus on techniques related to environmental concerns, positioning and transporting, asepsis and sterile technique, medication administration, and selected intrusive therapies. The critical thinking process, art of caring, and nursing theories upon which clinical practice is based will be integrated throughout the course to provide and manage safe, holistic care practices. The campus laboratory and clinical settings will afford practical experiences that include simulation and direct patient care interventions. These experiences facilitate learner application and integration of the principles and skills taught in the theory portion of this class. Students are expected to demonstrate beginning competency in application of the nursing process. 
Prerequisite: NURS 4322. 
Co-requisite: NURS 0015, NURS 3318, NURS 3435.

NURS 3628 Nursing Care of Adults I
6 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
Introduces the student to the use of the nursing process in the care of adults with chronic or non-complex illness. Uses a systems approach to discuss the effects of illness on individual and family, and to examine the disruption of growth and development patterns across the lifespan from young adult to senior years. The course includes clinical laboratory to allow the student the opportunity to apply theoretical concepts to clinical practice in diverse adult populations. 
Prerequisite: NURS 3318, 3435, 3614 and 3342.

NURS 4150 Professional Nursing Issues II
1 Semester Credit Hour (1 Lecture Hour)
Concentrates on economic and political issues affecting the nurse as an individual and a professional, and health care delivery to clients, groups and aggregates. Consideration is given to self-discovery, personal assertiveness, role conflict, negotiation and collective bargaining. Students are encouraged to apply critical thinking strategies during classroom discussions and presentations. 
Prerequisite: NURS 3628, 4564, 3548 and 3550.

NURS 4155 Professional Nursing Planning and Licensure Preparation
1 Semester Credit Hour (1 Lecture Hour)
The course emphasizes reflection, integration, and synthesis of curricular concepts. Students engage in comprehensive review of major nursing content for licensure, preparation for entry into practice, and plans for lifelong learning. 

NURS 4172 Biobehavioral Nursing Interventions II: Population Health and Chronic Health Issues Across the Life
1 Semester Credit Hour
Through psychomotor skill development and simulation this course advances health assessment, psychosocial, psychomotor, critical thinking, and therapeutic communication skills essential to promote, protect, maintain and restore the health of populations and provide holistic, evidence-based nursing care to individuals with chronic conditions across the lifespan and across health care settings with an emphasis on primary care.

NURS 4173 Biobehavioral Nursing Interventions III: Family and Child Health and Complex Health Issues Across the Lifespan
1 Semester Credit Hour
Through psychomotor skill development and simulation this course advances health assessment, psychosocial, psychomotor, critical thinking, and therapeutic communication skills essential to caring for the childbearing family as well as infants, children, and adolescents with chronic/unique conditions across health care settings with an emphasis on primary care.

NURS 4174 Biobehavioral Nursing Interventions IV: Synthesis of Nursing Knowledge, Evidence, and Practice
1 Semester Credit Hour (1 Lab Hour)
Through psychomotor skill development and simulation this course advances health assessment, psychosocial, psychomotor, critical thinking, and therapeutic communication skills essential to caring for individuals, families, and populations with acute and chronic conditions across health care settings with an emphasis on primary care.
NURS 4231 Pathophysiology/Pharmacology I
2 Semester Credit Hours
The course integrates anatomy, chemistry, microbiology, genetics/genomics, and psychoneuroimmunoenocrinology to explore physiologic and neurobehavioral alterations that occur in response to internal and external changes across the lifespan. Pharmacological concepts and interventions are explored as one strategy to promote health. Course content aligns with Biobehavioral Nursing Concepts II & III.

NURS 4232 Pathophysiology/Pharmacology II
2 Semester Credit Hours
The course integrates anatomy, chemistry, microbiology, genetics/genomics, and psychoneuroimmunoenocrinology to explore physiologic and neurobehavioral alterations that occur in response to internal and external changes across the lifespan. Pharmacological concepts and interventions are explored as one strategy to promote health. Course content aligns with Biobehavioral Nursing Concepts II & III.

NURS 4233 Pathophysiology/Pharmacology III
2 Semester Credit Hours
The course integrates anatomy, chemistry, microbiology, genetics/genomics, and psychoneuroimmunoenocrinology to explore physiologic and neurobehavioral alterations that occur in response to internal and external changes across the lifespan. Pharmacological concepts and interventions are explored as one strategy to promote health. Course content aligns with Biobehavioral Nursing Concepts II & III.

NURS 4234 Pathophysiology/Pharmacology IV
2 Semester Credit Hours
The course integrates anatomy, chemistry, microbiology, genetics/genomics, and psychoneuroimmunoenocrinology to explore physiologic and neurobehavioral alterations that occur in response to internal and external changes across the lifespan. Pharmacological concepts and interventions are explored as one strategy to promote health. Course content aligns with Biobehavioral Nursing Concepts II & III.

NURS 4250 Professional Nursing Issues
2 Semester Credit Hours (2 Lecture Hours)
Concentrates on legal, ethical, economic and political issues affecting the nurse as an individual and a professional, and health care delivery to clients, groups and aggregates. Consideration is given to self-discovery, personal assertiveness, role conflict, negotiation and collective bargaining. Students are encouraged to apply critical thinking strategies during classroom discussions and presentations.

NURS 4251 Professional Nursing Issues I
2 Semester Credit Hours
The first of four courses co-taught with an Art Professor, introduces and enhances student aesthetic knowing and expression. Students consider aspects of personal, ethical, empirical and aesthetic knowing as foundational to providing optimal healthcare across the lifespan. Foci include skills supporting expressions of aesthetics that highlight contemporary nursing issues such as ethical care, national health priorities, professional practice, and models of care.

NURS 4252 Professional Nursing Issues II
2 Semester Credit Hours
The second of four courses co-taught with an Art Professor, explores the integration of aesthetic knowing and expression within contemporary professional nursing. Students examine advocacy for patients, families and populations within 21st century healthcare while reflecting on topics such as self-care, work-life balance, healthy work environments, allostasis, and effective communication.

NURS 4254 Professional Nursing Issues IV
2 Semester Credit Hours
The final aesthetic knowing and expression course co-taught with an Art Professor considers allostasis in the creation of healing environments in dynamic sociopolitical, cultural, economic and technologic arenas. Students will be challenged to think about effective, efficient and entrepreneurial care consistent with the "Quadruple Aim".

NURS 4250 Wellness and Health Promotion Across the Lifespan
2 Semester Credit Hours
Introduction of core knowledge, concepts, and values fundamental to health promotion and nursing across the lifespan with diverse populations. Students explore the social determinants of health, levels of prevention, cultural competence, care management, identity formation, health outcomes and leadership using an integrated framework of health care delivery.

NURS 4281 Biobehavioral Care of Chronic Conditions Clinical
2 Semester Credit Hours (90 Lab Hours)
Students design and provide holistic, evidence-based nursing care to individuals with chronic conditions across the lifespan and health care settings using an integrated framework of health care delivery with an emphasis on primary care settings. Students collaborate with members of the health care team to plan, implement and evaluate care provided to individuals and populations with chronic conditions.

NURS 4282 Biobehavioral Health of Complex Conditions Clinical
2 Semester Credit Hours (90 Lab Hours)
Students design and provide comprehensive holistic, evidence-based nursing care to individuals with complex health problems across the lifespan and health care settings using an integrated framework of health care delivery with an emphasis on primary care. Students collaborate with members of the health care team to plan, implement and evaluate the care provided to individuals with complex health problems.

NURS 4283 Biobehavioral Health of the Family and Child Clinical
2 Semester Credit Hours (90 Lab Hours)
Students design and provide holistic, evidence-based nursing care to the childbearing family as well as infants, children, and adolescents with chronic/unique conditions across health care settings using an integrated framework of health care delivery with an emphasis on primary care. Normal and deviations from normal pregnancy are explored in relation to labor, delivery, and post-partum care, care of the neonate, and assisting families with transitions to parenthood. Students collaborate with members of the health care team to plan, implement and evaluate care provided to the childbearing family, infants, children, and adolescents.

NURS 4284 Biobehavioral Population Health Clinical
2 Semester Credit Hours (90 Lab Hours)
Students design and provide holistic, evidence-based health promotion, risk reduction, and disease management in selected community settings using an integrated framework of health care delivery. Students collaborate with members of the health care team to plan, implement and evaluate care to promote health, reduce risk and manage care.

NURS 4318 Nurse as Research Consumer
3 Semester Credit Hours (3 Lecture Hours)
Study of theory and research as a base for nursing practice. Critically analyzes published research studies with regard to implications for clinical practice. The course is planned for collaborative peer examination of the research process through critique of nursing studies.
Prerequisite: MATH 1442, 1342 or 2342.
Biobehavioral Nursing Concepts I: Health Assessment and Foundations of Nursing Across the Lifespan (3 SCH): This course introduces students to concepts, behaviors, principles, and theories that provide the foundation for nursing practice. Student recognition of normal and abnormal health patterns using an integrated framework of health care delivery is emphasized.

Biobehavioral Nursing Concepts II: Population Health and Chronic Health Issues Across the Lifespan (3 SCH): Students integrate nursing and public health science to promote, protect, maintain and restore the health of populations using an integrated framework of health care delivery. Evidence-based interventions which are implemented with individuals/families, communities, and systems are explored, as are the unique health needs of vulnerable populations and measures to eliminate health disparities in a multicultural and global environment.

Biobehavioral Nursing Concepts III: Family and Child Health and Complex Health Issues Across the Lifespan (3 SCH): Students learn about nursing care for the childbearing family and the importance of developmentally-appropriate family-centered nursing care for infants, children, and adolescents with acute and chronic health issues using an integrated framework of health care delivery.
NURS 4471  Leadership/management - RN/BSN
4 Semester Credit Hours (4 Lecture Hours)
Uses a systems framework and critical thinking strategies to study the coordinating role of the professional nurse within health care delivery. Current theories of management, leadership and change in organizations are examined and related to nursing practice. Focuses on synthesis of this knowledge to develop innovative and creative approaches to nursing practice. Applies theoretical and empirical concepts through experiences gained in local health care institutions.
Prerequisite: NURS 4318 and 4324.

NURS 4560  Nursing Care of Community - RN/BSN
5 Semester Credit Hours (3 Lecture Hours, 6 Lab Hours)
Explores community health nursing, focusing on historical development, philosophy, health care systems, epidemiology, and individuals, families, and specific aggregate groups. Applies theoretical and empirical knowledge in using the nursing process in community settings to promote, maintain and restore health. Focuses on transcultural nursing concepts, rural and home health care delivery. Progressively more independent behaviors are expected of students in community health practice. Diverse roles of the community and public health nurse are examined and a community assessment is completed using research and data processing skills.
Prerequisite: NURS 4318 and 4324.

NURS 4564  Nursing Care of Psychiatric Clients
5 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Focus is on the nurse as a provider of care to individuals, families and groups experiencing psychiatric-mental health problems. Theoretical foundations for the practice of psychiatric-mental health nursing will be studied. Application of nursing process to promote, maintain or restore mental health of individuals, families and groups. During the clinical experience, students will demonstrate theory-based practice and collaboration with interdisciplinary team participants.
Prerequisite: NURS 3550 and 3628.

NURS 4586  Interprofessional Collaborative Practice Clinical
5 Semester Credit Hours (5 Lecture Hours)
Students design and provide comprehensive holistic, evidence-based nursing care to individuals, families, and populations with acute, chronic, complex conditions across the lifespan and health care community with an emphasis on the role of the registered nurse in primary care settings using an integrated framework of health care delivery.

NURS 4628  Nursing Care of Adults II
6 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
Presents to the senior student critical thinking and problem-solving strategies for care of adults with acute or complex illness and/or injury. The effects of acute illness are examined in relation to the individual's developmental stage, culture, and gender. Building on Nursing Care of Adults I, a systems approach is used to analyze and intervene in alterations to the health of the individual and family. The course includes a clinical laboratory to allow the student the opportunity to integrate theoretical concepts and clinical practice in diverse populations.
Prerequisite: NURS 3550, 3548 and 3628.

NURS 4660 Nursing Care of Community Health Clients
6 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
Explores Community Health Nursing, focusing on historical development, philosophy, health care systems, epidemiology, and specific target groups. Primary, secondary and tertiary prevention activities are emphasized as they relate to individuals, families, and aggregates. Applies theoretical and empirical knowledge in using the nursing process in community settings to promote, maintain and restore health. Focuses on transcultural nursing concepts, rural and home health care delivery. Progressively more independent behaviors are expected of students in community health practice. Diverse roles of the community and public health nurse are examined and a community assessment is completed using research and data processing skills.
Prerequisite: NURS 3614, 3318 and 3435.

Operations Management (OPSY)

OPSY 4314  Operations Management
3 Semester Credit Hours (3 Lecture Hours)
The design, operation, and control of the transformation process in both service and production operations. Includes analysis and application of various decisions regarding site selection, process and facilities design, capacity planning, scheduling techniques, materials management, and cost and quality control.
Prerequisite: (ECON 2301, 2302 and ORMS 3310).

OPSY 4345  Materials Management and Purchasing
3 Semester Credit Hours (3 Lecture Hours)
Management of ordering, storage and distribution of the materials and services purchased by the organization. Emphasis on skill and knowledge required in the practice of purchasing, inventory management and cost reduction in materials.
Prerequisite: OPSY 4314.

OPSY 4390  Current Topics in Operations Management
1-3 Semester Credit Hours (1-3 Lecture Hours)
Selected topics for special study related to operational functions, processes, or issues. May be repeated for credit when topics vary.

OPSY 4396  Directed Individual Study
1-3 Semester Credit Hours (1-3 Lecture Hours)
Individual supervised study and a final report.

Operations Research/Mgmt Scien (ORMS)

ORMS 3310  Data Analysis and Statistics
3 Semester Credit Hours (3 Lecture Hours)
A study of descriptive statistics, probability distributions, the normal distribution, confidence intervals and hypothesis testing, regression analysis and chi square.
Prerequisite: MATH 1314 and MISY 2305.

Pathway (PATH)

PATH 0001  Grammar I
0 Semester Credit Hours (2 Lecture Hours)
Grammatical structures that enable students to better comprehend and use academic English are the focus of the course. Students will learn to appreciate the relevance of acquiring and applying grammatical knowledge to express themselves confidently and appropriately in different academic situations, as well as social situations relevant to the American college context.
PATH 0002 Listening and Speaking I
0 Semester Credit Hours
This course provides short and focused activities to help students improve their English listening and speaking skills. It includes practice in both mastering the larger message and key words, phrases and specific sounds to assist students in developing better speaking and comprehension skills. Students will practice giving academic presentations as well as practice speaking in small groups and individually.

PATH 0003 Reading I
0 Semester Credit Hours
In this course, students will develop the reading skills essential for academic learning and inquiry in the context of authentic academic reading tasks. Students will work to build fluency, comprehension, and vocabulary skills through extensive and intensive reading tasks of increasing complexity. Contemporary academic and literary texts will be used to develop students' critical reading and vocabulary, writing, listening, and speaking skills.

PATH 0004 Writing I
0 Semester Credit Hours
In this course, students will learn and apply the writing skills essential for academic success including sentence, paragraph, and basic essay writing. This course is aimed at students planning to study, or are already studying, at university level in English.

PATH 0005 Recitation I
1 Semester Credit Hour
This course provides students with a structured, scheduled academic environment providing the opportunity to complete assignments and work closely with their language instructor. Instructors utilize materials from student courses to facilitate activities and discussions that will increase comprehension of academic material and further students' abilities to work independently in academic settings. Each week, the course will focus on the language skills and vocabulary needed for the students' courses. Additionally, there will be a focus on study skills and time management needed for success in academic settings. Students will leave the course better equipped for university level academic course work and a thorough understanding of time management and appropriate study habits for the university.

PATH 0011 Grammar II
2 Semester Credit Hours
This course will focus on high-intermediate grammatical structures that enable students to better comprehend and use academic English. Students will learn to appreciate the relevance of acquiring and applying grammatical knowledge to express themselves confidently and appropriately in different academic situations, as well as social situation relevant to the American college context.

PATH 0012 Listening and Speaking II
2 Semester Credit Hours
In this course, students will learn and apply the listening, note-taking, and presentation skills essential for academic learning, inquiry, and communication in the context of authentic academic listening and speaking tasks. Students will work to build fluency, comprehension, and vocabulary skills through extensive and intensive listening tasks of increasing complexity. Contemporary academic lectures and seminars will be used to develop students' critical thinking skills.

PATH 0013 Reading II
2 Semester Credit Hours
In this course, students will study texts across several different academic disciplines in order to deepen their understanding of the rhetorical styles and conventions used and applied within the English language. Students will practice identifying audience, purpose, theme, main ideas, and details within several different genres of writing. Students will also develop a variety of strategies to improve their reading comprehension and efficiency, including annotation, vocabulary-building, and discussions regarding written materials.

