MECHANICAL ENGINEERING TECHNOLOGY, BS

Program Description
The Engineering Technology Council of the American Society for Engineering Education defines Engineering Technology as the profession in which knowledge of mathematics and natural sciences gained by higher education, experience, and practices is devoted primarily to the implementation and extension of existing technology for the benefit of humanity. Engineering technology focuses on the applied aspects of science and engineering to prepare graduates for practice in product improvement, manufacturing, and engineering operational functions. Engineering technologists are suited for industries that deal with application, manufacturing, implementation, engineering operation, sales, and production.

The Mechanical Engineering Technology degree is offered in both the traditional face-to-face format and an online format for the upper-division courses. The fully-online courses form a competency-based education program in which students receive credit for courses when specific competencies are demonstrated, and receive the degree when all degree-level competencies are demonstrated. In some cases, students may be able to take traditional courses for credit in the competency-based education program.

The goal of Engineering Technology is to prepare well educated, highly skilled, and socially and professionally responsible engineering technologists from a diverse population of students to create productive and rewarding careers. Graduates will be well grounded in the fundamentals of engineering, mathematics, science, communications, and problem solving. To create continuous improvement, the program uses input from employers, alumni, and the Industrial Advisory Committee. Engineering Technology is accredited by the Engineering Technology Accreditation Commission (ETAC) of ABET, www.abet.org (http://www.abet.org).

Contact Information
Engineering Technology Program, Texas A&M University-Corpus Christi, Corpus Christi, TX 78412-5797. Phone: (361) 825-5849. Web: http://entc.tamucc.edu/

Mechanical Engineering Technology
Mechanical Engineering Technology graduates will exemplify the attributes previously described.

Student Learning Outcomes
- Practical, highly qualified engineering technologists.
- Employed in professional careers where they will solve problems using technical and hands-on skills developed during their studies.
- Employed by companies to apply their knowledge in the design, manufacture, sales, installation, operation and/or maintenance of complex, high-value systems.
- Socially and professionally responsible, possessing skills for life-long learning.

Graduates will have:
- an ability to select and apply knowledge, techniques, skills, and modern tools of the discipline to broadly-defined engineering technology activities.
- an ability to select and apply a knowledge of mathematics, science, engineering, and technology to engineering technology problems that require the application of principles and applied procedures or methodologies.
- an ability to conduct standard tests and measurements; to conduct, analyze, and interpret experiments; and to apply experimental results to improve processes.
- an ability to design systems, components, or processes for broadly-defined engineering technology problems appropriate to program educational objectives.
- an ability to function effectively as a member or leader on a technical team.
- ability to identify, analyze, and solve broadly-defined engineering technology problems.
- an ability to apply written, oral, and graphical communication in both technical and non-technical environments; and an ability to identify and use appropriate technical literature.
- an understanding of the need for and an ability to engage in self-directed continuing professional development.
- an understanding of and a commitment to address professional and ethical responsibilities including a respect for diversity.
- a knowledge of the impact of engineering technology solutions in a societal and global context.
- a commitment to quality, timeliness and continuous improvement.
- knowledge, problem solving ability and hands-on skills to enter careers in Mechanical Engineering Technology.
- can apply specific program principles to the analysis, design, development, implementation, or oversight of more advanced mechanical systems or processes.
- prepared to enter careers in materials, applied mechanics, computer-aided drafting/design, manufacturing, experimental techniques/procedure, analysis of engineering data, machine/mechanical design/analysis, power generation, fluid power, thermal/fluid system design/analysis, plant operation maintenance, technical sales, instrumentation/ control systems, heating, ventilation and air conditioning (HVAC).

Academic advisors and faculty mentors are available to assist students with their academic endeavors.

Competency-Based Education Program for BS Mechanical Engineering Technology (CBE MCET)
A competency-based education (CBE) program is one in which specific, concrete competencies are defined. The top-level competencies are the ABET student learning outcomes listed above. Subject-specific sub-competencies are identified and assessed in each of the CBE MCET courses. When a student demonstrates the competencies for a specific course, the student passes the course. When all of the competencies for the degree have been demonstrated, the student receives the degree. The CBE MCET program is being offered for the upper-division (3000- and 4000-level) courses. Once a student has completed the first two years of the traditional MCET BS program as described below, the student may opt for the CBE MCET program. Each of the courses in the CBE MCET
program, with the exception of certain laboratory classes described below, may be completed online.

