GEOMATICS, POST-BACCALAUREATE CERTIFICATE

Program Descriptions
The Post-Baccalaureate Certificate in Geomatics is designed for students who hold a bachelor's degree or master's degree in fields other than Geomatics or Geographic Information Science and desire to continue their education to prepare for the Texas Board of Professional Land Surveying examination to become a Registered Professional Land Surveyor in Texas. Candidates for the certificate are required to complete 33 credit hours of surveying related courses; 20 of these credit hours must be taken at Texas A&M University-Corpus Christi. The Coordinator of the Geographic Information Science program or a designee may waive certain courses if a student has previously completed appropriate surveying courses. Students must apply for the certificate and complete a Certificate Plan approved by the Coordinator of the Geographic Information Science program or a designee.

Student Learning Outcomes
The graduates will have at the time of graduation:

1. Ability to measure, collect, and evaluate accuracy of geospatially referenced data and manage geospatially referenced data from different sources into common surveying information and mapping systems.
2. Ability to analyze and process geospatial data to produce technically sound and accurate GIS data products, maps, survey designs (e.g., as-builts), reports, and field instructions.
3. A sound understanding of the professional, ethical, and social responsibilities required for the execution of geomatics projects.

It is assumed that the student has completed all prerequisites and corequisites for the required courses.

Note:
Students must earn at least a 2.5 overall grade point average in all GISC courses.

Course Sequencing
Certificate Coordinator: Dr. Hongzhi Song

Students should take the courses in the following sequence to complete in the most timely manner:

First Year
Fall  Hours
GISC 2470  Geospatial Plane Measurement I  4
GISC 3300 or MATH 3342  Geospatial Mathematical Techniques  3
or Applied Probability and Statistics
GISC 1470  Geospatial Systems I  4

Hours  11

Spring  Hours
GISC 1336  Digital Drafting and Design  3
GISC 2250  Field Camp I (Prerequisite for GISC 4350)  2
GISC 3412  Geospatial Plane Measurement II  4

Hours  9

Second Year
Fall  Hours
GISC 3325  Geodetic Science  3
GISC 4315  Satellite Positioning  3
GISC 4318  Cadastral Systems  3

Hours  9

Spring  Hours
GISC 4350  Field Camp II  3
GISC 4340  Geospatial Computations and Adjustment  3
GISC 4371  History of Land Ownership  3

Hours  9

Total Hours  38

Courses
GISC 1301  Physical Geography
3 Semester Credit Hours (3 Lecture Hours)
The goal of this course is to encourage you to think geographically, examining the interactions between physical systems and human activities. Introduction to topics covered include elements of Physical Geography (studies of atmosphere, ocean and land surface environments), Geographic Information Systems (computer systems that capture, analysis, and display of geographic information), and human environmental interactions. Cross listed with GEOG 1301.

TCCNS: GEOG 1301
GISC 1336  Geospatial Mathematical Techniques  
3 Semester Credit Hours (2 Lecture Hours, 2 Lab Hours)  
An introduction to graphic and drafting principles and practices in surveying and mapping science. This course includes the development of the basic drafting skills needed to produce surveying plats and graphical presentations. The elements of descriptive geometry are addressed. A major component of the course is an introduction to the fundamentals of computer-aided drafting and design (CADD). Spring.  

GISC 1470  Geospatial Systems I  
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)  
Introduction to geographic information systems (GIS) and its theoretical foundations. Topics covered include vector and raster data models, acquisition and manipulation of data, cartography, current topics, data quality, and basic spatial analysis. Principles and uses of GIS software also covered. Fall and Spring.  

GISC 2250  Field Camp I  
2 Semester Credit Hours (6 Lab Hours)  
A one-week field camp with intensive field data collection and computations. Traversing between control points. Digital contour data and leveling control. Detail spatial data by total station. Construction set out using total station and steel band. Taken during the sophomore or junior year. Spring. Prerequisite: GISC 2470.  

GISC 2301  Geospatial Systems II  
3 Semester Credit Hours (2 Lecture Hours, 3 Lab Hours)  
An intermediate level course in the concepts and applications of geographic information systems (GIS). Topics covered include spatial database design and management, raster analysis, terrain mapping, analysis, and applications. Spring. Prerequisite: (GISC 1470).  