PATH 0014 Writing II
2 Semester Credit Hours
In this course, students will develop a foundation in the writing skills critical to academic success. Students will apply knowledge of audience, purpose, voice, arrangement, and style in varied writing tasks by writing across several different genres. Genres practiced in this course may include, but are not limited to: emails, newsletters, personal narratives, fiction, academic essays, and magazine/news articles. Students will learn grammar and vocabulary conventions as they apply to different genres and apply these skills in writing tasks of increasing complexity throughout the semester.

PATH 0022 Listening and Speaking III
2 Semester Credit Hours
In this course students will learn and apply listening, note-taking, and presentation skills essential for academic learning, inquiry, and discourse in the context of authentic academic listening and speaking tasks. Students will work to build fluency, comprehension, and vocabulary skills through extensive and intensive listening tasks of increasing complexity. Contemporary academic lectures and seminar will be used to develop students' critical thinking skills.

PATH 0023 Reading and Writing III
2 Semester Credit Hours
In this course students will improve upon and apply the reading skills essential for academic learning, inquiry, and discourse in the context of authentic academic reading tasks. Students will build vocabulary through extensive and intensive reading tasks of increasing complexity. Contemporary academic texts about writing will be used to develop students' critical reading, academic vocabulary, and complex writing skills. There will be a number of in-class written tasks and prompts that will stimulate free writing practice and introduce students to various styles of writing. Students will also use these written tasks to develop editing skills through the writing process. The final project will be a collection of these written tasks in the form of a portfolio.

PATH 0036 US Culture
3 Semester Credit Hours (3 Lecture Hours)
This course will offer English Language Learners a means for analyzing and evaluating the complex social and moral issues that are specific to the social and moral landscape of the United States. As students examine their own cultures and compare them with others, culture shock and cultural conflict may be lessened and appreciation for cultural differences may be strengthened. Students will engage in interactive tasks, including researching and case analysis of topics and social, academic and professional issues, especially those suggested by the extensive reading component of this course. Through the process of reading, discussion, analysis and writing students in this class will enrich their understanding of today's global society while at the same time they are sharpening their academic English skills.
PATH 0037  Critical Thinking
0 Semester Credit Hours
The purpose of this course is to develop the critical thinking skills needed to interpret and assess arguments and information. This course will highlight the language skills essential for critically analyzing and discussing the quality of the information and opinions presented in authentic texts and listening selections. The course will concentrate on detecting errors of reasoning in short and long passages, evaluating evidence in written and verbal arguments, detecting logical inconsistencies, removing vagueness and ambiguity through word choice and phrasing, and identifying the point or purpose of someone's remarks. Through examining these topics, students will be able to thoughtfully respond to others' opinions in a clear, logical, and informed way. Students will leave the course better prepared to collect, synthesize, and evaluate information and feel more confident in presenting their perspectives in an academic setting.

Philosophy (PHIL)

PHIL 1301  Introduction to Philosophy
3 Semester Credit Hours (3 Lecture Hours)
An examination of major philosophical issues such as the existence of God, freedom and determinism, moral rights and obligations, and the nature and limits of human knowledge.

TCCNS: PHIL 1301

PHIL 2303  Introduction to Logic and Critical Thinking
3 Semester Credit Hours (3 Lecture Hours)
Basic principles and techniques used in understanding, constructing, and evaluating arguments. Topics covered may include formal methods of analyzing arguments, informal fallacies, scientific reasoning, and moral arguments.

TCCNS: PHIL 2303

PHIL 2306  Introduction to Ethics
3 Semester Credit Hours (3 Lecture Hours)
This course includes a study of ethical theories and principles, and application of those theories and principles to ethical issues.

TCCNS: PHIL 2306

PHIL 3306  History of Eastern Philosophy I
3 Semester Credit Hours (3 Lecture Hours)
An historical and critical examination of traditional Indian philosophical and religious systems (such as various versions of Hinduism, Jainism, and Buddhism) and their relevance for contemporary people and societies.

PHIL 3307  History of Eastern Philosophy II
3 Semester Credit Hours (3 Lecture Hours)
A historical and critical examination of some of the philosophical and religious systems developed in China, Tibet, and Japan (such as various schools of Mahayana Buddhism, Taoism, Confucianism, and Zen Buddhism).

PHIL 3327  American Philosophy
3 Semester Credit Hours (3 Lecture Hours)
An introduction to American philosophy and the influential movement known as Pragmatism. The course focuses on the works of C.S. Peirce, William James, John Dewey, and George Santayana. Issues addressed include skepticism, the rejection of foundationalism, the role of belief in inquiry, verification and meaning, and the nature of truth.

PHIL 3342  Philosophy of Love and Sex
3 Semester Credit Hours (3 Lecture Hours)
This course is a study of the ethics of human relationships. Topics include friendship, romance, marriage, sexual orientation, adultery, promiscuity, sexual consent, sexual harassment, rape, pornography, and prostitution.

PHIL 3343  Philosophy of Law
3 Semester Credit Hours (3 Lecture Hours)
An introduction to philosophical issues concerning the law, such as the nature of law, relations between law and morality, theories of legal responsibility, and the role of law in society.

PHIL 3344  Social and Political Philosophy
3 Semester Credit Hours (3 Lecture Hours)
A survey of classical and contemporary material in social and political philosophy, covering topics such as individual liberty and government intervention, the role of government, and social justice.

PHIL 3345  The Meaning of Life
3 Semester Credit Hours (3 Lecture Hours)
An exploration of a variety of views concerning the meaning of life. Three kinds of responses to the question of life's meaning will be examined: theistic responses; non-theistic responses focusing on the creation of personal meaning within a natural universe; and responses that challenge the intelligibility of the question regarding the meaning of life.

PHIL 3346  Elementary Formal Logic
3 Semester Credit Hours (3 Lecture Hours)
A course on technical methods and foundational issues in Philosophy, Computer Science, and Mathematics. Topics include the Propositional Calculus, First-Order Predicate Calculus, meta-theoretic results (such as consistency, soundness, completeness, and decidability), and Zermelo-Fraenkel Set Theory.

PHIL 3347  Philosophy and Science Fiction
3 Semester Credit Hours (3 Lecture Hours)
An exploration of issues in contemporary philosophy such as the nature of life, personhood and self, knowledge and skepticism, time travel, and obligations to the non-human world. The course combines the reading of purely philosophical works with an examination of contemporary works of science fiction (including novels, short stories, and films).

PHIL 3348  Ethics, War, and Terrorism
3 Semester Credit Hours (3 Lecture Hours)
Why is it wrong to kill? Is killing an innocent person ever justified? Under what conditions can we justify war? How should we respond to terrorist threats? The course explores ethical theories in application to these and similar issues.

PHIL 4303  Minds and Machines
3 Semester Credit Hours (3 Lecture Hours)
A study of the relationship of the mental to the physical as it pertains to the foundations of psychology, artificial intelligence, and robotics.

PHIL 4304  Metaphysics
3 Semester Credit Hours (3 Lecture Hours)
An examination of issues in contemporary metaphysics, such as freedom of the will and determinism, the nature of causation, the mind-body problem, and the existence of abstract and concrete entities.
PHIL 4305 Truth, Knowledge, and Justification
3 Semester Credit Hours (3 Lecture Hours)
In this course, we will discuss the following questions among others: What is the nature of truth? Should truth be understood as correspondence with reality? What is it to know something? Is knowledge of the external world possible at all? Can I conclusively rule out the possibility that I might be dreaming right now, or that I might be just a brain in a vat? Are there any privileged beliefs that can be said to constitute the foundation for all of our knowledge? Are the standards for rationality and justification absolute or rather relative to cultural norms? Can there be rational disagreement between equally intelligent people who share the same body of evidence?

PHIL 4321 Ancient Philosophy
3 Semester Credit Hours (3 Lecture Hours)
A survey of the ancient Western philosophical tradition, including the Presocratics, Plato, Aristotle, and the Hellenistic Philosophers.

PHIL 4322 Modern Philosophy
3 Semester Credit Hours (3 Lecture Hours)
A study of some of the major philosophical developments of the 17th -20th centuries, focusing on topics such as the relation between mind and body, religious belief and the problem of evil, rationalism and empiricism, and the limits of human knowledge.

PHIL 4323 Contemporary Philosophy
3 Semester Credit Hours (3 Lecture Hours)
A course on important trends in contemporary philosophy beginning with the Fregean linguistic turn, and examining the major works of philosophers such as Frege, Russell, Wittgenstein, Quine, Davidson, Dummett, Putnam, Kripke, and Lewis.

PHIL 4330 Philosophy and History of Science and Technology
3 Semester Credit Hours (3 Lecture Hours)
An exploration of important issues concerning the natural and formal sciences from the standpoint of historical disputes and technological advances. Issues include the nature of science and of scientific progress, the justification of scientific theories, the possibility of objective knowledge of the world, the distinction between science and pseudo-science, and the relationship between faith and science.

PHIL 4331 Issues in Philosophy of Religion
3 Semester Credit Hours (3 Lecture Hours)
Standard philosophical methods will be used to explore issues such as the existence and nature of God, the problem of evil, and the relationship between morality and religion.

PHIL 4332 Moral Issues in Contemporary Medicine
3 Semester Credit Hours (3 Lecture Hours)
An examination of moral issues that arise in medicine, focusing on topics such as euthanasia, genetic interventions, medical research involving vulnerable subjects, and the distribution of medical resources.

PHIL 4333 Environmental Ethics
3 Semester Credit Hours (3 Lecture Hours)
An examination of our ethical obligations with respect to animals, plants, and environmental systems, and of the foundations of environmental law and policy. Can be cross listed with ESCI 4490, BIOL 4590 or BIMS 4590.

PHIL 4335 Moral Philosophy
3 Semester Credit Hours (3 Lecture Hours)
A study of moral theories, and of moral issues such as whether morality is subjective, whether there are moral facts, and the justification of practices such as capital punishment and abortion.

PHIL 4336 Advanced Seminar in Philosophy
3 Semester Credit Hours (3 Lecture Hours)
In-depth exploration of philosophical topics, designed for philosophy majors, with emphasis on student research and presentations.

PHIL 4337 Philosophy of Language
3 Semester Credit Hours (3 Lecture Hours)
A philosophical investigation into the nature of language. Topics include meaning, truth, theories of mediated reference, theories of direct reference, and speech acts.

PHIL 4390 Topics in Philosophy
3 Semester Credit Hours (3 Lecture Hours)
Study of important philosophical themes and figures. May be repeated for credit when topics vary. Topics may include, for example, Minds and Machines, Eastern Philosophy, Ancient Philosophy, Environmental Ethics, American Philosophy, and Moral Issues in Contemporary Medicine.

PHIL 4396 Directed Individual Study
1-3 Semester Credit Hours
See College description.

Physics (PHYS)

PHYS 1303 Introduction to Astronomy: Solar System
3 Semester Credit Hours (2 Lecture Hours, 2 Lab Hours)
This is one of two courses in the introduction to astronomy sequence which emphasizes the nature of astronomical phenomena over the mathematical analysis of them. This course will focus mostly on the nature of light, the nature and evolution of stars, the material between the stars, the Milky Way Galaxy, external galaxies, and the structure and evolution of the universe as a whole.
Co-requisite: SMTE 0095.
TCCNS: PHYS 1303

PHYS 1304 Introduction to Astronomy: Stars and Galaxies
3 Semester Credit Hours (2 Lecture Hours, 2 Lab Hours)
This is one of two courses in the introduction to astronomy sequence which emphasizes the nature of astronomical phenomena over the mathematical analysis of them. This course introduces astronomical phenomena related to the Solar System such as apparent motion of the Sun, phases of the Moon and apparent and true motion of the planets. Main focus will be on the objects comprising the Solar System: planets, their moons, asteroids, comets and trans-Neptunian bodies. A portion of the course will be dedicated to the formation and development of the Solar System and other, extrasolar planetary systems. The course also will touch the aspects of human exploration of the Solar System and the role of technology in our learning and understanding of the Solar System. This includes the history and the basics of robotic and manned spaceflights. Offered every Spring and Summer.
Co-requisite: SMTE 0095.
TCCNS: PHYS 1304
PHYS 1401  General Physics I
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
Introduction to Newtonian physics. Topics include Aristotelian physics and
its overthrow, Newton’s laws of motion and gravitation, and the
motion of particles, rigid bodies and fluids. The idea of the universe as
a law-governed system will be developed. Laboratory activities provide
introduction to empirical methods in science.
Prerequisite: (MATH 1314, 1316, 1324, 1325, 2312, 2413, 2414, 2415,
minimum score of 21 in ‘ACT Math’, minimum score of 500 in ‘SAT
Math’, minimum score of 21 in ‘ACT Math’, minimum score of 500 in ‘SAT1
Mathematics’ or minimum score of 615 in ‘Local Placement Test’).
Co-requisite: SMTE 0095.
TCCNS: PHYS 1401

PHYS 1402  General Physics II
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
Introduction to oscillatory and wave phenomena, electricity and
magnetism. The classical theory of fields will be used to study electric
and magnetic phenomena, including light, and their role in modern
technology. Laboratory activities provide introduction to empirical
methods in science.
Prerequisite: (PHYS 1401* or 24255).
* May be taken concurrently.
Co-requisite: SMTE 0095.
TCCNS: PHYS 1402

PHYS 2425  University Physics I
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
A calculus based introduction to Newtonian physics. Topics include
Aristotelian physics and its overthrow, Newton’s laws of motion and
gravitation, and the motion of particles, rigid bodies, and fluids. The idea
of the universe as a law-governed system will be developed. Laboratory
activities provide introduction to empirical methods in science.
Prerequisite: MATH 2413.
Co-requisite: SMTE 0095.
TCCNS: PHYS 2425

PHYS 2426  University Physics II
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
Calculus based introduction to oscillatory and wave phenomena, electricity and
magnetism. The classical theory of fields will be used to study electric and magnetic phenomena, including light, and their role in modern
technology.
Prerequisite: PHYS 2425 and (MATH 1314, 1316, 1324, 1325, 2312, 2413, 2414, 2415,
minimum score of 21 in ‘ACT Math’, minimum score of 500 in ‘SAT Math’, minimum score of 21 in ‘ACT Math’, minimum score of 500 in ‘SAT1
Mathematics’ or minimum score of 615 in ‘Local Placement Test’).
Co-requisite: SMTE 0095.
TCCNS: PHYS 2426

PHYS 3331  Mechanics I
3 Semester Credit Hours (3 Lecture Hours)
Fundamentals of classical mechanics. Topics include particle dynamics
in one, two and three dimensions: conservation laws; dynamics of a
system of particles; motion of rigid bodies; central force problems;
accelerating coordinate systems; Newton’s theory of gravitation;
Lagrange’s and Hamilton’s formulations of classical mechanics. This
course is offered through the Texas Physics Consortium (TPC). See their
website (http://www.tarleton.edu/tpc/) for details.
Prerequisite: PHYS 2426 and (MATH 3315* or 3315^).
* May be taken concurrently.

PHYS 3332  Electromagnetism
3 Semester Credit Hours (3 Lecture Hours)
Electrostatics; Laplace’s equation; the theory of dielectrics;
magnetostatic fields; electromagnetic induction; magnetic fields of
currents; Maxwell’s equations. This course is offered through the Texas
Physics Consortium (TPC). See their website (http://www.tarleton.edu/tpc/) for details.
Prerequisite: PHYS 2426 and (MATH 3315* or 2415*).
* May be taken concurrently.

PHYS 3333  Thermodynamics
3 Semester Credit Hours (3 Lecture Hours)
Concept of temperature, equations of state; the first and the second law
of thermodynamics; entropy; change of phase; the thermodynamics
functions. This course is offered through the Texas Physics Consortium
(TPC). See their website (http://www.tarleton.edu/tpc/) for details.
Prerequisite: PHYS 2426 and (MATH 2415 or 2415*).
* May be taken concurrently.

PHYS 3334  Modern Physics I
3 Semester Credit Hours (3 Lecture Hours)
A course in special relativity and elementary quantum mechanics.
Topics include relativistic description of space-time, relativistic energy
and momentum, the uncertainty principle, Schrödinger’s equation,
observables and operators, bound states, potential barriers, and the
quantum description of the hydrogen atom. This course is offered
through the Texas Physics Consortium (TPC). See their website (http://
www.tarleton.edu/tpc/) for details.
Prerequisite: PHYS 2426 and (MATH 3315 or 3315^).
* May be taken concurrently.

PHYS 3490  Selected Topics
1-4 Semester Credit Hours (1-4 Lecture Hours)
Subject materials will be chosen from Electromagnetic Field Theory,
Thermodynamics, Mathematical Methods of Physics, Waves and Optics,
Advanced Modern Physics, Quantum Theory, Computational Physics,
Geophysics, Environmental Physics and Medical Physics. May be
repeated for credit if topics selected are different. This course will be
used for upper-level physics electives offered from other Texas Physics
Consortium (TPC) schools. See their website (http://www.tarleton.edu/tpc/) for details.

