

COASTAL AND MARINE SYSTEM SCIENCE, MS

Program Description

Coastal and Marine System Science studies the interactions within the coastal and marine environment, which includes most of the critical physical and biological systems that support life on Earth. The mission of the Coastal and Marine System Science (CMSS) program is to support interdisciplinary research and scholarship on the biotic and abiotic components of this zone, including quantitative investigation of socio-economic and political processes. The program addresses this mission by integrating the tools of Earth System Science: biogeochemistry, geographic information science, ecosystem dynamics, and quantitative modeling.

With the increasing efficiency of real-time data collection, transfer, and processing, aided by autonomous observation systems such as satellite sensors, oceanic buoys, and remotely controlled or autonomous submersibles, Coastal and Marine System Science is at the forefront of extracting meaningful scientific results from large data sets in near real time. Graduates of the CMSS program will demonstrate proficiency in understanding and applying the concepts and principles of all of the natural sciences as well as a working competence in mathematical modeling and geospatial analysis.

All students share a core of five interdisciplinary courses that cover the foundations of mathematical modeling, environmental policy, and case studies in system science. Topical specialized coursework (determined by the graduate advisory committee of each individual student) provides grounding in the specific scientific disciplines needed to effectively manage the coastal and marine system. The required thesis involves an independent, detailed research project of importance to the international scientific community. The graduate advisory committee of each student will guide them through the conception, design, construction, and execution of a systems-based inquiry. Students who earn graduate degrees in the sciences are typically employed in teaching or research positions in universities, or in pure research applications at specialized institutions or governmental agencies.

Student Learning Outcomes

As part of their progression through the Coastal and Marine System Science program, the students will:

- acquire the skills required for system science studies applied to coastal and marine topics such that they are prepared to conduct CMSS original research,
- perform original and hypothesis-driven quantitative analyses that will lead to comprehensive verifiable models of natural systems,
- emphasize mathematical and/or analytical skills to generate new data and critically evaluate models that will aid in our understanding of dynamic natural systems, become a resource capable of answering environmental “what if” questions by providing comprehensive interpretation,
- develop the skills necessary to present and publish their work at national and international venues, and
- develop a skill set and research record such that they can secure employment at universities, federal agencies, private companies, or

non-governmental organizations where they can apply the skills and knowledge acquired during their time in the program.

Admission Requirements

Persons seeking admission to the CMSS Program must apply through the University's College of Graduate Studies (CGS). In addition to the documents required by CGS, applicants must submit GRE general test scores, an essay of no more than 1,000 words describing their educational background, career interests, goals and challenges, a curriculum vitae, and three letters of evaluation from persons knowledgeable about their potential for success in graduate studies. Persons seeking admission to the MS Program in CMSS should first contact the program faculty and identify a faculty member willing to serve as the graduate advisor. Applicants will not be admitted to the program without a graduate advisor. Applicants may optionally submit other relevant materials, e.g., copies of published works or reports of past scientific research. All materials submitted will be considered. A campus visit with personal interviews involving prospective faculty mentors is highly recommended. Completed applications must be received by the College of Graduate Studies by the deadlines posted on the CGS website.

Incomplete applications are not considered. The applicant will be notified of acceptance or rejection by letter.

Students accepted into the degree program must demonstrate proficiency in the natural sciences, mathematical modeling, and geospatial technology. This proficiency can be demonstrated by the successful completion of undergraduate classes in these topics, or by presentation of satisfactory evidence to the CMSS Program Coordinator. Students who are unable to demonstrate proficiency in the natural sciences, mathematics, or geospatial technology may be required to take undergraduate or graduate courses in these areas. These courses will not count toward the coursework required for the MS degree.

Teaching assistantships, graduate research assistantships, and fellowship positions are available to admitted degree-seeking students who maintain full-time graduate student status (9 credit hours per semester). For additional information, please contact the

Elective, Specialized and Topical Courses

Elective coursework (12 sem. hrs.) supporting the student's individual research goals is chosen from biology, chemistry, coastal and marine system science, computer science, environmental science, geographic information science, geology, math, marine biology, or other course offerings, in consultation with student's advisory committee.

Topical coursework should be approved by the graduate advisory committee, and is offered under the heading of: CMSS 6590 Advanced Topics (1-5 sch) Advanced Topics.

Students can also enroll in a Directed Independent Study, supervised by their advisor or other faculty members, at any stage of the program progression: CMSS 5596 Directed Independent Study (1-5 sch).

Students may also enroll in CMSS 5940 Thesis Project Research (1-9 sch) to conduct research related to the CMSS M.S. thesis project. Up to six hours may count as credit toward regular graded (non-research, non-variable credit) elective coursework for the M.S. degree requirement in Coastal and Marine System Science.

The remainder of classes or research projects designated as part of the elective coursework requirement must receive the approval of a student's graduate advisory committee. Students must demonstrate to the committee that the selection of classes or research projects produces a coherent course of study focused on the student's particular area of emphasis. Depending on the emphasis area, selections may include coastal and marine system science, marine biology, the natural sciences, computer science, geographic information science, mathematics, political science, public administration, business law, or other areas as stipulated by the graduate advisory committee.

Thesis Information

Thesis Course Series

Three courses are taken for the main research component of the degree, CMSS 5392 Thesis I: Thesis Proposal (3 sch), CMSS 5393 Thesis II: Thesis Research (3 sch), and CMSS 5394 Thesis III: Thesis Submission (3 sch). These must be taken by all students.

Thesis Format, Style, and Submission

The thesis must be prepared in a standard format and style prescribed by the advisory committee. Guidance can be found in the CMSS Student Handbook. For more information, contact the College of Graduate Studies.

Upon approval by the student's graduate advisory committee, a copy of the thesis will be submitted to the College of Graduate Studies. For more information, see the Masters Student Handbook, available from the College of Graduate Studies.

Final Thesis Defense

Each student must pass a final thesis defense examination during the last semester before graduation, to be administered by the student's graduate advisory committee. The exam will cover topics related to

1. all graduate coursework undertaken for the CMSS program,
2. the student's thesis research area, and
3. broad concepts of system science, requiring familiarity with the literature and appropriate professional societies.

The student is responsible for scheduling the defense in consultation with the graduate advisory committee. A student who fails the defense may repeat it once, but only after an interval of four months or more. If a student fails the second defense, he or she will be terminated from the program. Students must enroll in the course CMSS 5394 Thesis III: Thesis Submission (3 sch) during the semester in which they are planning to defend the thesis and/or graduate.