GISC 2438  Geospatial Software Systems I  
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)  
Introduction to the design and development of GIS software to solve spatial problems. Topics covered include programming basics, design and implementation common tasks in GIS applications. Fall. Prerequisite: GISC 1470 and COSC 1435 or COSC 1330.  

GISC 2470  Geospatial Plane Measurement I  
4 Semester Credit Hours (2 Lecture Hours, 3 Lab Hours)  
Historical introduction to field measurement and mapping; distance measurement using electronic distance meters; calibration and reduction. Leveling instruments; principles, construction, testing and adjustment; ancillary equipment. Optical and electronic theodolites. Traverse computations and adjustment. Coordinate systems. Map projections. Fall. Prerequisite: MATH 1316 or 2413.  

GISC 3300  Geospatial Mathematical Techniques  
3 Semester Credit Hours (3 Lecture Hours)  
Characteristics of geographic/spatial information; overview of relevant sections of numbers, algebra and geometry, plane and spherical trigonometry, matrices, determinants and vectors, curves and surfaces, integral and differential calculus, partial derivatives, with an emphasis on geospatial applications. Concepts of geospatial coordinate systems and geospatial coordinate transformations; overview of spatial statistics and best-fit solutions with geospatial applications. Prerequisite: MATH 2413 and 3342.  

GISC 3325  Geodetic Science  
3 Semester Credit Hours (2 Lecture Hours, 2 Lab Hours)  

GISC 3412  Geospatial Plane Measurement II  
4 Semester Credit Hours (2 Lecture Hours, 3 Lab Hours)  
Principles and reduction of observations and errors in spatial measurement. Techniques of horizontal and vertical angle measurement for precise positioning. Trigonometric heighting and vertical staff tacheometry. Setting out of structures. Design and computation of horizontal and vertical curves. Spring. Prerequisite: (GISC 2470 and 1336).  

GISC 3420  Geospatial Software Systems II  
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)  
Advanced programming course focusing on the design and implementation of GIS scripts and GIS web applications. Topics covered include GIS web applications, web mashups, GIS scripts, GIS tool creation, and advanced user interface design and implementation. Spring. Prerequisite: GISC 2301 and (COSC 1435 or 1330).  

GISC 3421  Visualization for GIS  
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)  
Basic elements of thematic cartography, cartographic theory, and cartographic projections. Integration of cartographic principles with GIS visualization. Principles of map design with GIS data. Spring. Prerequisite: GISC 2301.  

GISC 4180  Geospatial Systems Internship  
1 Semester Credit Hour (1 Lecture Hour)  
Internship education requires work with approved Geospatial Systems related industry employer. Students provide weekly written reports and final presentation to program at the end of internship. Must have completed 60 semester hours before attempting. Fall, Spring, and Summer.  

GISC 4305  Legal Aspects of Spatial Information  
3 Semester Credit Hours (3 Lecture Hours)  
Legal ownership of spatial data and information collected in the public sector. Public access to large digital databases. Copyright law as applied to spatial data. Legal issues related to property boundaries, statutory boundaries, voter district boundaries, and jurisdictional boundaries. Government fees and charges for access to spatial data. Social and economic value of spatial data. Spring. Prerequisite: GISC 2470.  

GISC 4315  Satellite Positioning  
3 Semester Credit Hours (2 Lecture Hours, 2 Lab Hours)  
Prerequisite: permission from the instructor.

GISC 4318 Cadastral Systems  
3 Semester Credit Hours (3 Lecture Hours)  
Land ownership recording systems used in Texas and U.S. Investigation and research for artificial and natural boundaries. Title searches at the county courthouse, title plants, and other sources for cadastral research. Riparian and littoral boundaries. Boundary marking and preparation of cadastral plans. Metes and bounds descriptions. Writing field notes. Urban and rural cadastral issues. Use of coordinate systems in cadastral mapping. Fall.  
Prerequisite: GISC 3412.