PHYS 4161  Physics Research Project
1 Semester Credit Hour (1 Lecture Hour)
The first half of a two semester sequence. The student will work with
a faculty member to develop and conduct a senior research project
including a search of the relevant literature and presentation of the
proposed research idea. This course is offered through the Texas Physics
Consortium (TPC). See their website (http://www.tarleton.edu/tpc/) for details.
Prerequisite: PHYS 3334.

PHYS 4162  Physics Research Seminar
1 Semester Credit Hour (1 Lecture Hour)
The second half of a two semester sequence. The student will work with
a faculty member to conduct a senior research project including giving an
oral presentation of the final results and writing up the results in a form
suitable for publication. This course is offered through the Texas Physics
Consortium (TPC). See their website (http://www.tarleton.edu/tpc/) for details.
Prerequisite: PHYS 4161.
PHYS 4330 Mathematical Methods for Physicists
3 Semester Credit Hours (3 Lecture Hours)
Mathematical techniques from the following areas: infinite series; integral transforming; applications of complex variables; vectors, matrices, and tensors; special functions; partial differential equations; Green's functions; perturbation theory; integral equations; calculus of variations; and groups and group representatives. This course offered through the Texas Physics Consortium (TPC). See their website (http://www.tarleton.edu/tpc/) for details.
Prerequisite: (MATH 3315 or 3315*).
* May be taken concurrently.

PHYS 4335 Quantum Physics
3 Semester Credit Hours (3 Lecture Hours)
The Schroedinger equation; one dimensional systems; the Heisenberg uncertainty principle; magnetic moments and angular momentum; two and three dimensional systems; approximation methods; spin. This course is offered through the Texas Physics Consortium (TPC). See their website (http://www.tarleton.edu/tpc/) for details.
Prerequisite: PHYS 3334 and (MATH 3315* or 2415*).
* May be taken concurrently.

PHYS 4337 Nuclear Physics
3 Semester Credit Hours (3 Lecture Hours)
The study of nuclear phenomena and properties including mass, stability, magnetic moment, radioactive decay processes and angular momentum. The use of nuclear techniques as applied to other scientific fields including electronics and medicine. This course is offered through the Texas Physics Consortium (TPC). See their website (http://www.tarleton.edu/tpc/) for details.
Prerequisite: PHYS 3334 and (PHYS 4335* or 4335) and (MATH 3315* or 2415*).
* May be taken concurrently.

PHYS 4340 Advanced Physics Lab
3 Semester Credit Hours (1 Lecture Hour, 4 Lab Hours)
A laboratory course focusing on experimental design, advanced data analysis and reduction, and experimental laboratory techniques and instrumentation. Experiments will be drawn from a variety of physics areas. This course is offered through the Texas Physics Consortium (TPC). See their website (http://www.tarleton.edu/tpc/) for details.
Prerequisite: (PHYS 3334 or 3334*).
* May be taken concurrently.
Co-requisite: SMTE 0095.

PHYS 4496 Directed Independent Study
1-4 Semester Credit Hours (1-4 Lecture Hours)
Requires a formal proposal of study to be completed in advance of registration and to be approved by the supervising faculty, the Chairperson, and the Dean of the College.

Political Science (POLS)

POLS 2304 Introduction to Political Science
3 Semester Credit Hours (3 Lecture Hours)
Introductory survey of the discipline of political science focusing on the scope and methods of the field, and the substantive topics in the discipline including the theoretical foundations of politics, political interaction, political institutions and how political systems function.
TCCNS: GOVT 2304

POLS 2305 U.S. Government and Politics
3 Semester Credit Hours (3 Lecture Hours)
A basic survey of American government, including fundamental political institutions, with special attention to the United States and Texas Constitutions.
TCCNS: GOVT 2305

POLS 2306 State and Local Government
3 Semester Credit Hours (3 Lecture Hours)
The politics, government, and administration of American states, counties, cities, and special districts, with special emphasis on Texas.
TCCNS: GOVT 2306

POLS 2311 Mexican American and Latinx Politics
3 Semester Credit Hours (3 Lecture Hours)
The study of Mexican American and Latinx politics within the American political experience. Topics include historical, cultural, socioeconomic, and constitutional issues that pertain to the study of Mexican Americans and other Latinx populations in the United States. Other topics such as political participation, governmental institutions, electoral politics, political representation, demographic trends, and other contemporary public policy debates will also be addressed.
TCCNS: GOVT 2311

POLS 2318 Politics, Groups, & Society
3 Semester Credit Hours (3 Lecture Hours)
This course explores the role of groups in political and social change in society. In doing so, the course explores the formal and informal institutions which aid and constrain group effectiveness. An emphasis is placed on contemporary examples.

POLS 2319 Religion and Politics
3 Semester Credit Hours (3 Lecture Hours)
The course will examine the intersection of religion and politics historically and during contemporary times with an emphasis on beliefs, behaviors, institutions, and policies.

POLS 3303 Contemporary Political Analysis
3 Semester Credit Hours (3 Lecture Hours)
Analysis of current problems in national and international politics. Emphasis is on methods of analysis, particularly the use of computers. Includes a segment on career opportunities for political science majors.

POLS 3311 Women and Politics
3 Semester Credit Hours (3 Lecture Hours)
The course will examine public policies affecting women, political participation, women in public office, and political attitudes of women.

POLS 3312 Campaigns and Elections
3 Semester Credit Hours (3 Lecture Hours)
A survey of the literature on campaigns and elections including theories of voter choice, effects of mass media and campaign finance regulations on the conduct and outcome of elections; effects of elections on policy; emphasis on U.S. national elections.

POLS 3313 The Legislative Process
3 Semester Credit Hours (3 Lecture Hours)
Survey and description of the legislative process in the United States Congress with relevant comparisons to practices within the several states and foreign nations. Emphasis upon the law-making process explained in terms of structure, participants, groups, associations and power relationships.
POLS 3314 Public Opinion
3 Semester Credit Hours (3 Lecture Hours)
An analysis of the kinds and distributions of opinions and attitudes in the mass public and the effects of those opinions on activities of policy makers, with special attention to problems of linking public opinion to public policy.

POLS 3315 Political Parties
3 Semester Credit Hours (3 Lecture Hours)
Organization, history, and activities of political parties and functions they serve in national, state, and local politics in the United States and elsewhere.

POLS 3316 The American Presidency
3 Semester Credit Hours (3 Lecture Hours)
A study of the federal executive branch with an emphasis upon the American Presidency with its relationships to other American political institutions and processes.

POLS 3317 Judicial Politics
3 Semester Credit Hours (3 Lecture Hours)
This course examines the political factors that influence judicial selection, decision-making and the policy-making role of courts. Furthermore, attention is directed at the impact of court decisions and the structure of the judiciary.

POLS 3321 Comparative Politics
3 Semester Credit Hours (3 Lecture Hours)
Concepts, theories and analytical frameworks for comparing different types of political systems around the world. Emphasis is placed on learning about different political systems and using the comparative method to evaluate and develop a richer understanding of politics, political culture, political behavior, and political institutions.

POLS 3331 International Relations
3 Semester Credit Hours (3 Lecture Hours)
Examination of the structure and function of the international system focusing on the power relationships among states, international organizations, and the critical issues animating contemporary international relations.

POLS 3341 Introduction to Public Administration
3 Semester Credit Hours (3 Lecture Hours)
Study of organization and management theories and practices of public administration affecting federal and subnational governments. Bureaucratic structures and procedures will be examined for their effects on policy, program development and evaluation.

POLS 3342 Introduction to Public Policy
3 Semester Credit Hours (3 Lecture Hours)
A survey of the policy process in the United States. The course will examine factors affecting the development, implementation and impact of public policies as well as a discussion of policy alternatives and controversies.

POLS 3343 Bureaucracy
3 Semester Credit Hours (3 Lecture Hours)
Examines the concept of the political role of the bureaucracy and the impact of other government institutions on bureaucratic structures, functions and behavior. The role of bureaucracy in public policy making and the influence of politics on implementation is analyzed.

POLS 3351 Civil Rights & Liberties
3 Semester Credit Hours (3 Lecture Hours)
This course explores the provision of civil rights and liberties, including First Amendment freedoms and criminal rights, through the lens of Supreme Court decisions. While historical cases are examined, special emphasis is put on contemporary Court decisions.

POLS 3352 The Politics of the European Union
3 Semester Credit Hours (3 Lecture Hours)
Examination of the institutional, economic and political forces that led to the creation and development of the European Union. Emphasis on the impact the European Union has had on world affairs.

POLS 3353 Comparative Politics of Developing Nations
3 Semester Credit Hours (3 Lecture Hours)
Analysis of contemporary issues within and amongst developing nations. Examines various institutions, political processes, and public policy debates in some or all of the following regions: Africa, Latin America, the Middle East, or Asia.

POLS 3354 Transitions to Democracy
3 Semester Credit Hours (3 Lecture Hours)
Analysis of transitions to democracy from authoritarian rule. Various stages of the transition process and theories of democratization are assessed. Emphasis will be placed on "third wave" transitions to democracy.
POLS 4325 Politics in Latin America
3 Semester Credit Hours (3 Lecture Hours)
Latin American governments and politics as related to such topical problems and processes as land reform and expropriation.

POLS 4327 The Politics of War
3 Semester Credit Hours (3 Lecture Hours)
This course will examine the politics of war from ancient times to the present. Included in this survey are great generals and military strategists, from Sun Tzu to Napoleon to generals of the American Civil War. Students will study concepts of international law, the law of nations, and the laws of war. The course further examines military strategy and tactics of the 20th century.

POLS 4361 American Political Thought
3 Semester Credit Hours (3 Lecture Hours)
A survey of the major developments in American political thought from the Colonial period to the present, followed by an analysis of important recent theoretical developments in American political thought.

POLS 4390 Topics in Political Science
3 Semester Credit Hours (3 Lecture Hours)
May be repeated for credit when topic varies.

POLS 4396 Directed Individual Study
1-3 Semester Credit Hours (1-3 Lecture Hours)
See College description.

POLS 4398 Applied Experience
3 Semester Credit Hours (3 Lecture Hours)
NCD.

**Portuguese (PORT)**

PORT 2315 Portuguese for Spanish Speakers
3 Semester Credit Hours (3 Lecture Hours)
This course is designed specifically for students with no previous knowledge of Portuguese, but who already speak Spanish. It provides Spanish-speaking students with an opportunity to develop Portuguese language skills, assisted by their knowledge of the Spanish language. The course will also emphasize several aspects of the Portuguese-speaking countries, such as food, music, and history.

PORT 2317 Language and Culture in Brazil
3 Semester Credit Hours (3 Lecture Hours)
This course is aimed at developing listening, speaking, reading and writing skills at an intermediate level and within a Brazilian cultural framework. The student will develop the ability to function in natural contexts, convey and understand messages with reasonable accuracy, and carry on more elaborate conversation in Portuguese. The course will also emphasize several aspects of Brazil and other Portuguese-speaking countries, such as history, politics and the struggle for the rights of minorities.

**Psychology (PSYC)**

PSYC 2301 General Psychology
3 Semester Credit Hours (3 Lecture Hours)
An introduction to the fundamental concepts and theories in psychology. Topics include biological processes, development, learning, personality, abnormal behavior, therapy, and social interactions.

**Evolutionary Psychology**
3 Semester Credit Hours (3 Lecture Hours)
Evolutionary psychologists argue that much of human behavior is the output of neural and psychological adaptations that evolved to solve recurrent problems in human ancestral environments. Some challenges addressed in this course involve survival, mating, familial relationships, and living in social groups.
PSYC 3360  Health Psychology  
3 Semester Credit Hours (3 Lecture Hours)  
This course will provide an overview of the field of health psychology, examining how psychological theories and research are applied to enhance health and well-being and to prevent and treat illness.

PSYC 3361  Psychology of Personality  
3 Semester Credit Hours (3 Lecture Hours)  
An introduction to major theories of personality. Personality processes and development are discussed from psychoanalytic, behavioral, humanistic, and other perspectives.

PSYC 3363  Abnormal Psychology  
3 Semester Credit Hours (3 Lecture Hours)  
An introduction to the study of abnormal behavior. Studies the etiology and characteristics of the major behavioral disorders, including current research findings and treatment practices. Competency in personality psychology, such as that obtained by completing PSYC 3361, is assumed for this course.

PSYC 3370  Psychology of Religion  
3 Semester Credit Hours (3 Lecture Hours)  
This course examines religious experience and behavior from a psychological perspective. Topics include historical and theoretical perspectives, development of religious beliefs across the lifespan, religious conversion, social and group experiences, and the varieties of religious belief.

PSYC 3374  Human Sexuality  
3 Semester Credit Hours (3 Lecture Hours)  
The study of human sexual behavior from a biological and psychosocial perspective. Emphasizes current research methods and findings.

PSYC 3375  Introduction to Clinical Psychology  
3 Semester Credit Hours (3 Lecture Hours)  
A survey of diagnostic and therapeutic strategies employed by clinical psychologists. The scientist-practitioner model is emphasized through the critical analysis of theories and empirical research that provide the foundation for determining effective treatments of mental disorders.

PSYC 3411  Experimental Psychology  
4 Semester Credit Hours (4 Lecture Hours)  
An introduction to the methods of scientific experimentation in psychology. Skills to critically analyze journal articles, design experiments, collect and analyze data, and write reports in APA style will be developed. Students are required to enroll in a laboratory section of this course. The laboratory component of this course offers applications of the principles discussed in the large lecture.  
Prerequisite: MATH 1442.

PSYC 4309  History and Systems of Psychology  
3 Semester Credit Hours (3 Lecture Hours)  
A study of the development of modern psychology through an examination of major philosophic, scientific, and social-political antecedents. Contemporary positions are discussed within the context of broader theoretical frameworks.  
Prerequisite: PSYC 2301.

PSYC 4310  Psychology Capstone Seminar  
3 Semester Credit Hours (3 Lecture Hours)  
All TAMU-CC Psychology students take a Capstone course in order to graduate. The Psychology Capstone Seminar, the final and required class that completes the Psychology curriculum, provides an opportunity for senior Psychology majors to demonstrate comprehensive learning in Psychology through intensive, integrative work on a specific topic in Psychology at an advanced level. The goal is to provide an enriching and culminating experience at the end of each student’s undergraduate education. Core components of the Capstone courses include reading and discussing peer-reviewed and primary source work, completing a final project, and presentations of ongoing and final projects.  
Prerequisite: PSYC 3411.

PSYC 4332  Cross-cultural Psychology  
3 Semester Credit Hours (3 Lecture Hours)  
This course is designed to provide students with both a theoretical and a practical understanding of the effects of culture on human thinking, values, and behavior. As such, it is focused on the effects of culture on the nature and behavior of individuals, their adaptations to institutions and environments, and their relations with others within and outside their culture. Knowledge presented in the class is drawn from both qualitative and quantitative research.

PSYC 4344  Drug Use and Abuse  
3 Semester Credit Hours (3 Lecture Hours)  
Study of the physiological, psychological, and social effects of drug use and abuse. Following a review of basic neuroanatomy and pharmacology, the actions and known effects of specific drugs of use and abuse will be examined. Treatments and prevention issues related to substance abuse will also be discussed.

PSYC 4352  Physiological Psychology  
3 Semester Credit Hours (3 Lecture Hours)  
This course is an introduction to the physiological mechanisms that underlie behavior with emphasis on the nervous, the endocrine and sensory systems.

PSYC 4354  Sensation and Perception  
3 Semester Credit Hours (3 Lecture Hours)  
Basic sensory processes as they relate to the sensory experience and to the construction of our conception of physical reality.

PSYC 4367  Gender Issues in Psychology  
3 Semester Credit Hours (3 Lecture Hours)  
This course is designed to introduce the undergraduate student to the theoretical and empirical issues related to the psychology of gender. Both traditional and contemporary theories that focus on the unique aspects in the psychological development of women as well as men will be examined.

PSYC 4370  Feminism & Science  
3 Semester Credit Hours (3 Lecture Hours)  
Science has been and continues to be thought of as the objective, empirical pursuit of natural facts. In this class we will discuss feminist approaches to science that encourage us to question such fundamental tenets, to understand how such an approach is biased, and ironically, quite far from objective in its over-reliance on masculine, patriarchal frameworks.  
Prerequisite: PSYC 2301.
PSYC 4372 Psychological Testing
3 Semester Credit Hours (3 Lecture Hours)
Statistical and research basis for test construction. Instruction in use of group and individual tests in intelligence, achievement, interest and personality. Understanding of individual measures in these areas.
Prerequisite: MATH 1442.

PSYC 4377 Industrial/Organizational Psychology
3 Semester Credit Hours (3 Lecture Hours)
This course will provide an Introduction to Industrial and Organizational Psychology, a scientific discipline that studies human behavior in the workplace. Topics will include the history of Industrial/Organizational psychology, job analysis, psychological assessments, personnel decisions, training and development, organizational change, teamwork, motivation, leadership and work stress and health.
Prerequisite: PSYC 2301.