A student must apply for the CBE program in MCET. The student

- Must be admitted as a student to TAMU-CC.
- Must indicate a positive decision to apply for the CBE MCET program, either through ApplyTexas or a change of major form if student is already at TAMU-CC.
- Must have completed all core courses and all lower-division courses as listed below under “Prior Course Completion.”
- Must have a 2.5 GPA in all coursework that applies to the program (core courses and lower-division courses that will be counted towards the program), whether taken at TAMU-CC or elsewhere.

Credit By Examination: Some courses will have an online pre-test that students can take to earn college credit for that course. The test will be the equivalent of a comprehensive final exam that will test students on all competencies related to the course. The pre-test will be proctored according to the same standard as all other tests taken in the course. If students pass the pre-test, they will receive credit and not be required to take the course. The fee for taking the pre-test in each course must be paid by the student and may range up to $300 per exam. The student should contact the office of the Department of Engineering or the Office of Distance Education and Learning Technologies at TAMU-CC to determine the exact cost of the pre-test.

Credit By Portfolio: For the courses listed below, it is possible that through experience on the job (such as running a process unit in a plant or working in a machine shop), the student might have acquired the competencies in a particular course and therefore be able to obtain credit by submitting examples of work, certified by a supervisor, that illustrate the competencies in the course. The competencies for these courses may be found on the program website, and students given the opportunity to submit portfolios for evaluation (at the cost of an evaluation fee up to $300). The supervisor must be approved by the Engineering faculty as having the necessary qualifications to validate the work submitted by the student. The portfolio(s) submitted by the student must demonstrate that the student has mastered the competencies in the class, as published on the program website.

Because of the nature of the last two courses, credit by portfolio must be obtained for both courses and cannot be obtained for each course individually.

Student Learning Outcomes

The student learning outcomes for the CBE MCET program are the same as for the traditional BS in MCET. These student outcomes will be met by the demonstration of specific competencies in each of the courses in the CBE MCET program.

General Requirements

A summary of the hours necessary for graduation follows:

The specific requirements for each aspect of the Bachelor of Science degree in Mechanical Engineering Technology are indicated below.

<table>
<thead>
<tr>
<th>Requirements</th>
<th>Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>Core Curriculum Program (<a href="http://catalog.tamucc.edu/undergraduate/university-college/programs/core-curriculum-program/">link</a>)</td>
<td>42</td>
</tr>
</tbody>
</table>
| First-Year Seminars (when applicable)
  - UNIV 1101 First-Year Seminar I (1 sch)
  - UNIV 1102 First-Year Seminar II (1 sch) | 0-2          |
| Common Engineering Technology Courses                                      | 31           |
| Required Mechanical Engineering Technology Courses                         | 36           |
| Technical Elective Block                                                   | 12-13        |
| Total Credit Hours                                                         | 121-124      |

**Note:** Full-time, first time in college students are required to take the first-year seminars.

- UNIV 1101 First-Year Seminar I (1 sch)
- UNIV 1102 First-Year Seminar II (1 sch)

Transfer students with 24 or more hours are exempt from First-Year Seminar.

Program Requirements

The courses that are considered to be in the major field of study are all MATH, CHEM, PHYS, COSC, ENTC, ENGR, EEEN, and MEEN courses in the curriculum listed below (any ENGR, MEEN, or EEEN courses taken to fulfill MCET degree requirements must be approved by the program coordinator and the department chair).

The specific requirements for each aspect of the Bachelor of Science degree in Mechanical Engineering Technology are indicated below. Students are encouraged to take the NCEES (National Council of Examiners for Engineering and Surveying) Fundamentals of Engineering (FE) exam during their senior year. The FE exam, [http://ncees.org/exams/fe-exam/](http://ncees.org/exams/fe-exam/), is the first step in the process that leads to the P.E. license.

Competency-Based Education Program for BS Mechanical Engineering Technology (CBE MCET)

### Prior Course Completion
A student must apply for admission to the CBE MCET program. Prior to being admitted to the program, the student must complete all TAMU-CC core curriculum requirements and the following courses or their equivalents (those courses which satisfy the core requirements for mathematics, life and physical sciences, and the component area option (CAO) are also listed, for completeness).