GISC 4320 Hydrography  
3 Semester Credit Hours (2 Lecture Hours, 2 Lab Hours)  
Introduction to offshore and inshore hydrographic mapping. Tidal datums and their computation. Review of hydrographic and nautical charts. Electronic position finding and bathymetric data collection. Echo sounding, side scan sonar. Seafloor mapping and underwater locating. Beach (combined land and hydrographic) mapping. Spring even years.  
Prerequisite: GISC 2470 and MATH 2413.

GISC 4326 Geomatics Professional Practice  
3 Semester Credit Hours (3 Lecture Hours)  
An intensive one-week summer course presented by practicing geomatics professionals covering many of the aspects of operating a professional surveying practice in the State of Texas. Topics cover surveyor responsibility and liability, the surveyor in court, standards of practice, surveying mathematics, Texas coordinate system, celestial observations, and project control.  
Prerequisite: GISC 2250.

GISC 4335 Geospatial Systems III  
3 Semester Credit Hours (2 Lecture Hours, 2 Lab Hours)  
Advanced spatial analysis and modeling in GIS. Topics covered include exploratory analysis of spatial data, network analysis, spatial point patterns, area objects and spatial autocorrelation, and spatial interpolation. Also covers new approaches to spatial analysis. Fall.  
Prerequisite: GISC 2301 and MATH 3342.

GISC 4340 Geospatial Computations and Adjustment  
3 Semester Credit Hours (3 Lecture Hours)  
Prerequisite: GISC 2470 and 3300.

GISC 4350 Field Camp II  
3 Semester Credit Hours (6 Lab Hours)  
A one-week field camp undertaking projects in cadastral, engineering, hydrographic, and geodetic positioning. Reduction of digital field data to produce final plans and reports. Taken during the senior year. Spring.  
Prerequisite: GISC 3412, 4318 and 2250.

GISC 4351 Geospatial Systems Project  
3 Semester Credit Hours  
This course allows students to employ knowledge attained in other courses to create a project to spatially analyze information of interest to you and your field of study. Students will either undertake a GIS project to manage, analyze, and visualize spatial data, or a survey project in cadastral, topographic, engineering, hydrographic, or geodetic positioning survey. Spring. Students who enroll in the project course will need permission from the instructor.  
Prerequisite: GISC 4350 or (GISC 3421 and 4335).

GISC 4371 History of Land Ownership  
3 Semester Credit Hours (3 Lecture Hours)  
This course prepares students by providing proper knowledge of how land transferred throughout history and techniques for researching land ownership in the present. Students receive an overview of legal aspects and other topics relative to land issues applicable for Land Surveyors, Civil Engineers, and GIS professionals, among others. Spring.  
Prerequisite: GISC 3412.

GISC 4431 Remote Sensing and Photogrammetry  
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)  
Provides the foundations to interpret, process, and apply remotely sensed data acquired by satellites and sub-orbital platforms (aircraft, UAVs) for mapping and analysis of our natural and built environment. Principles of electromagnetic energy-matter interaction, remote sensing systems and data characteristics, digital image processing, and information extraction methods will be covered. Included is treatment of: aerial photogrammetry; multispectral, thermal, and hyperspectral sensing; earth observation satellites; radar and lidar; emergent topics. Emphasis will be on their use for geospatial and environmental applications. Fall.  
Prerequisite: (PHYS 2425 and GISC 3300) or (MEEN 3310 and PHYS 2425).

GISC 4590 Selected Topics  
1-5 Semester Credit Hours (1-5 Lecture Hours)  
May be repeated for credit depending on topic. Variable content.

GISC 4596 Directed Independent Study  
1-5 Semester Credit Hours  
See College description. Offered on request. May be repeated for credit.

GISC 4690 Co-operative Education  
1 Semester Credit Hour (1 Lecture Hour)  
Co-op education allows students to take time off their full-time studies to gain valuable experience-based learning with employers willing to put on students for a semester (14 weeks), six months, or over the summer. The Co-op program allows students to maintain their full-time status as a student (continue health insurance coverage with parents, not effect student loan repayment, access to college activities, etc.) while undertaking work in their field of interest. The Co-op program is a partnership between the employer, the student, and the university.