PSYC 4390 Topics in Psychology
3 Semester Credit Hours (3 Lecture Hours)
May be repeated for credit when topics vary.
Prerequisite: PSYC 2301.

PSYC 4395 Undergraduate Research
3 Semester Credit Hours
A research project in psychology designed in consultation with a faculty director. The study is to be conducted by the student under the supervision and direction of the faculty member and may culminate in a formal report written in APA journal style.

PSYC 4396 Directed Individual Study
1-3 Semester Credit Hours
See College description.

PSYC 4398 Applied Experience
3 Semester Credit Hours
See College description.

Reading (READ)

READ 0399 Basic Reading and Comprehension
3 Semester Credit Hours (3 Lecture Hours)
This is a reading course for students who need assistance in developing college level reading skills. Emphasis will be on improving reading comprehension, critical reasoning skills, recognition of the organization of ideas in written material, study skills and vocabulary development. The Higher Education Assessment (THEA) reading skills will be covered.

READ 3310 Principles and Practices of Early Reading Instruction
3 Semester Credit Hours (3 Lecture Hours)
This course explores theories of early language and literacy development of children. Course content addresses language development and literacy concepts essential for pre-reading areas, such as phonemic awareness, oral language development, listening comprehension development, and alphabetic knowledge. The course explores ways educators can enhance language and literacy concepts utilizing art, music, and drama. READ 3310 emphasizes development of emergent literacy skills that lead to literacy skills taught in READ 3320.

READ 3320 Principles and Practices of Reading Instruction
3 Semester Credit Hours (3 Lecture Hours)
The purpose of this course is to provide the preservice teacher with a solid foundation for effective literacy instruction. This course will review research-based teaching strategies, instructional materials for phonics, vocabulary, fluency, and comprehension will as methods and assessments for efficacious literacy instruction. The primary focus of course content will be on core (tier 1) classroom instruction with discussions of differentiated instruction and frameworks for responsive intervention also addressed. The targeted grade levels for this course are third through sixth grade.

READ 3321 Principles and Practices of Reading Instruction, Grades 4 – 8
3 Semester Credit Hours (3 Lecture Hours)
This course will emphasize materials, methods, and beliefs for teaching reading in grades 4-8. Components of the course will include but not be limited to the five pillars of reading instruction identified by the National Reading Panel (2000): phonemic awareness, phonics, fluency, vocabulary, and comprehension.

READ 3351 Reading Assessment and Intervention
3 Semester Credit Hours (3 Lecture Hours)
This course is an introduction to utilizing formal and informal reading assessments and intervention strategies in a classroom setting. Students will administer assessments in the areas of phonemic awareness, phonics, fluency, vocabulary, and comprehension. Students will then select and adapt appropriate scientifically proven instructional strategies, based upon assessment results, for working with readers of varying abilities and implement these through actual lessons.
Prerequisite: READ 3310 and 3320 or READ 3353.

READ 3352 Content Area Reading for Elementary Students
3 Semester Credit Hours (3 Lecture Hours)
This course focuses on recent issues, materials, methods, and strategies considered essential for effective reading instruction in the elementary school content areas. Components of the course will include comprehension strategies, vocabulary development, reading-writing connections, and word study. The course will also include but not be limited to the five pillars of reading instruction identified by the National Reading Panel (2000): phonemic awareness, phonics, fluency, vocabulary, and comprehension.
Prerequisite: READ 3310 and 3320.

READ 3353 Content Area Reading for Secondary Students
3 Semester Credit Hours (3 Lecture Hours)
The skills required of secondary students to deal with subject matter in the various content areas are presented. In addition, developmental and corrective processes that incorporate the identification and remediation of dyslexia and other reading disorders are presented.

READ 3355 Teaching Reading in the Secondary School
3 Semester Credit Hours (3 Lecture Hours)
This course focuses on planning, developing, selecting, and organizing reading materials for secondary reading instruction.
Prerequisite: READ 3353.

READ 3356 Technology and Literacy
3 Semester Credit Hours (3 Lecture Hours)
Various software packages that have been developed for providing initial and tutorial instruction in the language arts are presented. In addition, instructional techniques for using these packages are covered.
Prerequisite: READ 3320 and 3321.
READ 3380 Children's and Adolescents' Literature
3 Semester Credit Hours (3 Lecture Hours)
Provides students with an understanding of children's and adolescent literature. Included in the class is the reading and study of literature and how to promote reading of literature in the schools. Extensive reading is required.

READ 4352 Advanced Practices in Reading/ Language Arts
3 Semester Credit Hours (3 Lecture Hours)
The emphasis is on instructional approaches supported by current theory and research and supervised implementation in a school setting. Attention is given to word study, comprehension, critical reading and reasoning, and reading-writing connections. Components of the course will include but not be limited to the five pillars of reading instruction identified by the National Reading Panel (2000): phonemic awareness, phonics, fluency, vocabulary, and comprehension.
Prerequisite: READ 3320, 3351, 4380 and 4394.

READ 4394 Field Experiences in Reading
3 Semester Credit Hours (3 Lecture Hours)
The culmination of experience for those students working toward a specialization in reading. Students are provided supervised experience in field-based activities, in addition to on-campus activities.
Prerequisite: READ 3310, 3320, 3351, 3352 and 4380.

READ 4696 Directed Individual Study
1-6 Semester Credit Hours (1 Lecture Hour)
Programs will be designed for individual cases through special permission of the Department Chair and Dean. May be repeated for credit when the topic varies.

Reciprocal Exchange Program (REEP)

REEP 4096 Reciprocal Exchange Program
12 Semester Credit Hours
NCD.

Science/Math and Tech Education (SMTE)

SMTE 0091 Biological Laboratory Safety Seminar
0 Semester Credit Hours
This non-credit course is designed as an on-line offering that must be passed by students each semester and at a grade of 100%. Students will be responsible for taking safety courses with different course numbers of SMTE, as each lab must meet different safety requirements as specified by the A&M System, depending on the types of hazardous materials used in each lab. Students will not be charged a fee for taking these courses.

SMTE 0093 Chemistry Laboratory Safety Seminar
0 Semester Credit Hours
This non-credit course is designed as an on-line offering that must be passed by students each semester and at a grade of 100%. Students will be responsible for taking safety courses with different course numbers of SMTE, as each lab must meet different safety requirements as specified by the A&M System, depending on the types of hazardous materials used in each lab. Students will not be charged a fee for taking these courses.

SMTE 0094 Geology Laboratory Safety Seminar
0 Semester Credit Hours
This non-credit course is designed as an on-line offering that must be passed by students each semester and at a grade of 100%. Students will be responsible for taking safety courses with different course numbers of SMTE, as each lab must meet different safety requirements as specified by the A&M System, depending on the types of hazardous materials used in each lab. Students will not be charged a fee for taking these courses.

SMTE 0095 Physics Laboratory Safety Seminar
0 Semester Credit Hours
This non-credit course is designed as an on-line offering that must be passed by students each semester and at a grade of 100%. Students will be responsible for taking safety courses with different course numbers of SMTE, as each lab must meet different safety requirements as specified by the A&M System, depending on the types of hazardous materials used in each lab. Students will not be charged a fee for taking these courses.

SMTE 0096 Environmental Science Laboratory Safety Seminar
0 Semester Credit Hours
This non-credit course is designed as an on-line offering that must be passed by students each semester and at a grade of 100%. Students will be responsible for taking safety courses with different course numbers of SMTE, as each lab must meet different safety requirements as specified by the A&M System, depending on the types of hazardous materials used in each lab. Students will not be charged a fee for taking these courses.

SMTE 0098 Theatre Student Safety Seminar
0 Semester Credit Hours
This non-credit course is designed as an on-line offering that must be passed by students each semester and at a grade of 100%. Students will be responsible for taking safety courses with different course numbers of SMTE, as each lab must meet different safety requirements as specified by the A&M System, depending on the types of hazardous materials used in each lab. Students will not be charged a fee for taking these courses.

SMTE 0099 Engineering Safety Seminar
0 Semester Credit Hours

SMTE 1350 Fundamentals of Mathematics I
3 Semester Credit Hours (3 Lecture Hours)
The conceptual framework for understanding and applying properties, models, and operations related to various number systems in problem solving settings.
Prerequisite: MATH 1314.
TCCNS: MATH 1350
SMTE 1351 Fundamentals of Mathematics II
3 Semester Credit Hours (3 Lecture Hours)
The conceptual framework for understanding and applying properties, models, and operations related to various data systems in problem solving settings.
Prerequisite: SMTE 1350.
TCCNS: MATH 1351

SMTE 3315 Foundational Approaches to the Physical Sciences
3 Semester Credit Hours (2 Lecture Hours, 2 Lab Hours)
Physical science topics such as simple machines, atoms, molecules, electricity and magnetism, sound, and light. Laboratory involvement will emphasize techniques of problem solving, data gathering, and data application. The course is taught following an inquiry based format and is recommended for future K-8 level science educators.
Co-requisite: SMTE 0096.

SMTE 3316 Foundational Approaches to the Life Sciences
3 Semester Credit Hours (2 Lecture Hours, 2 Lab Hours)
Emphasis on biological concepts including cells, plants, invertebrate and vertebrate structural systems. Laboratory investigations focus on techniques of problem solving, data gathering, and data applications. The course is taught following an inquiry based format and is recommended for future K-8 level science educators.
Co-requisite: SMTE 0091.

SMTE 3352 Fundamentals of Mathematics III
3 Semester Credit Hours (3 Lecture Hours)
The conceptual framework for understanding and applying properties, models, and operations related to various geometric systems in problem solving settings.
Prerequisite: SMTE 1351.

SMTE 4217 Secondary Approaches to the Life Sciences
2 Semester Credit Hours (2 Lecture Hours)
Study of secondary science teaching and learning from the standpoints of theory and practice, curriculum objectives, materials and evaluation. The course will emphasize contemporary issues by focusing on biological content ranging across the sub-disciplines of molecular biology, physiology, evolution and environmental science while teaching in a relevant and engaging context that includes web searches, laboratory activities, and student-centered inquiry activities

SMTE 4270 Science Education Topics I
2 Semester Credit Hours (2 Lecture Hours)
Presentation of the conceptual framework for understanding and applying science content in life sciences including biology, ecology and evolution using the national standards for science education and Texas Essential Knowledge and Skills (TEKS). The course is taught using scientifically researched literature and content knowledge in an inquiry based format and is recommended for future 4-8 and 7-12 level science educators.

SMTE 4273 Historical Development of the Sciences
2 Semester Credit Hours (2 Lecture Hours)
Study of human endeavors leading to the present body of scientific knowledge placed in a historical and philosophical context. Portions of the materials will be presented in a format conducive to adaptation for middle school and high school.
Prerequisite: BIOL 1407, CHEM 1412 and EDUC 3311.

SMTE 4270 Secondary Science Laboratory Techniques
3 Semester Credit Hours (3 Lecture Hours)
This course is designed to assist the 4-8 and 7-12 future science teacher in developing content knowledge, skills and mastery of designated laboratory and research techniques through scientific experimentation in areas such as chemistry, biology and physics. State and national laboratory safety mandates will also be addressed.
Prerequisite: BIOL 1407, CHEM 1412 and EDUC 3311.

SMTE 4320 Secondary Science Laboratory Techniques
3 Semester Credit Hours (3 Lecture Hours)
This course is designed to assist the 4-8 and 7-12 future science teacher in developing content knowledge, skills and mastery of designated laboratory and research techniques through scientific experimentation in areas such as chemistry, biology and physics. State and national laboratory safety mandates will also be addressed.
Prerequisite: BIOL 1407, CHEM 1412 and EDUC 3311.

SMTE 4370 Mathematics Education Topics I
3 Semester Credit Hours (3 Lecture Hours)
Presentations of contemporary issues in mathematics education. Topics include history of mathematics education, state and national standards for mathematics education, cognitive development, the importance of culture, language and gender in learning mathematics, authentic assessment, and interdisciplinary curriculum.

SMTE 4382 Basic Mathematics From An Advanced Viewpoint
3 Semester Credit Hours (3 Lecture Hours)
Capstone course for students pursuing grades 4-8 certification in mathematics. Presents basic mathematical concepts in the context of advanced mathematics courses. The course includes historical development of significant ideas in mathematics and science, interpretations of mathematical topics at multiple levels, and the use of technology to generate and convey understanding of mathematical ideas.
Prerequisite: MATH 2305 and 3312.

SMTE 4490 Selected Topics
1-4 Semester Credit Hours (1-4 Lecture Hours)
Subject materials variable. May be repeated for credit when topics are significantly different.

SMTE 4496 Directed Independent Study
1-4 Semester Credit Hours
Requires a formal proposal of study to be completed in advance of registration and to be approved by the supervising faculty, the Chairperson, and the Dean of the College.

Social Work (SOCW)

SOCW 2361 Introduction to Social Work
3 Semester Credit Hours (3 Lecture Hours)
An introductory survey of the field of social work including the nature, function, and types of social work practice. This course is designed to acquaint the student with the history, terminology, scope, and values of the profession of social work.

SOCW 3310 Approaches to Social Welfare
3 Semester Credit Hours (3 Lecture Hours)
Origin, development, and present status of social service programs with particular emphasis on the relationship of program resources, human needs, and the methods through which services are provided.

SOCW 3320 Social Services in the Community
3 Semester Credit Hours (3 Lecture Hours)
An introduction to the organizations and agencies involved in social service delivery. Exploration of the range and characteristics of the human service delivery system with particular emphasis on the social work profession.
Prerequisite: SOCW 3310.
SOCW 3350 Social Work Practice
3 Semester Credit Hours (3 Lecture Hours)
Social Work practice from a generalist perspective of social work intervention. Data collection, assessment, intervention, planning/implementation, and evaluation are covered.
Prerequisite: SOCW 3301.

SOCW 4396 Directed Individual Study
1-3 Semester Credit Hours
See College description.

SOCW 4398 Applied Experience
3 Semester Credit Hours (3 Lecture Hours)
One semester course of field work in a selected agency. (See college description.

Sociology (SOCI)

SOCI 1301 Introduction to Sociology
3 Semester Credit Hours (3 Lecture Hours)
An introduction to the basic concepts, methods, and theories used in Sociology. Topics illustrate the systematic understanding of social interaction, social organization, and social institutions. Reciprocal relationships between individuals and society are examined. Topics may include — but are not limited to – socialization, culture, social stratification, race and ethnicity, sex and gender, deviance, family, work, and social change.
TCCNS: SOCI 1301

SOCI 2301 Social Problems
3 Semester Credit Hours (3 Lecture Hours)
A survey and exploration of the causes and consequences of major social problems in the U.S. society, including contemporary issues of poverty, unemployment, income inequality, health care, crime, climate change, and other issues of social class, racial, ethnic, and gender inequality.
TCCNS: SOCI 1306

SOCI 2319 Social Psychology
3 Semester Credit Hours (3 Lecture Hours)
The scientific study of how a person's thoughts and behavior are influenced by others. Topics will include social cognition, attitudes, persuasion, interpersonal relationships, and group behavior. (Credit may not be given for both this course and PSYC 2326.) Cross listed with PSYC 2319.
TCCNS: SOCI 2326

SOCI 2350 Sociology of Sexuality
3 Semester Credit Hours (3 Lecture Hours)
An examination of sexuality from a sociological perspective. This course will consider the historical evolution of sexuality, the social construction of sexual identities, sexual inequalities and power, how sexualities and sex acts are defined as normal or deviant, and applications of sociological, queer, and feminist theories.

SOCI 3310 Sociology through Film
3 Semester Credit Hours (3 Lecture Hours)
The examination of film as a culture artifact to illustrate sociological concepts, theories, and perspectives. Specific attention will be given to narratives of film as they illustrate culture, aging, social class, gender, race/ethnicity, identity, and other sociological concepts.

SOCI 3312 Racial and Ethnic Relations
3 Semester Credit Hours (3 Lecture Hours)
The study of cultural, religious, ethnic and racial groups, and the treatment accorded them in society. Prejudice, discrimination and the outcomes of discrimination in relation to both dominant and subordinate groups are considered.

SOCI 3320 Sociology of Gender
3 Semester Credit Hours (3 Lecture Hours)
An examination of the roots, nature and social construction of gender roles including socialization of men and women, gender role relationships from the perspectives of sociology. Issues of family, education, work and the economy, religion, politics and law, feminist organizations, feminist theory, and men's and women's movements will be considered.

SOCI 3321 Mexican American Women
3 Semester Credit Hours (3 Lecture Hours)
A study of the Chicanas and the trends in society and Mexican-American culture affecting their lives and behaviors.

SOCI 3340 Sociology of the Family
3 Semester Credit Hours (3 Lecture Hours)
The study of the family, relationships among its members, and the relationship of family to other social institutions.