1. Engineering Technology students must take two courses in Physics even if the natural science portion of the core curriculum is satisfied by other means. Students transferring to A&M-Corpus Christi from other institutions may have various means for fulfilling the core curriculum. Please refer to the “General Education Requirement” in the catalog section entitled “Undergraduate Programs (http://catalog.tamucc.edu/undergraduate/undergraduate-programs/).”

Three hours of the Component Area Option of the University Core Curriculum are satisfied by the fourth (lab) hour of each of MATH 2413 Calculus I (4 sch), PHYS 2425 University Physics I (4 sch), and PHYS 2426 University Physics II (4 sch) (the first three lecture hours of each are used to satisfy the mathematics and natural science components of the Core). The other three hours of the Component Area Option of the Core are satisfied by the three lecture hours of MATH 2414 Calculus II (4 sch).

* Online offering
**Courses**

**ENTC 3220 Thermal-Fluids Laboratory**

*2 Semester Credit Hours (4 Lab Hours)*

Application of measurement instrumentation and experimental techniques utilized in thermodynamics and fluid mechanics. Experiments and project in hydrostatics, hydrodynamics, and thermodynamics.

**Prerequisite:** (ENTC 3306 or 3306*) and (ENTC 3320 or 3320*).

*May be taken concurrently.

**ENTC 3302 Manufacturing Processes**

*3 Semester Credit Hours (2 Lecture Hours, 3 Lab Hours)*

Introduction to metal and non-metallic manufacturing processes; casting, forging, rolling, extrusion, sheet metal forming, cutting tools turning and milling operations, abrasive machining, welding and joining, powder compaction, molding, forming of plastics, surface treatment, human factors and safety. Offered: Fall/Spring.

**Prerequisite:** ENGR 1312 and (ENTC 3308 and 2326) or (ENGR 2326).

**Co-requisite:** SMTE 0099.

**ENTC 3306 Fluid Mechanics**

*3 Semester Credit Hours (3 Lecture Hours)*

Fluid properties, fluid statics, dynamics, and kinematics, conservation of energy and momentum incompressible, laminar and turbulent flow. Similitude and dimensional analysis, and viscous flow. Offered: Fall (Spring as needed).

**Prerequisite:** (ENTC 2326 or ENGR 2326).

**ENTC 3308 Strength of Materials**

*3 Semester Credit Hours (3 Lecture Hours)*

Concepts in strength of materials, stress, strain; torsion; deformation under load; direct, shear, and combined stresses; shear and moment diagrams; Mohr's circle; stress concentrations, bending stresses and torsional shear stresses, deflection in beams and shafts; columns, connections, and pressure vessels. Offered: Fall (Spring as needed).

**Prerequisite:** (ENTC 2325 or ENGR 2325) and (ENTC 3410).

**ENTC 3320 Thermodynamics**

*3 Semester Credit Hours (3 Lecture Hours)*

Theory and application of energy methods in engineering; conservation of mass and energy; energy transfer by heat, work and mass; thermodynamic properties; analysis of open and closed systems; the second law of thermodynamics and entropy; gas, vapor and refrigeration cycles. Offered: Fall/Spring.

**Prerequisite:** PHYS 2425 and MATH 2414.

**ENTC 3323 Robotics and Automation**

*3 Semester Credit Hours (3 Lecture Hours)*

Automation in a manufacturing and assembly setting, material handling systems, remote guided vehicles, automated storage and retrieval systems, computer numerical machine tools, robotics. Offered: Spring.

**Prerequisite:** ENTC 3415.

**Co-requisite:** SMTE 0099.

**ENTC 3350 Human Factors Engineering**

*3 Semester Credit Hours (3 Lecture Hours)*

Application of human factors engineering principles utilized in mechanical system and product design. Overview of human characteristics and research and design techniques.

**Prerequisite:** (ENTC 3302 or 3302*).

*May be taken concurrently.

**Courses**

**ENTC 4350 Capstone Projects**

3 Semester Credit Hours (3 Lecture Hours)

Capstone Projects (3 sch) will last 14 weeks and will be synchronized with spring and fall semester offerings of the traditional face-to-face version of ENTC 4350 Capstone Projects (3 sch) will last 14 weeks and will be synchronized with spring and fall semester offerings of the traditional face-to-face version of ENTC 4350 Capstone Projects (3 sch). The capstone project in ENTC 4350 Capstone Projects (3 sch) will be completed as subsystems by subgroups or individuals off campus and integrated on campus at the end of the semester, with arrangements made for team presentations.

