ATMOSPHERIC SCIENCES, MINOR

Program Requirements

Students from other disciplines who choose the minor in atmospheric sciences must complete 10 semester hours from the following courses.

1 Pre-approval is required by ATSC faculty for taking ATSC 4590 Selected Topics (1-5 sch).

Notes:

Students should consult the catalog to determine any additional prerequisites for the courses. Students must earn a 2.50 minimum cumulative grade point average on all courses attempted in the minor discipline. The selection of courses must be made in agreement with the ATSC Advisor for minor programs.

Courses

ATSC 2101 Weathercasting  
1 Semester Credit Hour (1 Lecture Hour)
This course is to practice in preparing and presenting weathercasts for radio and television. The instructors of this course will provide the students with: (1) information in the form of lectures and supplemental readings; (2) opportunities to practice weathercasting on video, and (3) advice, supervision, and guidance. In lecture, students will spend most of the course learning about geography and weathercasting rules. A large portion of the course is to practice the weathercasting and report.  
Prerequisite: ATSC 2403.

ATSC 2301 Weather Observations  
3 Semester Credit Hours (3 Lecture Hours)
This course is an introduction of the basic concept of meteorology. The focus is on the measurements of the atmosphere and weather related phenomenon. The principle of the instruments used to measure temperature, pressure, moisture, radiation, precipitation and other weather related properties of the atmosphere will be introduced. The differences among the observations from in-situ, balloon borne, airborne, and satellite borne instruments will be examined and discussed.  
Prerequisite: ATSC 2403.

ATSC 2302 Introduction of Data Analysis in Atmospheric Sciences  
3 Semester Credit Hours (3 Lecture Hours)
This course will enhance student skills for analyzing atmospheric science-related datasets under various scientific programming environments. The focus is on developing a data analysis and problem-solving skillsets using mostly Python. The course includes: basic concepts of operating systems and high-level programming languages; basics of programming in Python; general data analysis methods and tools; scientific data formats used in remote sensing data and numerical model output; publication-quality scientific graphics; and critical steps of building a large programming project. Examples with IDL and FORTRAN are also included.  
Prerequisite: ATSC 2403.

ATSC 2303 Introduction to Meteorology  
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)
This course is an introduction to meteorology and the dynamics of planetary atmospheres. Emphasis on atmospheric accretion, composition, evolution, structure, and dynamics. Lab exercises cover basic measurement techniques, weather maps, and forecasting.  
Co-requisite: SMTE 0096.

ATSC 3305 Physical Meteorology  
3 Semester Credit Hours (3 Lecture Hours)
This course will cover the fundamentals of atmospheric physics including the atmospheric composition, kinetic theory of gases, moist processes, aerosol, solar and terrestrial radiation, scattering of electromagnetic radiation and radiative transfer.  
Prerequisite: ATSC 2403 and PHYS 2426.

ATSC 3306 Atmospheric Thermodynamics  
3 Semester Credit Hours (3 Lecture Hours)
This course introduces a foundation in the thermodynamics of the atmosphere. After a brief review of general thermodynamics, the emphasis is given to the basic principles that are useful for the application to atmospheric problems. The course covers a number of atmospheric processes that are basically thermodynamic in nature. The specific topics include aerological diagrams, atmospheric statics, and vertical stability.  
Prerequisite: ATSC 2403 and PHYS 2425.

ATSC 3401 Synoptic Meteorology  
3 Semester Credit Hours (3 Lecture Hours)
This course focuses on introducing middle-latitude synoptic weather phenomenon, including planet waves, frontal systems etc. We will apply principles of Dynamic Meteorology in regards to processes in the atmosphere, weather elements and forecasting. We will examine the structure and dynamics of these systems by integrating weather observations with the current state of dynamic theory, numerical weather prediction models, and the physical principles of atmospheric thermodynamics and cloud and precipitation physics.  
Prerequisite: ATSC 3306 and MATH 2414.  
Co-requisite: SMTE 0096.
ATSC 3402  Mesoscale Meteorology  
4 Semester Credit Hours (3 Lecture Hours, 2 Lab Hours)  
This course focuses on introducing mesoscale weather systems  
including thunderstorms, squall lines and hurricanes, as well as the  
mechanisms of tornado and lighting. The methods of observing,  
analyzing, and predicting these severe weather systems with the  
interpretation of satellite and radar images will also be introduced in this  
class.  
Prerequisite: ATSC 3306.  
Co-requisite: SMTE 0096.

ATSC 4301  Dynamic Meteorology I  
3 Semester Credit Hours (3 Lecture Hours)  
This course focuses on introductory-level atmospheric dynamics. Basic  
concepts of geophysical fluid dynamics and its application to a variety  
of atmospheric phenomena are introduced. Specific topics include  
the equations of motion on rotating earth, vorticity, potential vorticity,  
divergence, circulation theorem, and planetary wave.  
Prerequisite: ATSC 3306 and MATH 2414.

ATSC 4302  Dynamic Meteorology II  
3 Semester Credit Hours (3 Lecture Hours)  
This course is a continuation of ATSC 4301 (Dynamic Meteorology I),  
which covers the introductory-level atmospheric dynamics. The course  
introduces more advance materials including equatorial waves, baroclinic  
and barotropic instability, two-dimensional turbulence, atmospheric  
teleconnection, El Nino/Southern Oscillation, Madden-Julian Oscillation,  
global warming, and numerical modeling of atmospheric circulations.  
Prerequisite: ATSC 4301.

ATSC 4305  Remote Sensing  
3 Semester Credit Hours (3 Lecture Hours)  
This course aims to introduce the fundamentals of satellite/airborne  
remote sensing techniques and demonstrates its application to various  
aspects of Earth Sciences. Topics include physical principles of remote  
sensing from ultraviolet to the microwave, radiometry, sensors and  
sensor technology, calibration, and environmental applications for land,  
-ocean and atmosphere research.  
Prerequisite: PHYS 2426.

ATSC 4335  Climate and Climate Variability  
3 Semester Credit Hours (3 Lecture Hours)  
This course intended to guide environmental science undergraduate  
students in developing a conceptual understanding of Earth’s global  
climate and its variability. Review past climates, present mean state of  
the climate system, climate variability from seasonal to multi-decadal  
time scales, and climate change. Special attention will be given to  
climates of the Gulf of Mexico, Caribbean Sea and surrounding land  
regions. Plausible climate-change scenarios, as well as mitigation and  
adaptation strategies will also be discussed. Cross listed with ESCI 4335.  
Prerequisite: (ATSC 2403 or ESCI 3351).

ATSC 4496  Directed Independent Study  
1-4 Semester Credit Hours (1-4 Lecture Hours, 4 Lab Hours)  
Requires a formal proposal of study to be completed in advance  
of registration and to be approved by the supervising faculty, the  
Chairperson, and the Dean of the College.