SOCI 3349 Sociology of Deviant Behavior
3 Semester Credit Hours (3 Lecture Hours)
A systematic and critical study of the nature, patterns, and processes of violations of significant social norms by members of society. Specific attention is given to violations such as drug abuse, violence in and outside the family, and white-collar offenses.

SOCI 3350 Sociology of Education
3 Semester Credit Hours (3 Lecture Hours)
Employing a sociological lens to examine formal education in the United States and other countries, students will explore various schools of thought and controversies surrounding education in modern societies. They will examine important issues related to formal education, such as the expansion of schooling, equality of educational opportunity, unequal achievement of groups of students, the reproduction of inequality in education, schools' roles in the transmission of culture, and the social organization of schools.

SOCI 4301 Social Theory
3 Semester Credit Hours (3 Lecture Hours)
Combines an analysis of the major ideas and theories in sociology and their relationship to social research with an understanding of social processes and structures.
Prerequisite: SOCI 1301.

SOCI 4310 Sociology of Work and Occupations
3 Semester Credit Hours (3 Lecture Hours)
The study of work as a social phenomenon, including the social organization of work, occupations, and professions in society. The labor force, work culture, workers mobility, career lines, and leisure in contrast to work are considered.

SOCI 4312 Power, Privilege, and Poverty
3 Semester Credit Hours (3 Lecture Hours)
The study of social inequality in society, with emphasis on the social class structure of the United States, its origins, development, and consequences for individuals, groups, and society.
Spanish (SPAN)

SPAN 1100 Introduction to Service Learning
1 Semester Credit Hour
This is a one-credit course in which students in Spanish 1311 or 1312 may enroll and participate. This service learning course aims to promote collaborative learning between college students learning Spanish and people in the community. Available upon application. Repeatable up to 2 hours.

SPAN 1311 Spanish I
3 Semester Credit Hours (3 Lecture Hours)
Introduction to listening, speaking, reading and writing skills within a Spanish cultural framework. For students without previous knowledge of the language. (Language laboratory required. One hour per week.) *A lab fee is required for these courses.

SPAN 1312 Spanish II
3 Semester Credit Hours (3 Lecture Hours)
Continued practice in listening, speaking, reading and writing skills within a Spanish cultural framework. (Language laboratory required. One hour per week.) A lab fee is required for these courses.

Prerequisite: (SPAN 1311).

TCCNS: SPAN 2311
SPAN 2312 Continuing Spanish
3 Semester Credit Hours (3 Lecture Hours)
Continued development and review of all language skills at an intermediate level within a Spanish framework with an emphasis in the linguistic and cultural perspective.

Prerequisite: SPAN 2311.

TCCNS: SPAN 2312
SPAN 2313 Spanish for Heritage Speakers
3 Semester Credit Hours (3 Lecture Hours)
An introductory course designed for bilingual students who wish to enhance their linguistic skills (speaking, listening, reading and writing). This course will focus on the cultural and historical aspects related to the heritage Spanish speaker.

TCCNS: SPAN 2313
SPAN 2315 Language and Culture for Heritage Learners
3 Semester Credit Hours (3 Lecture Hours)
This course is designed to guide Spanish heritage language learners, as well as advanced learners of Spanish, in the development of their oral proficiency, written communication, and grammatical accuracy while exploring different cultural aspects from the Spanish-speaking world. It is highly recommended for students who have taken SPAN 2313 and/or who are transitioning into upper-division Spanish courses.

Prerequisite: SPAN 2313.

SPAN 3302 Spanish Composition
3 Semester Credit Hours (3 Lecture Hours)
A course designed to develop analytical perspectives in literary criticism and to strengthen reading and writing skills in Spanish through intensive reading of Spanish, Spanish American, and Chicano fiction.

Prerequisite: SPAN 2312.
SPAN 3303 Spanish Conversation
3 Semester Credit Hours (3 Lecture Hours)
A course designed to strengthen the student's oral proficiency in the
language through selected readings, videos and oral presentations.
Prerequisite: SPAN 2312.

SPAN 3304 Spanish Civilization
3 Semester Credit Hours (3 Lecture Hours)
This course has been designed to provide a general overview of the
cultural, linguistic, and historical experience of the Spanish people within
its larger European context. Conducted in Spanish unless otherwise
stated. This course may be used to satisfy the university core curriculum
requirement in Language, Philosophy, and Culture.
Prerequisite: SPAN 2312.

SPAN 3305 Latin American Civilization
3 Semester Credit Hours (3 Lecture Hours)
This course is designed to provide a general overview of the cultural,
linguistic, and historical experience of Latin American people before and
after Columbus. Conducted in Spanish unless otherwise stated. This
course may be used to satisfy the university core curriculum in Language,
Philosophy, and Culture.
Prerequisite: SPAN 2312.

SPAN 3307 Spanish Literature I
3 Semester Credit Hours (3 Lecture Hours)
A critical approach to the study of early Spanish literature from the
Middle Ages through the Eighteenth Century. Literary selections include
masterpieces that establish and reflect Spain's literary tradition within its
larger European context.

SPAN 3308 Spanish Literature II
3 Semester Credit Hours (3 Lecture Hours)
A continuation of a critical approach to the study of Spanish literature
from the Nineteenth Century through the present. Representative works
of Spanish Romanticism, Realism, Naturalism, and contemporary
literature are studied within their larger European context.

SPAN 3309 Spanish American Literature I
3 Semester Credit Hours (3 Lecture Hours)
A critical approach to the study of early Spanish American literature
from the Pre-Columbian Period through the Nineteenth Century. Selected
readings in all literary genres, major themes, writers, and early literary
movements will be studied within their larger Latin American context.

SPAN 3310 Spanish American Literature II
3 Semester Credit Hours (3 Lecture Hours)
A continuation of a critical approach to the study of Spanish American
literature from the Twentieth Century through the present. Representative
works of Latin American writers and literary movements: Modernism,
Realism, Avant-Garde, Regionalism, Magic-Realism are studied within
their larger Latin American context.

SPAN 3311 Spanish Phonetics
3 Semester Credit Hours (3 Lecture Hours)
A course designed to study the production and discrimination of the
Spanish sound system with a general overview of the geographical and
social distribution of phonemic and allophonic variants.

SPAN 3312 Spanish Grammar
3 Semester Credit Hours (3 Lecture Hours)
The course will serve to expand vocabulary, further develop writing
skills; understand, apply, and use Spanish grammatical structures, and
communicate more accurately in written and oral Spanish within a
Hispanic cultural context.

SPAN 3313 Introduction to Translation
3 Semester Credit Hours (3 Lecture Hours)
This course is an introduction to the theory, methods and practice of
English to Spanish and Spanish to English translation of general texts
from different fields. Challenges related to culture and language, as well
as professional ethics will be examined.

SPAN 3315 Civilizations of the Spanish-Speaking World
3 Semester Credit Hours (3 Lecture Hours)
This course has been designed to provide a general overview of the
historical, sociocultural and political experience of peoples from the
Spanish-Speaking world, both from Spain and Spanish America.
Prerequisite: SPAN 2312.

SPAN 3316 Spanish for the Professions
3 Semester Credit Hours (3 Lecture Hours)
The course stresses Health, Business and Legal terminology in Spanish
to enhance communication skills and cultural knowledge that will help to
serve the South Texas Spanish speaking population as well as to conduct
interactions with Spanish speakers and/or businesses through the United
States and the world.

SPAN 3317 Introduction to Hispanic Linguistics
3 Semester Credit Hours (3 Lecture Hours)
This course introduces the study of language, the main subfields of
Hispanic linguistics, and their application to other sciences.

SPAN 3320 Introduction to Spanish Literature
3 Semester Credit Hours (3 Lecture Hours)
A critical approach to the study of Spanish literature from the Middle
Ages through the present. Representative works of Spanish literature are
studied within their larger European context. It is highly recommended
that students take any of the following before taking this course:
SPAN 2313, 2315, 3302, 3303 have advanced proficiency or faculty
permit. Conducted in Spanish, unless otherwise stated. This course
may be used to satisfy the University Core Curriculum requirement in
Language, Philosophy, and Culture.

SPAN 3325 Introduction to Latin American Literature
3 Semester Credit Hours (3 Lecture Hours)
A critical approach to the study of Latin American literature from the Pre-
Columbian Period through the present. Selected readings in all literary
genres, major themes, writers, and literary movements will be studied
with a wide Latin American context. It is highly recommended that
students take any of the following before taking this course: SPAN 2313,
2315, 3302, 3303, have advanced proficiency or faculty permit. Conducted
in Spanish, unless otherwise stated. This course may be used to satisfy the
University Core Curriculum requirement in Language, Philosophy, and
Culture.

SPAN 4100 Service Learning
1 Semester Credit Hour
This is a one-credit course designed specifically for students who are
preparing themselves to serve the community using their Spanish
language skills. Students in this course will familiarize themselves with
the methodology of a particular field (heritage language teaching,
translation, interpreting, etc) to be able to interact and serve Spanish-
speaking individuals in the community. Available upon application.
Repeatable up to 3 hours.

SPAN 4301 Spanish Civil War and Literature
3 Semester Credit Hours (3 Lecture Hours)
Significance of the Civil War for Spanish, European, and world history.
Effect of war on literary and cultural life of the country and the response
of writers from Spain and Latin America. Conducted in Spanish.
SPAN 4302  Mexican Narrative
3 Semester Credit Hours (3 Lecture Hours)
Examination of representative novels and short stories reflecting the emergence of a post-revolutionary society in Mexico. Conducted in Spanish.

SPAN 4303  Spanish in the Southwest
3 Semester Credit Hours (3 Lecture Hours)
Cultural and linguistic dimensions of Spanish dialects of the Southwestern United States, with special attention to Texas Spanish and its sociolinguistic perspectives in the bilingual community at large.
Prerequisite: SPAN 2312.

SPAN 4304  Miguel de Cervantes' Don Quijote
3 Semester Credit Hours (3 Lecture Hours)
An advanced course designed to provide an introduction to Miguel de Cervantes' Don Quijote.

SPAN 4305  Latin American Novel
3 Semester Credit Hours (3 Lecture Hours)
This course explores major novels from Latin America from the 20th century to the present. It examines the different problems, discourses, voices, contexts, and geographies that define this genre in Latin America.

SPAN 4306  Modern Spanish Literature
3 Semester Credit Hours (3 Lecture Hours)
A course that focuses on modern Spanish literature. It is highly recommended that students take any of the following before taking this course: SPAN 2313, 2315, 3302, 3303, have advanced proficiency or faculty permit. Conducted in Spanish, unless otherwise stated.

SPAN 4313  Spanish Interpretation
3 Semester Credit Hours (3 Lecture Hours)
This course presents an introduction to methodologies, requirements, terminology, and practice of interpretation, with emphasis on simultaneous, consecutive, and sight interpretation.

SPAN 4320  Spanish in the Americas
3 Semester Credit Hours (3 Lecture Hours)
A study of the Spanish that was brought to the Americas, its development, propagation and contact with native-American languages, including the sociocultural factors that have contributed to the linguistic variation in contemporary Spanish-speaking societies.

SPAN 4322  Medical, Scientific and Technical Translation
3 Semester Credit Hours (3 Lecture Hours)
An advanced course in translation concentrating on medical, scientific and technical translation. The course is designed to extend student's knowledge of translation theory and consolidate their skills in specialized translation.
Prerequisite: (SPAN 3313).

SPAN 4390  Topics in Spanish
3 Semester Credit Hours (3 Lecture Hours)
Study of specialized topics in language or literature. These courses may also be designed to develop terminology and overall Spanish proficiency regarding specific professions: Business, Medical, Criminal Justice, Sociology, etc. May be repeated when topics vary.

SPAN 4396  Directed Individual Study
1-3 Semester Credit Hours (1-3 Lecture Hours)
See College description.

SPAN 4398  Applied Experience
3 Semester Credit Hours
A practical work experience related to the Spanish area and related careers. It is intended to provide an opportunity for a student to gain firsthand experience in an unfamiliar field. Consequently, Applied Experience credit may not be granted for a student's regular work assignment or for previous work experience. Registration is by application. The application must include a clearly written description of the duties and responsibilities involved in the Applied Experience project, and be signed by the student, the on-site supervisor, and the faculty supervisor. Completed applications must be received in the Dean's Office by the last class day of the semester preceding intended registration. This course is graded "credit" or "no credit." No more than three semester hours of Applied Experience credit may be counted toward the baccalaureate degree. Undergraduate Applied Experience course will include no less than one hundred hours and no more than 150 hours of work experience per semester.

SPAN 4421  Business, Commercial, and Legal Translation
4 Semester Credit Hours (4 Lecture Hours)
An advanced course in translation concentrating on business, commercial and legal texts. The course is designed to extend student's knowledge of translation theory and consolidate their skills in specialized translation.
Prerequisite: (SPAN 3313).

Special Education (SPED)

SPED 2397  Special Education Field Experience
3 Semester Credit Hours (3 Lecture Hours)
This course requires students to participate in schools and programs that serve individuals with disabilities on and off campus. Students will be actively involved in the learning situation.

SPED 3325  Strategic Instruction for Students with High-Incidence Disabilities
3 Semester Credit Hours (3 Lecture Hours)
This course provides an introduction and demonstration of specific skills necessary for teaching students with high-incidence disabilities.
Prerequisite: SPED 4310.

SPED 3330  Individualized Education Programs for Students with Disabilities
3 Semester Credit Hours (3 Lecture Hours)
This course emphasizes the design and implementation of individualized educational programs (IEP) for students with disabilities.
Prerequisite: SPED 4310.

SPED 3335  Applied Learning Theory
3 Semester Credit Hours (3 Lecture Hours)
This course is designed to develop and extend the student's knowledge of the principles of applied learning theory as it relates to students with extensive and pervasive support needs.
Prerequisite: SPED 4310.

SPED 3340  Individuals with Severe Disabilities
3 Semester Credit Hours (3 Lecture Hours)
This course is an introductory study of the adaptations, approaches, and supports necessary to meet the educational needs of students who have communication, intellectual, motor, sensory, medical impairments, and/or other extensive and pervasive support needs.
Prerequisite: SPED 4310.
SPED 4310 Students with Exceptionalities  
3 Semester Credit Hours (3 Lecture Hours)  
This course is designed to familiarize the student with the various conditions of individuals with disabilities.

SPED 4315 Motor Development for Students with Exceptional Needs  
3 Semester Credit Hours (3 Lecture Hours)  
A comparative overview of the physical development and motor-activity needs of students with disabilities.

SPED 4320 Community-based Instruction for the Students with Exceptionalities  
3 Semester Credit Hours (3 Lecture Hours)  
Strategies and procedures for teaching community-based instruction to individuals with disabilities, including independent living and socialization skills, are discussed.

SPED 4345 Behavioral Supports and Interventions for Students with Disabilities  
3 Semester Credit Hours (3 Lecture Hours)  
This introductory course will focus on positive behavioral supports and behavior intervention techniques. Course content includes information on: definitions, characteristics, prevalence, causes, assessment, prevention of behavioral difficulties, functional behavior assessment, applied behavior analysis, education service delivery, advocacy, and other current issues in the field.

SPED 4696 Directed Individual Study  
1-6 Semester Credit Hours  
Programs will be designed for individual cases through special permission of the Department Chair and Dean. May be repeated for credit when the topic varies.

**Sport Management (SMGT)**

**SMGT 2301 Practicum in Sport Organization I**  
3 Semester Credit Hours  
This course is designed to expose sport management majors to the profession by working with and assisting an organization in the sport or recreational industry. This will provide the student with opportunities to apply knowledge and theory related to sport management and help students to understand expectations and responsibilities and the reality of working in the sport industry. This will include, but is not limited to, performing managerial functions, such as planning, organizing, leading and evaluating, as well as, facility and event management, marketing, promotion, and market research. Students are expected to engage in the professional affiliation experience and complete accompanying academic requirements during the semester that they have made application. This experience will carry 3 hours of academic credit and will require a minimum of 100 contact hours at the fieldwork site.

**SMGT 2314 Introduction to Sport Management**  
3 Semester Credit Hours (3 Lecture Hours)  
The study of operating principles for programs in intercollegiate athletics, professional sports, recreational sports, and community sport associations. This course is recommended prior to courses in the Sport Management Specialization.

**SMGT 2315 Sport and Social Issues**  
3 Semester Credit Hours (3 Lecture Hours)  
Students examine the psychosocial and ethical factors involved in effective sport management. This course examines race, gender, social class, politics, religion, and other factors that affect sport in society.

**SMGT 3301 Practicum in Sport Organization II**  
3 Semester Credit Hours  
This course is designed to give sport management majors advanced practice and participation in working in the sport and recreational industry. This will include, but is not limited to, performing managerial functions, such as planning, organizing, leading and evaluating, as well as, facility and event management, marketing, promotion, and market research. Students are expected to engage in the professional affiliation experience and complete accompanying academic requirements during the semester that they have made application. This is an experiential course that allows the mid-level sport management major to build on the competencies developed SMGT 2301 through experience in hands-on supervisory and leadership positions and focused reflection through academic work. Students may have the opportunities available in the course to develop more advanced knowledge, skills and values held by professionals in the sport management industry. The practical work for this course is predominately completed on campus.  
**Prerequisite:** (SMGT 2301).