*Online offering
ENTC 3406 FLUID MECHANICS AND FLUID POWER
4 Semester Credit Hours (4 Lecture Hours)
FLUID MECHANICS Fluid properties, fluid statics, dynamics, and
kinematics, conservation of energy and momentum incompressible,
laminar and turbulent flow. Similitude and dimensional analysis, and
viscous flow.

ENTC 3408 STRENGTH OF MATERIALS
4 Semester Credit Hours (4 Lecture Hours)
Concepts in strength of materials, stress, strain; torsion; deformation
under load; direct, shear, and combined stresses; shear and moment
diagrams; mohr's circle; stress concentrations, bending stresses and
torsional shear stresses, deflection in beams and shafts; columns,
connections, and pressure vessels.

ENTC 3410 Material Science
4 Semester Credit Hours (4 Lecture Hours)
Structure and properties of metallic and nonmetallic materials;
microstructure, mechanical testing, phase diagrams, heat treatment,
testing, ceramics, polymers, composites, construction materials, failure
analysis, nondestructive evaluation, corrosion and thermal properties of
materials .
Prerequisite: CHEM 1411 and PHYS 2425.
Co-requisite: SMTE 0099.

ENTC 3415 Circuit Analysis II
4 Semester Credit Hours (4 Lecture Hours)
AC circuit analysis principles: AC generation, periodic functions, complex
numbers, phasors, impedance and admittance, network theorems, power,
frequency response, filters, transformers, and balanced three-phase
systems; and use of analysis software.
Prerequisite: ENTC 2414.
Co-requisite: SMTE 0099.

ENTC 3416 Digital Fundamentals
4 Semester Credit Hours (4 Lecture Hours)
Introduces the principles of digital logic analysis and design: logic
functions; logic gates, number systems and conversions; Boolean
algebra; logic simplification, combinational circuits, programmable logic
devices, sequential circuits, and use of analysis and simulation software.
Co-requisite: ENTC 2414, SMTE 0099.

ENTC 3418 Microprocessors/Microcontrollers
4 Semester Credit Hours (4 Lecture Hours)
Introduction to microprocessor architecture, assembly language
programming, and interfacing. Topics include computer organization,
addressing modes, instruction set, interrupts, timing, memory, and
interfacing.
Prerequisite: (COSC 1330 or 1435).
Co-requisite: SMTE 0099.

ENTC 3420 THERMODYNAMICS
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
Theory and application of energy methods in engineering; conservation
of mass and energy; energy transfer by heat, work and mass;
thermodynamic properties; analysis of open and closed systems; the
second law of thermodynamics and entropy; gas, vapor and refrigeration
cycles.

ENTC 3444 Electronic Devices and Circuits I
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
An introduction to semiconductor theory; solid state devices, including
diodes, Bipolar Junction transistors, JFETs, and MOSFETs; principles of
operational amplifiers; transducers and sensors.
Prerequisite: ENTC 3415.
Co-requisite: SMTE 0099.

ENTC 3450 Electronic System Design
4 Semester Credit Hours (4 Lecture Hours)
Principles of engineering design of electronic circuits and systems; time
and frequency responses; network analysis; systems specifications;
evaluation, testing, and verification; use of electronic design automation
tools.
Prerequisite: EEEEN 3345.
Co-requisite: SMTE 0099.

ENTC 3455 Solid Modeling and Finite Elements
4 Semester Credit Hours (3 Lecture Hours, 3 Lab Hours)
Use of computer aided design and solid modeling tools in engineering
design and manufacturing including: solid modeling, stress, flow and heat
transfer analysis using finite element methods, and rapid prototyping.
Offered: Spring.
Prerequisite: ENTC 3308.

ENTC 4210 Solid Mechanics Laboratory
2 Semester Credit Hours (4 Lab Hours)
Experimental principles from Strength of Materials, and experiments
and computer-based analysis of machine elements and structures for
Strength of Material and Solid Mechanics.
Prerequisite: (ENTC 4330*).
* May be taken concurrently.
Co-requisite: SMTE 0099.

ENTC 4320 Heat Transfer
3 Semester Credit Hours (3 Lecture Hours)
Fundamental study of convection, conduction and radiation as applied
to heat transfer, heat exchangers, boilers, other heat transfer equipment.
Offered: Spring.
Prerequisite: ENTC 3306 and 3320.