**SMGT 3320 Sport Communication**  
3 Semester Credit Hours (3 Lecture Hours)  
The purpose of this course is two-fold: (a) to explore sport communication theories and how they relate to current issues and topics within the sport communication realm, particularly as they address mass media communication and the larger sport environment; and (b) to examine more practical concepts, activities, and behaviors related to sport communication and apply them to professional and collegiate sports.

**SMGT 3325 Governance and Ethics in Sport**  
3 Semester Credit Hours (3 Lecture Hours)  
This course is designed to provide knowledge and awareness of the structures, rules and laws governing various sport organizations as well the participants.

**SMGT 3330 Promotion of Sport**  
3 Semester Credit Hours (3 Lecture Hours)  
This course is designed to provide the sport manager with an understanding of the main marketing issues within the sport industry. Special emphases are placed on the application and assessment of marketing sport within the private and public sectors.

**SMGT 3335 Legal Issues in Sport**  
3 Semester Credit Hours (3 Lecture Hours)  
Provides general knowledge of the judicial system and current legal issues in sport including risk management, eligibility, discrimination, drug testing, and Title IX.

**SMGT 3366 Managing Sport and Leisure Services**  
3 Semester Credit Hours (3 Lecture Hours)  
Introduction of issues related to managing sport and leisure services in a variety of settings such as universities, municipal recreation, corporate wellness centers, in government or private sectors.

**SMGT 3367 Sport Tourism**  
3 Semester Credit Hours (3 Lecture Hours)  
The course is designed to provide an introduction to sport events from a tourism strategic planning/marketing perspective. Throughout this course, students will be exposed to sport event production strategies for tourism and their impacts on event stakeholders. Students will examine specific sport tourism events and analyze their strategies for destination branding; sport tourism facility and event financing; host-guest interactions; environmental, political, economic, and socio-cultural impacts.
SMGT 4308  Sport Facilities and Event Management
3 Semester Credit Hours (3 Lecture Hours)
This course focuses on the major components of both facility and event management – planning, financing, marketing, implementation and evaluation. This course will provide a working knowledge of how to manage sport facilities and how to plan, manage, implement and evaluate sport events.  
Prerequisite: SMGT 2314.

SMGT 4309  Finance Management in Sport
3 Semester Credit Hours (3 Lecture Hours)
This course is designed to provide knowledge of financial planning and administration. This includes, but not limited to, basic budget terminology, sources of financing for operating and capital expenditures, expenditure policies, auditing and the grant process.  
Prerequisite: SMGT 2314.

SMGT 4351  Sport Entrepreneurship
3 Semester Credit Hours (3 Lecture Hours)
This course will provide an analysis of entrepreneurship in sport and the sport industry. Emphasis will be placed on the structure and framework of entrepreneurial endeavors and the theory and practice of entrepreneurs in sport. Topics covered will include: idea generation, business strategy, entrepreneurial activities, establishing business operations, venture capitalism, business plan writing, financing and marketing a start-up and the legal challenges of growing a business.  
Prerequisite: (SMGT 2314).

SMGT 4365  Managing Personnel in Sport Organizations
3 Semester Credit Hours (3 Lecture Hours)
This course is designed to expand the student’s understanding of various management techniques and their application to sport organizations and administration. Topics include organizational behavior, human resources management and labor policies.  
Prerequisite: SMGT 2314.

SMGT 4693  Professional Field Experiences I
6 Semester Credit Hours
The professional field experience (minimum of 150 hours) is designed to provide the student the opportunity to apply knowledge and theory related to kinesiology, health, physical fitness and sport. The underlying objective behind the fieldwork and internship assignments is for students to gain on-the-job opportunities to integrate their classroom knowledge with professional responsibilities. Students must enroll in both SMGT 4693 - Professional Field Experience I and complete requirements of this course.

SMGT 4694  Professional Field Experiences II
6 Semester Credit Hours
(minimum 150 hours) is designed to provide the student with additional opportunities to apply knowledge and theory related to kinesiology, health, physical fitness and sport that was gained in SMGT 4393 Professional Field Experience I. Students must be enrolled in SMGT 4693 Professional Field Experience I simultaneously with SMGT 4694 Professional Field Experience II.

Study Abroad Program (SAPR)

SAPR 4096  Study Abroad Program
18 Semester Credit Hours (18 Lecture Hours)
NCD.

Teacher Education/Student Teaching (EDUC)

EDUC 2307  Schooling in a Democracy
3 Semester Credit Hours
A course to enable citizens, parents, and prospective professional educators to synthesize their general education experiences/courses with current issues and practices related to teaching and learning in the United States. Career opportunities and personal commitments to the teaching profession will be explored. The systematic process of admission to the teacher education program will be initiated. Field observations in communities and schools will be required.  
TCCNS: EDUC 1301

EDUC 3311  School and Society
3 Semester Credit Hours (3 Lecture Hours)
The characteristics, organization, and management of the American School System including: The history of the development of American schools, legal and ethical issues, teaching as a profession, influence of cultural background on instruction of students, characteristics and needs of special populations, and adapting curriculum and instruction for students from special populations. A student interview with Department of Teacher Education faculty will be required. Field experiences required.

EDUC 4311  Classroom Management
3 Semester Credit Hours (3 Lecture Hours)
A study of classroom organization and management as related to basic principles of human development and learning. Preventative discipline techniques utilizing both group and individual processes are emphasized. This course is to be taken concurrently with Planning, Teaching, Assessment, and Technology.

EDUC 4312  Classroom Management: Grades 7-12
3 Semester Credit Hours (3 Lecture Hours)
A study of classroom organization and management as related to basic principles of human development and learning. Preventative discipline techniques utilizing both group and individual processes are emphasized. This course is to be taken concurrently with Planning, Teaching, Assessment and Technology for Grades 8-12 Teachers.

EDUC 4313  Classroom Management: Grades 4-8
3 Semester Credit Hours (3 Lecture Hours)
A study of classroom organization and management as related to basic principles of human development and learning. Preventative discipline techniques utilizing both group and individual processes are emphasized. This course is to be taken concurrently with Planning, Teaching, Assessment and Technology for Grades 4-8 Teachers.

EDUC 4314  Classroom Management: Grades EC-6
3 Semester Credit Hours (3 Lecture Hours)
A study of classroom organization and management as related to basic principles of human development and learning. Preventative discipline techniques utilizing both group and individual processes are emphasized. This course is to be taken concurrently with Planning, Teaching, Assessment and Technology for Grades EC-6 Teachers.

EDUC 4321  Instructional Design for Special Populations
3 Semester Credit Hours (3 Lecture Hours)
A study of the characteristics and needs of special student populations in a culturally diverse society. Special populations emphasized will include special education, gifted and talented, at-risk, and bilingual. Instructional strategies, differentiating curriculum, and diversifying assessment will be examined in relation to special populations. This course is to be taken concurrently with clinical teaching.
EDUC 4322  Instructional Design for Special Populations: Grades 7-12
3 Semester Credit Hours (3 Lecture Hours)
A study of the characteristics and needs of special student populations in a culturally diverse society. Special populations emphasized will include special education, gifted and talented, at-risk, and bilingual. Instructional strategies, differentiating curriculum, and diversifying assessment will be examined in relation to special populations. This course is to be taken concurrently with student teaching.

EDUC 4323  Instructional Design for Special Populations: Grades 4-8
3 Semester Credit Hours (3 Lecture Hours)
A study of the characteristics and needs of special student populations in a culturally diverse society. Special populations emphasized will include special education, gifted and talented, at-risk, and bilingual. Instructional strategies, differentiating curriculum, and diversifying assessment will be examined in relation to special populations. This course is to be taken concurrently with student teaching.

EDUC 4324  Instructional Design for Special Populations: Grades EC-6
3 Semester Credit Hours (3 Lecture Hours)
A study of the characteristics and needs of special student populations in a culturally diverse society. Special populations emphasized will include special education, gifted and talented, at-risk, and bilingual. Instructional strategies, differentiating curriculum, and diversifying assessment will be examined in relation to special populations. This course is to be taken concurrently with student teaching.

EDUC 4390  Special Topics
1-3 Semester Credit Hours (1 Lecture Hour)
Topics in Curriculum and Pedagogy will be explored at the request of participants or faculty with the approval of the Department Chair, Dean, and Curriculum Coordinating Committee (CCC).

EDUC 4392  Student Teaching: EC-Grade 6
3 Semester Credit Hours (3 Lecture Hours)
Laboratory experiences and directed teaching in grades EC-Grade 6.

EDUC 4393  Student Teaching: Grades 7-12
3 Semester Credit Hours (3 Lecture Hours)
Laboratory experiences and directed teaching in grades 7-12.

EDUC 4394  Student Teaching: EC-Grade 6
3 Semester Credit Hours (3 Lecture Hours)
Laboratory experiences and directed teaching in grades EC-Grade 6.

EDUC 4395  Student Teaching: Grades 7-12
3 Semester Credit Hours (3 Lecture Hours)
Laboratory experiences and directed teaching in grades 7-12.

Prerequisite: EDUC 4693.
*May be taken concurrently.

EDUC 4605  Planning, Teaching, Assessment and Technology
6 Semester Credit Hours (6 Lecture Hours)
A study of planning, teaching, assessment and technology as they relate to teaching. Lesson planning, teaching, reflection, observation, and collaboration with site professors and cooperating teachers in the field are integral parts of the course.

EDUC 4606  Planning, Teaching, Assessment and Technology for Grades 7-12 Teachers
6 Semester Credit Hours
A study of planning, teaching, assessment and technology as they relate to teaching in grades 7-12. Planning will include general curriculum issues, the lesson cycle, multiple intelligences, learning styles and resources. Teaching will include methods and strategies for delivery of instruction and classroom environment. Assessment will focus on traditional and authentic alternative assessment. Technology will cover media and techniques from transparencies to computer technology, and will incorporate the skills and knowledge for using the microcomputer to plan and develop presentations, instructional materials, and learning activities in the public school curriculum. Observation and collaboration with professional teachers in the field, as well as journal writing, will be integral parts of the course. Two full days per week are required at a partner school site. A student may enroll in this course for a maximum of 2 times only; and it must be completed during the Fall or Spring semesters in order to successfully complete all requirements.

EDUC 4607  Planning, Teaching, Assessment and Technology for Grades 4-8 Teachers
6 Semester Credit Hours
A study of planning, teaching, assessment and technology as they relate to teaching in grades 4-8. Planning will include general curriculum issues, the lesson cycle, multiple intelligences, learning styles and resources. Teaching will include methods and strategies for delivery of instruction and classroom environment. Assessment will focus on traditional and authentic alternative assessment. Technology will cover media and techniques from transparencies to computer technology, and will incorporate the skills and knowledge for using the microcomputer to plan and develop presentations, instructional materials, and learning activities in the public school curriculum. Observation and collaboration with professional teachers in the field, as well as journal writing, will be integral parts of the course. Two full days per week are required at a partner school site. A student may enroll in this course for a maximum of 2 times only; and it must be completed during the Fall or Spring semesters in order to successfully complete all requirements.

EDUC 4608  Planning, Teaching, Assessment and Technology for Grades EC-6 Teachers
6 Semester Credit Hours
A study of planning, teaching, assessment and technology as they relate to teaching in grades EC-6. Planning will include general curriculum issues, the lesson cycle, multiple intelligences, learning styles and resources. Teaching will include methods and strategies for delivery of instruction and classroom environment. Assessment will focus on traditional and authentic alternative assessment. Technology will cover media and techniques from transparencies to computer technology, and will incorporate the skills and knowledge for using the microcomputer to plan and develop presentations, instructional materials, and learning activities in the public school curriculum. Observation and collaboration with professional teachers in the field, as well as journal writing, will be integral parts of the course. Two full days per week are required at a partner school site. A student may enroll in this course for a maximum of 2 times only; and it must be completed during the Fall or Spring semesters in order to successfully complete all requirements.

EDUC 4693  Student Teaching: Grades 7-12
6 Semester Credit Hours (6 Lecture Hours)
Laboratory experiences and directed teaching in grades 7-12 in the student’s teaching field(s).
EDUC 4694 Student Teaching: EC-Grade 6
6 Semester Credit Hours (6 Lecture Hours)
Laboratory experiences and directed teaching in grades EC-Grade 6.
Prerequisite: EDUC 4993.
*May be taken concurrently.

EDUC 4696 Directed Individual Study
1-6 Semester Credit Hours (1 Lecture Hour)
Programs will be designed for individual cases through special
permission of the Department Chair and Dean. May be repeated for credit
when the topic varies.

EDUC 4699 Teaching Internship
6 Semester Credit Hours
An internship designed for inservice teachers seeking certification under
the post baccalaureate program. Grade assigned will be "credit" (CR) or
"no credit" (NC).

EDUC 4992 Student Teaching: Grades 4-8
9 Semester Credit Hours
Laboratory experiences and directed teaching in grades 4-8 in the
student's teaching field(s).

EDUC 4993 Student Teaching: Grades 7-12
9 Semester Credit Hours
Laboratory experiences and directed teaching in grades 7-12.

EDUC 4994 Student Teaching: EC-grade 6
9 Semester Credit Hours (9 Lecture Hours)
Laboratory experiences and directed teaching in an EC-Grade 6
classroom.

EDUC 4995 Clinical Teaching
9 Semester Credit Hours
Laboratory experiences and directed teaching in student's certification
area(s).

Theatre (THEA)

THEA 1120 Theatre Practicum 1
1 Semester Credit Hour (1 Lab Hour)
Practicum in theater open to all students with emphasis on technique
and procedures with experience gained in play productions. Linked with
THEA 1342 - Costume Technology.
Co-requisite: SMTE 0098, THEA 1371.

THEA 1121 Theatre Practicum 2
1 Semester Credit Hour (1 Lab Hour)
Practicum in theater open to all students with emphasis on technique
and procedures with experience gained in play productions. Linked with
THEA 1330 - Theatre Stagecraft.
Co-requisite: SMTE 0098, THEA 1330.

THEA 1310 Theatre Appreciation
3 Semester Credit Hours (3 Lecture Hours)
Survey of theatre including its history, dramatic works, stage techniques,
production procedures, and relation to other art forms. Participation in
productions may be required.
TCCNS: DRAM 1310

THEA 1330 Theatre Stagecraft
3 Semester Credit Hours (3 Lab Hours)
Study and application of the methods and components of theatrical
production which may include one or more of the following: theater
facilities, scenery construction and painting, properties, lighting, and
sound.
Co-requisite: SMTE 0098, THEA 1121.

THEA 1341 Stage Makeup
3 Semester Credit Hours (3 Lecture Hours)
A practical exploration of basic stage makeup techniques. The student
will also investigate the relationships of character to makeup and begin
to understand the work needed to design makeup for a production.
Co-requisite: SMTE 0098.
TCCNS: DRAM 1341

THEA 1351 Acting I
3 Semester Credit Hours (3 Lecture Hours)
The development of basic skills and techniques of acting, including
sensory awareness, ensemble performing, character analysis, and script
analysis. Emphasis on the mechanics of voice, body, emotion, and
analysis as tools for the actor.
TCCNS: DRAM 1351

THEA 1352 Acting II
3 Semester Credit Hours (3 Lecture Hours)
A continuation of Acting I with emphasis on characterization and working
with extended realism. The student will study the theories of Constantin
Stanislavski.
Prerequisite: THEA 1351.
TCCNS: DRAM 1352

THEA 1371 Costume Technology
3 Semester Credit Hours (3 Lecture Hours)
A BEGINNING OVERVIEW OF THE VOCABULARY AND BASIC SEWING
METHODS OF THEATRICAL COSTUMING.
Co-requisite: SMTE 0098, THEA 1120.
TCCNS: DRAM 1342

THEA 2120 Theatre Practicum 3
1 Semester Credit Hour (1 Lab Hour)
Practicum in theater open to all students with emphasis on technique
and procedures with experience gained in play productions.
Co-requisite: SMTE 0098.

THEA 2121 Theatre Practicum 4
1 Semester Credit Hour (1 Lab Hour)
Practicum in theater open to all students with emphasis on technique
and procedures with experience gained in play productions.
Co-requisite: SMTE 0098.

THEA 2336 Voice for the Actor
3 Semester Credit Hours (3 Lecture Hours)
Principles, practices, and exercises in awareness, relaxation, freedom,
flexibility, and expressiveness in the actor’s vocal instrument.

THEA 2355 Script Analysis
3 Semester Credit Hours (3 Lecture Hours)
Students will learn the principles, techniques, and processes of dramatic
structure found in written scripts as seen through the perception of the
stage director, actor, and designer. A written intensive analysis of each
script studied during the semester will be required. Focus will be on the
theories of Aristotle and Eugene Scribe’s “Well Made Play Formula”.
Prerequisite: THEA 1330 and 1371.

THEA 3120 Theatre Practicum 5
1 Semester Credit Hour (1 Lab Hour)
Practicum in theater open to all students with emphasis on technique
and procedures with experience gained in play productions.
Co-requisite: SMTE 0098.
THEA 3121 Theatre Practicum 6  
1 Semester Credit Hour (1 Lab Hour)  
Practicum in theater open to all students with emphasis on technique and procedures with experience gained in play productions.  
Co-requisite: SMTE 0098.

THEA 3165 The Design and Technical Portfolio.  
1 Semester Credit Hour (1 Lecture Hour)  
A basic course in the development of the student portfolio for the areas of design and technology with emphasis in the theatrical job market or graduate school.

THEA 3300 Stage Movement  
3 Semester Credit Hours (3 Lecture Hours)  
Students will gain insights into the physical skills, practices, exercises, and staging techniques developed and used by actors and directors in theatrical performance, with an emphasis on relaxation, freedom, expressiveness, spatial relationships, and composition.  
Prerequisite: THEA 1351 and 1352.

THEA 3302 Creative Dramatics  
3 Semester Credit Hours (3 Lecture Hours)  
Theories and practices incorporating the techniques of creative drama in the elementary, middle, and high school classroom. Especially recommended for elementary education, recreation, and the social sciences.

THEA 3303 Theatre in the Public Schools  
3 Semester Credit Hours (3 Lecture Hours)  
Theories and practices of incorporating theatre activities in the public schools. Especially recommended to students of elementary and secondary education, recreation and the social sciences.

THEA 3310 Contemporary Theatre  
3 Semester Credit Hours (3 Lecture Hours)  
An overview of the nature and function of theatre in our contemporary society with discussion of representative plays and playwrights, theatrical styles, and avant-garde theatre. Students will explore multicultural, political, and experimental themes, attend theatrical productions, and meet with actors, designers, and directors to discuss contemporary practices.

THEA 3312 Stage Combat I  
3 Semester Credit Hours (1 Lecture Hour, 2 Lab Hours)  
Stage combat is a unique form of acting and movement; integral to the training of the professional actor and an extremely marketable skill. This course is an introduction to the stage fight discipline. It is important as actors that we develop a keen sense of duality in performance; a seemingly impromptu, theatrically engaging moment of violence built upon a foundation of safe, consistent physical dialogue. In this way, we can enhance the physical lives of all the characters we play; especially those engaged in acts of violence. This course explores many fundamental acting techniques in a new light including responsibility to a partner, listening and responding, projection, articulation, spatial awareness and above all intent. May be repeated for credit.

THEA 3335 UIL Debate and Speech  
3 Semester Credit Hours (3 Lecture Hours)  
This course will prepare students to coach High School speech events as extra-curricular and co-curricular activities. The class will focus primarily on Texas University Interscholastic Leagues (UIL competitions) but will also cover events sponsored by the Texas Forensics Association (TFA) and the National Forensics League (NFL). Areas covered will include oral interpretation, extemporaneous speaking, and debate.

THEA 3340 Audition Preparation  
3 Semester Credit Hours (3 Lecture Hours)  
Provides the student with the information and skills needed for auditioning in both professional and educational theatre.  
Prerequisite: THEA 1351 and 1352.

THEA 3350 Production Management  
3 Semester Credit Hours (3 Lecture Hours)  
This course is a survey of stage management and theatre administration. Topics to be studied include stage management, production management, professional unions, publicity/marketing, box office and house management.  
Prerequisite: THEA 1371, 1330 and 2355.

THEA 3370 History of the Theatre I  
3 Semester Credit Hours (3 Lecture Hours)  
Historical investigation of the nature and function of theatre from primitive rituals through the Renaissance periods with discussions of representative plays/playwrights, theatrical styles and stage design.  
Prerequisite: THEA 2355.

THEA 3371 History of the Theatre II  
3 Semester Credit Hours (3 Lecture Hours)  
Historical investigation of theatre from the Restoration era to the present. Focus on the nature and function as well as the critical analysis of theatre and design, various movements, and influential people.  
Prerequisite: THEA 2355.

THEA 3373 Principles of Design  
3 Semester Credit Hours (3 Lecture Hours)  
Builds upon the student’s practical lab experience and understanding of theatrical design begun in costume construction and theatre stagecraft. Students will explore the creative process of theatre production as it pertains to lighting, set, sound, props, and costume design projects.  
Prerequisite: THEA 1371 and 1330.

THEA 3375 Acting III: Period Styles  
3 Semester Credit Hours (3 Lecture Hours)  
Specific training for actors in period plays. Emphasis on training the actor for the Classical, Renaissance, Shakespearean, and Modern Periods.  
Prerequisite: THEA 1351 and 1352.

THEA 3377 Acting Shakespeare  
3 Semester Credit Hours (3 Lecture Hours)  
Advance study in the analysis and performance of heightened text as written by William Shakespeare. Coursework includes in-depth application of Elizabethan theatre practices and how these practices may be adapted for 21st century actors, directors, and audiences.

THEA 3380 History of Theatrical Styles  
3 Semester Credit Hours (3 Lecture Hours)  
A survey and research-oriented course which studies the major impact of the visual, artistic, historical, and social period movements. The course will focus on the approach that the actor, designer, director, and playwright take in developing the understanding of the environment of a play’s location and time period.

THEA 3381 Drawing and Rendering for the Stage  
3 Semester Credit Hours (3 Lecture Hours)  
Examination of the uses of the various materials used and the development of the techniques employed in the creation and presentation of theatrical renderings and models.  
Co-requisite: SMTE 0098.
THEA 3382 Drafting and Computer-Aided Design for the Stage
3 Semester Credit Hours (3 Lecture Hours)
Practical examination and practice in theatrical drafting conventions with an emphasis on the development of hand drafting techniques and CAD (computer-aided design).
Prerequisite: THEA 1330.

THEA 3385 Musical Theatre
3 Semester Credit Hours (3 Lecture Hours)
The focus of the course is on musical theatre history, exploring trends in the genre, audition techniques, characterization, staging and choreography.

THEA 3386 Playwriting
3 Semester Credit Hours (3 Lecture Hours)
is a fundamentals course in writing for the stage. The course will cover playwriting for monologues, 10 Minute Plays, and One Act Plays. Completion of Script Analysis is strongly suggested but not required. May be repeated for credit.

THEA 3387 Dramaturgy
3 Semester Credit Hours (3 Lecture Hours)
This class will provide a brief overview of many of the skills and tools that dramaturgs possess. We will study the history of the field and learn about currently working dramaturgs, while also covering the foundational skills of historical research, structural analysis, and theoretical application. Completion of Script Analysis is strongly suggested but not required. May be repeated for credit.

THEA 4100 Senior Seminar
1 Semester Credit Hour (1 Lecture Hour)
A seminar class for the graduating senior. The student will be given the opportunity to address individual weaknesses and strengths in preparation for graduate school or entering the job market.

THEA 4200 Senior Capstone
2 Semester Credit Hours (2 Lab Hours)
The course is designed to provide the graduating senior an opportunity to complete a final project in the acting/directing or design/tech focus areas. The student's project will be juried by the entire faculty and include a research and production component.

THEA 4312 Stage Combat II
3 Semester Credit Hours (1 Lecture Hour, 2 Lab Hours)
Stage combat is a continuation of the skills of acting and movement; integral to the training of the professional actor and an extremely marketable skill. This course is an advanced weaponry course in the stage fight discipline. It is important as actors that we develop a keen sense of duality in performance; a seemingly impromptu, theatrically engaging moment of violence built upon a foundation of safe, consistent physical dialogue. In this way, we can enhance the physical lives of all the characters we play; especially those engaged in acts of violence. May be repeated for credit.
Prerequisite: THEA 3312.

THEA 4313 Theatre Technologies
3 Semester Credit Hours (3 Lecture Hours)
Designed to provide a forum for intensive study of a particular aspect of modern theatrical technologies. Various topics may be selected based on current industry trends, student needs and available resources.
Prerequisite: THEA 1330, 3381 and 3382.

THEA 4314 Collaborative Approaches to Design
3 Semester Credit Hours (3 Lecture Hours)
An advanced design course where the student will examine the process of design from the standpoint of the relationship created within the design team. Through class projects, the student will participate in a design process which fosters communication of ideas, written analysis and collaboration in pursuit of a unified design in all aspects of production.
Prerequisite: THEA 3373.
Co-requisite: SMTE 0098.

THEA 4323 Oral Interpretation of Children's Literature
3 Semester Credit Hours (3 Lecture Hours)
A study primarily through the medium of performance, of various types and forms of literature for children. Strongly oriented toward teaching literature in the elementary school classroom. (Credit may not be given for both this course and COMM 4323 or ENGL 4370.)

THEA 4333 Technical Direction
3 Semester Credit Hours (3 Lecture Hours)
An advanced technical class geared for the student who wishes to receive training and employment as a technical director.

THEA 4360 Stage Direction I
3 Semester Credit Hours (3 Lecture Hours)
The study and practical application of directing principals for the beginning director. Elements of script analysis, blocking, movement, character development, tempo, and design will be investigated as part of the directing process. The student will direct a ten-minute play for public performance.
Prerequisite: THEA 1352 and 2355.

THEA 4361 Stage Direction II
3 Semester Credit Hours (3 Lecture Hours)
An advanced study in directing with actual experience in organization, interpretation, casting, and producing the one-act play. The student will direct a one-act play for public performance.
Prerequisite: THEA 4360.

THEA 4364 Costume Crafts
3 Semester Credit Hours (4 Lecture Hours)
Students will learn to identify, comprehend, and demonstrate practical knowledge of tools, machines, and techniques practiced in a costume crafts studio. They will learn to recognize the different materials, chemicals, and tools used in costume crafts. They will know what the above items are best suited for and what type of project they should be applied to. The student will gain basic crafting skills. These skills are gained by extensive hands-on experience by working on projects in the costume studio. They will gain the ability to purchase, layout, cut, and construct any specialty project in the costuming area.
Prerequisite: THEA 1371 and 2370.

THEA 4365 Costume Design
3 Semester Credit Hours (3 Lecture Hours)
A study of the theory and practice of costume design utilizing the human form as a design element for the stage. Encompasses theatre form, style, and drafting and drawing techniques. Students are required to work on University Theatre productions as part of this course.

THEA 4366 Scene Painting
3 Semester Credit Hours
The examination and practice of the various materials and techniques of professional scenic painting, including material mixing, faux techniques, and textural applications.
THEA 4370 Set Design  
3 Semester Credit Hours (3 Lecture Hours)  
A study of the theory and practice of set design. Students will learn the fundamentals of theatre design and will apply this knowledge to projects. Projects will encompass theatre form, style, and concept utilization. Students are required to work on University Theatre productions as a part of this course.  
Co-requisite: SMTE 0098.

THEA 4371 Acting for the Camera  
3 Semester Credit Hours (3 Lecture Hours)  
Emphasizes the practice of various acting styles for television, video, and film. The student will receive practical experience in commercial styles, public service announcements, television and video style acting, and film scene study. (Credit may not be given for both this course and COMM 4371.)

THEA 4372 Theatre Practicum  
3 Semester Credit Hours (3 Lecture Hours)  
Advanced practice and participation in set construction, lighting implementation, and stagecraft. Students will build upon skills in the areas of theatre production and design for production in the University Theatre. Class meets twice weekly with additional crew/lab work requirements as well. Students are required to work on University Theatre productions as a part of this course. May be repeated twice for credit.

THEA 4373 Improvisation Skills Level I  
3 Semester Credit Hours (3 Lecture Hours)  
is a fundamentals of improvisation course that teaches the guidelines for successful improvisation skills. The course emphasizes the basics of successful improvisation as it pertains to Theatre, Communication, and the student who wants to improve their communication skills. May be repeated for credit.

THEA 4374 Improvisation Skills Level II  
3 Semester Credit Hours (3 Lecture Hours)  
is a continuation of Improvisation course level I that instructs the student in the guidelines for advanced improvisation skills. The course teaches the skills necessary for advanced individual and group improvisation. Emphasis is on ensemble performance. May be repeated for credit.  
Prerequisite: THEA 4373.

THEA 4375 Lighting Design  
3 Semester Credit Hours (3 Lecture Hours)  
A study of the theory and practice of lighting design. Practical experiences in University Theatre are included to provide exposure to the total design and implementation of lighting design. Students will become familiar with the techniques and aesthetics of lighting theatrical performances and will apply skills to create designs for projects and actual plays. Students are required to work on University Theatre productions as a part of this course.

THEA 4380 Advanced Stage Makeup  
3 Semester Credit Hours (3 Lecture Hours)  
A study of the theory and practice of designing makeup for the stage. Students will learn about aesthetics, application, and techniques of stage makeup. Students will do makeup designs as projects in the class. Students are required to work on University Theatre productions as part of this course.

THEA 4384 Theatre Production  
1-3 Semester Credit Hours (1-3 Lecture Hours)  
An applied production experience in which students perform in a play, work back stage or on a stage crew, or learn to design a play or musical from conception to final production. Students enrolling in the course but not cast in the shows will work backstage (technical production) or in another production capacity. Enrollment is by application only, and must be approved by the instructor in advance of registration. As part of the application process the number of credit hours will be determined by the instructor. May be repeated for credit.

THEA 4390 Topics in Theatre  
1-3 Semester Credit Hours (1-3 Lecture Hours)  
Study of specialized topics and themes in the areas of acting, directing, and theatre history. May be repeated when topics vary.

THEA 4396 Directed Individual Study  
1-3 Semester Credit Hours (1-3 Lecture Hours)  
See College description. By application.

THEA 4398 Applied Experience  
3 Semester Credit Hours  
See College description. By application.

University Studies (UNIV)  

UNIV 1100 Career and Academic Planning  
1 Semester Credit Hour (2 Lecture Hours)  
assists students in confirming career and educational choices based on strengths-based career assessments, research on career interests, and clarification of majors and degree options. Through in-class activities, discussions, and presentations, students will explore the variety of educational opportunities available to them at the university to support their career and academic interests. In addition, students will be introduced to decision-making and goal-setting strategies to identify and set achievable academic and career goals.

UNIV 1101 University Seminar I  
1 Semester Credit Hour (2 Lecture Hours)  
UNIV 1101 is designed to support students in their transition as new TAMU-CC Islanders. Students are encouraged to reflect on the value of a university education and challenged to adopt strategies for lifelong and integrative learning in an active learning environment with a contextualized curriculum. Required of full-time first-year students and should be taken within the first full year of enrollment at TAMU-CC.

UNIV 1102 University Seminar II  
1 Semester Credit Hour (2 Lecture Hours)  
UNIV 1102 continues to challenge students to adopt lifelong and integrative learning strategies in an active learning environment. Students are encouraged to reflect upon and refine personal and professional goals through the lens of their intended future. Required of full-time first-year students and should be taken within the first full year of enrollment at TAMU-CC.

UNIV 2490 Current Issues in University Studies  
1-4 Semester Credit Hours (1 Lecture Hour, 1 Lab Hour)  
Focused exploration of contemporary interdisciplinary issues for lower-division students. May be repeated when topics vary.
UNIV 3340  Academic and Field Research
3 Semester Credit Hours (3 Lecture Hours)
This course is an examination of the assumptions and questions underlying research methods across disciplines, with special emphasis on how methodologies from different fields (such as science and humanities) can complement each other. The course will involve experts from across the university who will address issues such as 1) the distinct qualities of quantitative and qualitative research, 2) current uses of surveys, interviews, and market research, 3) the construction of new knowledge in various disciplines, from problem to publication, 4) the critical use and evaluation of electronic and print resources, archival materials, government documents, and scholarly list serves.

UNIV 3490  Topics in University Studies
1-4 Semester Credit Hours (1 Lecture Hour, 1 Lab Hour)
A course that deals with significant contemporary issues that transcend disciplinary boundaries. May be repeated when topics vary.

UNIV 4350  University Studies Capstone
3 Semester Credit Hours (3 Lecture Hours)
This course emphasizes writing, research, professionalization, and workforce preparation. Students will be responsible for developing a reflective writing portfolio that showcases their academic specialization and preparation within the University Studies program. The course will also cover the practical skills of obtaining employment, including writing resumes, effectively interviewing, and effectively searching for available jobs.

UNIV 4490  Seminar in University Studies
1-4 Semester Credit Hours (1 Lecture Hour, 1 Lab Hour)
Interdisciplinary study of specialized topics and themes transcending the boundaries of a single discipline. May be repeated when topics vary.

Women and Gender Studies (WGST)

WGST 3301  Introduction to Women and Gender Studies
3 Semester Credit Hours (3 Lecture Hours)
An introduction to the study of women and gender across disciplines and cultures. Designed to engage students in some of the most important methodological and theoretical debates regarding women's experiences and the construction of knowledge about women historically and today. Literary, anthropological, sociological, historical, scientific, and managerial perspectives may be included.