ENTC 4322 Programmable Logic Controllers
3 Semester Credit Hours (3 Lecture Hours)
Introduction to PLCs and their use in industrial automation. Topics
include programming, counters, timers, interrupts, and process control
applications. Offered: As needed.
Prerequisite: ENTC 3416.
Co-requisite: SMTE 0099.

ENTC 4330 Solid Mechanics
3 Semester Credit Hours (3 Lecture Hours)
Stress analysis of deformable bodies and mechanical elements; stress
transformation; combined loading; failure modes; material failure
theories; fracture and fatigue; deflections and instabilities; thick
cylinders; curved beams; design of structural/mechanical members;
design processes for shafts, bearings, springs, fasteners, and mechanical
joints.
Prerequisite: ENTC 3308.

ENTC 4331 Unit Processes
3 Semester Credit Hours (3 Lecture Hours)
Principles and methods for staged separation processes including
distillation, absorption and stripping, extraction, and adsorption systems.
Offered in Fall and Spring
Prerequisite: ENTC 4320.
ENTC 4332 Process Modeling and Control
3 Semester Credit Hours (3 Lecture Hours)
Prerequisite: ENTC 3306.

ENTC 4333 Chemical Reaction Engineering
3 Semester Credit Hours (3 Lecture Hours)
Fundamental principles of chemical reaction engineering and application to design and analysis of basic chemical reactors containing both homogeneous and heterogeneous reactions. Offered Fall and Spring.
Prerequisite: ENTC 4331 and 4332.

ENTC 4335 Energy Conversion
3 Semester Credit Hours (2 Lecture Hours, 3 Lab Hours)
Installation, design characteristics, operational performance, and maintenance of motors, turbines, pumps and compressors. Introduction to global energy concerns; fossil and nuclear fuels; energy consumption analysis; energy management and conservation techniques; renewable and alternative energy sources. Modern energy conversion devices such as fuel cells, photovoltaic cells, and micro-power turbines.
Prerequisite: ENTC 3320.

ENTC 4350 Capstone Projects
3 Semester Credit Hours (3 Lecture Hours)
This course allows students to employ the knowledge attained in other courses to implement (including building, testing, and documenting) the project approved in ENTC 4415 - Project Justification and Management, within budget and on schedule. Course requirements include a written report and oral presentations. Normally taken in the student's last semester.
Prerequisite: ENTC 4415.
Co-requisite: SMTE 0099.

ENTC 4360 Mechanical System Design
3 Semester Credit Hours (3 Lecture Hours)
Analysis, management and cost, team work, optimal design, and computer simulation of mechanical systems and components; Applications in fluid flow and heat transfer, machine elements, and stress analysis. Selected course topics are assigned as projects.
Prerequisite: ENTC 3308.

ENTC 4415 Project Justification and Management
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
Foundations of engineering economy, cash flow and equivalence, and project justification. Introduction to project management, planning, scheduling, and control, use of project management software, GANTT charts, PERT charts, critical path. Students prepare proposals, including specifications, timelines, schedule, and budget, for projects to be implemented in ENTC 4350 - Capstone Projects.
Co-requisite: SMTE 0099.

ENTC 4420 Embedded Systems
4 Semester Credit Hours (4 Lecture Hours)
Characteristics of embedded systems, system design, interface devices, memory management, interrupt support, input/output applications, software-hardware co-design, modular programming, multitasking, simulation, and control of external devices.
Prerequisite: (ENTC 3416 or 3418).
Co-requisite: SMTE 0099.

ENTC 4435 POWER PROTECTION SYSTEMS
4 Semester Credit Hours (4 Lecture Hours)
Course topics include safety, reliability and availability in power systems; breaker operation; relay operation and relay circuit design; fault tolerance; cost analysis; control systems and system surveillance.

ENTC 4446 Control Systems I
4 Semester Credit Hours (4 Lecture Hours)
Introduction to control systems; open and feedback; Laplace transform and frequency response; control valves; electric motors; P, PI, and PID modes of control; analog and digital controllers Process characteristics; analysis of control systems; gain and phase margin; stability.
Prerequisite: ENTC 2414.

ENTC 4490 Selected Topics
1-4 Semester Credit Hours (1-4 Lecture Hours)
Subject material variable. May be repeated for different topics.

ENTC 4496 Directed Independent Study
1-4 Semester Credit Hours
Requires a formal proposal of study to be completed in advance of registration, approval of supervising faculty and chairperson.