WGST 4380  Senior Seminar in Women and Gender Studies
3 Semester Credit Hours (3 Lecture Hours)
This seminar explores the relationship between theory and application in the field of women and gender studies. This includes the study of feminist theories and methodologies with special attention to the application of these to current debates and social issues. In addition, students must complete a research paper or applied experience project that is relevant for their major field of study.

Appendices

A: Glossary

Admission
The process of being brought into the University. A student is not considered for admission until all specified forms and fees have been received.

Census Date
The day, each term, on which official calculations are determined. For semesters it is the 12th class day, and for summer terms the 4th class day. Registration and Adds may not occur after this date.

Class Days
The days, Monday through Friday, during which the University is in session; not the days on which an individual class meets.

Degree Student
One admitted to a degree program.

Drop
The process of terminating enrollment in one or more classes while remaining enrolled for at least one class for the same semester. A fee is charged for dropping a class after the term has started.

Full Time
A degree-seeking undergraduate attempting 12 or more semester hours in a semester. A degree-seeking graduate student attempting 9 semester hours in a semester.

GPA
Grade Point Average. Please check elsewhere in this catalog for method of calculation.

Graduation
The ceremonial completion of a degree program. The degree is not awarded until all academic requirements are certified as completed. The student initiates application for graduation at point of registration for last term of study. Application must be processed for each attempt.

Graduate Student
A student who holds a baccalaureate degree and is enrolled in a graduate program of study.

Hold
A note placed in a student record which restricts a particular activity. Only the office which places a hold can remove it.

Late Registration
A period beginning with the first day of classes and ending on or before the census date during which registration may occur. Special permission may be required. A late registration fee is assessed.

Matriculation
The initial registration as a degree-seeking student toward a particular degree. A student matriculates once for each degree.

Non-Degree Student
One taking classes without the expectation of receiving a degree. A non-degree student is neither part time nor full time, and is not classified as freshman, sophomore, junior, or senior.

Pre/Co Requisite
A requirement that must be completed before/at the same time a course may be attempted.
Some college-level courses that are not equivalent to courses at the University may transfer for credit. The Office of Recruitment and Admissions can provide information about the transferability of particular courses.

</table>

Registration
Reserving space in a course (a process called tallying) followed by payment of all tuition and fees: it is a two-part process. Registration is not completed until payment has occurred.

Restricted Course
One for which admission is limited to a particular classification of student. A student who has been enrolled in error can be removed administratively.

Transcript
A record of a student's academic history at the University. It is prepared by the Office of the University Registrar. Please check with that office for preparation schedule and fees.

Withdrawal
The process of dropping all classes for a given term. A check-out process is involved, and the student is not associated with the University until the student seeks reinstatement for a subsequent term.

B: Lower-Division Transfer Courses: Common Courses

Texas Common Course Numbering System (TCCNS)
The Texas Common Course Numbering System (TCCNS) (http://www.tccns.org/) is a cooperative effort among Texas community colleges and universities to facilitate transfer of freshman- and sophomore-level general academic courses.

The TCCNS provides a shared, uniform set of course designations for students and their advisors to use in determining both course equivalency and degree applicability of transfer credit on a statewide basis. When students transfer between two participating TCCNS institutions, a course taken at the sending institution transfers as the course carrying, or cross-referenced with, the same TCCNS designation at the receiving institution.

In the common course numbering system, each course is identified by a four-letter "rubric" (i.e., prefix or department abbreviation) and a four-digit number. The first digit of the number reflects the academic level of the course (1 and 2 are lower-division courses) and the second digit reflects the semester-credit-hour value of the course. The third and fourth digits establish course sequencing and/or distinguish this course from others of the same level, credit value, and rubric. Texas A&M University-Corpus Christi uses this format as the basis for numbering most lower-division courses.

Table of Common Courses
The following table identifies selected TCCNS courses and the equivalent lower-division Texas A&M University-Corpus Christi courses. The equivalency table is updated periodically.

Students attending community colleges or universities that are participating TCCNS institutions may use the table as a guide in selecting courses that will transfer to Texas A&M University-Corpus Christi. Students should become familiar with the requirements of the University Core Curriculum Program (http://catalog.tamucc.edu/undergraduate/university-college/programs/core-curriculum-program/) and with degree requirements so that they may select appropriate transfer courses. (A list of core curriculum transfer courses is provided later in this chapter.)

**Lower-Division Core Curriculum Transfer Courses**

The core curriculum requirements are discussed in the "University Core Curriculum Program (http://catalog.tamucc.edu/undergraduate/university-college/programs/core-curriculum-program/)* section of this catalog. The following table lists lower-division Texas A&M University-Corpus Christi core curriculum courses for which there are transfer equivalents. The approved core curriculum transfer courses are identified by their common course numbers and titles.

Transfer students also have several other means of meeting the core curriculum requirements. See "General Education Requirement" in the section entitled "Undergraduate Programs (p. 42)" for details.

ENGL 2321 British Literature

Component Area Option (6 sem. hrs.)

To satisfy the 6 semester hour Component Area Option students may select any Core courses that are not already being used to satisfy another Core requirement. In addition, students are able to use lab hours, from 4-hour Core courses, for up to 3 hours of the Component Area Option. Students may take MATH 2141 Calculus I (4 sch) to satisfy 4 hours of the Component Area Option. MATH 2141 Calculus II (4 sch) is not included in the Mathematics Component Area, and will only satisfy the Component Area Option. The Core includes 42 hours. Some degree plans, however, require the selection of Core courses that may lead up to 3 additional hours (for example, courses with credit labs). Those 3 additional hours may be applied to the Component Area Option.

Note: Additional courses that are not included in the above list may fulfill specific Texas A&M University-Corpus Christi core curriculum requirements. For more information on transfer equivalencies,
C: Drug and Alcohol Abuse Prevention Program

Texas A&M University-Corpus Christi is committed to a campus-wide plan to educate students and employees about alcohol and drug issues, discourage the irresponsible use of alcoholic beverages, and prohibit the unlawful use, possession or distribution of controlled substances. The University will act to ensure compliance with all local, state, and federal laws, System policies and University rules and procedures dealing with controlled substances, illicit drugs, and the use of alcohol. The Code of Conduct provides information on alcohol and drug rules and university sanctions. To review the Student Code of Conduct online, go to http://judicialaffairs.tamucc.edu.

To implement an effective drug and alcohol abuse prevention plan, the University will use both formal and informal channels of communication to:

1. disseminate the standards of conduct that govern student and employee behavior,
2. communicate legal sanctions, as well as university disciplinary sanctions that can result from violations, and
3. distribute information about the health risk associated with use and abuse.

The campus will make available referrals to local treatment centers and counsels programs. These referrals will be made within a supportive, confidential, and non-punitive environment under the auspices of the University Health Center, Counseling Center, and/or Human Resources.

Alcohol and Drug Rules

The University prohibits the use or possession of alcoholic beverages on campus by any individual under the age of 21. Failure to comply with this rule violates state law and the rules governing student conduct and will subject the individual to disciplinary action.

Students of lawful age under Texas Statutes may possess and/or consume alcoholic beverages in the privacy of their rooms or apartments in campus residence facilities. However, residence hall occupants and their guests must comply with state and local statutes concerning possession, sale, and consumption of alcoholic beverages. Any use of alcoholic beverages should be in moderation. Therefore, bulk quantities of alcohol (kegs, cases, party balls, etc.) are not allowed on campus or in residence facilities. Loud or disruptive behavior, interference with the cleanliness of residence facilities, or drinking habits that are harmful to the health or education of an individual or those around him/her are reasons for appropriate disciplinary action by the University.

With limited exceptions, the possession of open containers and the consumption of beer, wine, and/or distilled spirits is prohibited in all public areas of the campus. For the purposes of this rule, residence hall balconies and patios are considered public areas. Although students of lawful age may possess and consume alcoholic beverages in the privacy of their rooms or apartments, all alcoholic beverages transported through public areas on the University grounds and in residence facilities must be unopened and concealed.

All members of the University community are expected to abide by state and federal laws pertaining to controlled substances and illicit drugs. Standards of conduct strictly prohibit the unlawful manufacture, distribution, possession or use of controlled substances, illicit drugs or drug paraphernalia on University property, at University-sponsored activities, and/or while on active duty. Individuals may use prescription medications that are medically necessary and prescribed by a licensed physician.

While the University has limited jurisdiction when alcoholic beverages and illegal drugs are consumed off-campus, members of the University community are encouraged to consider these regulations as a guideline for responsible and lawful behavior. Any recognized student organization that plans to include alcohol at an official function off-campus must obtain permission from Student Activities under the University risk management guidelines. Failure to comply with this requirement will be reason for appropriate disciplinary action by the University.

University Sanctions

Students suspected or found in violation of University drug or alcohol rules and regulations will be notified in writing to appear for a hearing with a judicial affairs officer. Procedures for hearings are outlined in the Student Code of Conduct.

A student found responsible for violating the rules and regulations will be subject to sanctions commensurate with the offenses and any aggravating and mitigating circumstances. Disciplinary actions in cases involving alcohol and drug-related violations result in sanctions up to and including suspension or expulsion from the University and referral for prosecution. Any disciplinary action imposed by the University may precede and be in addition to any penalty imposed by an off-campus authority. Students will be advised of available alcohol and drug counseling at the University Counseling Center and/or referred to a community organization. The University Counseling Center and the University Health Center can provide assistance and referral to appropriate community agencies.

Advisors and faculty members have the responsibility to supervise student activities on all trips. Faculty members should inform students that actions violating state laws, local regulations, and University rules regarding alcohol and drugs will not be permitted on any University trip. Students who violate these guidelines regarding alcohol and drug use on field trips will be subject to disciplinary action.

Health Risks

Alcohol abuse can cause many health-related problems. Approximately 150,000 deaths annually are directly related to alcohol abuse and/or alcoholism. Alcohol abuse can lead to alcoholism, premature death through overdose, and complications involving the brain, heart, liver, and many other body organs. Alcohol abuse is a prime contributor to suicide, homicide, motor vehicle deaths, and other accidental causes of death. Alcohol abuse also causes liver disease, gastritis, and anemia.

Alcohol abuse interferes with psychological functions, causes interpersonal difficulties, and is involved in many cases of child abuse. Alcohol abuse also disrupts occupational effectiveness and causes legal and financial problems. Alcohol used in any amount by a pregnant woman can cause birth defects.

The abuse of illicit drugs can result in a wide range of health problems. In general, illicit drug use can result in drug addiction, death by overdose, death from withdrawal, seizures, heart problems, infections (i.e., HIV/AIDS, hepatitis), liver disease, and chronic brain dysfunctions. Other problems associated with illicit drug use include psychological dysfunctions such as memory loss, thought disorders (i.e., hallucinations,
paranoia, psychosis), and psychological dependency. Additional effects include occupational, social, and family problems as well as a reduction in motivation. Drug use by a pregnant woman may cause addiction or health complications in her unborn child.

**Campus Resources**

A&M-Corpus Christi offers a variety of programs to promote healthy lifestyles and substance-free alternatives. Students can become involved with the planning of drug and alcohol education programs by contacting Student Engagement & Success at 361-825-4284.

University Counseling Center - The University Counseling Center offers students individual counseling, educational programming and support groups focused on alcohol and other drug use, abuse and addiction. An Alcohol Education Program for Minors is also available for minors cited/charged with alcohol-related offenses (MIP, DUI, and Public Intoxication). For more information, call 361-825-2703 or visit the web site at http://counseling.tamucc.edu.

University Health Center - The University Health Center can provide information about the health risks of drug and alcohol abuse, as well as general medical care for students. For more information, call 361-825-2601.

I-TEAM - I-TEAM Peer Educators strive to educate the campus community and promote healthy behaviors related to alcohol and drugs. The group facilitates a host of activities year round. Call 361-825-4284 for more information.

University Police Department - The University Police Department educates the University community about drug and alcohol issues as well as enforces local, state and federal law. For more information, call 361-825-4444.

Annual Security Report - This report includes statistics for the previous three years concerning reported crimes that occurred on campus; in certain off-campus buildings or property owned or controlled by A&M-Corpus Christi; and on public property within, or immediately adjacent to and accessible from, the campus. The report also includes institutional policies concerning campus security, such as policies concerning sexual assault, and other matters. Obtain a copy of this report by contacting the University Police Department 361-825-4444 or by accessing the following web site: https://police.tamucc.edu/cleryact/campusSecurityAct.html.

The Biennial Review of the Drug and Alcohol Abuse Prevention Program is conducted to determine program effectiveness and consistency of policy enforcement. Obtain a copy of this report at http://iadapt.tamucc.edu.

**D: Hazing**

Hazing is strictly prohibited and the University will investigate any claim of hazing and take appropriate action. Hazing is defined as:

Any intentional, knowing, or reckless act, occurring on or off the campus of an educational institution, by one person alone or acting with other, directed against a student, that endangers the mental or physical health or safety of a student for the purpose of pledging, being initiated into, affiliating with, holding office in, or maintaining membership in an organization. The term includes, but is not limited to:

- Any type of physical brutality, such as whipping, beating, striking, branding, electronic shocking, placing of a harmful substance on the body, or similar activity.
- Any type of physical activity, such as sleep deprivation, exposure to the elements, and confinement in a small space, calisthenics, or other activity that subjects the student to an unreasonable risk of harm or that adversely affects the mental or physical health or safety of the student.
- Any activity involving consumption of a food, liquid, alcoholic beverage, liquor, drug, or other substance that subjects the student to an unreasonable risk of harm or that adversely affects the mental or physical health or safety of the student.
- Any activity that intimidates or threatens the student with ostracism, that subjects the student to extreme mental stress, shame, or humiliation, that adversely affects the mental health or dignity of the student or discourages the student from entering or remaining registered in an educational institution, or that may reasonably be expected to cause a student to leave the organization or the institutions rather than submit to acts described in this subdivision.
- Any activity that induces, causes, or requires the student to perform a duty or task that involves a violation of the Texas Education Code Sec. 37.152 and 37.153.

The intent of the act or the consent or cooperation of the hazing recipient will not constitute a defense. The University may charge an individual and/or the officers of a recognized organization with responsibility for the hazing act(s) both on or off-campus. Hazing is also a violation of Texas state law. See the Texas Education Code, sections 37.151 and 51.936 at www.stophazing.org/texas (http://www.stophazing.org/texas/).

In summary, a person may be found guilty of criminal conduct for hazing, encouraging hazing, permitting hazing, or having knowledge of the planning of hazing incidents and failing to report in writing his/her knowledge to the Dean of Students or other appropriate institutional official.

Texas law provides any person reporting a specific hazing incident to the Dean of Students or other appropriate institutional official is immune from civil and criminal liability unless the report is in bad faith or malicious.

For additional information on hazing, students may refer to the Student Conduct Code of Conduct, which can be found online at judicialaffairs.tamucc.edu (http://www.judicialaffairs.tamucc.edu), or contact the Student Conduct & Community Standards directly.

**E. Student Travel Rule**

1. **Overview**

Texas A&M University-Corpus Christi is supportive of student travel and recognizes that the safety of its students is of the utmost importance. The requirements outlined below apply to student travel that is more than 25 miles from campus to an activity that is organized, sponsored and/or funded by the University or by an organization properly registered at the University. Students traveling on behalf of the University must obtain prior approval from the appropriate department. This rule applies to travel by car, truck, van, bus and airplane. It must be read in conjunction with University Procedure 13.04.99.C1.01, Student Travel Procedures.

2. **Travel Safety Guidelines**

During travel situations specified above, students must abide by the following safety guidelines.
1. Drivers and passengers must abide by all federal and state laws. In accordance with State law, drivers and passengers must use seat belts or other available safety restraints.
2. Drivers must possess a valid driver's license that is appropriate for the classification of vehicle being driven.
3. Drivers, occupants, and their luggage should not exceed the vehicle manufacturer’s recommended capacity.
4. Operator fatigue should be considered when selecting drivers. On lengthy trips, alternate drivers should be used to avoid fatigue.

3. Vehicle Options
Listed below are the basic means of travel available to students:

1. Rental Vehicles: Students traveling using a rental vehicle must comply and abide with all University and rental provider rules, regulations, and stipulations.
2. Vans: Fifteen (15) passenger vans may be used; however, only (9) occupants, including the driver, may ride in the van. Nothing may be loaded on top of the van, and all cargo should be loaded evenly. Cargo limit must meet safety requirements. It is preferred that a University employee drive the van.
3. Personal Vehicles: The driver must have adequate motor vehicle insurance and the vehicle must meet all state safety and registration requirements.
4. Commercial Carrier (airplane, bus, train, etc.) Students traveling by commercial transportation must comply with all rules specific to the carrier. This includes laws and regulations regarding carry-on luggage and weight restrictions.

4. Additional Standards
This rule is considered to be a minimum standard. Departments, units, and/or student organizations may mandate additional standards as deemed necessary to address the unique requirements associated with a particular type of student travel.
